Theorists are apt to attribute the success of federalism in America to the size of the United States and to their freedom from all risks of foreign intervention. When thinkers are asked to explain the triumphs of the federal principle in Switzerland they find its causes in the smallness of the country and in the moderation imposed on Swiss politics by the pressure of powerful neighbors. It is rash to draw any certain inference from the results of two political experiments. Still, Switzerland and the United States suggest that under favorable circumstances the federal scheme of government may, just because the federal bond is loose even when it is strong, produce a condition of calm political sentiment very favorable to the removal of those bitter and lasting animosities which even now divide and weaken the populations of some of the greatest among European states. Another conclusion forced upon a critic by a comparison of American and Swiss history is, that a federal state needs for its continued existence the increasing development of national sentiment. De Tocqueville was convinced that both in America and in Switzerland "State rights" would in the long run be too strong for the central power. The growth of the sentiment of nationality in each case falsified his prediction.

A critic, further, of politics who looks upon the Confederacy of Switzerland or the United States of America as high works of legislative art, may derive much instruction from comparing the different methods by which the constitutionalists of each country have attempted to solve essentially similar problems, and the different degrees of success which have crowned their efforts.

Swiss constitutionalism has, it will be found, failed at exactly those points where the triumph of American statesmanship has been most conspicuous. Nothing, for example, in the institutions of America has excited more admiration among foreigners than the position given under the Constitution to the Federal judiciary. Nothing, on the other hand, is less satisfactory than the position occupied in Switzerland by the Federal Tribunal. That body, it is true, recalls the Supreme Court of the United States, but it has few of the claims to authority possessed by the American court. Its judges are not appointed for life; it is not empowered to adjudicate on the validity of laws passed by the Federal Assembly; it is incompetent to deal with many matters which in England, no less than in America, would fall within the jurisdiction of the judges; its decisions are, it would appear, enforced by the action of the executive. The tendency, indeed, of opinion throughout the Confederacy is to strengthen the position of the Federal Tribunal. But even were the authority of the court greatly extended, it would never attain to anything like the power possessed not only by the Supreme Court of America, but even by the English bench. The truth is, that the traditions of Swiss history are unfavorable to the development of that regular supremacy of the law of the land which is the marked characteristic of the institutions founded by the English people on both sides of the Atlantic. The more closely the Swiss Federal Constitution and the Cantonal constitutions of Switzerland are studied, the more apparent it becomes that the tendency of the Swiss people is still, as it has been for centuries, to allow to the legislature the exercise of judicial functions. The Swiss have scarcely as yet recognized the truth which lies hid under the much misunderstood dogma of the separation of powers.

If the greatest glory of the founders of the American republic was to constitute the law courts the guardians of the Constitution, their second great achievement was to form the most powerful second chamber which has ever been called into existence. It is hardly possible to exaggerate the originality, the boldness, or the success of the arrangement by which the Senate was made the representative of the States. Its success was so patent that the Swiss statesmen of 1848 were, in spite of their great distaste for second chambers, almost compelled to follow the example set by the statesmen of America. The Council of States, in which each Canton is represented by two members, might well have been expected to fill the place and exert the authority of the American Senate—the expectation was, in fact, entertained by the leading men of Switzerland. It has been, however, entirely disappointed. From one cause or another the second chamber in Switzerland occupies a position distinctly inferior to that of the National Council, or, to use the equivalent American expression, of the House of Representatives. Various causes may be assigned for a result which no one appears to have anticipated. The Swiss "Senate," if one may use a name which does not strictly belong to the Council of States, was from the first hampered by the traditions of the old Swiss Diet. It never possessed those powers which connect the American Senate with the Executive. Each Canton determines the time for which its Senators shall hold office. On several matters of importance the Senate votes together with, and is therefore outnumbered by, the members of the House of Representatives. To all these special sources of weakness one may perhaps add a cause of a more general character: a second chamber is an institution unknown to the Swiss Cantons. Its place is at the present day to a great extent supplied by the preëminently Swiss arrangement of the Referendum, under which the validity of a law depends ultimately on the direct assent of the sovereign people. To trace out, however, the whole of the reasons which have prevented the Swiss Council of States from becoming the most influential part of the legislature, would be impossible within the space at my disposal. The important matter is to note that Swiss constitutionalists have not been able to produce a body of anything like the authority of the American Senate.

If the constitutionalism of Switzerland is in several respects markedly inferior to that of the American republic, there are at least two genuine products of Swiss political inventiveness which well deserve the attention of all persons interested in the success of democratic government.

The Referendum—an institution which, under different forms, exists in every Canton throughout the Confederacy, and also forms part of the Federal Constitution—is, for good or bad, likely to come into existence in every thoroughly democratic State. For reasons which I may explain in another letter, it is to my mind probable that, before many years are over, this scheme for submitting every law of importance to the approval of the electors may, in essence though not in name, become an integral portion of the British Constitution. However this may be, the fact is manifest enough that an arrangement which commends itself to the most democratic population of Europe cannot, in an age when democratic ideas are spreading far and wide, be dismissed without careful consideration. On one point alone connected with the Referendum is it necessary for the present purpose to dwell. This appeal to the people, as it exists in Switzerland, must be considered, on the whole, a conservative arrangement: it tends at once to hinder rapid change, and also to get rid of that inflexibility or immutability which, in the eyes of Englishmen at least, is a defect in the Constitution of the United States. It enables the Swiss people to revise the Constitution with something like the ease with which every law can be changed in England; it secures, at the same time, that no law of importance shall be changed if there be a strong popular feeling against innovation. There is needed no great sagacity to perceive the faults of the Referendum: it diminishes the importance of debate, and therefore lowers the character of any representative assembly whose determinations require for their validity the sanction of a reference to the people. But, in the present state of the world, it is some compensation for the evils of a Referendum that it gives to constitutions under which it exists more stability than can be ascribed to the political institutions of States which, like England, are ruled by a sovereign Parliament, and more flexibility than is compatible with a Constitution which, like that of the United States, can be legally changed only by a sovereign power which may not be called into activity more than once in half a century.

The mode, again, in which the Executive is appointed, under the Swiss Constitution, has the recommendation of combining to a certain extent the opposite merits of Cabinet government as it exists in England, and a Presidential government as it exists in America. The Federal Council fills the place of the English Ministry, or of the American President and his Ministers: it is the Executive of the Confederacy. Its members are elected by the Federal Assembly—that is, by the two chambers sitting together. These members are appointed for a period of three years, and during that time cannot be removed from office. After the election of each new national Council, or, to use American phraseology, of each new House of Representatives, a new Council, which may, however, consist of the same members as the outgoing body, is elected by the Federal Assembly. Now, the main point to observe is, that this arrangement avoids some of the vices both of Cabinet government and of Presidential government. The Council is, like the American President, irremovable by the Federal Assembly. It does not depend for its continued existence on the shifts and changes of parties or factions. It is, again, like the English Cabinet, in close and immediate connection with the Assembly by which it is created. It is, of course, easy to put the same facts in a point of view unfavorable to Swiss institutions. The Council, it may be said, has neither the perfect independence of the American President, nor that absolute identity of feeling with the party predominant in the Assembly which is the strength of English Ministerial government. This criticism contains important truth. The Swiss system of appointing the Executive would, it may be admitted, be unsuitable for countries like Great Britain, where the Government must play a very active part, and where the weakness or the inertness of the Executive power may well mean national ruin. It is also plain that the Swiss system is all but incompatible with the conditions of party government as it flourishes either in England or in America. But the question whether parliamentary government necessarily means party government, is one to which cautious thinkers would be slow to give an off-hand answer. There is some reason for thinking that the success or failure of democratic institutions may ultimately turn on the possibility of keeping up representative institutions without creating the popular agitations and the fluctuations of policy which appear to be an unavoidable part of government by party. If this be so, the Swiss Constitution presents at lowest an ingenious attempt to obtain the merits of government by parliament without falling into the worst evils of government by faction. The attempt may turn out a failure, but neither Englishmen nor Americans ought to turn aside with contempt from a scheme for avoiding both the evils resulting from changes of Cabinet and the evils flowing from Presidential elections.

A. V. Dicey.

TOLSTOI'S 'MY RELIGION.'

Paris, September 23, 1885.

One must be wanting in sensibility not to feel much gratitude, and almost personal affection, toward a writer who has given him new sensations, new emotions, new ideas of a noble and inspiriting kind. Such, I confess, are my feelings for Count Tolstoi. I attempted lately to give you an imperfect idea of his 'War and Peace' and of 'Anna Karenin'—two works marked by the most extraordinary talent, and, I might say without exaggeration, by a wonderful genius. I was aware that Count Tolstoi had somewhat painted himself as Pierre Besushkoff in 'War and Peace'; that, having tried every form of thought, he had found a mental and intellectual refuge in religion. My Russian friends all told me that it was not worth my while to read the book in which Tolstoi has given to the world his *ultima verba*. There is something to be found and to be learned even in the aberrations of a great mind. I knew that Tolstoi was living in the country, and was doing all he could to *simplify* himself, as the Russians say;

that he had renounced the court, the world, and lived almost as a peasant among peasants, doing every day some physical and material work; that literary glory seemed to him, like all other glories, a mere vanity; that he had broken his pen, and taken hold of the plough. What was the secret of this change? What relation could there be between a delicate, refined mind like his and this mysterious Russian Nihilism, which has become abhorrent to the world since it has inspired so many crimes?

Here was a curious riddle to solve. I had known Ivan Turgeneff personally; and though there was no Nihilist in him, in spite of his having invented the word—though he had shown in his 'Fathers and Sons' his dread of the new materialistic doctrines professed in some of the Russian universities—he felt great leniency, an invincible kindness and affection for all those who were discontented, in his own country as well as in all Europe; with the men who represent more or less consciously what goes under the vague names here of reform and there of revolution. There must be a deep substratum of suffering and discontent in a country only emerging from barbarism. It is not in Russia as it is with old wine: the scum on the top, the lees at the bottom, the good wine between the two. The middle class hardly exists, and where it exists it is still despised; on the top there is a court and a servile aristocracy, an aristocracy of vanities, not of privileges; under this film are only the great and ignorant masses of the peasantry.

You see already in 'War and Peace,' as well as in 'Anna Karenin,' severe judgments upon the higher class, upon the generals, the courtiers, the worshippers of transient and ephemeral greatness. All the fine characters are living protests against the vanities and follies of a frivolous and corrupt aristocracy. Still, Tolstoi does not yet appear to us in the light of a reformer. How did he come to experience what the theologians call grace?

"I have not always," he says, "had the religious ideas which are set forth in this work ('My Religion'). For thirty-five years of my life I have been a Nihilist, in the exact acceptation of the word; not a revolutionary Socialist, a man who believes in nothing. Five years ago faith came upon me; I believed in the doctrine of Christ, and my life changed suddenly. I ceased to desire what I desired before, and I began to desire what I had never desired. What seemed to me good before, seemed now bad, and what had seemed bad seemed good. That happened to me which happens to a man who has gone out on some business. On his way he decides that the affair is not of much importance to him, and he returns home. What was on his left is now on his right, and what was on his right is now on his left."

Tolstoi informs us that for five years he has been working at a new translation, verse by verse, of the Four Gospels and making a new concordance. It is doubtful to me if he ever takes a high place among modern exegetes. His life will probably end before his work is done. What he now wishes to impart to his fellow-creatures is merely what might be called the sentimental part of his doctrine.

He had always recognized, even in the midst of his scepticism, the beauty of the Christian doctrine; he had made his submission to the Orthodox Church—the Church of the great laborious Russian population. But many things were repulsive to him in the Orthodox Church—the strangeness of its dogmas, the spirit of persecution, the approbation given to punishment by death, to war. He felt that the Church was taking for essential what was not essential, and that it neglected what was essential. He read and reread the Gospels.

"The Sermon on the Mount always seemed like something exceptional. I read it more than any other part. Nowhere does Christ speak with more solemnity; nowhere does he give moral rules more clear, more accessible, or which find a greater echo in the hearts of every one. Nowhere does he address himself more to the multitude, to the people. If there are clear and precise Christian principles, it is here that they must be formulated. Therefore I looked for the solution of my doubts in the three chapters of Matthew, v., vi., and vii., and in the Sermon on the Mount."

We cannot follow Tolstoi in all his developments. It is enough to say that he finally lands in a doctrine of pure non-resistance: "We must not resist the wicked." As soon as he perceived this clearly, he found himself happy and at rest.

"From childhood," says he, "I had been taught that the doctrine of Jesus is divine, and at the same time I was taught to respect the institutions which guarantee by violence my security against the wicked. I had been told that these institutions were sacred; that I must resist the wicked; that it is humiliating to give way to him. I was taught to judge and to punish. Then I learned the profession of arms—that is to say, resistance to the wicked by homicide. The army of which I was a part was called the 'Christophile army,' and the blessings of Heaven were asked for it."

Tolstoi became, in fact, convinced that it is impossible to confess Christ and at the same time to work with premeditation for the organization of property, of tribunals, of States, of armies. The doctrine of non-resistance is no novelty in the United States, where it has been advocated by some of the noblest spirits; but I have not yet seen it carried to such extremes as in the 'Religion' of Tolstoi. He tells us rather amusingly how the two laws—the higher law and the law of the State—often come in opposition.

"One of these last days I was going toward the Borovitzky gate. Under it stood an old lame beggar, with his head tied up with a rag. I took out my purse to give him a little money. At the same instant I saw coming from the Kremlin, with rapid strides, a young grenadier with a red face, a martial air, and the sheepskin furnished by the State.

"The beggar, having seen the soldier, rose in great fear and ran, as fast as his feet allowed, toward the Alexander Garden. The grenadier, after running awhile, stopped, exclaiming against the beggar, who had established himself under the gate notwithstanding the rules.

"I waited for the grenadier. When he was near me, I asked him if he knew how to read:

"'Yes, and why?'

"'Have you read the Gospel?'

"'Yes!'

"'And do you remember the verse, "And who shall feed the hungry," etc.?' I cited the passage. He remembered it and heard me till the end. I saw that he was uneasy. Two passers-by had stopped, and were listening.

"The grenadier seemed annoyed at the idea that having done his duty, having chased the passers-by from a place where it was forbidden to stop, he was in the wrong. He was looking for an excuse. Suddenly his eye brightened up, he looked at me over his shoulder, as people do when they depart.

"'And the military regulation, do you know it?' said he.

"I said, 'No.'

"'Well, then, you have nothing to say,' observed the grenadier, with a victorious movement of his head, and, putting his sheepskin back, he proudly walked away to his station.

"He is the only man whom I have met, who has resolved with a true logic the eternal question which rises amid our social state, and which rises before every man who calls himself a Christian."

You see at once whither Tolstoi tends. He shuts up all the tribunals: "Judge not that ye be not judged." He condemns all executions, all modes of coercion, all national hatreds, all wars; he professes horror and contempt for all the professions—military, diplomatic, and political—which serve to keep men divided. Tolstoi considers all men as having a debt which they will never be able to pay. This debt binds them to all the generations of men, past, present, and future; all they can do for the others goes into a sort of sinking-fund. The true life is the life which adds something to an immense capital, belonging to humanity itself.

This doctrine leads him to what the Russian Nihilists have called simplification. He describes with great eloquence life in the great cities, the perpetual struggle, the sufferings of so many men whom he calls "the martyrs of the doctrine of the world." In his eyes, the first condition of human happiness is perpetual contact with nature. Man must, like a plant, enjoy the sun, the fresh air, the spectacle of the earth.

"The victims of the world see nothing but stones and wood; they live in an artificial light; they hear nothing but the sound of machines, of guns, of instruments of music. They breathe distilled perfumes and the smoke of tobacco; they eat, thanks to their weak stomachs and depraved taste, unnatural aliments. When they go from one place to another they travel in close boxes. In the country, in foreign lands where they go, they always have under their feet the same tissues, the same stones; the same draperies hide from them the light of the sun. The same valets, coachmen, and porters intercept all communication with men, with the earth, with vegetation, with animals. As prisoners sometimes console themselves with a bit of grass which grows in the court of their prison, with a spider or a mouse, these people console themselves sometimes with faded plants, with a parrot, a pug dog, a monkey, which they cannot even feed themselves."

One of the conditions of happiness is work—not only intellectual work, but physical work also, which procures appetite and quiet sleep. A third condition is family life; the fourth is an affectionate intercourse with all men. Tolstoi tries to show that those who are sometimes called the "happy few" are deprived of all these elements of happiness, at least in great part. He would bring man back to a certain sort of Eden, where there would be a perfect simplicity, where man would be nearer nature, where each man would do some work with his own hands.

It is certainly singular that this tendency is common to all Russian writers. It springs from a sentiment of love for a great people only just emerging from a state of slavery; and at the same time from a great dislike of the old slave-masters, of the court, of the functionaries, of the men who look on the Russian people as a natural prey. Having to choose between the gilded functionary and the humble, they take the part of the muzhik. The more refined they are, the more they show their contempt for what is the object of the ambition of the upper class, living under the rule of the *tchinn*. Ivan Turgeneff, Dostoyevsky, Tolstoi are all obeying the same tendency which we find already in Pushkin. Nobody, however, had hitherto tried to give to these vague sentiments the form of a religion. It remained for Tolstoi to do so. While we admire the generosity of his sentiments, we cannot but feel that he has placed his Eden in the world of fancy and of imagination." The world will never be what he dreams it to be; and it is not safe to present to nations an ideal which they cannot possibly attain. Many will find nothing in his 'Religion' but weapons against established governments and laws, and even against the rights of property.

Correspondence.

VANDALISM IN THE YOSEMITE REGION.

To the Editor of The Nation:

Sir: I have just returned from a visit to Yosemite Valley, and am anxious to call your attention to the fires which are raging and working untold damage in the surrounding forests. In their anxiety to grow food for their sheep while passing through these forests, the herdsmen have set light to the fallen trees and brushwood all over the hills, hoping that grass will

spring up in the spaces thus cleared, by another year. The flames, fanned by a gentle breeze and fed by an abundance of the dryest fuel, take everything before them, and spread ruin over many a hundred acre. In spite of notices advertising the penalties for wilful damage in the woods, fires have been lighted in the very midst of the Mariposa Big-Tree Grove, and the Grizzly Giant, one of Nature's most wonderful gifts to the people of the United States, has suffered severely.

Unless more care is taken of these beautiful trees, in a few years they will be known only to memory, and one of the most heavenly places on earth will be robbed of its charm.

Yours very sincerely,

CYRIL EDWARDS.

THE PALACE HOTEL, SAN FRANCISCO, CAL., September 26, 1885.

THE DELIMITATION OF DELAWARE BAY.

TO THE EDITOR OF THE NATION:

SIR: The reference of Professor Agassiz, in his recent letter on the Coast Survey, to the real value, even from a practical point of view, of good work of a highly theoretical kind, done by a scientific bureau, has a timely illustration in the way a controversy between the authorities of the States of Delaware and New Jersey has within a few weeks been adjusted by the adoption of the line from Cohansey Light to Bombay Hook Point, as the division line between Delaware River and Delaware Bay.

Professor Henry Mitchell, whose modest official title is that of Assistant in the Coast Survey, but who, in studies of tidal action, ranks with the foremost men of science, made in 1883 an elaborate report on "The Estuary of the Delaware," based upon a new survey. When Mr. Stockton, the Attorney-General of New Jersey, submitted the question in dispute to Professor Hilgard, the Superintendent of the Coast Survey, Professor Hilgard referred the subject to Professor Mitchell, who promptly gave the line from Cohansey Light to Bombay Hook Point as the head of the bay. This decision, confirmed by the authority of Professor Hilgard, was communicated by Mr. Stockton to Mr. Paynter, the Attorney-General of Delaware, and was accepted by him as conclusive upon the point in controversy. Mr. Paynter, in his letter to Mr. Stockton, says:

"Like yourself, I regard the charts of the Coast Survey, or the opinions of officers and scientists connected with this branch of the Government service, as of the highest authority. The letters of Superintendent Hilgard and Professor Mitchell (copies of which you kindly furnished me) seem conclusive on the point; and their reasons are especially cogent, not only from the fact that they are founded on the formation of the banks and shores, as well as the bed of the waters, but also the fact of the opinions emanating from such distinguished gentlemen, who have made the estuary of the Delaware and of other rivers a special study, entitles them to the highest consideration." W.

BOSTON, September 29, 1885.

THE ASTOR DECISION.

TO THE EDITOR OF THE NATION:

SIR: Mr. Warren's letter in No. 1054 of the *Nation* (September 10), in regard to the tax he was made to pay on his professional books, touches a point on which large numbers of Americans feel immensely ashamed of their country. I have gone through customs examinations in England, Switzerland, Germany, Austria, Italy, Greece, and Belgium, and all of these put together did not display the pettiness and meanness that we have to endure when we land in this rich and free country. I was in Europe at the time of the Astor decision, and supposed that this case would remove difficulties out of the way of people who have little or nothing to bring in. I landed from the *Britannic* August 22, and declared to the officer on board that so far as I knew I had nothing dutiable; and I do not believe *now* that I had. But the examining official on the New York dock got hold of a remnant of three yards of silk, left over from the original twenty yards bought for a dress pattern, because the London dressmaker cut economically. According to the Astor decision, I do not see that any duty would have been rightly exacted, even if I had brought the twenty yards with me not made up at all. The appraiser was perfectly satisfied that I was a professor in an American college, and that the dress and remnant belonged to my wife, who was with me; and yet I had to pay a dollar a yard on the three yards of silk. Besides that, I had a few small mementos that I expected to give to friends; still, they all belonged to me, having been purchased with my money. I declared their value at about $35, and paid about $13 duty.

The matter is small in itself, but large in principle and application. Can you tell me (and many others) whether Mr. Warren and I were justly made to pay duty or not? The officials no doubt find the majority of their passengers in a great hurry, and so the latter can all the more easily be imposed on.

I venture to say that our picayune and contemptible method is breeding an increasing number of free-traders in the United States—and that's one consolation, at least.—Respectfully,

A. H.

POSTAL SAVINGS BANKS IN THE SOUTH.

TO THE EDITOR OF THE NATION:

SIR: If you can pardon further reference to postal savings banks, the writer would like to suggest a few facts which might not be out of place in that connection. It is admitted such banks have proved beneficial in other countries, but for some reason we have failed to properly appreciate their advantage at home. The cities and towns of our country have, in the majority of cases, private savings banks, but it is in the agricultural sections that some such system is needed. The North and West are much more advanced in banking facilities of every kind than the South, and it is the latter section especially that would unquestionably be benefited by postal savings banks. In the South, which is in the main an agricultural community, the towns are few and far between. The cross-road store, post-office, and blacksmith shop constitute the chief settlements one meets in a journey of ten or twenty miles, and as for a savings bank, fifty miles would be within the mark.

The argument might be made, that the establishment of banks should be left to private enterprise, and not depend upon public or Government aid. While this argument is true, it must be remembered that much of the Southern country has more than a moiety of negroes, who form such a weight in the public scale as to bear down much enterprise which should be expected from the population, all things being equal. The negro is in a state of advanced childhood, and lacks those qualities which are necessary to produce material advancement. He is extravagant and prodigal, and seems to have little idea of accumulation. Much of this is due to the fact that he has no opportunity presented to save his earnings. The writer was struck by the absence of such facilities, during a recent visit to a Southern agricultural section, and the necessity for some such plan as the one advocated at once suggested itself. The Southern people, however willing, are unable to afford these advantages, and need outside help in this, as in the matter of public education. The negro is here, and has come to stay. That he needs assistance, none deny. He is still dependent, and the best way to help him to become independent is to advance his material condition. Wealth is a powerful agent to inspire respect, and savings banks exert no small influence in its accumulation. The negro needs more practical economy and less sentiment: having learned how to vote, he remains to be taught how to save.

The establishment of postal savings banks should be confined to non-Presidential offices, so that the usefulness of private savings banks should not be restricted. The townsman can take care of himself, but the country laborer needs assistance. The fear expressed that postal savings banks might strengthen the national Government is groundless. The trouble anticipated that such banks may become a burden when the national debt is extinguished, is a trouble that doubtless will be met when that time arrives. "Sufficient unto the day is the evil thereof." GEO. FREDERICK GEPHART.

BALTIMORE, MD., September 30, 1885.

INSURANCE OF BANK DEPOSITS.

TO THE EDITOR OF THE NATION:

SIR: The idea of securing bank depositors against the loss of their deposits (editorially considered in *Nation*, No. 1057), is an excellent one. But, while allowing Mr. Flannagan great credit for bringing forward the subject, I believe the object can be attained in a better way than he proposes by a *mutual* deposit-insurance company, composed of such banking associations as would unite for the purpose. A premium of a certain percentage on average deposits would be paid by each bank desiring insurance. The investment of premiums, payment of losses and return dividends would be managed in much the same way as in a mutual fire-insurance company. The principal advantage of this method would be a more equitable division of losses, the premiums being based on deposits, the subject of the insurances, and not, as Mr. Flannagan proposes, on circulation, which has no relation whatever to the thing insured. Incidentally, other advantages would be obtained, as, for example, a thorough examination of the affairs of each insured bank at frequent intervals. The present system of Government inspection is notoriously insufficient, but an insurance company such as I have proposed would, for its own protection, establish the most thorough methods of inspection and audit that could be devised.

It may be urged as an objection to this plan that each bank would be at liberty to insure or not, as it preferred. This, to some extent, is true, but it is not a serious obstacle to the success of the plan, for the improved stability of the banks belonging to the insurance company would attract depositors so powerfully that all first-class banks would eventually be compelled in self-protection to offer the same security to their depositors; and the depositor would soon hold a bank that did not insure its deposits in much the same estimation that a merchant does a customer who carries no fire insurance on his property.

The plan I have suggested seems to me not only feasible, but equitable, simple, and comprehensive. Nevertheless, I do not offer it as conclusive, and I hope the subject, important as it is, will have such discussion as will evolve the best plan obtainable. W. P. J.

PHILADELPHIA, October 1, 1885.

TO THE EDITOR OF THE NATION:

SIR: Aside from the questions as to its practicability discussed in your last number, the plan proposed by Mr. W. W. Flannagan for protecting the depositors in national banks, by converting the tax on bank circulation into a special fund for the payment of claims against failed banks, and subrogating the United States to all the rights of the creditors against the assets and the

liabilities of the shareholders, seems to be open to serious objections.

That the total amount of losses on claims against failed banks since the national banking system went into operation has been only $9,524,553, is certainly due, in part, to the watchfulness of depositors, and their concern to place their money in the safest banks; but Mr. Flannagan's estimate of the amount that would be required, from the Government, under his plan, for the payment of these losses, seems to be based upon the erroneous supposition that depositors could be relieved from all concern and responsibility, and all apprehension regarding the safety of their money, without increasing the amount of losses.

The best plan for the protection of depositors against loss is the one which, by increasing the watchfulness of individual depositors, reduces that loss to a minimum, and distributes that minimum equitably among those who have enjoyed its protection. A plan for the liquidation of claims against suspended banks by a tax on deposits, levied for that purpose, would, by throwing the loss, not upon the Government, by reducing its revenues derived from the national banking system, but upon those who enjoy its protection, where it properly belongs, meet your objection to Mr. Flannagan's plan; and the distribution of this loss among the banks in proportion to the amount of their deposits, instead of the amount of their circulation, would remove the objection of banks which issue circulating notes to the adoption of the plan suggested by Mr. Flannagan. In consideration of the protection and security furnished by such a system, the additional tax would be as readily borne as the premium of insurance.—Very respectfully,

L. H. POOLE.

WASHINGTON, D. C., October 3, 1885.

PROHIBITION AND THE CONSTITUTION.

TO THE EDITOR OF THE NATION:

SIR: On Monday last there came up for hearing before Judge French, of the second circuit of the seventh judicial district of this State, a petition asking the removal to the Federal courts of certain liquor causes then pending, on the ground that questions were involved in these causes requiring a construction of the Fourteenth Amendment to the Constitution of the United States. The following are extracts from the opinion rendered on the hearing:

"Our present prohibitory liquor law, as amended July 4, 1884, by the acts of the Twentieth General Assembly, prohibits the selling or keeping for sale of intoxicating liquors as a beverage, and also prohibits their sale for other purposes except by persons who have obtained special licenses for that purpose, and given the heavy bond required by law. Persons who have obtained such licenses are required to make reports to the proper authorities of their sales, and are placed under other restrictions. The mere possession of intoxicating liquors, by a person not having a license to sell, in his store or warehouse is made presumptive evidence of guilt on his part. The keeping of liquors for sale makes the building where it is sold and the furniture, fixtures, vessels, and contents used in business a nuisance. Suit in equity may be brought by any citizen of the county to have the nuisance abated and to enjoin the defendant from continuing it. To abate the nuisance the furniture, fixtures, and liquors used for the purpose prohibited by statute might be destroyed, or sold to pay the expenses of abating the nuisance. No distinction is made between ale, wine, and beer and furniture and fixtures in use in the sale of the same which were owned and were lawful property prior to July 4, 1884, and ale, wine, beer, furniture, and fixtures which have been made or brought into the State since that time. The abatement of the alleged nuisance maintained by the defendant through the medium of this suit will cause the destruction of what was lawful property and owned by him prior to July 4, 1884, as well as what was illegal property prior to that time; and the injunction will with equal force prevent the sale of either kind of property. No distinction is made in the statute between the two kinds of property, and none is made by the plaintiff's petition.

"Under a similar statute in New York it was adjudged that such a statute was in violation of the constitutional inhibition against taking property without due process of law, because it made no distinction between property owned prior to the enactment and property manufactured or brought into the State subsequently (Wynehamer vs. People, 13 N. Y., 391)."

After citing the further cases of Bartemeyer vs. Iowa (18 Wall., 129), and Beer Co. vs. Massachusetts (97 U. S., 25), the opinion concludes by ordering each of the aforesaid causes, in which the amount in controversy exceeded $500, to be transferred to the Federal courts.

In a contribution to the *Nation* (vol. xxxviii, p. 381) made by the writer over a year ago, attention is called to the point here decided and to the authorities on which the decision is based. A good defence under these authorities can certainly be made to any prosecutions by which rights of property in liquors, acquired *before* the prohibitory law was passed, are sought to be destroyed. Indeed, by slight diligence on the part of the liquor-dealers, the entire question of the constitutionality of this law might have been brought before the Supreme Court of the United States months since, and a decision made sure of which would forever set at rest many vexed questions of property rights as affected by the police power. This power is confessedly a great one, but it has limits. What these limits are, moreover, in the case of vested property rights, is, it would seem, sufficiently certain. Bartemeyer vs. Iowa and Beer Company vs. Massachusetts, both emphatically reassert the familiar principle that vested rights of property cannot be destroyed without due compensation for losses to be entailed thereby first being made. Nor is there the least danger in this principle to the sovereignty of the State or to the public safety. For what possible traffic is there which, under and by virtue of this principle, cannot be suppressed *at once*, on the making of due compensation?

But it may be said, the Supreme Court of the United States, in the recent cases of Boyd vs. Alabama (94 U. S., 645) and Fertilizing Company vs. Hyde Park (97 U. S., 659) have held that the police power may be so exercised as to impair the obligation of a contract, and still not be unconstitutionally exercised. True, but mark the reason for this holding. If the police power were never, under any circumstances, permitted to impair the obligation of a contract, then, under some contract so providing, a certain line of business could be carried on for twenty, fifty, or a hundred years. And this line of business could thus be carried on in spite of the fact that it had become an insupportable nuisance to the entire community round about. It could not be stopped short of the expiration of the time named in the contract. To hold, therefore, that the obligation of a contract can never be impaired by the police power would be to violate right reason and public policy. But, under the principle that vested property rights cannot be destroyed without due compensation first being made, any traffic or line of business which has become a nuisance can be stopped instantly, and the rights of both the individual and the public still preserved. For, to the individual whose business is destroyed, compensation is made; and from the public the burden of a nuisance is lifted.

That there is force in this distinction may be seen from the fact that, in Beer Company vs. Massachusetts, the court, while sustaining the constitutionality of a law prohibiting the sale of malt liquors by the Boston Beer Company in the State of Massachusetts, *despite an unexpired charter granted to said company by the State, authorizing them to manufacture such liquors in all their varieties*—the court, we say, while sustaining this prohibitory law, are careful to add:

"We do not mean to say that property actually in existence, and in which the right of the owner has become vested, may be taken for the public good *without due compensation*. But we infer that the liquor in this case, as in the case of Bartemeyer vs. Iowa, was not in existence when the liquor law of Massachusetts was passed. Had the plaintiff in error relied on the existence of the property *prior* to the law, *it behooved it to show that fact*. But no such fact is shown, and no such point is taken."

IRVING B. RICHMAN.

MUSCATINE, IOWA, September 13, 1885.

Notes.

THE Century Company have in preparation 'The Art of Pheidias,' by Dr. Charles Waldstein.

E. & J. B. Young & Co. announce 'Church Life in Colonial Maryland,' by the Rev. Theodore C. Gambrall; and 'Tiles from Dame Marjorie's Chimney-Corner, and China from her Cupboard,' by F. S. J. Burne and H. J. A. Miles, illustrated.

Charles Scribner's Sons will be the American publishers of Mr. J. C. Rodrigues's collected articles on the Panama Canal, which recently appeared in the London *Financial News*, and attracted much attention from their evident mastery of the subject, and the highly unfavorable conclusions drawn from the mass of statistics presented. The same firm will issue 'The Greek Archipelago, with a Look at Turkey after the War,' by the Rev. Henry M. Field. Their *Bookbuyer* states that Mr. Hamilton W. Mabie, of the *Christian Union*, will write the authorized Life of the late Mrs. Helen Hunt Jackson. The October number of this periodical, by the way, begins a series of carefully engraved portraits of American authors with Mr. R. H. Stoddard's. Mr. Cable's is to follow next month. These portraits are supplementary, and are printed on plate paper.

D. C. Heath & Co., Boston, announce a 'Select Bibliography of Ecclesiastical History,' by John Alonzo Fisher, of Johns Hopkins University.

Ticknor & Co.'s list includes the following works: 'English Home Life,' by the Rev. Robert Laird Collier; 'Japanese Homes and their Surroundings,' by Prof. Edward S. Morse; 'The Olden-Time Series,' compiled by Henry M. Brooks; and 'An American Woman's Life and Work,' a memorial of the late Mary Clemmer, by Edmund Hudson.

A new work entitled 'Natural Theology, or Rational Theism,' from the pen of Dr. M. Valentine, ex-President of Pennsylvania College, is promised by Messrs. S. C. Griggs & Co., to be ready in October. The fifth volume of the series of "Griggs's Philosophical Classics" will be 'Hegel's Logic,' by Dr. W. T. Harris, of the Concord School of Philosophy. It is expected to be in the hands of the printers in October.

The following are additional announcements of G. P. Putnam's Sons: 'Railroad Transportation, Its History and Its Laws,' by Arthur T. Hadley, Commissioner of Labor Statistics for the State of Connecticut, and Instructor in Yale College; 'Evolution of To-day,' a summary of the Theory of Evolution as held by modern scientists, by H. W. Conn; 'Postulates of English Political Economy,' by the late Walter Bagehot, with introduction by Professor Marshall, of Cambridge, England; 'Problems in Philosophy,' by John Bascom, President of the University of Wisconsin; 'Poetry as a Representative Art,' by Prof. George Z. Raymond, of the College of New Jersey; 'Lincoln and Stanton: A Study of the War Administration of 1863,' by William D. Kelley; 'The Origin of the Republican Form

of Government in the United States of America,' by Oscar S. Straus; 'Inquirendo Island: The Narrative of a Voyage of Discovery.'

George J. Coombes will shortly publish a volume entitled 'After-Dinner Stories from Balzac, Done into English by Myndart Verelst, with an introduction by Edgar Evertson Saltus, author of "The Philosophy of Disenchantment," etc.'

Two little books sure to be sought after are the facsimiles of George Herbert's 'Temple,' after a unique copy of the first (undated) impression in 1633; and of Walton's 'Complete Angler,' after the first edition of 1653. The quaint embossed binding in brown and white patterns at once distinguishes these books as antique. The facsimile must be understood as an imitative resetting, supplemented in the case of certain types and ornamental pieces by photographic reproductions. In both cases the result is very successful. Mr. Grosart furnishes a brief introduction to Herbert; but a better one is Walton's own in the companion volume. The American publishers are Baker & Taylor.

White, Stokes & Allen issue what they call a Favorite Edition of Fielding's Novels, in four volumes. The external appearance is sightly enough, and the typography is good; but a dearer price would have to be asked for better paper and a clearer impression.

The second series of 'The Good Things of *Life*' (White, Stokes & Allen) has a very even excellence. Mr. F. G. Attwood's designs, as usual, supply the humor which needs no legend.

J. T. Headley's 'Mountain Adventures,' Flammarion's 'Wonders of the Heavens,' and Viardot's 'Wonders of Sculpture,' all illustrated, are the new issues of the cheap edition of the "Wonders" series (Scribners).

We are glad to observe that a second edition of that well-conceived little politico-economic textbook, 'Lessons on Practical Subjects for Grammar-School Children' (Boston: Little, Brown & Co.) has been called for.

The appendix to the new edition of the late Mrs. Helen Jackson's 'Century of Dishonor' (Boston: Roberts Bros.) is numbered xv, and consists of the report made by the author and by Abbot Kinney, acting as special agents under the authority of the Indian Commissioner, on the condition and need of the Mission Indians of California. It bears date July 13, 1883, and possesses, besides its intrinsic importance, a special interest as the direct fruit of the work, first published in 1881, of which it now forms a part.

Mr. Clarence Deming's 'By-Ways of Nature and Life' has very properly been reissued by the Messrs. Putnam as part of their "Traveller's Series." The chapter on the "Zoo" and Jumbo is timely.

Carl Schoenhof, of Boston, has just published a volume that will be welcome to French instructors not only in scientific schools but in colleges generally. 'French Prose of Popular Science and Descriptive Literature,' edited and annotated by Prof. Jules Luquiens, of the Institute of Technology, is a collection of eleven long extracts from the best authors. Each extract is complete in itself, so that the volume has nothing of the fragmentary character of a Reader. Prof. Luquiens has added about eighty pages of notes, short, clear, and to the purpose.

In spite of the very laudatory article in the *Revue Critique* upon the 'Grammaire élémentaire de la vieille langue française' by L. Clédat (Paris: Garnier; Boston: Schoenhof), the book is not quite what it should be. It is elementary to a puerile degree for any one who would think of studying Old French, and very disappointing when it tries to give the results of modern scholarship. But it is better than Brachet's 'Grammaire historique,' and until an historical French grammar that deserves the name is published, it is the best guide that a beginner can find for the study of Old French.

Every admirer of Heine knows how unconscionably dear his works are. The copyright on these expires in January next, and doubtless many a German publisher has laid his plans to bring out a cheap edition by that date. Meantime Hoffman & Campe, of Hamburg, are shrewdly forestalling this movement by issuing a cheap "library edition" in twelve volumes 12mo, cloth. The first is the favorite 'Buch der Lieder' (New York: Westermann). The type is large enough, and the paper a dull white—conditions favorable for reading by lamplight.

The second of the "Military Monographs" published for the Military Service Institution by G. P. Putnam's Sons is entitled, 'Killed by a Brother Soldier,' the subject of General J. B. Fry's narrative being the shooting of General Nelson by General Davis at Louisville in 1862. The *Journal* of the above-named Institution for September has for its most interesting paper "Some Glances Backward," by Captain Edward Field, who also gives a glance forward, and makes a suggestion which some magazine editor might profit by: that the great "Indian fighters" yet living should be got to record their experience in battle with every variety of tribe and under all sorts of conditions, for the benefit of officers and men who may hereafter be involved in like conflicts. In Colburn's *United Service Magazine* for April, May, and August, Mr. H. Y. Powell has articles on our Naval War of 1812, based on James's and Cooper's histories, "with various fresh particulars from British and American authorities not hitherto collected."

Mr. G. Brown Goode's "Biography of the Halibut" in the October *American Naturalist* is very good reading, and contains much curious information about a fish whose extinction on this coast at no distant day is confidently predicted. We remark also Dr. W. Matthews's "Mystic Dry-Paintings of the Navajos"—unique sand pictures, made after traditional patterns, and destroyed as soon as completed; and Mr. John T. Campbell's "Traces of Prehistoric Man on the Wabash."

Prof. David P. Todd's account of the Lick Observatory in California, with illustrations, has been reprinted from *Science* of September 4.

Not long since we noticed in these columns the drawing of a typical coral atoll which serves as a frontispiece to the Report of the United States Solar Eclipse Expedition to the South Pacific Ocean (*Nation*, March 26, 1885, p. 261), and spoke of its excellence. Independent testimony to this is at hand in the letter of a gentleman long resident in Tahiti, who has just received the publication in question. He says: "You will allow me, as one who has spent so many years in the Islands, to express my delight at the life-like picture which is given of a coral atoll." Since atolls are so common and have been so much visited, it is somewhat strange that we have had to wait till now for adequate pictures of them.

India and Scotland were the subjects which received the most attention in the Geographical Section of the British Association at its late meeting in Aberdeen. The opening address of the President, Gen. J. T. Walker, was an account of the Indian Survey, of which he was for many years the head. This survey has for its end far more than the collection of mere scientific information, as was shown by Colonel Barron's paper on the "Cadastral Survey." In addition to mapping the areas of villages and fields on a scale of sixteen inches to a mile, it defines the rights and gives the castes of landlords and tenants for each field. It also collects information regarding the rents paid, the crops grown, the nature of the soil, and the means of irrigation. A year's work ranges from 650 to 800 square miles, comprising sometimes over a million of fields. Mr. Everard im Thurn gave an interesting account of Mt. Roraima in Brazil, which, previous to his ascent last December, was deemed inaccessible except by balloon. On reaching the summit he seemed to be entering a "gallery of countless vast stone monsters," the result apparently of the action of water in wearing away the surface of the rock. The Indians term it, with as much truth as poetry, "the ever fruitful mother of streams," for, "starting with a wonderful leap of 2,000 feet down over its cliff, were streams which flowed in various directions to swell with no inconsiderable contribution of water the Orinoco, the Essequibo, and the Amazon, the three chief river systems which water the greater part of the Atlantic side of the continent of South America." Among other subjects treated were recent explorations of New Guinea, an Antarctic expedition, and "Geographical Education."

—The *Century*, in closing its very successful fifteenth year with the October number, announces a continuation of its War Papers, serial fiction by Mrs. Foote, Howells, and Cable, and serial articles upon Christian Unity, Sidereal Astronomy, and Manual Education, besides the usual repertory of travel sketches, short stories, and miscellanies. The present number has a continuation of the rather dry account of the partially unexplored River Yukon in Alaska, and a sketch of the growth of independent journalism as it was illustrated by the career of Samuel Bowles. Mr. Howells takes us with too much haste through Pisa, Lucca, Pistoja, Prato, and Fiesole. The topic of leading interest, however, is General Grant, regarding whom there are four articles and two poems and some "Memoranda." The military papers, in fact, all relate to General Grant, and are by writers who, at one time or another, were members of his personal staff. The article upon the Riverside Park also, though written before the selection of the burial-place, adds to the memorial character of this issue of the magazine. General Badeau gives a connected account of the closing period of Grant's life from the time of the accident which lamed him, with full details of the subsequent sufferings from the fatal disease in his throat. He also tells the story of the Grant & Ward bankruptcy, and its terrible effect upon the sensibilities and the vital forces of the General. Considering the delicacy of the subject, it is high praise to say that its handling is judicious and skilful. The articles by Generals Porter and Wilson are more directly connected with the war period of the General's life. Perhaps no two persons would in such cases agree in drawing the line between what is to be said and what omitted, but in General Wilson's article we should feel like objecting to the taste of the opening story of General Sherman, and would decidedly protest against the probable accuracy of the closing one in regard to Mr. Lincoln. The "Memoranda" contain General Buell's categorical denial of the accuracy of the story, often told, of his asking Grant at Shiloh if he had considered the means of retreat, and of the latter's reply. A daughter of General Heintzelman produces letters of her father showing that in the retreat from the positions on the Chickahominy after the battle of Gaines's Mill, he regarded himself as acting strictly in accordance with the letter and spirit of orders received by him, and was confident, also, that his movement was in itself right. The new evidence incidentally brought out in the "Memoranda" from time to time is no small addition to the value of the War Papers as a series.

—Apropos of a recent criticism on Mr. Howells by a correspondent in these columns,

Mr. J. F. Kelly writes us from London as follows:

"The MS. of Leopardi's unpublished translation of, and commentary on, Porphyry's 'Life of Plotinus' is in the Biblioteca Nazionale at Florence. It is entitled: 'Porphyrii de Vita Plotini et ordine librorum ejus Commentarius Græce et Latine, ex versione Marsilii Ficini emendata. Græca illustravit et Latina emendavit Jacobus Leopardi' (1814). F. Cruzer has made use of it in the 'Addenda et Corrigenda' (vol. iii, pp. 499-502) to his edition of Plotinus (Oxford, 1835). Those of your readers who are interested in Leopardi's philosophical ideas should not fail to read M. F. A. Aulard's 'Essai sur les idées philosophiques et l'inspiration poétique de Giacomo Leopardi' (Paris, 1877)."

—More and more self-assertion is showing itself in the French of Canada. A fresh illustration just now comes to hand in a pamphlet of twenty-six pages on 'La Situation de la Langue Française au Canada.' The author is Benjamin Sulte, of Ottawa, descended from ancestors famous under the old régime, and well known by various works on Canadian annals. In his volume on Three Rivers, 'Chronique Trifluvienne,' he was the first to prove that the discovery of Wisconsin by Jean Nicolet must have been as early as 1635. This last brochure was suggested in conversation with journalists visiting him from France. Sulte, believing with Burke that language, while lighter than air, is yet a bond stronger than iron, holds that the French ought to be guarded by every Canadian as the apple of his eye. He calls it a sentinel over a sleeping host, so that if he perishes they are likely to fall with him. He tells the story of Canadian struggles, not without success, to prevent English from being declared the official language, or from having any superiority in legislature or in courts. He claims that, Canadian literati surpassing their conquerors as the Greeks did the Romans, the literature of the New Dominion is French, not English. Citing sundry prophecies downward from 1760, that the French language, as that of an inferior race, must die out of Canada, he points with pride to a population of 1,800,000 French-speaking people in British America and the United States. A language that has thriven so well among domineering conquerors who would gladly have blotted it out, M. Sulte is sanguine his compatriots will never let die. But his main contention is that it deserves to survive no less than any other dialect whatever of all those which arose from the ruins of Roman Gaul. In its basis Norman, this idiom was eclectic from the peculiarities of other Canadian colonists, very much as a composite photograph combines the effects of a dozen portraits. It was the French as it flourished in the age of Louis XIV. This speech, taught to the *habitans* by well-cultured priests, monks, nuns, officials, and adventurers, has come down intact to the present day, and is homogeneous from New Orleans to Gaspé and Manitoba. It is purer French than the Parisian, for it is smutted with no argot. It is deformed by no Breton or Gascon provincialisms. It has fewer Anglicisms than prevail in France itself.

—M. Sulte brings forward La Potherie, Charlevoix, Le Clerc, and many other witnesses to support his views. Noteworthy is this testimony from the Abbé d'Olivet: "On peut envoyer un opéra en Canada, et il sera chanté à Québec note pour note et sur le même tone qu'à Paris, mais on ne saurait envoyer une phrase de conversation à Bordeaux et à Montpellier et faire qu'elle y soit prononcée syllabe par syllabe comme à Paris." M. Sulte exults in French still holding its own as the cosmopolitan dialect of diplomacy, and alludes to Bismarck addressing an official note to the Czar in German, and receiving an answer written in Tartar. On the whole he comes to the self-satisfying conclusion that Canada is more French than France, and its vocabulary much superior to a Parisian's. In the matter of *accent*, however, M. Sulte confesses a decided Canadian peculiarity. But he reminds us that Paris, and every French province as well, has an accent of its own, and he claims the same right for the American French. Yet while arguing that the Canadian accent, so far as not taught by English teachers, is no great remove from the ideal of the French Theatre in the seventeenth century, he concedes that it is monotonous, and so lacks the sprightliness of old France. All in all, he pronounces American French no patois or jargon, as slanderously reported, but a better copy of the European than the Yankee dialect is of English, and hence a speech no Frenchman can blush for as John Bull must for the eccentricities of slang in his American cousins.

—The 'Statistische Handbuch für Elsass-Lothringen,' just published by the Statistical Bureau of the Reichsland Ministry, offers an instructive insight into the changing nationality relations of that interesting division of the German Empire. Of the communes of the whole territory, 72 per cent. belong to the area of the German language, 22 per cent. to that of the French, and 4 per cent. to the mixed (fractions omitted). But of the three districts, Lower Alsace has almost exclusively German communes, Upper Alsace a very large proportion of such, but Lorraine somewhat less than half. Counting the population, however, without regard to communities, even in Lorraine the German element strongly preponderates. Immigration and emigration effect here striking changes. In 1871-75 the total population of the Reichsland was reduced from 1,517,000 to 1,499,000, owing to a heavy French exodus, from patriotic motives; in 1876-80 it rose to nearly 1,528,000, immigration from Germany more than compensating for the loss from emigration. The largest loss was in youths approaching the age at which they would be liable to military conscription. Emigration and immigration affected most strongly the capital of the Reichsland, Strassburg, the latter exceeding the former by 10,000. The emigrants were mainly Catholics, the immigrants mainly Protestants. In Lorraine the Protestant population, numbering only 15,000 in 1871, had doubled in 1880. The number of Jews was slightly decreasing. In the public schools the Protestants were represented in proportions far exceeding their numbers. Although in 1880 they did not comprise quite one-fifth of the total population, they were nearly as 2 to 3 in the higher schools. Immigrant pupils were there almost exactly half as numerous as native Alsace-Lorrainers. This extraordinary disproportion is owing in part to the very frequent sending of French boys to schools in France. As probably the most promising boys are sent to French institutions, this circumstance also explains in part the inferior standing of the native, and chiefly of the Catholic, pupils in their respective classes. In the periodical press of the Reichsland, the German and French elements appear in more natural proportions to the population. Of 118 periodical publications, 68 appeared in German, 25 in French, and 25 in both languages. Only 30 antedated the German conquest.

—In Prof. A. E. J. Modderman, whose death was recently announced, Holland loses her most eminent criminalist and most popular statesman. Professor Modderman's life was almost entirely devoted to the reform of Dutch criminal law, which, till a short time ago, was based, in the main, on the Code Napoléon. His thesis, on taking his degree, demonstrating the necessity of a national penal code, attracted so much notice that shortly afterwards he was appointed professor of criminal law, first at Amsterdam and then at Leyden. In 1870 he was also made secretary of the committee appointed to carry out his idea of a national code. When in 1879 the Cabinet d'affaires under the premiership of Van Lynden was formed, the portfolio of Justice was offered to Modderman and accepted by him, principally in order to defend before the Legislature the code drafted by the committee of which he had been the most active member. When a comprehensive work of this kind is submitted to an assembly of which the majority are lawyers, it happens but too often that the unity and system of it are destroyed by the abuse of the right of amendment; but Modderman's personal magnetism was such that he carried the Code through without any important change. The new Code gave a great extension to the system of solitary confinement: it was therefore necessary to defer its going into effect till the new prisons should be built, and also till the other Codes were modified, so as to be in harmony with the new provisions as to criminal law. But unfortunately the ministry fell shortly afterwards, party strife broke out with new force, the work of legislation was stopped, and the new Code has not yet been tested by actual experience, although the prospects are now that it will go into effect within a short time. By all competent judges, not only in Holland but in France, Germany, and Italy, it is conceded to be, both on account of its systematic arrangement and especially on account of its clearness of expression, one of the most remarkable enactments of modern times. Only a few months ago Professor Modderman was appointed a judge of the Court of Appeals, and if he had been spared, he would have had the crowning satisfaction of applying and interpreting the work which he might justly have called his own.

GARRISON.

William Lloyd Garrison. 1805-1879. The Story of his Life, Told by his Children. Vol. I.—1805-1835. Vol. II.—1835-1840. The Century Company. 1885. 8vo, pp. 522, 480.

A MUCH-ABUSED rather than much-discussed character stands here thrown freely open for inspection. The orthodox clergy, who have had most to do in blackening it, have made their censure retroactive, covering with their *odium theologicum* the whole of a career which only in its later stages united them in professional opposition. This biography, tracing the ancestry, boyhood, training, and adult development of Mr. Garrison in strict chronological progression to the close of his thirty-fifth year—with a wealth of documentary evidence, much of which has never before been published—now for the first time enables the man to be seen in his true light. In so doing, it unavoidably relates the history of the anti-slavery movement of which he was the founder. All his prominent associates figure on the scene and speak in their own persons. One finds cited, more or less *in extenso*, manuscript letters from Gamaliel Bailey, the Benson brothers, George Bourne, James Boyle, Arnold Buffum, Charles C. Burleigh, Maria Weston Chapman, David Lee and Lydia Maria Child, John A. Collins, Abraham L. Cox, Prudence Crandall, Samuel Fessenden, James Forten, James S. Gibbons, William Goodell, Angelina and Sarah Grimké, Robert B. Hall, Francis Jackson, James C. Jackson, Simeon S. Jocelyn, Oliver Johnson, Abby Kelley, John Kenrick, Isaac Knapp, Ellis Gray Loring, Samuel May, Samuel J. May, Lucretia Mott, Orson S. Murray, Amos A. Phelps, Wendell Phillips, Robert Purvis, Edmund Quincy, N. P. Rogers, Samuel E. Sewall, Arthur and Lewis Tappan, Anne Warren Weston, J. G. Whittier, Nathan Winslow, Elizur Wright, and Henry C. Wright. Add Mr. Garrison's British coadjutors—W. H. Ashurst, John Bowring, Thomas Fowell Buxton, James Cropper, Elizabeth Pease, Charles Stuart,

George Thompson, and Richard D. Webb—whose inedited letters have likewise been used for this biography—and still we have not half enumerated the *dramatis personæ;* nor all of the most important, for the manuscript collection available was a chance-medley, no man having done less, systematically, to pave the way for his biographer than Mr. Garrison. His own letters are naturally very numerous, and, being largely quoted along with his speeches and his articles in the several newspapers which he edited, afford an opportunity of comparing his public with his private utterances. The consistency of these is unmistakable, and together they illustrate most strikingly the *measure* of his language.

This language was, from the outset of his anti-slavery career, condemned for its "harshness," but it was always scrupulously weighed and adapted, and therein lay its effectiveness, since it could not be confounded with mere abuse. The charge is again and again met in these pages by Mr. Garrison himself, and it is made clear that the real ground of offence—in him as well as in his colleagues, not a few of whom easily surpassed him in "harshness"—was the abolition *doctrine*, and not the phraseology with which it was advocated. Deaf ears did not wish to hear the truth about the national sin and the national danger. His voice reached them as no other had done, even when, as in the case of Bourne, the harshness was greater and the doctrine of immediate emancipation the same. "I will be heard," said the editor of the *Liberator* in his salutatory, and he was heard: the means were conformable to the end. Before him, as John Quincy Adams recorded in 1820, there was "a great mass of cool judgment and of plain sense on the side of freedom and humanity, but the ardent spirits and passions [were] on the side of oppression." In Mr. Garrison these qualities were united, while his speech remained truly dispassionate.

We have a test of this in the curious paradoxes that, as persecution increased and involved his own person, he was led the more speedily to the doctrine of Christian non-resistance; and as the churches and the clergy grew more and more openly pro-slavery, he was drawn more irresistibly than ever to the study of the Bible. This ended (toward the close of the present narrative) in his embracing "Perfectionism," as others called it, or "practical holiness," as he termed it—"the doctrine that total abstinence from sin in this life is not only commanded but necessarily obtainable." It was the outgrowth of his reflections on the subject of peace as enforced in the New Testament, and it exacted a total separation of himself from all existing human governments, as being transient institutions based on violence, and destined to disappear on the coming of Christ's kingdom. Whatever may be thought of this doctrine as a working one in our world, it was drawn from the Bible, and was modelled upon the character and teachings of Jesus. In other words, it was a Bible heresy, not an "infidel" one. So was Mr. Garrison's view of the supersession of the Jewish Sabbath, which agreed with Luther's and Tyndale's, though far less rudely expressed. His formula of duty in this regard was "to keep not one in seven, but all days holy."

These heresies, nevertheless, became grounds of division (culminating in 1840) between himself and the clergy and the sectarians, both anti-slavery and pro-slavery; and the breach was completed by a third scandalous mistake in exercising the Protestant right of private interpretation of the Scriptures: Mr. Garrison refused to oppose the speaking of women in public. It seems laughable now, but the feeling excited by the anti-slavery lecturing of the Grimké sisters begot a sham clerical anti-slavery organization in rivalry of the old, which had remained faithful to Mr. Garrison. The controversy marks the beginning of the woman's-rights agitation in this country, and in it also the Liberty Party had one of its roots. The true history of the rise of this political organization will be sought in vain outside of these volumes. The reader will judge whether to have had a hand in laying its foundations is matter for boasting, and whether Mr. Garrison's active opposition to its inception was unnatural, short-sighted, or unjustified by the result.

More searchingly than any similar work, this biography serves as a touchstone to reputations that have been labelled and catalogued and placed upon the shelf. The greatest is liable to be recalled and tried anew by the question, Which side did this man take in the vital conflict between slavery and freedom? A conspicuous example is furnished by Harrison Gray Otis, once a Senator of the United States, a most admired orator, a member of the Hartford Convention, finally, Mayor of Boston. Perhaps, all told, there is more of him in these pages than can be found in any other one place, and upon it posterity is as likely to make up its final judgment of him as upon any other source. Yet he could see nothing in the *Liberator* office but "an obscure hole," and took the lead in that Faneuil Hall meeting for discountenancing the Abolitionists which engendered "the Boston mob" *par excellence* of October 21, 1835. Mayor Lyman, too, a Boston citizen of the best type, with many local claims to remembrance, will probably owe his fame, for better or worse, to the exhaustive account of the mobbing of Mr. Garrison during his term of office, as given in the work before us. The same event is made to cast a side-light even upon Channing's character, and indeed the relations of this divine to the editor of the *Liberator* and the anti-slavery organization will surprise many of his traditional admirers. That downright opponents like Dr. Wayland and Dr. Leonard Bacon fare still more badly at the hands of the documents here mustered, was to be expected.

Next after the Boston mob, the fiftieth anniversary of which is close at hand, the episode of the founding of the American Anti-Slavery Society in 1833 will probably most fix the attention. But, in truth, there was no important gathering or occasion in the period under review from which Mr. Garrison was absent, or concerning which he has not left some description in his familiar correspondence. Thus, we do not know where there exists so full a report of the memorable meeting of the "Seventy Agents" in New York in November, 1836. The burning of Pennsylvania Hall in 1838 is similarly narrated at first hand, while numerous autograph letters epitomize the London World's Anti-Slavery Convention of 1840. A special interest attaches to incidents which are not absolutely new to print, though practically out of sight. Such are the interviews with Wilberforce and Clarkson in England, and with Harriet Martineau in this country; the sittings to the painter Haydon in London; the "temptation" of Garrison by Aaron Burr. When one has turned the thousandth page of the ever-changing story, it seems as if the hero of it were long past his prime. The running-title, however, allots, as we have said, but thirty-five years to the play upon which the curtain drops. More of life has seldom been compressed into so brief a span.

The typography of these handsome volumes, from the De Vinne Press, is beyond praise. The notes and references are abundant if not superabundant. There is a minute index of forty pages. Scattered through the chapters are portraits of Mr. Garrison and his nearest friends, and sundry facsimiles, by which the reader is helped into the very spirit of the time. Among the portraits, which number no less than twenty, and have been engraved (many for the first time) by the best artists of the *Century*, we remark those of Benjamin Lundy, Arthur Tappan, Arnold Buffum, Isaac Knapp, Oliver Johnson, S. E. Sewall, E. G. Loring, S. J. May, Wendell Phillips, Theodore D. Weld, Francis Jackson, George Thompson, Charles Follen, Prudence Crandall, the Grimké sisters, Abby Kelley, Mrs. M. W. Chapman, etc. The whole work is a key to the files of the *Liberator* and to the contemporary anti-slavery literature, including the manuscript sources, which it is announced will be deposited with the Boston Public Library in perpetuity.

MARTINEAU'S TYPES OF ETHICAL THEORY.

Types of Ethical Theory. By James Martineau, D.D., LL.D. Oxford: Clarendon Press; New York: Macmillan. 2 vols., 8vo. Vol. I., pp. xxiv + 479; Vol. II., pp. viii + 539.

ONE must speak hesitatingly about the historical importance of a new book; and yet we should not wonder if, in the end, Doctor Martineau's present work were to come nearer than any other English ethical treatise so far published in this age, to filling a place beside the standard English ethical discussions of the seventeenth and eighteenth centuries. Surely, at all events, this book, viewed with reference to the needs of its own time, reminds us, despite its diffuseness and its lack of literary unity, of the kind of work that was for their own times done by Hobbes or Shaftesbury or Smith or Butler. And this we say without meaning thereby to express our own agreement with Doctor Martineau's doctrine, any more than we intend to express agreement with Hobbes or with Shaftesbury or Smith or Butler. Our judgment is for the first a purely formal judgment, based on the quality of the work done. Of the doctrine we shall speak further very soon. But at all events the book is, in every respect save one, abreast with the learning of its time. This one great lack lies in the direction of a closer knowledge of modern German thought, and few ethical writers could better dispense with this knowledge than Doctor Martineau. The defect is, even for him, however, serious; yet in compensation therefor we have a very wide range of historical study and appreciation, a definite and significant positive doctrine, and an enthusiastic affection for human nature. These are enough to constitute a more considerable contribution to philosophical ethics than this generation in English thought has so far otherwise known.

In a literary point of view, the book plainly suffers from its origin in the author's lectures. It suffers yet more, artistically, from the author's naturally genial and infinitely diffuse flow of learned discourse. His estate is wide, full of winding roads, of pleasant views, of gardens and of thickets. He has certain fine outlooks, certain especially beautiful meadow-lands and mountain summits that he wants you to see. So he takes you to them: but first, by the way, numberless paths open, and must be followed here and there, to show you whither they lead. At last the heights are reached and the views seen; but then you must be taken home again by another road, through more groves and thickets. When you are done you know not exactly why just this route has been followed; and your guide, confident that you have been at all events well instructed, refuses to give you any further explanation, save that he has willed it so, and likes that road best himself.

By this figure we may express the impression produced by the curious and original arrangement of this work, and by the fact that you can

find such things as biographical details about Spinoza or Comte, philological excursions concerning Plato, an exposition of the Cartesian physics, and numerous other irrelevant outbursts of ardent scholarship, scattered all through what aims to be a united argument concerning the difference between right and wrong. Yet Doctor Martineau is never pedantic, and never quite garrulous. You hear much from him, and the effect is, at worst, still good. As for the mentioned curious arrangement, the author begins with an historical sketch of certain selected "non-psychological theories" of ethics. These theories, such as Plato's, Spinoza's, or Comte's, seek for the origin and truth of moral distinctions in the world without, and then bring into man's nature the moral law thus physically deduced. They are in so far all alike wrong; for, according to Doctor Martineau, the moral law is only to be spiritually discerned—that is, the true theory must be "psychological," and so must first find the moral distinctions in man's own mind and nowhere else. But when you resolve to get your moral doctrine psychologically, your troubles are not done. For you may still get, by mistake, not an "idiopsychological" ethical theory, as Doctor Martineau's terminology runs, but an "heteropsychological" theory. And that would be disastrous. For only "idiopsychological" ethics, seeking the origin of the moral distinctions in a moral faculty proper, *i. e.*, in Conscience, can satisfy the conditions. "Heteropsychological" ethics may hunt for the moral nature in the love of pleasure, or in the abstract reason, or, with Shaftesbury, in an æsthetic sense of the fitness of things. But such a search is one for a false unity. The Conscience can be reduced to nothing simpler than itself. Conscience proper Doctor Martineau treats at the opening of his second volume, thus discussing the "idiopsychological" theory in between the "non-psychological" theories, set aside in the first volume, and the "heteropsychological" theories, whose refutation concludes his work. The truth is thus sandwiched between two generous layers of error, and so this philosophical titbit is prepared.

Conscience, however, is an old friend in ethics. The theory of Doctor Martineau is made in the fear of old objections, and is a revised version of Butler's doctrine. Conscience for him is not merely a storehouse of dogmatic moral maxims, but a perceptive faculty. And what it perceives is the existence of a graded moral scale of active principles, *i. e.*, "incentives" or "springs" of action, in our nature. In this scale we perceive a regular series, from lowest "dispositions" or "springs of action," through the higher to the highest. In estimating conduct, our conscience applies itself, not to our acts directly, nor to their consequences as such, but to their incentives. The incentives once graded, an act is good in proportion as, in presence of any lower incentive, it involves a choice of a higher. And so, in general, our lives ought to express our higher rather than our lower springs of action. Yet the lower cannot be wholly excluded. The judgments of conscience are thus not passed upon the consequences of the acts as such. Yet, by a process that Doctor Martineau does not make very clear, the computation of consequences (vol. ii, p. 255) "is already more or less involved in the preference of this or that spring of action; for in proportion as the springs of action are self-conscious, they contemplate their own effects, and judgment upon them [*i. e.*, upon the effects] is included in our judgment on the disposition." However this may be, Doctor Martineau's method of defining conscience obviously escapes some of the traditional theoretical difficulties about that rather pretentious faculty. Conscience, in his view, does not set out with a mass of querulous "thou shalt not" maxims, but only excludes relatively, declaring that *when* a higher incentive can be followed, then a lower must, by comparison, be rejected. But if the incentive A is rejected by comparison with B, when the two happen to conflict, the incentive B is rejected by comparison with its own higher incentive C, when the conflict is between these; and conscience thus has, in general, no absolute respect for the incentives, but only a relative interest in them. Exception is to be made in favor of the highest and lowest incentives in the known scale. Reverence, as the highest incentive, has for us an absolute moral value among motives, and acts that are necessary to express it have the highest possible warrant as against all opponents. On the other hand, Vindictiveness, being on the lowest grade among our motives—far lower, for instance, than mere natural Antipathy—has for us an absolute moral worthlessness, being rejected as against any other motive that may move us, and so rejected altogether. Even at the highest extreme of the scale, however, the mentioned absolute value of Reverence must be practically limited by the fact that our nature does not permit us always to be revering, but forces us to be often eating or fighting; and that, in fact, an effort to be continually reverential, and nothing else, would make us all vile prigs, and so would defeat its own aim. The complexity of our nature must thus be regarded in giving its due place to even our highest motive.

This theory of conscience is not only more liberal than many past theories, but it escapes that repeated objection of the opponents of intuitional moral theories, according to which the actual variations of moral judgment among men exclude the possibility of a conscience as an authoritative and uniform faculty. When men differ in moral judgment, they are, in fact, according to our author, judging different things. For acts are practically so complex, and incentives so numerous, that we seldom take all things into account. A wrong analysis of the facts may bring to conscience a false case, which this highest judge, who knows only the law, and accepts the evidence as he finds it, must then estimate incorrectly.

Such we understand to be Doctor Martineau's position. Its agreement with one whole growth of ethical tradition is perfectly manifest and admitted; but its statement is frequently original, and is accompanied by a very keen psychological analysis of human acts and motives.

That this psychological theory includes a belief in our moral freedom of will, and is also not disconnected from theological considerations, every reader of Doctor Martineau's previous publications will know without being told. Man is constantly in the presence, says Doctor Martineau, of Nature and God, *i. e.*, of the perceptible world, and of its eternal cause. To understand them, however, we do best to begin with our own souls, "to believe what the soul says of them," rather "than what they have to say about the soul." We thus obtain a "volitional theory of nature," and escape what Doctor Martineau especially abhors, "a naturalistic theory of volition." In relation to ethics, the two methods of philosophizing thus indicated are evidently identical respectively with Doctor Martineau's "psychological" method, and with his great opponent, the "non-psychological" method. The same tendency that leads him to look within for the moral distinctions, leads him to assume, as the complement and support of his ethical doctrine, a "volitional theory of nature." The human conscience demands that we should be in a world worthy of our reverence, and capable of understanding our graded scale of inner excellence. We must interpret the outer world by our knowledge of our own inner nature, and especially of our moral nature. But hence the need, Doctor Martineau thinks, of supplementing our ethics by a theism. In defining this theism, his moral doctrine pursues him to the end. God, in order to be such a God as our conscience reveres, cannot be simply immanent in the world, but must transcend it. What is realized in the world cannot be simply and absolutely necessary; there must be personal freedom still in God, something that might be and is not chosen, something more than any phenomenal world can manifest. For, after all, in Doctor Martineau's way of thinking, one of the most noteworthy characteristics of a person obviously is, that as person he is "not all there," and might be other than he is.

This is the outline of our author's doctrine. We admire the exposition, and think very highly, as the reader sees, of the historical influence that it may hope to have. As against the naïve and stubbornly unprogressive hedonism of some of the recent ethical theorists among the evolutionists, it has great logical advantages. It is free from their Philistinism, and yet it does not despise their facts. But still we cannot in the least disguise our fundamental disagreement with our author—a disagreement that expresses itself at once in our feeling that his lack of appreciation for modern German thought is a serious defect, even in so wealthy a thinker as he. There are some lessons to be learned from the historical outcome of the critical philosophy, and one of these lessons is, that no graded scale of incentives, intuitively and dogmatically established by any independent moral faculty, can be in the least adequate to the vast undertakings of ethical doctrine. Every such scale thus arbitrarily established is a mere personal whim on its very face, a caprice of the man who makes it. Conscience, defined as a private intuitive faculty, is once for all *defined as* a mere individual prejudice. The mere chance fact that two men or many men have or may have the same caprice, gives no logical universality to the moral perception. By the very definition, any logical universality is thus excluded from morals, and ethical questions become for such a system mere questions of taste. With another private scale of gradation, we should have another code; and this scale is, after all, an accidental system of pigeon-holes, useful in our own studies. To assure us that, meanwhile, it is of divine origin, and that God arranges incentives in just such an order of pigeon-holes, would be to give up the whole case, and make our ethics depend on our physics. Yet to confine ourselves to our own minds, and to say, "Such is the scale, because we find it given in our own souls," is to abandon universality for a confessedly private preference. How to look successfully for universality in ethics is another matter. Doctor Martineau's method will always be, we doubt not, of great historical importance, and, expounded as he here expounds it, with all the liveliness of controversial and psychological illustration and observation that distinguishes his thought, the result is a really great book. But our historical success in philosophical writing is, fortunately or unfortunately, not coincident with our success as mere logicians, or even as correct expounders of the fundamental difficulties of our chosen problems. Philosophy is valuable, as a social force, in quickening men to wrestle with life-problems for themselves; and incomplete theoretical success is often, from this social point of view, immensely important. Hence our admiration for this book, despite our objections.

Doctor Martineau's graded scale of springs of action has another very serious defect, besides the capricious and accidental basis upon which it all rests. Most of the steps, namely, by which it is reached, involve processes of false abstraction, which all the author's concrete interest in human nature cannot render other than obviously unfruitful. After all, who can decide whether, ab-

stractly and in themselves, viewed wholly apart from their consequences, compassion is higher than gratitude, or fear morally higher than the tendency to spontaneous activity? Yet just such questions Doctor Martineau's conscience undertakes to answer for him. In fact, of course, he never really answers as abstract questions as he puts to himself. Suppressed and concrete considerations really decide. Yet his problems, as they are stated, are often merely amusing in their unreality. He is, for instance, studying the *Love of gain*, in its moral relations in the scale, and at the moment is comparing it with *Antipathy* or *Hatred*, considered as a primary passion or as an instinctive "movement of self-protection." He is courageous enough to assume an ideal case much in this way: Banish all consideration of consequences, concentrate attention on the one moment of action, and suppose a purely abstract and momentary man, "who has an intense horror of blood," and "receives an offer of an abattoir with a good butcher's business attached." Ought he, leaving out altogether for the moment his family and friends and position in life, and balancing only his primary passion of blood-hatred against his love of gain, to accept or not? Doctor Martineau's conscience is equal to this bit of abstraction, and decides that "to me it appears certain that we should look with contempt upon the suppression of even such aversion by hire." Much more, of course, if one's antipathy is felt toward a person, say a negro, it is obvious to Doctor Martineau that this primary "self-protecting" antipathy ought not to yield to a mere love of gain, however it may properly yield to compassion, or possibly to reverence, if these come into play. Californians who employ the hated Chinese for cheap labor's sake will please take notice of Doctor Martineau's conscience on this matter, as indicated by this remark.

Now, such abstraction as this is plainly unpractical, not to say immoral. There is a true scientific abstraction, giving us unreal, or even physically impossible cases, which, with the abstraction itself, are still useful. Such an abstraction is that of the mathematical physicist, who studies the disposition of the heat conducted from a given source along a homogeneous bar, of a given shape and conductivity, immersed in a perfectly non-conducting medium, after the lapse of a given time from the beginning of the process. Such cases do not occur in nature; but they are valuable for the study of nature. But a false abstraction it would be to discuss in biology whether, in case a living animal consisted only of a great toe and a tail, it would find the toe more valuable than the tail. Yet just such an abstraction is Doctor Martineau's in the case mentioned. Even a butcher's life-work is an organic whole, and he is a member of a social order, with family, friends, and endless social duties. His love of gain is itself no quality capable of being understood by abstraction. Like the great toe or the tail of an animal, its nature is determined by the total of the organism, viz., here, of the character to which it belongs. And even so with the butcher's antipathy for blood. Hence the answer to Dr. Martineau's question is as indeterminate as would be the answer to the supposed biological question—as indeterminate and as worthless. A man is no more made of "springs of action," in Doctor Martineau's sense, than he is of quiddities or of second intentions.

Morality is, after all, what Aristotle made it, a science of gradations among Ends. The determination of the worth of Ends, and the consequent gradation of motives, cannot be made from any capricious and purely subjective examination of abstract "springs of action," but must find some other rational basis. If, for instance, the "greatest happiness of the greatest number" is the highest End, then we shall have one possible gradation of the motives of men. But if the social order as such, the organization of civilized humanity, is our highest End, motives will get some other sort of judgment. Conscience, merely as something in us, is unauthoritative, and may be wicked. And so we find Doctor Martineau's ethical doctrine fundamentally defective, deeply as we admire the learning, the keen observation, and the hard-won personal wisdom with which the venerable teacher has adorned his work. We repeat, this book will live long and prosper; yet not because its fundamental doctrines are very novel, or logically satisfactory, but because a true man wrote it, and because his generous learning vivifies and warms its dust, and clothes the old body with precious and enduring garments.

TWO BOOKS ON THE VOICE.

The Child's Voice: Its Treatment with regard to After-Development. By Emil Behnke and Lennox Browne. Chicago: A. N. Marquis & Co. 1885.

Voice Use and Stimulants. By Lennox Browne. Chicago: A. N. Marquis & Co. 1885.

THE authors of these two brief treatises have adopted a plan of composition which has been used before, and which threatens to become a literary fashion that has, no doubt, its advantages, though it will add one more terror to the martyrdom of being a famous man. In order to determine some disputed points regarding the use of the voice at certain periods of life, and regarding the effects of alcohol and tobacco on the vocal organs, they sent circulars with questions to hundreds of well-known singing teachers and vocalists, in order to secure their opinions, as well as a brief account of their personal experiences. The names of all who responded to the call are printed in the appendix of each book, besides being in many cases quoted in the preceding pages.

The monograph on the Child's Voice is by far the more valuable of the two, and should be consulted by all parents who wish to cultivate the voices of their children, but do not know when to begin. The decision of this question should rarely be left to a vocal teacher, for the obvious reason that it is his advantage to begin as soon as possible. That singing lessons should be given to all young people who have the least gift for it, is a point which cannot be sufficiently recommended to parents. For, aside from the æsthetic pleasure to be derived from music, the exercise of the vocal organs often has a most remarkable effect on health. Dr. Martin, of St. Paul's Cathedral in London, who has had twenty years' experience in training an average of forty choir boys, states that he has never witnessed any pulmonary delicacy engendered, and that the health of many boys of consumptive disposition has improved under his training. Moreover, "it is very rare to see children trained in singing suffering from that very common defect in this country, of breathing through the mouth instead of through the nostrils"; and the full respiration required in singing also has a beneficial influence on digestion: singing engenders hunger, and "singing boys have often lusty appetites."

Although a few of the vocalists who replied to the questions sent them by our authors, state that voice-training may safely and advantageously begin at a very early age, by far the best and most copious evidence is to the opposite effect. Coupling this with their own experience, the authors "are bound to say we think the advantages of early training have been greatly overrated." There is, however, a great difference between the natural and the artistic use of the voice, which is well expressed by Mme. Antoinette Sterling: "A girl may commence singing as early as possible. *Cultivation* of the voice should not commence till *after* the change to womanhood, ordinarily." Doctor Stainer says: "Little girls should not be taught to sing at all, as their tender voices are often *permanently* injured by premature efforts. A female voice should not go through *any serious work or training* until womanhood has been reached." And Mrs. Curwen gives her personal testimony thus: "When I was a child, singing was not taught in schools, . . . so I escaped the habit of shouting and straining so common now with children who go to school. And I never had singing *lessons* till nearly nineteen years of age." Provided the natural voice is only used, avoiding all strain and loudness, children cannot easily sing too soon and too much. For, as Mme. Sherrington says, "Early training sharpens the sense of hearing, and early use of the vocal cords stretches and strengthens them. Children should therefore from earliest childhood be taught little songs *and dancing to acquire rhythm.*"

In the case of boys, complete rest at the period of puberty is much more important than in the case of girls, and the common neglect of such rest in the case of choir boys is probably the principal reason why "the number of boy choristers with fine voices who attain to eminence as singers in after life is very small." Mr. Turpin also touches upon a cause of the rarity of good voices: "Rough play in noisy streets, attended by loud shouting, I find to be, through forcing the tones of the lower register, the most frequent cause of failure in training boys' voices"; and the objection that interference with such sport would lessen the manliness and cheerfulness of boys, is met by the reply that complete suppression is not called for, but only moderation. Many interesting points regarding the differences between boys' and men's and girls' and women's voices are noticed, and a separate chapter considers the cause of the greater change of the male than the female voice, without coming to any satisfactory conclusions.

Dr. Lennox Browne's 'Voice Use and Stimulants,' though comprising only 110 pages of text, contains a good deal of "padding," including a twenty-page disquisition on the question, "Was Mme. Malibran a Drunkard?" If she, one of the world's greatest vocalists, had been a drunkard, the Doctor's thesis that alcohol is injurious to vocalists would have received a serious blow; and he therefore determines this mooted and mysterious question to his satisfaction as well as he can. Mr. Sims Reeves, too, who had been named as a case refuting his theory, is quoted as having written in 1876 regarding stimulants, that "by long experience I find it better to do without them entirely. A glycerine lozenge is preferable; on very rare occasions a small quantity of claret and water may be necessary; but all alcoholic stimulants are detrimental." Of 380 vocalists who were questioned regarding their drinking habits, almost 70 per cent. admitted that they drank regularly or occasionally; but 75 per cent., on the other hand, refuse to take any stimulant either immediately before or during use of the voice, as an aid to its exercise. Spirits are used by only 8 per cent., "while a much larger number take the trouble to especially condemn" their use. Doctor Browne, however, is sufficiently liberal to admit that after work, at meal time, such a small amount of alcohol as is contained in a pint of claret is harmless, and may even be useful by its effects on digestion. The best way of taking wine for vocalists, however, would seem to be "in pills," as Theodore Hook puts it; for one vocalist writes that he has "found good dried raisins a nice stimulant to the voice, eaten fasting or shortly before singing"; and the author adds: "I learn also that Mme. Lind-Goldschmidt has

great faith in the value of raisins, and largely recommends them to her pupils."

Outline Study of Political Economy. By George M. Steele, LL.D. Chautauqua Press. 1885.

IT is the aim of this book to make the science of Political Economy intelligible to "younger students and those who have not had long discipline in severer studies." While it may be possible for a master of the science to construct a "primer" that shall interest and instruct the young in economic subjects—such a work, for example, as Harriet Martineau's stories—it is preposterous for any one to attempt to explain to undisciplined minds principles that absolutely require severe discipline for their comprehension. You cannot explain Hydrodynamics to persons that have no acquaintance with algebra. A perusal of this work leads us to the opinion that the author himself is deficient in the discipline necessary to qualify him for the discussion of his subject, and the attempt of the blind to lead the blind cannot fail to end in disaster. The apparent simplicity that is attained is due to the omission of whatever is difficult. The "younger students" who may be compelled to study this treatise are to be pitied, for they can hardly escape forming the impression that they are learning something about Political Economy—an impression of which they will of course feel a reluctance to be disabused.

The qualifications of the author for the work that he has undertaken may be inferred from a few of his statements. He regards the quantity of money of which a community is possessed as of great consequence; so that if this quantity were reduced below a certain figure, commerce would be crippled, production checked, labor unemployed, and the purchasing power of the community diminished. Hence the issue of greenbacks during the war was a most beneficial measure, setting "in motion at once the commerce and industry which had been languishing." The policy of protection he considers a wholesome one. The objection that a protective duty is of the nature of a tax on other industries seems to him "to be specious and fallacious." This conclusion does not appear to have been reached by any process of ratiocination, but to have been adopted upon the authority of Horace Greeley. With incredible simplicity the author calls our attention to the fact that the duty on steel rails was increased at the petition of the consumers, who knew that this was the true way to secure lower prices. Why the manufacturers acquiesced in this increase, when they must have known its pernicious character, we are not informed. Even in matters of fact, where ordinary care would prevent serious error, we find that Mr. Steele is not to be trusted. Thus, to take one example only, we are told that every national bank must deliver to the Treasury bonds "equal in value to two-thirds of the capital," and that the banks are required to keep on hand for the redemption of their notes a certain proportion of lawful money; twenty-five per cent. in sixteen cities, fifteen per cent. elsewhere.

We have reserved the choicest illustration of our author's merits for the last; and, indeed, were it not for this, we should hardly have felt justified in calling our readers' attention to his book at all. In his account of "Lombard Street" Mr. Bagehot makes the following observations:

"In the last century a favorite subject of literary ingenuity was 'conjectural history,' as it was then called. Upon grounds of probability, a fictitious sketch was made of the possible origin of things existing. If this kind of speculation were now applied to banking, the natural and first idea would be that large systems of deposit banking grew up in the early world, just as they grow up now in any large English colony. . . . Conjectural history would be inclined to say that all banking began thus; but such history is rarely of any value. The basis of it is false. It assumes that what works most easily when established is that which it would be most easy to establish, and that what seems simplest when familiar would be most easily appreciated by the mind though unfamiliar. But exactly the contrary is true. Many things which seem simple and which work well when firmly established are very hard to establish among new people, and not very easy to explain to them. Deposit banking is of this sort."

We have not space to quote Mr. Bagehot's classical account of the origin of deposit banking. Suffice it to say that he shows that this kind of banking is an institution peculiar to the English people, and that it arose quite incidentally from the practice of issuing notes by bankers. A system of note issues, he observes, is historically the only introduction to a large system of deposit banking. In fact, until some time in the present century banks paid very little attention to their deposits, and it may be doubted whether there was a bank in existence fifty years since that had been formed with any thought of this branch of business. "Hypothetical history, which explains the past by what is simplest and commonest in the present, is in banking, as in most things, quite untrue."

It seems incredible that, with this detailed and deliberate warning from the pen of the most distinguished writer upon the subject that this generation has seen, any person should be found so presumptuous as to offer his own ignorant conjectures in the guise of actual history. Nevertheless, Mr. Steele writes as follows:

"The beginning of the modern system was probably something in this way: In communities where there was a considerable variety of industry, and there were consequently many exchanges, there would necessarily be greater or smaller accumulations of money in the hands of individuals. It would be found inconvenient, hazardous, or expensive to keep these in one's own possession. A strong-box, perpetual watching, and manifold precautions might secure safety. But it would naturally occur to practical business men that one strongly protected place, under the care of a competent person who should devote himself to the charge of the treasures of his employers, would be at least less expensive than each individual's custody of his own valuables; and that it might be vastly cheaper, as well as more effective, for the whole community of business men to combine, and assign the guardianship to one man, than for each to exercise it on his own account. Hence would result a building centrally located, with strong vaults and other safeguards and securities, where each person having surplus funds would deposit them for safe keeping," etc., etc.

It is safe to say that no bank was ever formed in any such way. A safe-deposit company is not a bank, and this is not even a correct account of the formation of a safe-deposit company. We trust that this is not a sample of the teaching usually dispensed to the audiences at Chautauqua. Certainly "younger students and those who have not had long discipline in severer studies" may be conscientiously advised to waste no time in listening to such instruction.

Matrimony by Advertisement, and Other Real Adventures of a Journalist. By Charles G. Payne. London: Vizetelly & Co.

THIS little volume of reprinted articles is very clever newspaper work, and will furnish an hour of entertaining and often genuinely humorous reading. At the bidding of different editors Mr. Payne has succeeded in taking his readers through a variety of strange and startling adventures, but whether or not he went through them himself previously is not always certain. The first article, "Matrimony by Advertisement," tells how the author explored the mysterious abode of the editor of the flourishing London *Matrimonial Journal,* his impressions of the various photographs of eligible and other aspirants to wedded bliss which he saw there, and his subsequent interviews with several of the celibate ladies. He simulated the garb and manner of the gouty and desolate old widower, of the ardent costermonger, of the hard-up swell in search of a partner with a purse, and of a number of other uxorious pilgrims; and he comes to the conclusion—though the statement will be received with deserved incredulity—that a man desirous of marrying through the agency of the matrimonial papers, can generally get what he wants with large choice. Though convinced that the women who advertise personally are for the most part of a coarse disposition, Mr. Payne, with apparent seriousness, declares that the system of obtaining husbands for really modest and lovable girls by the activity of parents and guardians is one that very largely prevails. He ventures the opinion also that a companionable and courageous man may without much difficulty find a well-to-do wife through one of these advertisements, by giving a first place to affection and a second place to money.

The best article, however, and probably the one that has served the best end, is "A Spell in a Madhouse as an Amateur Maniac," an exciting description of the interior of a private lunatic asylum. Mr. Payne has no difficulty in showing that the present English lunacy laws, in their medico-legal aspect, are wofully lax. Two doctors, neither of whom had ever seen the supposed patient before, were easily induced to certify him for an asylum, after visiting him separately, neither staying more than four minutes. As Mr. Payne puts it, they were bounced into the thing—put upon their dignity by the doubt expressed as to their power of diagnosis, and readily imposed upon by a last will ostensibly in the handwriting of the imaginary maniac, but in reality concocted by a young lady, and in regard to which neither of the doctors sought any proof of the handwriting. Very useful criticisms upon the lunacy laws and procedure are embodied in this sketch, which contains graphic and amusing descriptions of the every-day life of the asylum in which the author found a temporary home.

As an amateur cabby, Mr. Payne's chief adventure was to leave at the circular road, Regent's Park, a hapless fare who had asked to be driven to Bedford Park, but the driver could not for the life of him remember the way to that outlandish West-London suburb, and feared to ask his way lest he might be detected as a non-licensed driver, in which case the real driver of the cab would have been fined and disgraced. For this act, however, the journalistic Jehu atoned by giving a gratuitous drive in Hyde Park to a poor invalid lady. Referring to the many accidents to cab horses, the author suggests the formation of a veterinary ambulance association for the purpose of instructing cabmen in the preliminary treatment of accidents.

The "Robber's Vade-Mecum" contains full and very humorously written descriptions of the arts by the practice of which the thief, in his many capacities, is able to prey successfully upon the more honest and more sleepy sections of the community. The reader is let into the secrets of artistic robbery on the street and on the race-course, and is presented with a detailed essay upon the most approved methods of modern housebreaking. With doubtful wisdom, although certain entertainment, this chapter contains illustrations of "burgling tools." A reference to these cuts will in some cases show the reader how to guard against the wiles of the professor of the jimmy, but it will perhaps be of greater service to him should he contemplate following the profession of the late Mr. Sikes and of the pious Mr. Charles Peace. Among the drawings are those of some of the favorite implements by the use of

which the last-named gentleman rose to eminence.

"Twenty Years' Penal Servitude" and "A Talk with a Birmingham Thief" show a remarkable aptitude for discovering and describing the lives, habits, and slang of the criminal and convict classes, and bringing out their best side. A number of ingenious and graphic expressions, such as gonophs, mollhooks, tecks, mugs, bangoes, snides, and coshes; the cadger's drag, the bludgeter; and dipping, wiring, hoisting, snowdropping, screwing and sticking, and tying up a Jay, will doubtless enter at once into the vocabulary of Mr. Payne's readers, and Juggins may become as familiar to them as a household word. This versatile journalist says in a prefatory note that his "principal incentives have been the mandates of editors desirous of serving the public," and adds that "the desire to study various phases of life as an aid to the writing of works of fiction has been subsidiary." Mr. Payne's readers, however, will probably come to the conclusion that he stands in no need of aid to write excellent fiction.

The Hazen Court-martial: The responsibility for the disaster to the Lady Franklin Bay Polar expedition definitely established, with proposed reforms in the law and practice of court-martial. By T. J. Mackey. 8vo, pp. 364. D. Van Nostrand. 1885.

It is a matter of history that, after the wreck of the *Proteus* relief expedition and the return of the United States steamer *Yantic* to St. Johns, N. F., General Hazen of the Army Signal Office urged the Secretary to despatch immediately one of the vessels then ready for sea at that port to the rescue of Greely; that the Secretary of War, after consulting with the Secretary of the Navy and several Arctic travellers, decided not to do so; that after the disasters of the following winter had been revealed by the return of the naval expedition under Schley, General Hazen, deeming that he had been unjustly reflected upon in the report of the Secretary of War, and that he had information which would demonstrate this injustice, addressed a letter to the Secretary with the supposed proofs enclosed; that this letter was returned to him by the Secretary as transcending official propriety; that the verbal reply of General Hazen to a question on the matter from a friend, who was also a newspaper reporter, was more or less accurately reproduced the next day in a Washington newspaper; that at the instance of the Secretary of War a court-martial was ordered, before which it was charged and by which it was decided that, in this letter and conversation, General Hazen had been guilty of unwarranted and captious criticism of his superior officer, and was accordingly sentenced to be censured in orders by the President of the United States as reviewing authority. The question as to the accuracy and weight of General Hazen's defence of himself to the Secretary (the chief matter of interest to the public in the whole proceedings), was not considered by the court, whose whole duty resolved itself into a decision as to the military etiquette of the manner of the defence, and the discussion by the General in public of the Secretary's refusal to consider it.

Mr. Mackey, General Hazen's counsel at the time, now publishes the record of the court-martial and its consequences, with an appendix containing the evidence submitted to the Secretary but not to the court, with an introduction of some sixty pages in which the whole subject is considered. This may fairly be taken as General Hazen's defence of himself against public criticism on the main issue, and only in a minor sense

ected against the verdict of the court, which considered special circumstances arising out of that issue. In fact, the ordinary reader, divested of interest in technicalities and acquainted with the restrictions imposed by military discipline, can hardly suppose that the verdict of the court should have been other than what it was. As in the book on the rescue by Schley and Soley the naval view of the *Proteus* disaster was very clearly and impartially presented, so we have from Mr. Mackey in the present volume the case as seen from the standpoint of the head of the Signal Office. Counsel, being unrestricted by military discipline, has, however, brought out very clearly certain matters, essential to the understanding of the whole, which etiquette forbade should appear in a volume prepared by naval officers. If his evidence remain uncontroverted, it would seem undeniable that an unfortunate friction existed between the Secretary and the head of the Signal Office; that there was at least a chance that a second expedition in 1883, as suggested by General Hazen, might have rescued or succored Greely, and that prompt action might have got it off in time, and, consequently, that the Secretary's decision not to attempt it is to be regretted, though at worst only an error of judgment. The conduct of Garlington, as presented in the testimony of two of his companions, appears in a less favorable light than before, and the censure of Commander Wildes by the Secretary of the Navy would seem to have been even more fully justified than has been generally supposed. Before the assignment of responsibility for the final tragedy can be impartially made, however, the public will probably wish to hear from the late Secretary of War, who, under this combined attack with argument and evidence, can hardly continue to keep silent.

Two Years in the Jungle. By W. T. Hornaday. 8vo, pp. xxii, 512. Maps and illustrations. Chas. Scribner's Sons. 1885.

The author of this work is well known to the habitués of American museums of natural history by the specimens of artistic taxidermy which he has contributed to their collections. He is now chief taxidermist to the National Museum at Washington. Previous to his engagement there he had studied his profession in Ward's well-known establishment in Rochester, and the travel and experiences recounted in these pages were undertaken for the purpose of obtaining the skins and skeletons of rare animals for Mr. Ward. The record is rather of action than of observation, of pursuit and capture rather than of study, of sturdy delights of the energetic hunter rather than the rapture of a biologist in a strange and novel fauna. The writer makes no pretensions to literary art, but writes in an easy, straightforward manner, which, if it might have benefited by some revision, at least savors of entire sincerity. The uncivilized people with whom he came in contact are regarded from the point of view of the employer, companion, or guest, rather than as ethnological specimens; and in these features the book forms a marked and interesting contrast to most of those which will find a place on the same shelf. For the ordinary reader it lacks condensation: though not tedious it is too long. The commercial naturalist who may follow in Mr. Hornaday's footsteps, will probably find much that will be useful and important to him in the very details which a more practised writer would have omitted.

The animals which were the object of the journey were chiefly the larger mammals—deer, antelope, elephant, wildcats, tigers, monkeys (especially the anthropoid apes); the various crocodiles; and the larger fishes. The search for these carried Mr. Hornaday to the banks of the Jumna and Ganges, the Nilgiri Hills, and Indian forests; to Ceylon, the Malay peninsula, and Borneo. The most important parts of the book are those relating to gavial shooting on the Jumna, to the long and finally successful chase for wild elephants, and to orang-hunting in Borneo. The latter detained Mr. Hornaday some time among the Dyaks, for whom he expresses almost unqualified admiration. To the biologist the observations on the habits of the larger game will convey much of interest and permanent value, as will the exact and careful measurements which the author has tabulated. The ethnologist will find less, but still some not unimportant, contributions to his stock of information; the sportsman and collector will profit more than either by a perusal of the work. There are two good maps, numerous rather coarse illustrations, of which those representing fishes are much the best, and a satisfactory index. An appendix contains various notes useful to collectors, and a table showing the destruction of human life and domestic animals annually caused by wild beasts and serpents in India.

The author seems to have enjoyed unusually good health in his jungle wanderings, though not entirely exempt from fever. His good fortune is largely to be attributed to his temperate living and suitable dress. It need hardly be added that the objects of his journey were secured—in fact, he seems to have attained a very unusual measure of success.

The Two Hundredth Birthday of Bishop Berkeley. A Discourse given at Yale College on the 12th of March, 1885. By Noah Porter. Charles Scribner's Sons.

Considering how contemptuously Bishop Berkeley regarded all material things, the material aspect of President Porter's monograph has an undisguisedly satirical suggestiveness. A more beautiful bit of book-making one does not often see. The thick hand-made paper is very tempting to the eye, and might distract the reader were not the letter-press in the best manner of Messrs. De Vinne & Co. It is a pity that there should be an erratum, and strange that President Porter should have made such a mistake. It is also a pity that all the parts of a conversation on p. 11 should be included in one set of quotation marks, as if Hartley Coleridge had done all the talking.

Turning from the material form to the spiritual contents of the book, we find in them an agreeable presentation of the facts of Berkeley's life and the principles of his philosophy. Prof. Moses Coit Tyler's monograph, in the lately published 'History of the American Episcopal Church,' is fuller in regard to his American residence, and the accompanying monograph on his relations to Yale College is fuller in regard to these. As for the philosophical positions of Berkeley, the essays of Mill and Huxley will be useful reading in connection with this discourse. President Porter devotes a note in his appendix to the former. Mill's admiration for Berkeley was very great, but it was not directed to that which was most admirable in him for President Porter. This was not his subjective idealism, but its theistic implications. But the revival of Berkeley's fame, which has of late been quite remarkable, has certainly not been in virtue of his speculative Theism. It is in virtue of this, however, that President Porter finds him an excellent stalking horse, from behind which he sends many a hissing shot into the philosophers and scientists who are not to his mind. Indeed, he is evidently irritated not a little by the praises which Berkeley has elicited from the scientific school, and he is at pains to show that his disagreement with them is much more than his agreement.

It was not necessary to such a discourse as this that the writer should engage in any labor

of original investigation. President Porter has avowedly drawn his material from the most obvious sources, viz.: Professor Fraser's 'Life and Letters'; the same author's sketch in Knight's 'Philosophical Classics'; the 'Selections from Berkeley for the use of Students in Universities,' also edited by Professor Fraser, of which a new edition was recently noticed in these columns; and Professor Krauth's annotated edition of the 'Treatise concerning the Principles of Human Knowledge.' The story of Berkeley's life and the discussion of his system are intermingled in a pleasant manner, and in proportions suited to the conditions of a discourse publicly delivered. The relation of Berkeley to Locke and Hume and Kant is elaborated in the appendix (the opinion of Kant being remarkably contemptuous in comparison with the retreat upon him that has been generally sounded), and also the criticism upon J. S. Mill. There is further an elaborate note upon the Berkeley fellowships at Yale, showing that their significance consists in their being the first fellowships for graduate students provided in any American college.

Those who have not heretofore informed themselves concerning Berkeley's personal history will be astonished to find that the three works on which his philosophical fame principally rests were written from the twenty-fourth to the twenty-eighth year of his age. Another interesting fact is that Miss Van Homrigh, Swift's Vanessa, gave Berkeley half her fortune on the strength of an hour's acquaintance, coming hard upon her disgust with Swift's marriage to Stella. Two of Berkeley's Newport company, Harrison and Smybert, have monuments in Boston of their own making, for the former was the architect of King's Chapel and the latter of the Old Statehouse. Whatever may be thought of Berkeley's philosophy, his personal character was certainly most lovable, and his religious tolerance remarkable for his generation. President Porter's quotations from his letters, in which he speaks of his little daughter and the son whom he had lost, make up the page that will be read over oftener than any other in his handsome book.

Thoughts on Science, Theology, and Ethics. By John Wilson, M.A., Trinity College, Dublin. London: Trübner. 1885.

THIS is a convenient compendium, in 200 small and openly printed pages, of the current Positivistic opinions, with surprisingly little sophistication or individual color. One would think Mr. Wilson must be a new convert to Positivism, for he writes with a good deal of vigor, and a vigorous thinker could hardly if he tried produce a book so commonplace. It will have a real value for the professed student of philosophy as a compend of the current commonplaces of Positivistic thought for the year 1884. It will give a young person a good introduction to Positivism; and it will be seized upon with avidity by the idealists, who will delight in making mincemeat of it. It consists of two parts, the first about science, the second about ethics. The first chapter, entitled "What is Science?" shows that the author does not know enough to distinguish science itself from a system of philosophy supposed to be in harmony with the spirit of science. He quotes with approval the remark of Doctor Magee, present Bishop of Peterborough, that "science abhors finality in belief"; if so, it does very unwisely to continue making observations, for these have the strongest tendency to bringing questions to a settlement. In chapter second the author asks "What is the Use of Science?" and answers that it is to satisfy the craving of the mind for a theory. That is the function of a philosophy. Chapter third treats of the methods of science:

"If a proposition stands the tests of both induction and deduction, we have the best warrant possible for believing in its truth; that is to say, for the truth of a general proposition we have the best verification when all the particular facts known to us are in accordance with it, and when experience verifies all the particular propositions logically deducible from it."

According to this, induction tests a proposition by old experience, and deduction by new experience. This is the most original idea in the book.

The ethics is substantially that of Spencer:

"The scientific sanction [of morality] rests on the nature of things. In man has been evolved in some degree a sympathetic nature, by which the pain and injury of others becomes self-pain and self-injury. This sympathetic nature is the subjective sanction. Secondly, living in society, a condition of life which to a sympathetic nature becomes a necessity, he is continually surrounded by the influence of his fellows. Whenever his conduct is painful or injurious to these, he finds it resented. Whenever it is beneficial, he finds it encouraged. This constant, ever-present influence of the many upon the individual constitutes the objective sanction."

The Haunted Adjutant, and Other Stories. By Edmund Quincy. Edited by his Son, Edmund Quincy. Boston: Ticknor & Co. 1885.

WE have already noticed the first volume of this series of reprints from the works of an admirable writer and man. The story which gives a title to the present volume is the only one having a plot, or belonging in the category of our popular short-measure fiction. It is thoroughly entertaining and very skilfully worked up, and had it been placed at the beginning it would have whetted the reader's appetite more than does "An Octogenary," which precedes it. Some of the tales are true, like "Two Nights in San Domingo," to which we can affix the date 1843, since it appeared in the *Liberty Bell* of that year; or like "Dinah Rollins," "Phoebe Mallory," and, presumably, "Lewis Herbert: an Incident of New England Slavery." Five out of the seven deal with the Revolutionary epoch, or that immediately succeeding, which took a singular hold on Mr. Quincy's imagination, particularly with reference to the siege of Boston and the sufferings of the exiled Tories. He delighted to reconstruct the social aspect of his native city—the houses, furniture, books, manners, amusements, costumes, tone—of which he must have had close traditions in his own circle, though, as is hinted on p. 309, he got "a clearer notion of the way in which people lived in Boston eighty years since" from such African house-servants as survived the war and Massachusetts slavery than from more dignified sources. There is naturally a sameness and a certain amount of even verbal repetition in the *mise-en-scène* of the tales here brought together; and it would have been more just to Mr. Quincy if the date and original medium of publication of each had been noted in the table of contents.

As for our author's peculiar pleasantry, so easily converted into satire fatal to the politico-clerical humbug and hypocrisy of the time in which he wrote, one cannot weary of it. Nor is it uninstructive to observe how his humor was controlled by his profound moral convictions, so that, for example, as a total abstainer he apologizes between the lines for making a merry picture of our ancestors at the wine-table, necessary as this touch was to a complete realization of them. The total impression that the book makes is that Mr. Quincy was, both by intellectual affinity and by direct descent, a gentleman of the old school; and this is fully borne out by the capital likeness, in heliotype, which serves as a frontispiece. To commune with one in a book, as the species is getting rarer, is a privilege which the public ought to appreciate, even if Mr. Quincy's English style had not independent attractions for those who regard such matters.

The Light of Asia and the Light of the World. By S. H. Kellogg, D.D., Professor in the Western Theological Seminary, Allegheny, Pa. Macmillan & Co. 1885.

THIS is a Christian missionary's "apology" for the integrity of the Christian Gospels against the suggestions of poets and radicals who would bring in another gospel. Dr. Kellogg confesses that he writes as a partisan, and is not unbiassed. He is zealous to prove not so much the truth of his Christian belief as the falseness and absurdity of all other beliefs. He is an instance, theologically, of that class of men who shut one eye when viewing an object, that their whole power of vision may be exercised without hindrance, through the other. In fact, he can see nothing good or true except it be "true to him." His mode of reasoning will not satisfy the candid thinker. It is this class of readers who will seek and not find in Dr. Kellogg's book any solution of the difficulties which beset their path. Others, who follow implicitly the leading of their own apostles, will perhaps be edified, and shut up the book with an inward sense of its complete sufficiency.

But, seriously, how is it that Dr. Kellogg and those who rank themselves on his side cannot see the difference between the imperfection of a belief and its falseness? If Buddha denied the existence of God, it was not the Christian's God he had an eye to, but the anthropomorphic, passionate, lustful God of the heathen world, or, if this phrase will not do, of the purely idolatrous world. Every one knows that Buddha denounced idolatry: was he right or wrong in so doing? He did not flatly deny the existence of Devas and Devîs, but he said, as *we* say, that they were not worthy of worship. If he had not a true knowledge of God, he at least would not worship false gods. Is there no virtue, no good in this? Dr. Kellogg cannot see it.

Again, about the "soul." The orthodox side say that Buddha denied the existence of soul. But we should do well to inquire what Buddha meant by *attâ*, or soul. It is defined to be "either a material form, or the aggregate of sensation, perception, reason, and consciousness." There is the *attâ* named the eye, the *attâ* named the ear, etc. Buddha denied the eternal existence of any such quiddity as this. Was he wrong? Will Dr. Kellogg even venture to define his idea of "the soul"? In the *Indian Evangelical Review* for April, 1885, there is an excellent article on the "Tripartite Nature of Man"; in this same number there is also an equally excellent article by Dr. Kellogg on "The Antagonisms between Hinduism and Christianity." We assume, therefore, that Dr. Kellogg has read the first-named article. Does he accept its statements? Does he believe that the soul, except it be reunited with the spirit, may perish like the souls of beasts? If so, how can he find fault with the Eastern teacher, who was feeling for light, and denied the necessary eternity of the part of man called "the soul"? Buddha knew nothing of the life-giving spirit, but he did not deny its existence. He was waiting to be taught; he was standing at the door till it opened; he was doubtless in the dark, but his face was turned to catch the first stream of the dawn.

In Sunny Lands: Out-door Life in Nassau and Cuba. By William Drysdale. With illustrations of places and people. Harper's Franklin Square Library.

AMERICANS are so much more in the habit of going to Europe than to the West Indies that

every one of us who visits the latter is apt to feel as if he were an original discoverer. If he communicates to the world, as he generally does, the results of his investigations in the strange lands he has visited, he writes much as if he believed that no one had ever been there before. The Southern Cross, the cocoanut, the milk in the cocoanut, the plantations with their strange new products of sugar, of coffee, and of cocoa, all are described with a minuteness and a prodigality of epithet which show how oblivious the writer is of the fact that most of his information is accessible elsewhere. Mr. Drysdale is no exception to this rule. He tells us much that we seem to have read before; but then he tells it in a somewhat new way, which gives an air of novelty to his book. He is, as he somewhere mentions, a newspaper man, and he writes newspaper English. His style is radically different from that of Kingsley, Gallenga, or any of the more recent writers about the tropics. "The way," he says, speaking of his appetite on board ship, "we used to work in six meals a day was a caution." Many things have been said of the Gulf Stream, but surely never before that "in winter there is not heat enough in it to melt a cake of ice, and in summer it's about as warm as boarding-house coffee." This light method of treatment occasionally gives an air of frivolity and even vulgarity to Mr. Drysdale's book, which does injustice to its underlying seriousness. It really contains not only a great many illustrations (which seem to be from old plates), but also a great deal of information of one kind and another of value to any one who thinks of going to Nassau or Cuba.

College Latin Course in English. By William Cleaver Wilkinson. Chautauqua Press. 1885.

MR. WILKINSON'S "After School Series" is, we suppose, brought to a conclusion with the 'College Latin Course,' a work fully deserving the high commendation which we have bestowed upon the earlier volumes. The selections here given are from Livy, Tacitus, Plautus, and Terence, Lucretius, Horace, Juvenal, Cicero (as men of letters), Pliny, and Quintilian. The treatment is animated and intelligent, the chief defect being a certain intolerance of spirit which makes it impossible for the author to appreciate fully what is most characteristic in the classical spirit: Christianity does not need to depreciate its rivals. There are several portraits, but for the most part too small and inartistic to convey a vivid conception of personality. The plan of ancient Rome makes the walls and gates of the republican period far too prominent as accompaniments of the Pantheon and the Colosseum. The course of the Via Sacra is no doubt uncertain and disputed, but who would think of having it end at the Porta Carmentalis?

Menschen- und Völkernamen. Etymologische Streifzüge auf dem Gebiete der Eigennamen. Von Rudolf Kleinpaul. Leipzig: Carl Reissner; New York: B. Westermann & Co. 1885. 420 pp.

THIS work purports to give the history of names —national, family, and Christian. The common or famous names which the author discusses are grouped in divisions and subdivisions without number. Thus the *first* chapter, on "Human Names," is divided into three divisions, of which "Children's Names" is the third. This, again, is divided into two subdivisions, and the first subdivision into four sub-subdivisions, the fourth sub-subdivision being redivided into five sub-sub-subdivisions. After wandering through this kind of a table of contents, one is not surprised to find the author's third chapter beginning: "*Omnes eodem cogimur.* Jedes Volk und jede Klasse des Volkes muss sich dazu verstehen $(a+b)^2$ statt $\times$ zu sagen." When one examines any particular subdivision he finds it to consist only of a list of names, diversified, but hardly enlivened, by heterogeneous allusions to persons and places, historical and imaginary.

We can say no more of this work beyond brief mention of the tables, the like of which, says Herr Kleinpaul, have never, so far as he knows, been attempted. One of them arranges common given names by countries, each column being supposed to contain the names most usual with a particular people. Thus under England, we find, properly enough, William (*e. g.*, William the Conqueror), Alfred (Alfred the Great), Richard (of which Dicken is given as an abbreviation, and whose most famous illustration is "Cœur de Lyon)." But when we come to "Bayard," and find Bayard Taylor mentioned as an Englishman (there are subdivisions for Americans and Scotch), any doubt we may have felt as to the justice of our author's claim to originality is nearly gone; and when, further down, we find "Stanley," "from Stanley, the African explorer, *e. g.*, 'Stanley Huntley,' the chief of the Sioux," there is not left even a shred of it.

BOOKS OF THE WEEK.

Addresses and Historical Papers before the Centennial Council of the Protestant Episcopal Church in the Diocese of Virginia, May 20-24, 1885. Thomas Whittaker.

Fenn, G. M. The Dark House: A Knot Unravelled. Chicago: A. N. Marquis & Co. 25 cents.

Littell's Living Age, Vol. 166. July-September, 1885. Boston: E. Littell & Co.

Rational Communism: The Present and Future Republic of North America. The Social Science Publishing Company. $1.50.

St. Nicholas Songs. With Illustrations. The Century Company. $3.50.

Smart, H. Two Kisses. Philadelphia: T. B. Peterson & Brothers. 25 cents.

Warden, Florence. A Vagrant Wife: A Novel. D. Appleton & Co. 25 Cents.

Something New and Approved in United States History for Schools.

History of the United States.

By Alexander Johnston, Professor in Princeton College, author of a History of American Politics, etc., etc. With numerous Maps and Illustrations. 12mo, pp. 473. $1.40.

A history of the United States, and not principally a history of the colonies from which the United States sprang. It is not a story book or a picture book. The author has written in the conviction that what the mass of pupils need is to learn from the history of the past how best to perform the simple and homely duties of good citizenship. Very few boys will ever have an opportunity to exhibit the virtues of the Pilgrim Fathers or the ability of John Smith; but almost every one of them will soon be called upon to vote upon questions which involve some understanding of the political, financial, or economic problems of the past.

What some leading teachers think of the book.

From Wm. F. Allen, Professor in University of Wisconsin:

"It is the only school history which gives constitutional and political history the importance which they deserve."

From James Monroe, Professor in Oberlin College:

"I approve of the substitution of important facts, political, military, or economic—in other words, of real history—for the romantic stories that have filled so large a space in our school books. I know of no school history of the United States which includes so much that it is necessary to know, and excludes so much that it is not."

From J. D. Crawford, Professor in University of Illinois:

"Without neglecting the ordinary statements of histories of the United States for schools, and without political bias, the author seems to have attempted to bring forward practical lessons that our youth must learn or our citizens remain ignorant of their duties. I should be very well satisfied that youth in whom I am interested should learn their history and infer their responsibilities from this work.

From E. B. Andrews, Professor in Brown University:

"It will also fill a place for which, perhaps, the author had little thought of adapting it—that of the best brief manual for general readers, and for rapid reference and verification of minor points on the part of scholars themselves."

From Geo. H. Hoss, President of Baker University:

"Prof. Johnston has found out that there are some other things in history besides wars and political conventions. It seems time that our children should be taught that we are a nation of civilians, and not a tribe of warriors. This book is a step in that direction."

From E. H. Russell, Principal of Mass. State Normal School, Worcester:

"There is a seriousness, and vigor, and thoroughness about the book that will help to raise the study above the rank of a mere pastime in school, and this, I think, will be a valuable service done to our youth."

From James H. Canfield, Professor in University of Kansas:

"Most admirable in plan and in execution. For high-school work, and even for review in college or university, I doubt if it can be excelled. He who knows well this little work and the contents of the volume by the same author, 'American Politics,' will be far better informed than the average 'statesman.'"

From Jas. W. Bell, Professor in University of Colorado:

"People whose time is limited naturally wish to know about the growth of the United States during its late years, and this Prof. Johnston's history gives more fully than other school-books. Interesting it certainly is, and that is the highest aim of a text-book."

A copy sent to a teacher for examination, with a view to adoption, on receipt of 70 cents.

HENRY HOLT & CO.,

PUBLISHERS, NEW YORK.

German Simplified.

An eminently practical new method for learning the German language, especially adapted to self-instruction. 12 Numbers at 10 cents each, sold separately. For sale by all booksellers; sent post-paid on receipt of price by Prof. A. KNOFLACH, P. O. Box 1550, New York.

JUST OUT.

The OCTOBER NUMBER of

Le Français.

REVUE MENSUELLE DE GRAMMAIRE ET DE LITTÉRATURE.

Subscription terms: Per Year (nine months), $2.00; Single Numbers, 25 cents.

Edited by JULES LÉVY, Roxbury, Mass.

"By all odds, the best educational French journal ever attempted in this country."—*The Nation.*

IN any family, whether large or small, but especially where the number of children is large, a record of the constitutional peculiarities of each one, and the whole course of its physical development in sickness and in health, is certain to be instructive and may prove invaluable. Such a record is Professor J. B. Fonssagrives's 'Mother's Register,' consisting of a series of tables scientifically arranged for brief and convenient entries. A separate volume for boys and for girls. Price, post-paid, 75 cents per volume, or $1 25 for two volumes

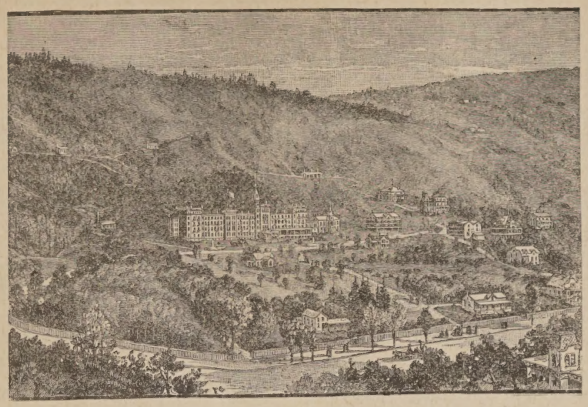
CARL SCHOENHOF, Importer, 144 Tremont St., Boston.

The Sanatorium, Dansville, N. Y.



[Long Known as Our Home on the Hillside.]

An institution for the scientific treatment of chronic invalids, as well as for rest and recuperation of those who are tired out. It is under the management and personal care of a corps of regularly educated and experienced physicians, devoted to their work. Massage, Electro-Massage; Doctor Taylor's Swedish Movements; Electricity (Galvanic, Faradic, and Franklinic, the latter from most approved Holtz machine); Inunction; and all forms of baths, including the Moliere Thermo-Electric, Turkish, Roman, and Russian, are employed according to individual needs. The plan of treatment comprehends proper regulation of daily life, including diet, exercise, etc., together with cheerful and helpful social and religious influences. The comforts and pleasures, without the cares of home; entire freedom from taxations of fashionable life; and opportunities for recreation and amusements, under reasonable regulations, are enjoyed. Thoroughly skilled attendants administer to every want.

The Sanatorium consists of a main building and nine cottages, located on an eastern mountain slope overlooking the town of Dansville, and 1,500 feet above the level of the sea. For beauty of scenery, healthfulness of climate, and purity of air and water, it is unrivalled. Winters exceptionally mild for this climate. *Malaria utterly unknown.*

The main building, occupied since 1883, is 300 feet long, five stories high, of brick and iron construction, and

ABSOLUTELY FIREPROOF.

It is constructed to meet every need of the invalid or seeker of rest and quiet, and is complete in minutest sanitary details. Among its attractions are light, airy rooms, ventilated after the best plan, and heated by steam; open grates in public and many private rooms; safety elevators; electric bells in every room; spacious halls and corridors, kept at uniform heat; perfect sewerage (closets in annex, separate from building, but connected by warmed corridors); best modern appliances in culinary department; abundant, varied, and well-prepared dietary; extensive apartments for treatment, arranged to secure entire individual privacy, etc.

Autumn and winter months are considered most favorable for treatment. Throughout the entire main building a uniform and agreeable steam heat is constantly maintained, and this, with the perfect ventilation, induces many to prefer a winter residence here to one in a tropical climate.

Special rates to clergymen and physicians. Dansville is accessible from all quarters by Del. & Lack. and by the Erie R. R. For illustrated descriptive pamphlet, circular, and other particulars, address

FACULTY OF THE SANATORIUM,
Dansville, Livingston Co., N. Y.

CROSBY'S VITALIZED PHOSPHITES

For fifteen years has been a standard remedy with all physicians who treat mental or nervous disorders.

It aids in the bodily and wonderfully in the mental growth of children.

It restores the energy lost by nervousness, debility, over-exertion, refreshes weakened vital powers in old or young.

It is used by Bismarck, Gladstone, and all great brain workers.

Scribner & Welford's

NEW BOOKS.

The Life of George Brummell, Esq.,

Commonly called Beau Brummell. By Captain Jesse. Revised and Annotated Edition from the Author's own Interleaved Copy. With Forty Portraits in color of Brummell and his Contemporaries. 2 vols., royal 8vo, cloth, $12.00.

*** He was a man who, without birth, rank, fortune, or great intelligence, established himself as the *arbiter elegantiarum* among a proud and exclusive aristocracy; who was a favorite and companion of George IV. when Prince of Wales, and whose latter career was too pitiable even for comment.

Memoirs of the Life of Colonel Hutchinson.

By his Widow, Lucy. New Edition, Revised and Edited by Charles H. Firth, M.A. With many letters never published, and much other new matter. With Ten Etched Portraits. In two volumes, fine paper, medium 8vo, and handsome binding, $12.00.

"For the first time since they saw the light, the 'Memoirs of Colonel Hutchinson' have appeared in a garb worthy of their interest and value. Posterity will, it may safely be predicted, never tire of reading the 'Memoirs of Colonel Hutchinson.' Besides furnishing an insight into the greatest struggle England has known clearer than is elsewhere to be obtained—showing how the conflict affected the quiet homes of England, the discord it bred in families, the treachery it produced among friends—the book furnishes pictures of men and women so characteristically English that the stamp is recognizable in whatever is best in previous and subsequent history."—*Notes and Queries.*

THE IDEAL SERIES.

In beautiful duodecimo volumes, printed on hand-made, uncut paper, and handsomely bound. Each volume is a gem of the printers' and binders' arts.

OLD WORLD IDYLS AND Other Verses. By Austin Dobson. 12mo, cloth, $2.40.

BALLADES IN BLUE CHINA. By Andrew Lang. 12mo, cloth, $2.

RHYMES À LA MODE. By Andrew Lang. With frontispiece by E. A. Abbey. 12mo, cloth, $2.

*CONFESSION OF AN ENG*lish Opium-Eater. By Thomas De Quincey. With notes by Richard Woodhouse, etc. Edited by Richard Garnett. 12mo, cloth, $2.

*ANCIENT BALLADS AND LE*gends of Hindustan. By Toru Dutt. 12mo, cloth, $2.

*THE LOVE SONNETS OF PRO*teus. By Wilfrid Blunt. 12mo, cloth, $2.

THREE HUNDRED ENGLISH Sonnets. Chosen and edited by David M. Main. 12mo, cloth, $2.40.

THE VICAR OF WAKEFIELD. By Oliver Goldsmith. With a Preface and Notes by Austin Dobson. 12mo, cloth, $2.

*** *The above books will be sent upon receipt of advertised price. Catalogues of our regular stock will be mailed, if desired, to those interested. NEW CATALOGUE OF CHOICE, RARE, AND SECOND-HAND BOOKS, READY. New Musical Catalogue ready.*

SCRIBNER & WELFORD, 743–745 Broadway, N. Y.

Bohn's Libraries.

A Series Standard Works of European Literature in the English Language. Full Catalogue sent, post-free, to all parts of the world on application.

RECENT ADDITIONS TO THE LIBRARIES.

WALTON'S LIVES OF DONNE, HOOKER, etc. New Edition. Revised by A. H. Bullen. With numerous illustrations. $2.

GRIMM'S GERMAN TALES. With the Notes of the Original. A New Translation, by Mrs. A. Hunt. With Introduction by Andrew Lang, M.A. 2 vols. $2.80.

BURNEY'S NOVELS. EVELINA. 1 Vol. Cecilia. 2 vols. By Frances Burney (Mme. D'arblay). With Introductions and Notes by A. R. Ellis, author of 'Sylvestra,' 'Marie,' etc. Price per volume, $1.40.

CENTENARY EDITION.

BOSWELL'S LIFE OF JOHNSON, with the Tour in the Hebrides and Johnsoniana. New Edition, with Notes and Appendices by the Rev. A. Napier, M.A., Trinity College, Cambridge. With Frontispiece to each vol. 6 vols., $8.40.

COLERIDGE'S AIDS TO REFLECTION. Confessions of an Inquiring Spirit, and Essays on Faith and the Common Prayer Book. New Edition. $1.40.

COLERIDGE'S LECTURES AND NOTES ON Shakespeare and other English Poets, including Mr. Collier's transcript of the Lectures of 1811, and the Bristol Lectures of 1813, now first collected. By T. Ashe, B.A. $1.40.

COLERIDGE'S TABLE-TALK and OMNIANA. Edited by T. Ashe, B.A. $1.40.

GOLDSMITH'S WORKS. A New Edition, containing pieces hitherto uncollected, a Life of the Author, and Notes from various sources. By J. W. M. Gibbs. In five volumes. Vol. III., containing The Citizen of the World, Polite Learning in Europe. *Now ready.* $1.40.

GILBART'S THE HISTORY, PRINCIPLES, and Practice of Banking. Revised to the Year 1881 by A. S. Michie, Deputy Manager of the Royal Bank of Scotland, London. With Portrait of Gilbart. 2 vols. $4.

SPINOZA'S CHIEF WORKS. Translated, with Introduction, by R. H. M. Elwes. 2 vols. Vol. I.—Tractatus Theologico-Politicus, Political Treatise. II.—Improvement of the Understanding, Ethics, Letters. $4.00.

DANTE.—IL PURGATORIO: a Literal Prose Translation. By W. E. Dugdale. With the Text of the Original and Explanatory Notes. $2.00.

DANTE.—THE INFERNO: a Literal Prose Translation, with the Text of the Original collated with the best editions, printed on the same page, and Explanatory Notes. By John A. Carlyle, M.D. $2.00.

VASARI'S LIVES OF THE PAINTERS. (In 6 vols.) Vol. VI., just published, being a Commentary, containing Notes and Emendations from the Italian Edition of Milanesi and other sources. By J. P. Richter, Ph.D., author of 'The Literary Works of Leonardo da Vinci,' &c. $1.40.

PLUTARCH'S LIVES. Newly Translated, with Notes and a Life, by A. Stewart, M.A., late Fellow of Trinity College, Cambridge, and the late George Long, M.A. 4 vols. $5.60.

PLUTARCH'S MORALS: Theosophical Essays. Translated by C. W. King, M.A., author of 'The Gnostics and their Remains.' $2.00.

GOETHE'S EARLY AND MISCELLANEOUS Letters, including Letters to his Mother, with Notes and a Short Biography by Edw. Bell, editor of 'Wilhelm Meister's Travels,' &c. $1.40.

GOETHE'S MISCELLANEOUS TRAVELS, including Letters from Switzerland, Campaign in France, Siege of Mainz, and Rhine Tour. Translated by L. Dora Schmitz and others. $1.40.

*LESSING'S WORKS. Translated from the Ger*man. Vol. I.—Tragedies and 'Nathan the Wise.' Vol. II.—Comedies. Vol. III.—Laokoon, Hamburg Dramatic Notes, &c. 3 vols., $4.80. With portrait, &c.

*KANT'S PROLEGOMENA AND METAPHYSI*cal Foundations of Natural Science. Translated, with Memoir and Introduction, by E. Belfort Bax, author of 'Jean Paul Marat.' With portrait of Kant. $2.00.

MOLIERE'S DRAMATIC WORKS. A new Translation in English Prose, by C. H. Wall. With a short Life and a Portrait. 3 vols. $4.20.

Charles Scribner's Sons

HAVE JUST READY:

A BEAUTIFUL BOOK.

Bric-a-Brac Stories.

By Mrs. Burton Harrison. Illustrated by Walter Crane. 1 vol., 12mo, $2.00.

Mrs. Burton Harrison has the art of the teller of fairy tales in perfection, and she has filled this book with the most charming and absorbing stories of that kind to which children listen eagerly through the longest evenings. Mr. Walter Crane, whose pencil has been hitherto devoted to illustrating the works of English writers, has furnished twenty-four full-page pictures, quaint and beautiful. He has also made for it an especially bright and ingenious cover.

Marvels of Animal Life.

By C. F. Holder. Illustrated. 1 vol., 12mo, $2.00.

One of the most curious and entertaining books ever written in the field of natural history—a book as far out of the ordinary course of "popular science" as the matters it describes are out of the common routine of a naturalist's study, which will interest young and old readers alike. Mr. Holder describes in a most entertaining way all the odd and curious things animals do, their housekeeping, their manufactures, their modes of self-protection, etc., etc. The volume is fully and cleverly illustrated.

Roses of Shadow.

By T. R. Sullivan. 1 vol., 12mo, $1.00.

A most pleasant revival of a type of novel that has been growing rare; a story well told, with the charm of a sincere, self-respecting style, that does not lose itself in a search after effects and oddities, and with a strong and healthy plot, not frittered away by perpetual analysis.

The Last Meeting.

By Brander Matthews. 1 vol., 12mo, $1.00.

A novel which combines successfully the old style of story, full of plot, and the modern, more subtle, analytical methods. The *motif* is most original and clever, and at the same time the author shows an uncommon literary dexterity. The scene is laid in New York, and the book gives an interesting picture of the semi-literary society of the metropolis.

Sermons on the Christian Life.

By John De Witt, D.D. 1 vol., 8vo, $2.50.

Dr. De Witt's book deals with correlate Christianity, considered as a whole, from various aspects of human life. His chapters form a strong, manly, earnest discourse upon many elements of Christian character.

Corea, the Hermit Nation.

By William Eliot Griffis. 1 vol. Illustrated. *A new and cheaper edition.* 8vo, $2.50.

This new edition has afforded Mr. Griffis an opportunity to add several new pages to his history, which is the standard and authoritative work of Corea, down to the present year.

The Nation.

NEW YORK, THURSDAY, OCTOBER 15, 1885.

The Week.

PRESIDENT CLEVELAND has signalized his Administration by no act more decisively right and conspicuously just than by bringing under review the suit instituted in the Attorney-General's office to set aside the Bell Telephone patent. The fact that the suit was at once dismissed when the President called for the reasons why it was begun in an *ex-parte* manner, is sufficient proof that the reasons were not good, and that the step taken by the Solicitor-General was indefensible. Attorney-General Garland does not make a satisfactory defence of himself; for, although it is true that he did not order or authorize the suit to be begun, it was his duty, upon his return to his office, to have done what the President has now done—that is, to have reviewed the action taken by the Solicitor-General in his absence. And this was all the more incumbent on him since he was a party having an interest in the suit. All that needs to be said is that the President has gained in public estimation through this incident as much as some other people have lost.

A correspondent of the *World* has had an interview on the political situation with Judge Thurman, of Ohio, in which he is reported as saying of the New York Independents:

"What will they do? Why, I think it is very plain what they will do. They are going back about as fast as they can. I was opposed to having anything to do with them from the first. I never had any confidence in them. I have just been reading the New York *Times* this morning, and its attacks on Governor Hill are surprisingly bitter. It is worse than it was before. No, I don't think we can trust the Mugwumps, as you call them."

This is on the whole the most sensible Democratic talk about the Mugwumps we have seen for a good while. No better advice can be given to Democratic politicians than "not to trust the Mugwumps." There is nothing which the Mugwumps so much desire as not to be trusted by the politicians of either party. What they seek, indeed, above all things to inspire in both is distrust. They want no politician to be able to count on their support for the things he would most like to do. They seek to diffuse through all party conventions a feeling of insecurity and uncertainty. What Judge Thurman means by "not having anything to do with them," we do not know. Who has "had anything to do" with the Mugwumps? The Mugwump does not wish either Republicans or Democrats "to have anything to do" with him in the sense in which politicians understand that term. He is essentially a solitary animal, and prefers to "flock by himself," as Lord Dundreary says. The only place he cares to meet politicians or have anything to do with them is at the polls, and for his presence there he is indebted to no man's favor, and his sole business is to leave little notes for the active politicians on both sides, expressing his approval or disapproval of their goings on. By all means let him be distrusted, for he is not trustworthy.

The latest reinforcement against the Mugwumps received by the Life-Long Democrat comes in the person of Mr. William Henry Hurlbert, some time editor of the *World*, and more recently a candidate for the Italian mission, and opposed for that office by the New York *Times*, on the ground that he would, if appointed, follow the example of Alaric and plunder Rome. He writes a longer letter than either the Life-Long or the Jeffersonian Democrat, and, as well as we can make out, indicates that he dislikes Mugwumps, thinks they did not help Cleveland, and wishes they would not continue to vote the Democratic ticket. The letter is so long, and so well fortified with "significant" figures, that we fear hardly any of the *Sun* Democrats will find time to read it, as they all, or nearly all, have to repeat the words aloud when reading anything, which of course is very tedious, and prevents any close following of the sense. No Mugwump, we feel sure, will read it on seeing the signature, owing to a profound indifference on their part about Mr. William Henry Hurlbert's opinions on all subjects.

Mr. Davenport's letter of acceptance will strengthen him in the estimation of the Independent voters. He does, what the Republican platform would have done had it been the production of sensible men, recognizes President Cleveland's sincerity as a civil-service reformer, and his determination to enforce "in good faith the policy to which he stands committed," Indeed, in speaking of his own position toward the reform, Mr. Davenport uses the President's identical language: "I believe in civil-service reform," and again recognizes the President's work by adding, "and welcome any action by any official, Federal or State, which shows a sincere purpose to promote and establish it." This is a complete justification of the Independents' position, that in supporting Mr. Davenport they are taking the only course possible for approving President Cleveland's policy. Every day's developments are adding force to what Mr. Davenport says about the opposition of the Democratic party to the President's course, and nothing will show that party the folly of such opposition except defeat.

Aside from the issue of civil-service reform, Mr. Davenport dwells only upon two points in the platform, the silver question and the labor problem. On both these his views are sound and well defined. He wisely makes civil-service reform, or the question of good government, the leading issue in the canvass, and unmistakably indicates that he is something more than a mere partisan candidate by declaring a "sincere purpose," in case of his election, "to discharge the duties of the office with fidelity and with firm regard to the interests of the State." These are sound Independent doctrines, and armed with them the Independents can brush aside the trumpery platform constructed by Col. George Bliss as unworthy of further consideration. Mr. Davenport has cleared away all the rubbish with which foolish Republican partisans were endeavoring to obscure the real issue, and has put the campaign in its true light before the people. This letter will inevitably force Governor Hill to come out more openly than ever as the candidate of the spoilsmen of his party, for on that ground alone has he even a shadow of a hope of success. He must follow the course marked out for him by the *Sun*, and repel scornfully the support of all the "dudes and aristocrats."

According to present appearances, the Ohio Democrats have got their thrashing. The majority against them may not be large, but it is sufficient. They have lost their State ticket, and probably the Legislature also. They carried both at the election two years ago. They have misused the advantages which the fair fame of President Cleveland's Administration placed in their hands, by failing to endorse his civil-service policy, and by treating it with ill-disguised contempt or open hostility. They went into the campaign with no issue that appealed to the popular desire for reform of any sort. The spoils system and the liquor interest were their main reliance in the campaign. Governor Hoadly, it must be allowed, was better than his party, but his ability and good character were overborne in the public estimation by his surroundings, and outweighed by the bad conduct of the Cincinnati *Enquirer* gang. The apprehension existed that if the Democrats carried the State, John R. McLean would be elected Senator by the same influences that elected Payne in place of Pendleton, and this apprehension received a powerful impulse, a few days before the election, through the publication of a lot of affidavits affirming that McLean had been driving around Cincinnati in a hack, offering greenbacks to local Republican leaders to betray their legislative ticket. Everybody was prepared to credit such a statement, and its damaging effect was heightened by the belief that McLean would not plant his money in this way unless he expected to reap the harvest of the Senatorship. The returns indicate that the Prohibition vote was drawn from both parties about equally, and that the Germans voted the Republican ticket as heretofore. The total Prohibition vote is almost 25,000, or more than double the vote given for St. John last year.

General Logan has taken hold of the sectional issue in a way which is calculated to show Senators Hoar and Sherman, and ex-Governor Long, that they have a good deal to learn yet before they can do the subject justice. Like all the other advocates of the issue, the General starts off by saying he is willing to "stand alone," if necessary, in its defence. Evidently there is a lack of popular sympathy which is felt in common by all of them. The General does not dwell so much as the others upon the suppression of the negro vote, but he comes out with great vigor upon the "treason-stained saddle" of the late Robert E. Lee, and appears to be under the impression that it is running for the Governorship of Virginia. This is

a very strong card, and a photograph of the saddle, with the treason stains well defined, ought to be forwarded at once to Messrs. Hoar, Sherman, and Long, and published in the *Tribune* and the Cincinnati *Commercial Gazette*. It is a much more vital aspect of the issue than the utterances of either Jeff Davis or Robert Toombs.

Ex-Governor Daniel H. Chamberlain has written a very pungent letter to the Boston *Advertiser*, in answer to Messrs. Hoar, Long, Lodge, and others, on "the bloody-shirt" question. He makes the point that to continue railing at and threatening the South, after the Republican party had voluntarily relinquished all attempt to control it, was bad and mischievous politics. But he goes further than this, and fairly slaughters the unfortunate Hoar, by showing that, by the corrupt agreement which he and his Republican brethren in the Senate entered into with Mahone, he helped fasten on the negroes of Virginia a far more debasing yoke than any imposed on them by the white Bourbons in other States, besides helping to degrade the public service. But we warn Mr. Chamberlain that he need not expect to make Mr. Hoar wince or retreat. Long years of steeping in self-esteem have made him proof against all the arts of the rhetorician.

Mr. Hoar, to do him justice, has retracted one of the many reckless and inaccurate statements publicly made by him about the present Administration. He announced with much solemnity at the late Republican State Convention at Worcester, that the entire force of the Department of Justice had been changed by the Attorney-General. He now writes to the Boston *Herald* that this was an error; that the force of the Department of Justice contains sixty-nine persons, and of these only twenty-five have been removed. He adds, most sanctimoniously:

> "Such statements ought seldom if ever to be made without being based on the authority of official records or reports, and I should not ordinarily make them without such authority. But such documents are not easily accessible relating to matters which have occurred since the adjournment of Congress. The source of information on which I relied, and supposed I could rely with entire safety, was one most friendly to the Administration; and the statement had been very widely and repeatedly circulated without contradiction."

The truth is that the Senator makes such statements nearly every time he opens his mouth about politics, and on such authority as that on which he made this one — that is, somebody on "whom he relied, and supposed he could rely with entire safety," but on whom he would not have thought of "relying" if his news had been unwelcome, or had been damaging to James G. Blaine, for instance. And further, in the present case, the Senator is in error touching the absence of contradiction. The story he adopted was contradicted in the Washington despatches of the *Evening Post*, and we think in other papers, some weeks before the Senator's speech. Mr. Cabot Lodge's reading at a club dinner a list of some half-dozen bad minor appointments, somewhere at the West, as a fair illustration of the general way in which the Administration was dealing with the civil service, was, in its disingenuousness, fully as bad as Mr. Hoar's out-and-out blundering; in fact, we think it was worse, for it is a kind of thing that a man always does deliberately and of malice aforethought.

The Massachusetts Democratic State Convention on Wednesday showed that the party has at last escaped from the sway of Butlerism, the candidate named for Governor, ex-Mayor Prince, of Boston, being honorably distinguished as one of the few leaders who never concealed their contempt for the political free-booter, and who thus incurred his lasting hostility. The Convention also showed its comprehension of the fact that the only hope for the party's future is in pledging Cleveland its hearty support, although the resolution endorsing the President's policy regarding civil-service reform is decidedly halting, and adopts the old demagogical fling about the danger of creating an official class, while a similar spirit characterizes the bid for the soldier vote in the utterly false charge that the law abridges the right of veterans to office. The most hopeful feature of the gathering was the fact that it made its President a man who had sense enough to see, and courage enough to state, the truth about the party's present position, in such plain words as these:

> "We must remember that we are only in the probationary period. Our triumph was as much the result of distrust on the part of the people in the candidate and leaders of the Republican party as of implicit confidence in us. We were triumphant on the faith of promises made, and because, as a pledge of our sincerity, we nominated a man for President who in his official life was an embodiment of the sound principles of our party platform. Honor and patriotism alike demand that our pledges to the people shall be kept and faithfully carried out, so that when our years of probation are at an end the voters of the land shall say: 'Well done, good and faithful servants,' and intrust us with their affairs for four years more."

The Convention failed to take the pronounced position in favor of a reform policy which Mr. Fitzgerald here assumed, but it at least showed that the party in Massachusetts did not propose to follow the example of the Bourbons who secured control in New York.

The contest between the liquor-dealers and the general public in Wisconsin is growing very bitter, and developing some features of general interest. The last Legislature passed a law raising the minimum fee for licenses throughout the State to $200, and allowing any municipality to increase the rate to a maximum of $500. Compared with the system in operation in the neighboring State of Illinois, and in view of the growing sentiment everywhere in favor of imposing heavier license fees, this was a moderate proposition, which the liquor interest would have been wise to accept without grumbling. Instead of doing so, the dealers have furiously opposed every movement toward securing the higher rates, and they have begun to apply boycotting tactics to people who favored such movements. The tone of a State Convention which they have just held at Milwaukee was thoroughly insolent and overbearing, and betrayed a singular obtuseness to the prevailing feeling among the people. When liquor-sellers boast of being "more powertul than any other class in the land," and endorse the policy of boycotting men for simply seeking an application of reasonable restrictions upon their traffic, they are making a bad mistake. While the public will not endorse the utterly impracticable policy of prohibiting all sales of liquor, it will never submit to being ruled by liquor-sellers.

The most important matter before the Georgia Legislature at its present session has been the question of restricting the powers of the State Railroad Commission. The anti-corporation movement which swept over the West under the lead of the Grangers a dozen years ago, made itself felt in the South somewhat later, and the Georgia Legislature in 1879 created a Board of Commissioners who were vested with almost dictatorial powers over the railroads. The Commissioners have never been slow to employ these powers, and the fact seems to be established that they have often abused their authority by arbitrarily reducing and changing rates without reason, and even without excuse. The companies were naturally and properly indignant at such treatment, and sought relief by pressing the passage of a bill which allowed them to make their own rates, and provided that those rates should stand until some individual or corporation should make formal complaint to the Commissioners, who were still to retain the power of changing the rates in such a contingency. The proposition was so reasonable that it should easily have commanded assent, but demagogical outcries against corporations availed to prevent its securing the constitutional majority of members required to pass a bill, although more than half of those voting supported it. The advocates of the change urged that, unless such a bill were passed, foreign capital would no longer be invested in the construction of railroads, and they are undoubtedly right, for no prudent investor will subject his money to the caprices of a board so irresponsible and omnipotent as the Georgia Commissioners now are.

The official organ of the Mormon Church has printed a long address from the Bishops, or whatever they are—John Taylor and George Q. Cannon—who have for months been trying to escape arrest at the hands of United States officers. They stand by "celestial marriage," as the sign of a standing or falling church, and show that it has been made imperative on them by divine revelation, and that they cannot give it up, in deference to Gentile prejudices, without incurring the risk of eternal damnation. Of course, under these circumstances, any good Mormon will freely incur stripes or imprisonment sooner than cut down the number of his wives. The theological arrangements of the Saints in this matter are, in fact, most comfortable. Among all other religious denominations damnation follows on doing something one likes to do very much, which of course makes their yoke a little hard for the ordinary run of sinners. But, in the Mormon Church, damnation follows on failure to follow one of the sinner's strongest inclinations. Mahomet has always been thought to have exhibited a deep knowledge of human nature in the matrimonial rules he devised for his flock. But he only permitted polygamy. In making it obligatory, the Mormon divines have far outdone him, both as theologians and social philosophers. Taylor and Cannon, following the example of party

conventions, append to their confession of faith a regular "arraignment" of the Gentiles from the moral point of view. On this very delicate ground, it must be confessed, the Saints are very strong and the Gentiles very weak. United States Christians are certainly but poorly prepared for controversy with the Mormons over the question of comparative domestic purity and matrimonial permanence.

The Grand Jury, which for some days had been in session at Green River, Wyoming, came into court Wednesday week reporting no bill against the sixteen persons arrested under charge of murdering the Chinese at Rock Springs; and on their return home in freedom to the scene of the slaughter, the accused were "treated to an enthusiastic reception" by "several hundred men, women, and children," or, in other words, the entire Rock Springs population. "Some testimony of a startling character," the telegraph says, "was given to the Grand Jury," "which is calculated to throw new light on the affair." The Rev. Timothy Thirloway, a Congregational minister, who resided at Rock Springs with his family at the time of the riot, made a sworn statement showing that the Chinese set fire to their own houses to prevent white men from robbing them of their money, which was buried in the ground underneath their dwellings. The Rev. Timothy must be, like Warren Hastings, amazed at his own moderation. It was quite open to him to charge the Chinese with suicide, or with murdering each other, or driving each other into that awful region of desolate mountains where they died of starvation or as the wild beasts' prey. Possibly he thought it safer to confine his "sworn statement" to its modest limits because there is authority for accusing the Chinese of burning houses to roast pigs. But that was in a milder climate than Wyoming, and the houses were frail and inexpensive; in short, we do not think the existence of such a race-habit can be established. The Rev. Timothy has, however, made a valuable contribution to the study of sociology. He may be supposed a little better than his neighbors, and from his behavior may be inferred the condition of public morals among all classes of society in that wild frontier region.

The ten columns of printed matter furnished to the *Herald* by Ferdinand Ward as his statement of the rise and fall of the firm of Grant & Ward, embrace very few facts not known before, and as to these it must be said that little credence is to be attached to anything except the documentary evidence introduced. Several of the persons implicated have made reply to the half-truths and whole-cloth lies embraced in the statement. Mayor Grace says that he never heard of any Government contracts or any city contracts in his dealings with Grant & Ward, and that he never asked Ward to take him (Grace) as a partner in the firm. The statement of Ward upon the latter point is altogether beyond belief, since he knew at the time when he says he declined to take Mr. Grace into partnership that Grant & Ward were insolvent, and that Grace possessed means sufficient to extricate the firm from their difficulties, and that he would be compelled as a general partner to do so. Why Ward should tell so self-evident and aimless an untruth now is one of a great cloud of mysteries which thicken every time he opens his mouth. An accusation against Mr. George D. Morgan, of the Mercantile Trust Company, implying that he had privately pocketed $20,000 as a bonus from Ward for a loan of $300,000 from that institution, or from the Equitable Life Assurance Society, is answered by the statement of his superior officer that he (Morgan) turned the bonus over to the corporation, and that the bonus was for loans amounting to $1,250,000, or about 1½ per cent. —not an extravagant commission. The inferences which Ward intended the public should draw to the detriment of General Gordon, are likewise dispelled by the fact that the Georgia coal mine was examined by Ward's brother at the instance of the firm, and favorably reported on before Grant & Ward assumed General Gordon's debt at the Marine Bank—that is, Grant & Ward bought the mine after investigation and not upon any kind of compulsion, moral or legal. It was not necessary for the sons of General Grant to say anything in reply to Ward. The fact that they put actual money into the business in the beginning and had nothing left when the crash came, but were in debt to others for enormous sums, is sufficient to clear them of every charge except that of blindness.

One of the pleasantest incidents of the day is the kindly way in which men of all creeds and ministers of all denominations speak of the late Cardinal McCloskey. Fifty years ago it would have seemed impossible that a Roman prelate should be followed to the grave in this city by so many regrets and so much respect. The secret of the change is, not that the deceased Cardinal's creed has become any more acceptable, but that he, its most conspicuous professor, was above all things a minister of peace. He avoided all controversies, he turned away wrath with soft answers; he disarmed prejudices by a life of singular purity and simplicity; he covered all men, and not those of his own faith only, with the mantle of charity. There could hardly be a better propagandist than he, and yet probably no Catholic priest ever occupied himself less with propagandism.

Lord Randolph Churchill, not to be beaten by Salisbury and Gladstone, has got out a manifesto of his own, which in meaninglessness apparently closely resembles the one which Dickens ascribed to Disraeli, many years ago, in the *Household Words*, in which Dizzy declared that "others might do as they pleased, but he was for the Star and Garter, the Crown and Sceptre, the Elephant and Castle, the Blue Boar and the Red Lion," these being the signs of various well-known inns in and around London. Lord Randolph promises harmony with all the Powers, an imperial confederation for the colonies, complete reconciliation with his "Irish brethren," absolute security for the Indian Empire, and local self-government for the country districts. On the other hand, the Tories are to oppose firmly "the social ruin" threatened by the Liberal programme. Parnell, in the meantime, does not grow more conciliatory. On the other hand, he announces that the judicial rents fixed by the Commissioners under the Land Act are no more sacred than any other rents, are too high and will have to come down. The truth is, the condition of Irish agriculture and trade both seem to indicate that the rents are still much too high, or, in other words, that Ireland cannot afford a landed gentry; that the utmost the soil can do in the presence of American competition is to maintain the people actually engaged in its cultivation.

The only danger to the peace in Eastern Europe seems to arise from the warlike attitude of Greece and Servia, each of whom claims an addition to its territory, if Bulgaria is to have one. Servia claims, in fact, a slice of the present Bulgaria, and Greece wants Macedonia, if there is going to be anything in the nature of a redistribution. Apparently Prince Bismarck proposes to let Turkey take care of herself in case the Greeks and Servians persist in their aggressiveness, but in case they do not, to accept the unification of Bulgaria under Turkish suzerainty. It seems a very good settlement on its face, but it really contains a snare of the worst kind for the Turks. If they succeed in their military operations, they will of course carry them on in the old fashion, with massacre and pillage, and then nothing will prevent the participation of Russia in the contest, and probably of Rumania also. The Russian people will never again see their co-religionists slaughtered by the Turks without drawing the sword. Austria, too, would promptly advance on Salonica as a measure of precaution in case there was any disturbance in Macedonia, and in the end the victories of the Turks, like those they won in Servia in 1877, would be ruinous.

The continued defeats and dissensions of the German Liberals in Cisleithan Austria have finally led to a disruption of their representation in the Reichsrath into two distinct camps, each represented by a separate Parliamentary club. The separation was consummated on the eve of the opening of the Parliament, after a last attempt by a committee to save the unity of the once so powerful party. The majority of the Liberal representatives, upwards of seventy, remained faithful to the old banner, as members of the German-Austrian Club; the minority, less than fifty, formed a new organization, named the German Club. Intrinsically, the difference between the two factions may be stated to be this: the majority are Austrians and Liberals first and Germans next; the minority are Germans first, Liberals next, and Austrians last of all. On most occasions the members of both are expected to vote in harmony in opposition to the Slavs and the Taaffe Cabinet, but the seceders are more irreconcilable and more vehemently outspoken. They are mostly representatives of German constituencies in provinces predominantly Slavic, like Bohemia. That the split, which was brought about by the irreconcilables, will contribute to the further decline of the German cause in Austria is doubted by nobody. It is characteristic of the national Babel which Cisleithania presents that the swearing in of the representatives, at the opening of the Reichsrath, took place in all the following languages: German, Bohemian (or Czech), Polish, Ruthene, Slovene, Wallachian (or Ruman), Italian, and Serbo-Croat.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, October 7, to TUESDAY, October 13, 1885, inclusive.]

DOMESTIC.

THE President having called Attorney-General Garland's attention to the comments of the press upon the action of the Solicitor-General regarding the suit to test the validity of the Bell Telephone patent, Mr. Garland has made a statement to the President and the Cabinet. He says that he has always regarded himself as "incapacitated" by his interest in the Pan-Electric Company from taking any interest in the suit; that the Solicitor-General, who has the authority, acted on the request for the use of the name of the United States in the suit without the Attorney-General's knowledge; and that, the President having called the Solicitor-General's attention to the fact that by precedent the matter ought to have been referred to the Interior Department, that officer has directed the suit in question to be discontinued.

On Friday the President appointed Charles D. Jacobs to be Minister to the United States of Colombia. Mr. Jacobs is about fifty-five years of age. He was a member of the Common Council of Louisville, and was twice elected Mayor of that city. He was a prominent candidate for the Gubernatorial nomination in 1884, and is a lawyer of ability.

President Cleveland has appointed Jabez L. M. Curry, of Richmond, Va., Minister to Spain. Mr. Curry is a native of Georgia, and a graduate of the University of Georgia and of the Harvard Law School. He was a member of the Confederate Congress and served in the rebel army. In 1865 he became President of Howard College, at Marion, Ala. In 1868 he went to Richmond College, Richmond, Va., as Professor of English and Mental Philosophy, and about this time, at the earnest solicitation of friends, he consented to be ordained to the ministry. He, however, declined to accept any of the numerous calls he received. During several years past Mr. Curry has been the general agent of the Peabody educational fund, and has been very active in forwarding the cause of education in the South. He has been an earnest opponent of Mahone.

There is a well-supported rumor in Washington that Mr. Charles R. Codman, of Boston, has accepted the place of Civil-Service Commissioner to be vacated on November 1st by Dorman B. Eaton. Mr. Codman has been very reluctant to accept the position because its duties necessarily interfere with his private business. Civil-service reformers will unquestionably regard the appointment of Mr. Codman as one to be highly commended. He is enthusiastically in favor of such a civil service as President Cleveland aims to secure. He has taken a leading part in the Republican politics of Massachusetts in recent years, but in 1884 refused to support Blaine.

Requests having been preferred by Generals Sheridan, Schofield, Pope, and Howard, that their present personal aides be made exceptions to the recently issued order sending back to their regiments all officers who have been absent therefrom on detached or staff duty four years or more, Secretary Endicott has decided that no exceptions shall be made to the operation of the order.

The Administration has rebuked a good many cavillers by causing the department clerks to understand that they are all at liberty to go home to vote, and to vote for whatever candidate they please, provided that they have not already exhausted their leaves of absence.

The delivery of special-stamp letters on Sunday has been made optional by the Post-office Department.

An election was held in Ohio on Tuesday for Governor and other State officers and a Legislature, which will be called upon to choose a United States Senator to succeed John Sherman, whose term expires in 1887. The people of the State also voted upon proposed amendments to four sections of their State Constitution, which change the time of the biennial elections of State officers and Legislature to the first Tuesday after the first Monday in November, and do away with October elections. Four tickets were in the field: Republican, headed by J. B. Foraker; Democratic, by George Hoadly; Greenback, by G. W. Northrop; and Prohibitionist, by A. B. Leonard. The latest returns indicate the election of Foraker and the Republican State ticket by about 15,000 plurality. It is also probable that the Republicans have secured a working majority of the Legislature. The Constitutional amendments are said to have been carried. The Prohibition vote is estimated at 20,000, drawn from both parties. The day was rainy. There were no serious disorders. Hamilton County probably gave a Republican majority.

The Republican candidates for Governor and Lieutenant-Governor in this State published their letters of acceptance on Friday. Ira Davenport in his letter said: "I would remark that the emphatic utterances of the Convention on the three commanding subjects of civil-service reform, the currency, and labor have my earnest concurrence. I believe in civil service reform, and welcome any action by any official, Federal or State, which shows a sincere purpose to promote and establish it. When it comes to be thoroughly understood and its methods perfected, I am confident that it will commend itself to the people through the improvement of their official service and the purification of their political life. The experience of seven months would seem to show that no matter how well disposed the President of the United States may be toward civil-service reform, or even how determined he may be to promote it, he cannot in this command the support of the party which stands arrayed in opposition to ourselves. Every day adds to the proof that the least worthy and the apparently controlling elements of that party are resolved to thwart every movement the President may make toward any enforcement in good faith of the policy to which he stands committed. I fully concur in the demand of the Convention for appropriate legislation by Congress putting an end to the silver coinage, already excessive, and calling for honest silver dollars on the basis of the gold standard."

The Massachusetts Democratic State Convention was held at Worcester on Wednesday. The platform adopted contained the following planks: "We have full faith and confidence in the President, in his wise caution, his far-seeing sagacity, his courage and firmness, his determination to administer the Government in the interests of the whole people, and his devotion to the fundamental principles of national Democracy. We expect that under his Administration every reform required to make the Government pure and honest will be made; that the liberty and rights of every citizen in every section of our own country and on the soil of every foreign country will be jealously guarded and carefully preserved; that sectional prejudice and jealousy will disappear, and that that pervading spirit of nationality will be revived which makes every citizen glory in the prosperity and honor of a common country; that the civil service will be established on a broad basis of justice and equality, securing to the Administration official sympathy with its policy—not creating an unofficial class which shall be above and beyond the people, but giving to each and every citizen who is capable and honest the right to be selected for public employment; that it will recognize the principle that every officer of the republic is a public servant, strictly responsible to the people, and holding his office subject to the will of the people."

Frederick O. Prince, ex-Mayor of Boston, was nominated for Governor on the second ballot. Other nominees are ex-Senator H. H. Gilmore, of Cambridge for Lieutenant-Governor; ex-Senator Jeremiah Crowley, of Lowell, for Secretary of State; ex-Mayor Henry K. Braley, of Fall River, for Attorney-General; Representative Henry M. Cross, of Newburyport, for State Treasurer; and Mr. James Delaney, of Holyoke, for Auditor.

Information which daily comes from Virginia shows that the purpose of Mahone is to elect members of the Legislature enough to secure a working majority on joint ballot, and that he does not expect to elect Wise Governor. Fifty-one members of the House of Delegates will be a clear Mahone majority of two.

Senator Gorman, of Maryland, has dictated the Democratic nomination for Mayor of Baltimore. The Independents and best Democrats are indignant and will bolt.

The Governor of Oregon has called an extra session of the Legislature for November 9, to choose a United States Senator.

The Mormon Church organ at Salt Lake on Wednesday night printed five columns and a half of an address from John Taylor and George Q. Cannon. It is devoted to strictures on the judicial proceedings there, calling them prejudiced and harsh. It says: "We join with all saints in invoking blessings upon the noble men and women who have exhibited their integrity to God and the cause, and their devotion to principle, by submitting to bonds and imprisonment rather than deny the faith or break the covenants."

A street-car strike in St. Louis occasioned serious riots on Thursday and Friday evenings. Quiet was completely restored on Tuesday, and all cars were running unmolested.

Three distinct earthquake shocks were felt in Virginia about 11:30 o'clock on Friday night.

The great explosion at Flood Rock, near Hallet's Point, New York Harbor, which has been awaited for many months, took place at 11:13 A. M. on Saturday. It was a complete success in every way. The shock was felt throughout this city, but no damage was done to property. Onlookers observed a spectacle of much grandeur. An apparently solid mass of water, acres in extent, rose about 200 feet in the air, with jets and peaks shooting up much higher. Its resemblance to an immense iceberg was remarkable. The whole river from Astoria to New York seemed to boil for a few moments, and then subsided. Vibrations were observed 50 miles away.

The work upon Hallet's Point reef was begun in 1869, and the obstruction was blown up on Sunday, September 24, 1876. As soon as the great value of what had been done was ascertained, work was begun upon Flood Rock, a reef of about nine acres in area, which obstructed the main channel between Hallet's Point and the New York shore. An island was constructed on top of the rock, and a shaft was sunk to a depth of 64 feet below low-tide level. From this main shaft radiating galleries were blasted out, and the reef honeycombed. The total length of the galleries was 21,670 feet. The roof of the galleries was drilled with 13,286 holes, of an average depth of 9 feet. These holes were loaded with cartridges containing 6 pounds of explosive. About 75,000 pounds of No. 1 dynamite and 240,000 pounds of rack-a-rock, a mixture of chlorate of potash and dinitro-benzole, were used. The blast was six times as large as that of September, 1876, and was the largest ever made.

Cardinal McCloskey died at his residence in this city at 12:50 o'clock on Saturday morning. John McCloskey, the first American Cardinal, was born in Brooklyn March 20, 1810. His early promise caused his mother, who was left a widow when he was ten years of age, to give him a liberal education. He was ordained a priest in 1834, became a bishop of the Roman Catholic Church in 1844, an archbishop in 1864, and Cardinal on March 15, 1875. On January 12, 1884, Cardinal McCloskey celebrated his golden jubilee, or the fiftieth anniversary of his ordination to the priesthood. He has been in failing health for some time, and his death was expected.

FOREIGN.

A careful calculation shows that the Conservatives in the French Chamber of Deputies will probably number about 210, M. Clémenceau's Radical party 124, and the Republicans of other shades 250. M. Clémenceau's position, therefore, will be somewhat like Mr. Parnell's in the English Parliament.

It is understood that the French Cabinet have resolved to resign just before the assembling of the Chambers.

France has asked for the postponement of the date of convening the Latin Monetary Conference. The date fixed was October 12.

The French War Office received a despatch on Friday, dated Tamatave, from Admiral Miot, commander of the French forces in Madagascar, stating that the French and Hovas had an indecisive fight on the 26th of September. The French lost 21 killed and wounded, and the Hovas 200.

Lord Lyons, the British Ambassador to France, and M. de Freycinet, the French Minister of Foreign Affairs, have arrived at an understanding by which their respective Governments will observe a strict neutrality if Turkey fights any of the Balkan States or Greece, and the other Powers hold aloof. It is believed that hostilities are inevitable, as both Servia and Greece disregard the injunction to adopt a peace policy, and state that they will keep quiet only on condition that they be compensated. Turkish troops which formed the garrison at Salonica are moving toward the Rumelian frontier.

It is asserted in Berlin that Germany, with the approval of Russia, Austria, and England, has proposed, in a plan for the settlement of the Bulgarian question, that the following principles be observed: First, that the Greek and Servian demands be rejected. Second, that Turkey be advised to complete her military preparations, so as to be ready to interfere in the event of Greece and Servia moving to enforce their demands. Lastly, that the union of Bulgaria and Rumelia under Prince Alexander, the latter avowing the sovereignty of the Sultan, be recognized. France has also assented to this plan. Mr. Gladstone favors the unity of Bulgaria, but trusts that its territory will not exceed its present limits, because he fears disastrous complications.

King Milan, of Servia, at a recent meeting of the Chamber of Deputies, declared that in the event of the union between Bulgaria and Rumelia being recognized by the Powers, Servia would fight unless her demands for an extension of territory were granted.

The Russian Government has ordered all Russian officers to leave Bulgaria.

A despatch from Sophia, Bulgaria, on Monday said: "The populace are fleeing. Rumors are current that the Servian army has crossed the frontier. The Government has telegraphed to Philippopolis, entreating Prince Alexander to return. A telegram from Nish says the Servian War Office has given contracts for 6,000,000 kilos of corn. Troops are advancing toward Ak-Palanka and Leskovatz."

Lord Salisbury, the Conservative Premier, at the National Conservative Conference in Newport, Eng., on Wednesday, outlined his policy. Referring to the disturbances in the Balkans, the Premier said: "It is no part of the duty of British statesmen to interfere in the affairs of Eastern Rumelia. The treaty of Berlin has not been frustrated nor has the San Stefano treaty been restored. The policy of the Government is to uphold the Turkish Empire, and wherever it is possible to do so genuinely and healthily, to uphold, cherish, and foster strong, self-sustained nationalities which have an important bearing on the future of Europe. For the present I have hopes that the Powers will confine the disturbance within the limits of the Rumelian territory. Russian influence would have checked the political growth of Rumelia if the latter country had united with Bulgaria in 1878." He favored a great change in the present measures for local self-government. To decentralize authority in London was an indispensable part of the new Government's policy. People having wealth should bear the burden of the expenses of the country. He regarded the integrity of the Empire above all other political considerations. He favored the imperial federation movement, but his plans in regard to the matter had not yet been tangibly shaped.

In the course of the speech Lord Salisbury also said he had seen no plan for the solution of the Irish question. He denied that the Crimes Act had diminished the number of outrages. He believed in a closer union of England and her colonies with a view to proving the real strength of the nation in European councils, and said that it was one of the most important questions of the future. He favored a measure for cheapening and simplifying the sale and transfer of land. He stated that the Government had received returns showing that general crime in Ireland had decreased. Boycotting was amenable to the ordinary law, which must be sternly enforced. Thirty-five prosecutions, he said, had already been started. Extending self-government to Ireland, he declared, was an open question, but it was desirable so far as possible to give Ireland the same benefits as were enjoyed by the rest of the United Kingdom. He was agreeable to local trials of the closing of taverns on Sunday. He thought an imperial federation would not solve the Irish question. He was in favor of an easy system for the transfer of land. He denounced Mr. Chamberlain's scheme of small freeholds, which, he said, would lead to domination or corruption.

The Irish Nationalists have decided to contest every Irish Parliamentary seat except twelve. The Roman Catholic bishops of Ireland have passed a resolution condemning acts of violence and intimidation, and warning their respective flocks against indulging in illegal excesses. Such acts, they say, are certain to bring the anger of God upon the evil-doers and their families, besides disgracing the Irish people in the eyes of the civilized world.

Mr. Parnell was given a great reception at Kildare, Ireland, on Sunday. The occasion was the consecration of the church of Dr. Kavanagh. Archbishops Walsh and Croke and Bishops Duggan and Lynch were present, Archbishop Walsh denounced Dublin Castle, and declared in favor of abolishing the Lord Lieutenancy. Archbishop Croke preached a semi political sermon in the presence of the assembled bishops and priests. He urged the people to remain steadfast in their religion, but not to forget their duty to their country. In the afternoon Mr. Parnell made a great speech denouncing landlords and the land act of 1881. He predicted that the land act would be amended in the very near future, either by the English or by an Irish Parliament, so as to bring about a further reduction of judicial rents of 30 or 40 per cent. He concluded with an earnest appeal to the people to avoid outrages and violence. This meeting is taken as a significant indication of the close alliance of Irish religious and political leaders.

Lord Randolph Churchill has issued an address to his constituents. In it he says: "The policy of the Tories is to regain the friendship of the Powers, which prejudice, presumption, and poltroonery have almost forfeited, and to use that friendship to secure European peace; imperial federation for defensive and commercial purposes of England and her colonies; to conciliate by equal laws and just and firm administration the Irish brethren now irritated and estranged, so that the union which nature as well as policy effected may eternally endure; to place the security of the Indian empire beyond the influence of panic or anxiety; to give the rural farming population self-government, which has already benefited the great towns. The Tories will oppose the dismemberment of the Empire under the guise of national councils. The abolition of the House of Lords, the disestablishment of the Church, the use of its endowments for purposes of secular education, the wholesale plunder of all who acquired property by inheritance or thrift, under the guise of ransom and graduated taxation—all mean social ruin, and must be confined to Mr. Chamberlain. If the people restore the Liberals to power, the Tories will patiently accept the judgment of the people, but history will mourn and wonder at the insanity of a people who deliberately flung away a priceless heritage, thereby consigning to the grave a great and glorious empire."

The London *Standard* (Conservative) entirely ignores Lord Randolph Churchill's manifesto.

There is a sensational report in London that the Government is determined on the annexation of Upper Burmah.

Mr. Herbert Gladstone, speaking at Leeds, on Monday, said that all Liberals were agreed that the office of the Lord Lieutenancy of Ireland should be abolished. He thought that in time England would voluntarily yield home rule to Ireland, maintaining, however, the rights of the Crown. Mr. John Bright, in a speech at Street, declined to pass an opinion on the subject of free education. Regarding the land question, he said he only wanted the transfer of land made easy, and did not approve of certain new-fangled proposals on the subject. He deprecated the fact that certain politicians were teaching the masses that they were slaves. The statements made by these men were absurd in the face of the recent reforms. Mr. Bright concluded with a forcible protest against a resort to arms as a means of settling international disputes. He attributed the prevailing war feeling to "jingoism" in the newspapers.

A despatch from Constantinople to the *Herald* on Saturday said: "Sir Henry Drummond Wolff's mission has been crowned with success. His understanding with the Porte on Egyptian affairs is complete, and an imperial *irade* will soon be issued sanctioning an arrangement, the principal points of which are as follows: Turkey appoints six commissioners—two for finance, two for military organization, and two for general administration. England, on her side, will appoint a similar number. When the labors of these men have been completed and Egyptian affairs have been placed on a satisfactory footing, the British occupation will cease."

Official advices have been received at Cairo from Ras Alula, the commander of the Abyssinian expedition marching to the relief of the beleaguered garrison at Kassala, to the effect that, after a severe battle, the Abyssinians defeated a large force of dervishes under Osman Digna, and that 3,000 dervishes were killed in the encounter. The Abyssinian General is now rapidly advancing on Kassala.

Prince Albrecht, of Prussia, has been appointed Regent of the Duchy of Brunswick. The Duke of Cumberland has protested against the appointment, as being himself heir to the dukedom.

A Berlin despatch says: "Mr. Pendleton, the United States Minister, purposes coming to an early agreement with the German Government with reference to the Bancroft treaty, as cases of expulsion and enrolment of Americans living in Germany in the army have largely increased."

Émile Perrin, painter, art writer, and impresario, but best known as Director of the Théâtre-Français in Paris since 1871, is dead. He was born in Rouen in 1814, and was a pupil of Gros and Delaroche.

A fire in the Charterhouse Buildings, London, on Thursday, destroyed thirteen warehouses. The loss was estimated at $15,000,000.

The hearing of Riel's case in London was postponed on Tuesday until October 21. Riel has been again respited to October 26.

The New Zealand Government has renewed the mail service with San Francisco.

UNIFORMITY IN ELECTION SEASONS.

THE Ohio election on Tuesday was the last October election that will ever be held in that State. The last Legislature submitted to the people a proposed amendment to the Constitution, changing the day for choosing State officers to the date when Congressmen and Presidents are elected—the Tuesday after the first Monday in November. All the parties declared in favor of the movement, and thus ensured the adoption of the amendment by an overwhelming majority. In the large view this was the most important feature of Tuesday's voting. Whether Hoadly or Foraker should be elected Governor for two years, or whether the Republicans or the Democrats should secure the Senatorship for six years, were matters of only transient consequence compared with the permanent result that the demoralization of "October States" in national elections is practically at an end.

One of the surest signs of political progress in the United States during the last half century is the steady approach toward uniformity in the times of election. Men now living can remember the period when the confusion which prevailed in this matter was almost appalling. Forty years ago the people not only did not cast their ballots for Presidential electors upon the same day throughout the country, but the voting actually extended over a period of a fortnight. In the famous campaign of 1840 the balloting began in Pennsylvania and Ohio upon the last Friday in October, which fell that year upon the 30th of the month, and closed in North Carolina upon the second Thursday of November, which was the 12th day. Twelve of the States voted upon the first Monday in November, two upon the first Tuesday, one on the first Wednesday, and several others upon the second Monday or second Tuesday, while New Jersey took two days (the first Tuesday and Wednesday), and New York, opening the polls on the first Monday morning, did not close them until Wednesday night. In 1840 the success of Harrison in Pennsylvania decided the election before the last States cast their ballots, and in 1844 the defeat of Clay in New York, through the defection of the anti-slavery Whigs, who supported Birney, also settled the issue days before North Carolina voted. Fortunately the people had the good sense to insist upon uniformity before the crisis which must, sooner or later, inevitably have come if the States had gone on voting for President in this helter-skelter fashion, until in some year it would have been found that the result depended upon a close State which voted last of all.

Originally there was an even greater lack of uniformity about the time of holding State elections. In Connecticut the inauguration of the Governor used to be the great holiday of the year, and, as the early part of May appeared the most favorable season for such a celebration, the election was held a few weeks earlier, in April. New Hampshire began her political year in June, and also held her election in the spring, selecting, with curious thoughtlessness, a day in early March—the worst month in the year for travelling over the country roads of that mountainous State. The first part of August would seem about as disagreeable a time as could be picked out for an election, and yet Indiana, Illinois, Iowa, and Missouri originally selected the first Monday of August, as did also States nearer the equator, like Kentucky, Tennessee, North Carolina, and Alabama. Maine and Vermont chose different dates in September, while the great States of Pennsylvania and Ohio were imitated by Indiana, and later by Iowa and West Virginia, in selecting the second Tuesday in October.

Reform had begun before the rebellion, Illinois, for instance, having changed from August to November; but the great changes have come about during the last fifteen years. "As goes Pennsylvania, so goes the Union," had become a political motto, justified by the fact that, after the reorganization of parties in 1825, her electoral votes had never been cast for an unsuccessful candidate; and the consequence was that in every Presidential year both parties concentrated their energies upon the October State election in Pennsylvania. The State was often very close before the war, Harrison receiving only 349 more votes than Van Buren in 1840; and even after the war, although the Republicans had greatly the advantage, it was bitterly contested. The demoralization of these struggles at last became so manifest that the people rebelled against the system of a separate State election earlier than the national one, and in 1873 they heartily ratified a new Constitution which changed the time to November. Soon after, by the way, Connecticut and New Hampshire gave up their spring elections, and fell into the November column. This left Ohio and Indiana still to be fought for in the same old way, for the sake of the "moral effect" which a preliminary victory there would exert throughout the country. Indiana bore the brunt of the struggle as a really doubtful State until it had also wearied of the strain. The people sought to end the nuisance by changing the time to November before the election of 1880, but Mr. Hendricks persuaded the Democratic Supreme Court to overthrow the amendment on technical grounds in order to retain Indiana as an October State, and thus help his chances in the Democratic Presidential Convention. The scheme failed, so far as Mr. Hendricks was concerned, but resulted in making the State the real battle-ground in the Presidential election of 1880; and its October contest in that year was probably the most debauched State election ever known in our history. The people were so thoroughly disgusted that they ratified the amendment the next time so emphatically that no question could be raised about it. West Virginia and Iowa followed their example in 1884, and now Ohio does the same thing. There are now left only eleven of the thirty-eight States which do not hold their State elections in November, and these will probably one by one follow the drift.

This change is cause for national congratulation. The whole country has suffered from having the result of a Presidential election made to turn upon the decision of what was theoretically only a State election a few weeks earlier. The old scenes in Pennsylvania every fourth October, the more recent performances in Indiana in the same month of 1880, and in Ohio in October, 1884, were not only disgraceful, but dangerous. As the stake to be won became more valuable, the players grew more reckless, and we finally reached the point where a Vice-President elect cynically referred in a public speech to the success of his party in carrying a national election by a liberal use of "soap" in the State election upon which the larger issue was made to hinge. The fact that the people of these great States have realized the folly and danger of the old way and insisted upon a reform, in the face of persistent opposition by the professional politicians, encourages the hope that the republic will cure other evils in the administration of Government as they may arise.

TWO TYPICAL STATES.

By a rather curious coincidence there assembled last week in an Eastern and in a Western State two companies of men who had been prominent in their development as commonwealths. At Montpelier there gathered, to the number of many hundreds, members of the Vermont Legislature for more than half a century past, while at Indianapolis was held a reunion of the survivors of the Constitutional Convention of 1850–51. Each occasion brought out a flood of local reminiscence, and each gathering, in its very composition, threw much light upon the history of the State. The simultaneous occurrence of the two reunions served to portray in a striking light the points of difference and of resemblance between States which are typical of two very different methods of development.

Among all the States Vermont comes the nearest to a survival of the ancient Puritan commonwealth. Settled almost exclusively by the original Puritan stock, it has always retained a large share of their peculiar character. For half a century its growth in population has been trifling, the increase in each of two decades being less than 2,000, and for the whole fifty years from 1830 to 1880 only from 280,652 to 332,286. The distribution of the population continues almost the same as in the earliest period of New England, when cities in the modern sense were unknown, and the people were thinly scattered through the agricultural sections. The largest place in the State, Rutland, has only about 12,000 people, and there are but five others with as many as 5,000 apiece. The foreign element is very small, and is chiefly massed in the towns, so that there are counties where not more than one in fifteen of the people were born abroad. The native-born are to a remarkable extent the descendants of Vermonters, only 14 in every 100 having been born in other States. Nowhere else in the country can the antiquarian discover so many communities which preserve in the closing years of the nineteenth century so many of the characteristics which distinguished them at its beginning.

While Vermont is thus still a State of one prevailing type, Indiana is a good sample of a composite commonwealth, which has grown rapidly by accretions from all parts of the country and world. In the half-century when the New England State increased her population less than one-fifth, the Western one advanced by leaps and bounds, so that its 343,-

031 people of 1830 had become almost sixfold as numerous when the census of 1880 disclosed 1,978,301 souls. The extent to which Indiana has drawn from the older parts of the country is forcibly shown by the statistics as to the birthplace of the members of the Convention of 1850. Kentucky heads the list, with 22; next come Pennsylvania and Virginia, each with 19; then Ohio, with 17, and New York, with 16, while Indiana itself, although admitted to the Union a full generation before, stood sixth, with 13, followed closely by Maryland and Tennessee, with 7 apiece, by Massachusetts and South Carolina with 4 each, and by Vermont with 1. Of course, the proportions of the whole population contributed from these sources would not agree with the divisions in the Convention, but as such a body was recruited from the most prominent men in the State, the figures give a good idea of the varying forces which shared in the development of the State.

Each State has found itself able to learn from the other. It is a curious illustration of the fact that a community made up of various elements is often more open to progressive ideas than a more homogeneous one, that Indiana as early as 1850 saw the wisdom of having the Legislature meet only once in two years, while the conservatism of Vermont clung to the annual system until 1870. Indiana, on the other hand, took the New England State for a copy in its provisions for public education. The Eastern common-school system thus transplanted immediately took root and throve finely in Western soil. While Vermont went backwards in the matter of illiteracy between 1850 and 1860, the number of adults in Indiana who could not read and write fell off from 72,710 to 62,716 in the decade after the Convention, although the population increased by more than one-third in the same period. By 1880 the Western State had caught up and passed the Eastern one, the percentage of persons returned as unable to read by the last census being 4.9 per cent. in Vermont and 4.8 per cent. in Indiana. Much stress was laid at Montpelier last week upon the services of Vermont to the Union during the war, and it is highly creditable to the little State that she contributed 35,262 men to the army out of 60,580 males of the military age in 1860, or 58 per cent. of all. Yet Indiana, despite the large Southern element in her population, did even better, with 197,147 out of 265,295, or 74 per cent., her nearness to the scene of military operations accounting in part for this remarkable showing.

The relative weight of the two States in the Government has undergone a wonderful change. Vermont once had six representatives in Congress out of 181 and Indiana but three, while now Vermont has only two out of 325 and Indiana thirteen. The transformation is only typical of that which has befallen New England as a section. In the first years of this century that part of the country contributed a quarter of the lower house; now it sends only a twelfth. It is hard for these older States to find themselves remaining almost stationary in population and thereby dwindling in political power—unless they have the shrewdness to arrest the process by retaining in service, when they can find them, such men as Senators Edmunds and Morrill. They are inclined, not unnaturally, to feel that this apparent decay of the old stock in relative influence bodes ill for the country. It is well, therefore, that they should realize that the newer and more heterogeneous States, to which they have themselves made large contributions, are keeping pace with them in all that goes to make a successful commonwealth, and that New England may even profitably take an occasional lesson from the West.

THE TORY PROGRAMME IN ENGLAND.

LORD SALISBURY'S programme can hardly be called anything more than a rehash of Mr. Gladstone's. He proposes nearly everything that Mr. Gladstone proposes, including the cheapening of land transfers. There is evidently no fight left in the Tory leader, combative as he is by nature. In truth, it would be almost impossible for a stranger who knew nothing of the existing condition of English politics, to guess from the expository portion of the speech of an English politician of to-day to what party he belonged. It is only in the "arraignment" of the other party that he shows his colors. A state of things strikingly similar may be observed in American politics. Nobody can tell, except by reading the "arraignment" clauses, whether a platform has been issued by the Republicans or Democrats. The only marked differences between them lie in their opinions of each other. A Democrat may in fact be defined as a man who thinks Republicans never do right, and a Republican as a man who thinks Democrats always do wrong. On all other points, even civil-service reform, the two parties agree, for each is in favor of "real civil-service reform" conducted by itself, and opposed to sham civil-service reform conducted by the other—excepting, of course, Hill's followers in this city, who are opposed to reform of all kinds.

There is, therefore, one may say, nothing in English politics to-day on which the two great parties join issue. Lord Salisbury's address settles that. But there is, nevertheless, a question on the horizon which is probably more serious than any with which either of them has ever had to grapple. As the canvass goes on, and the time for the meeting of the new Parliament draws near, the prospects of such obstruction from the Irish party in the House as will prevent either Salisbury or Gladstone from fulfilling his promises to the electors on English and Scotch questions, becomes painfully apparent. In other words, the Irish question, from being the standing bore of British politics, which every English and Scotch member put as far from him as possible, has become the one question of vital importance. It stands between the English constituencies and every change which either Salisbury or Gladstone has undertaken to bring about. In whichever way the wistful English or Scotch elector turns his eyes, Parnell and his Nationalists block the way and insist on a settlement.

What makes the prospect all the more gloomy is that the old plan of governing the Irish by bargaining with the malcontents is still persisted in by both sides—that is, instead of finding out what is necessary to put Ireland on a perfectly equal footing with England and Scotland, and then doing it without any more debate, the old mistake of asking the Irish what they will take to be quiet is still adhered to. In answer to this Parnell naturally names a very big price, that is, he says he will not be quiet, and abandon obstruction and boycotting, for anything short of legislative independence. Then there is in England another burst of denunciation of Parnell and Irishmen in general, and another burst of vows that nothing will ever induce Englishmen to submit to anything of the kind, at which Parnell smiles and goes on perfecting his arrangements.

The Tories, after reviling the Liberals for four years for not making their measures of repression in Ireland more severe, thought they could win the Parnellites over by abandoning the Liberal Coercion Bill when they came into office. There were even rumors, at the time, of a secret alliance between Parnell and Salisbury. It now plainly appears that there never was any foundation for these rumors. The abandonment of the Coercion Bill has not had the smallest effect on the policy of the Irish. They discovered under the Land League that boycotting was a good means of enforcing obedience to the League's orders. They are now using it to enforce obedience to the orders of the National League. It is a dreadful weapon, but it is powerful and effective, and it puts "the Castle" at its wit's ends, and keeps the English public in mind, as no amount of talk would do, that the Irish question is not settled, and that next winter will not be a quiet winter, in which the House of Commons will be able to postpone the consideration of Irish business and take up matters of Imperial or purely English concern.

For, unfortunately, it is a mistake, as the English public is discovering, to suppose that Irish crime and outrage are simply intended for local effect. When an obnoxious landlord, or a man who takes the place of an evicted farmer, or livery-stable keeper who supplies conveyances to the police, is boycotted, the object is not simply to bring the offender to his knees; it is also to spread the news of Irish discontent in England, and bear it in on the English mind. That it is most valuable in this way there is no denying. There are, unhappily, very few Englishmen who would read a single word Parnell or Sexton or Healy says on any political question, if the orator were not backed up by some form of turbulence or lawlessness in Ireland. If reports, if speeches, if books, if appeals, arguments, discussions of every kind known to civilized man could have settled the Irish question, it would have been settled one hundred years ago. It is because peaceable agitation has failed, because appeals to "reason and justice," to use Mr. Gladstone's phrase, have so long fallen on leaden ears, that the Irish question has risen into proportions before which politicians of both parties to-day stand appalled.

THE "EDUCATED UNEMPLOYED."

MR. WILLIAM HENRY RAWLE, a distinguished member of the Philadelphia bar, delivered an address before the Phi Beta Kappa at Harvard College last June, upon a class of modern society which suffers a great deal without ex-

citing much sympathy—namely, the men who, after receiving what is called "the best education the country affords," are unable to earn a living. They are now, in every modern country, a very large class as well as a very unhappy one. In France they are mainly collected in Paris, where they are said to have furnished, in very bitterness of soul, a large portion of the energy and capacity as well as the ferocity of the Commune. In Russia they are supposed to constitute the bulk of the Nihilists. In Germany, although they show no signs of hostility to society, their rapid multiplication has been such as to excite genuine alarm among those who speculate about the future of the German race. In England they pour into London and pour out to the colonies by thousands every year, after attempts, more or less feeble, to obtain a footing in some one of the learned professions. In America their case is less hard than elsewhere, because the country is so full of openings of one sort or another, and because here it costs a man far less than in the Old World to confess that he has made a mistake in the choice of a calling, and to try some occupation for which he was not bred. But the amount of silent suffering, of heart-sickness, of dying hopes among them in all countries is enormous. If they paraded the streets with banners, or described their struggles in a hall, as the uneducated unemployed do, their tale would probably be as woful as any that discontented labor has ever thundered into the ears of capital.

Mr. Rawle discusses their case mainly from the standpoint of his own profession, and he has but little comfort to offer them. He points out, what every one now sees with more or less clearness, that the day has gone by "when the mere fact of a college education is of itself an assurance of success in life." And then he most mercilessly adds, that while it was never so true that "there is plenty of room on the front bench, it cannot be known too soon that there is little room in the legal profession for mediocre talent." The reasons he gives for this are perhaps the most interesting portion of the address, as he describes with the authority of a master the profound changes which within thirty or forty years have taken place in the relations of the bar to the community at large. There is no young man thinking of adopting the legal profession who will not profit by Mr. Rawle's exposition of the great increase of the obstacles to success through mere industry and perseverance. Mr. Rawle's conclusion is that though a college education does do many other valuable things for him, it does little or nothing to start him in practice in the law.

Any detailed or adequate review of the address (which may be had now in pamphlet form) in an article like this is out of the question. We commend it to the perusal both of young professional men, and of young men intending to be professional. But in doing so we will mention some points on which we think Mr. Rawle has generalized too freely. We think, in the first place, that the overcrowding of the professions which he describes as one of the marked phenomena of our day, is not as new as he supposes it to be. The overcrowding of the bar in England, for instance, and in all the large cities in this country, is one of our most ancient tales of wrong. We make bold to say that success seemed as hard to achieve, and was as hard, to Eldon and Erskine, as it is to the young men who are going to try their luck at it to-day in New York. Victory in open competition remains, all things considered, about as difficult in one generation as another. The game is played in all the professions on a much larger scale than it used to be, but in the competitive professions, *i. e.*, the bar and medicine, the way of the beginner has always been inexpressibly hard and toilsome, and the percentage of failures enormous.

In the next place, Mr. Rawle, while helping to dispel some mischievous delusions about the conditions of professional success, indirectly encourages what we think is also a mischievous delusion—that success in what is called "business," that is, trade, or exchange, or manufactures, is any easier than in the professions. The truth is, that anything that can be called success, that is, anything more than a salary sufficient for the meagre support of a family and an obscure and somewhat precarious existence, is just as difficult of attainment for the boy who does not go to college as for the boy who does. The great bulk of men who engage in business on their own account, beginning either in a small or great way—95 per cent. we believe it has been calculated by good authority—fail early in their career. A few of these recover, and finally achieve independence. But it is safe to say a larger proportion of the young who try business than of those who try professions sink long before middle life into a sort of cowed content as the recipients of small salaries, and, far from aiming at fame, or honor, or fortune, are only too happy if their subsistence is not precarious, as well as modest.

College education, considered as a preparation for active life, has suffered, and must always necessarily suffer, a good deal from the sort of conspicuousness which surrounds undergraduates and graduates, and from the high expectations which the expense and elaboration of a college course naturally create in the minds of parents and guardians. The truth we believe to be that at twenty-one the chances of achievement and comfort and foothold among successful men at thirty are as good for the graduate as for the boy in the store or in the machine shop or the counting-room. The ability, after saving, borrowing, or inheriting $10,000, to invest it in a business in which it will go on yielding 20 or 30 per cent. for a series of years—say ten—in the teeth of competition, is, we believe, as rare as ability to succeed in any of the learned professions, and is as little the creation of training of any sort.

Training is of enormous value: nobody can rate its power more highly than we do. But we are inclined to believe that in most discussions about the conditions of success in life, as in most of the recent discussions about college curricula, a great deal too much has been made of it. It cannot either harm or help a man nearly as much as many people imagine. We doubt very much, for instance, whether Mr. Charles Francis Adams, jr., was nearly as much damaged by the attempts to teach him Greek at college as he fancies he was. And no elective system, and no substitution of modern for ancient languages, or of science for literature, is going to make the human brain *much* more capacious or receptive than it now is. In spite of all the improvements made of late years in educational machinery, the difficulties of effecting an entrance into the pupil's skull remain very much what they used to be. This applies to the store and the shop and the counting-room as well as to the school and college. Every one of them does something toward enabling a mediocre man to earn his bread. But none of them does much to assist an able man to win the prizes of life. Hence attempts to formulate the conditions of success are rarely satisfactory. Most of the books which tell young men how "to make their mark" are ludicrous failures. Success in life in all the callings means ability to

> "Grasp the skirts of happy chance,
> And breast the blows of circumstance."

No man can be either taught to do this, or be hindered from doing it, by teaching. In winning the prizes of life the "personal equation," as it is called, does nine-tenths, the education not over one-tenth of the work. In other words, it is easy to educate a man to earn a bare livelihood, but nobody can be educated to take a seat on the front bench, or be prevented from taking it by any particular kind of education. So that we think it may be safely said to any youth who feels he has the seeds of greatness in him—that is, has the right kind of moral constitution—that it cannot hurt him to go to college, even if he means to be a machinist or a dry goods man, while it is likely to add enormously to the finer pleasures of a prosperous career.

BURGOYNE'S HANAU ARTILLERY.

As the failure of Burgoyne was the success of the American Revolution, all particulars relating to his campaign will always grow in interest. More than three thousand of his troops were Germans, and not a few of the German officers daily recorded their experiences. These manuscript journals are still to a great extent treasured in Hessian archives, and have been consulted, but by no means exhausted, by Bancroft and other historians. A volume concerning the German auxiliaries of Great Britain in the Revolutionary War, by E. J. Lowell, was published last year. Its material was largely obtained by personal research among the state papers in Cassel, and the result was a more vivid, picturesque, and minutely accurate narrative than could otherwise have been produced. In Mr. Lowell's valuable monograph is given a list of no less than thirteen manuscripts written by German officers serving in America, and now for the most part deposited in the State Library at Cassel ("Ständische Landesbibliothek"). Congress, in aid of historical research, ought to secure the publication of them all, as it has already provided for the printing of so many Parisian documents respecting French discoveries and establishments in the Mississippi Valley. History is the last result of comparing and combining all possible *matériaux pour servir*.

Without waiting for Congressional action, Mr. William L. Stone long ago translated and published several works by the Riedesels, and has since procured a copy of the Diary of G. Pausch, chief of the Hanau artillery during the Burgoyne

campaign, which he found in the State Library at Cassel. This manuscript, of one hundred and seventy pages, which has never been published, details the fates and fortunes of Pausch and his men from May 15, 1776—the day they left Hanau—to the close of Burgoyne's last battle, October 7, 1777. Hanau is on the Main. The vessels in which they there embarked conveyed them to a transport at the mouth of the Waal, which took them to Spithead, to Quebec, and so to the river Sorel. The whole transit occupied three months and a half. To guard against desertion in passing down the Rhine, the vessels anchored in the middle of the river, or were moored on islands. The transport had been engaged in the Guinea slave trade, and so was fit for the German slave trade. She started with one recalcitrant gunner in chains.

The white slaves were, however, less discontented than their captain had anticipated. "They never forgot," he says, "to sing devotional hymns morning and evening—the offering due to their Almighty Protector." They slept six in each bed, probably just as the negroes had slept, but did not complain. Twenty transports set out together, but were scattered by a storm which broke the mainmast of the Hanau ship, the *Juno*, and made all on board despair. Soon after, the *Juno* on her solitary way encountered a little two-master which was at once pronounced by the English captain an American corsair or pirate, but turned out to be a French fishing-smack. This mistake was repeated more than once and was peculiarly distressing to Captain Pausch, because his cannon had been stowed away in the hold, and he had no more than a dozen muskets for his men, whose swords, also, were too short to be of any avail against boarding-pikes. The fear of Paul Jones was already widespread. Another mistake was taking an iceberg for a cliff of Newfoundland, a less ludicrous blunder than the British cruiser thinking Schooner Rock on Mount Desert an American vessel and opening fire upon it.

The command of Captain Pausch amounted to 128 men with six cannon. They arrived in Canada in health, yet were speedily attacked with diarrhœa, and about one-sixth of them, sometimes one-fourth, thus became non-combatants and continued so. Their chief did his utmost for their comfort as to rations, clothing, and quarters. His intentions were, however, often incapable of execution, owing to the high prices of every necessary. His journal incidentally gives curious details on the cost of living, which was fivefold that in Hanau.

The people whom he had before called Americans, after arriving in Canada he styles "rebels." Among camp rumors he mentions that an attack on St. Johns was expected on the 4th of September. It is scarcely possible that there was any ground for such a fear, but its existence delayed the British advance, which, had it begun earlier, might have taken Ticonderoga in 1776. Had Burgoyne started from this lake fortress the next spring, his progress must have been as triumphant as it proved tragical. Through neglect to consider the moral effect of the fighting at Valcour Island, Bancroft condemns Arnold. Arnold fought there against fivefold his number. He was overwhelmed as Leonidas was, but his sacrifice was a success. Arnold's heroism and that of his men made his conquerors afraid to move forward from Crown Point, or even to winter there. Pausch, who first met the rebels at Valcour, testifies to th ir firing so well as to sink one of his vessels, and firing still when their own were sinking. His minute account of this action must correct and complete those already in circulation.

After a useless blockade of the lake at Crown Point for a fortnight, the British retreated to Canada. Life in winter-quarters at Montreal is well described. From first to last all orders were issued to Pausch in French, of which he knew something, but nothing of Engli h. Sometimes when on detached service with an English force who were ignorant of German, he compares himself to David's "pelican of the wilderness" (Ps. 102, vi). His men were more homesick than he. They had, indeed, an unexpected luxury in each ration, and one unknown in modern armies, namely, a pound of excellent butter every week, and a daily dram of rum; but then there is no mention of beer, and the poorest red wine cost thirty-six kreutzers a bottle, and Madeira a dollar. Besides, many were in the hospital, and always, day and night as long as their breath held out, talked about brides and wives, fathers, mothers, brothers, sisters, and relatives further removed, as well as the devilries of their native villages.

Captain Pausch confesses that the English artillerymen were taller and stronger than his own, yet in a competitive drill and cannonade his battery gained the victory. The English adopted his style of swab and linstock or fuse, and yet stirred up in him bitter hostility by the rule of their service which prescribed that English officers should command Germans, while German officers should have no authority over English soldiers. He was also offended by British interference with his discipline, and an attempt to deprive his men of side-arms when off duty. But it angered him to the heart most of all that he was obliged to share in the quick step, perhaps double-quick. It may be he was as fat as *Falstaff*, and so naturally says:

"Such a march has never been made in Hesse nor in Prussia, nor in all the world except in a steeple-chase with fleet horses and dogs. It is ridiculous on parade, useless in war, since you cannot march a charging column in this way, and whoever should try to conduct thus an orderly retreat would not only come off badly, but would lay himself open to all manner of abuse from all the journalists of Europe and America."

In describing the charge of the Americans at Stillwater, however, he says they came on at the self-same double-quick, but were reported to be all drunk.

The journal of Captain Pausch is most copious in describing the three battles in which he and his battery bore an active part, namely, the naval action against Arnold on Lake Champlain, and the battles on the 19th of September and the 7th of October, the two last before the surrender of Burgoyne. No historian of these conflicts could fail to learn something he would be glad to know from the minutiæ noted in the day-book of the Hessian officer. His courage and skill on all these occasions won special commendations from his superiors.

His notes concerning the Indian allies of the British confirm the American accounts of savage barbarities raging unrestrained. After most of the Indians had deserted and fled home to their wigwams, the remnant, he says, on the morning after an engagement, "had a fine time in plundering and (according to their wretched custom) scalping the dead and wounded Americans." As scouts they were of no use, but on the eve of the last conflict "they came in bringing one prisoner half dead and two scalps which they had taken after their own neat fashion."

In the September struggle the Americans were finally repulsed. They had no artillery, and, at the sight and sound of Pausch's great guns, gave way as the Romans did when they were first confronted on the field of battle by the elephants of Pyrrhus. But in the October contest, perceiving that they had been more scared than hurt, they stormed and captured the batteries both of the Germans and English. The Captain went into the last fight with about forty artillerymen and more than twice as many as an infantry support. Some he saw killed or wounded at their posts and others made prisoners, and at length found himself serving a cannon with only three helpers. Returning to camp, convinced that his command was annihilated, he discovered almost all of them there without even a wound. The truth was, that, the battle being waged amid thick underwood, it was easy for every one who chose to slip away unperceived. Few were they who did not see their opportunity and make the most of it. It was clear to him that they had given "leg-bail" early, or some of them would have had wounds to show.

The manuscript from which Mr. Stone's copy was made is imperfect. Between the 8th of June, 1777, and the 19th of September following there is no entry. It has been supposed that during these three months the Captain was too actively engaged for writing at all. This supposition runs counter to the fact that Burgoyne's artillery was doing no service whatever during much of his campaign. Besides, there is a similar gap in the diary stretching over forty-four days of the previous December and January—the most leisurely period of winter-quarters. Not one syllable respecting these six weeks is found in the Captain's day-book. But that book shows that the writer was in the habit of transmitting his daily records, either the first draft or a copy, to Hesse by every opportunity. It is natural to think that hundreds of notes were made by the Hanau chief relating to days as to which his manuscript, as we now have it, is silent. Those notes may be still extant, but not yet detected, in Hessian manuscript collections, public or private, and may turn up where least looked for.

A PHASE OF ENGLISH OPINION.

LONDON, October 1, 1885.

AN American observer who gathers his impression of England from the newspapers, must, I suppose, come to the conclusion that the English people are at the present moment keenly excited on public affairs, and that the country is distracted by political passions. Many obvious facts favor this impression. The Archbishop of Canterbury must believe that a great crisis is at hand, for he has just issued a series of petitions to heaven which he terms, with the infelicity characteristic of official language, "prayers for the approaching election." Politicians high and low are all agog. Mr. Gladstone publishes an address to his constituents which is a pamphlet on all the main topics of the day, and forms a guide for inexperienced Liberal candidates. Mr. Chamberlain announces schemes for abolishing at the public expense half the evils of poverty. Mr. Morley denounces government by actual "soft speeches" and promised "hard cash." Mr. Parnell proclaims the approaching legislative independence of Ireland, and one English member after another replies that an independent Parliament in Ireland is incompatible with the existence of the British Empire. Conservatives of all types meanwhile denounce Mr. Gladstone and deride Mr. Chamberlain, and add to the general confusion by asserting that the Conservatives are the true friends of the Irish, and that by some curious hocus-pocus the Tories can keep order in Ireland while keeping on good terms with men whose whole policy is opposition to the law of the land, and that Tory statesmanship may achieve all that is valuable in Mr. Chamberlain's programme without the disturbance of vested rights or the increase of public taxation. Meanwhile the one indisputable fact is that the last reform bills have extended the suffrage to a class who have never before exercised power, and that a mob of poor and uneducated electors will in the course of a month or two be able, nominally at

least, to exercise predominant power over all things which depend upon the will of Parliament.

An American observer who notes these facts and a hundred like them, must, as I have said, draw the inference that the English people are passing through a period of vehement and even of revolutionary excitement. No conclusion, however, could be more entirely false. The present phase of public feeling is curious and noteworthy, but the last thing which any one who sees English life from the inside would assert is, that the nation displays passionate interest on any topic whatever. We may, indeed, be passing through the calm which precedes a storm, but for the moment the waves are still. I have no talent or taste for the part of a prophet. My aim in this letter is simply to describe the actual state of feeling among the classes of Englishmen with which alone I have any acquaintance—those classes, namely, who read and support the daily press. These classes may be no wiser or better than the large body of artisans or country laborers. But the persons whom I have in my mind have, on the whole, been hitherto the predominant power in English political life, and to ascertain their feeling at a given moment is a matter of curiosity, if not of importance.

The existing phase of opinion—a phase which one may well suspect to be very transitory—is marked by three characteristics.

The first, the salient, and the most indisputable of these features is the consciousness among well-to-do Englishmen of their own profound ignorance as to the wishes of the new electors. Every one forms his own conjectures as to the way in which the village householders will vote. One observer believes that they are deeply imbued with the kind of socialism natural to men who have always looked to the parish for relief; another holds that the laborers will be guided by the influence of Mr. Gladstone; a third asserts that they will be led by the squire or the parson; a fourth prophet is convinced—and this apparently is the predominant belief—that the laborers on the whole will as a body look for advice to the dissenting ministers. The one conclusion on which all who think seriously on the matter are substantially agreed, is, that any prediction with reference to the conduct of the new voters is nothing better than a guess. That this should be so must appear strange enough even to Americans, who understand English habits and sentiments far better than do Continental observers. Yet the reasons for this ignorance are not far to seek. One of the least satisfactory traits of English life is the separation of classes, and no class is so little known to those who do not belong to it as the agricultural population. The process, also, by which the inhabitants of cottages have come to be admitted among those whom a Frenchman would call "active citizens,' has contributed to maintain the general ignorance of rural sentiment. The Parliamentary franchise has in their case been obtained without any serious struggle on the part of those claiming votes, or, to speak accurately, for whom votes were claimed. The £10 householders, or the artisans of the towns, had to press hard for their share of the suffrage. Their effort to obtain a recognized position in the body politic had at least the advantage of making known to their countrymen the views of the men who claimed a right to vote. The laborers, who have been given votes almost without the trouble of asking, have had no opportunity of forcing their wishes, their principles, or their prejudices upon the attention of the whole nation. The middle classes, moreover, had, before the great Reform Bill of 1832, taken an active part not only in municipal government, but in social and religious movements, and the workmen of the cities had between 1832 and 1866 displayed their virtues and their faults to the whole nation in the conduct of trade disputes. The "hands" were better known than liked by employers, but, after all, they were known. Laborers, on the other hand, who have lived in villages where no form of local government exists, and who have until recently been unable to combine in "unions," have not had any opportunity of exhibiting on any public stage either their merits or their faults as citizens, and if they have never, like the artisans, roused the censure or the hostility, have also hardly arrested the attention, of the wealthier members of the community.

To the mystery which at the present moment shrouds the wishes and opinions of the new electors must in the main be attributed the second peculiarity in the present state of feeling. This peculiarity is one for which it is extremely hard to find an appropriate name. It might perhaps be described as instability. The utterances of public men are marked by an extraordinary kind of uncertainty and vagueness. Whether the matter in hand be the disestablishment of the Church, the reform of the land laws, the relation of England to Ireland, or the foreign policy of the country, English politicians of all parties seem to be smitten with an incapacity for delivering any clear opinion whatever. Nothing illustrates this better than the eulogies bestowed by Mr. Gladstone's warmest admirers on his recent manifesto. It lays down, we are told, a platform on which all sections of the Liberal party can unite; its merit is that it is a creed which can be repeated with equal fervor by Lord Hartington, by Mr. Chamberlain, by Mr. Jesse Collins, by Mr. Goschen. It is supposed, that is to say, to supply formulas vague enough to be honestly subscribed to by men who entertain very different, if not actually opposed, political opinions. Whether flatterers who attribute this kind of merit to the late Premier's letter do justice to him or to it, need not now be discussed; the point to note is the satisfaction felt by Liberal critics at the authoritative promulgation of a vague political creed. No stronger proof could be given of the indefiniteness which marks the Liberalism of the day.

Nor is uncertainty of belief or of utterance peculiar to Liberal or Radical speakers. A similar instability deforms the speeches and proposals of Conservatives. Tory orators criticise Mr. Gladstone's mistakes or expose Mr. Chamberlain's fallacies, but they can do nothing else. Each and all of them are afraid of finding themselves in contradiction with the sentiments of their colleagues or with their own former assertions. They are hampered partly by the past: men who for years, both by word and vote, maintained the necessity for stringent Coercion Acts, and derided Bright's dictum that "force is no remedy," can hardly with comfort to themselves insist that Ireland must be governed by the ordinary law of the land, and that exceptional combinations against law can never justify exceptional legislation for the maintenance of order. They are hampered even more by their uncertainty as to the future. The incalculable element in all forecasts as to the policy even of next year is the bias of the new electors. Till doubt on this matter is removed, anything seems possible. There are persons of judgment who believe that the next Parliament will give the franchise to women, remodel the tenure of land, and grant Ireland everything which Mr. Parnell chooses to demand. There are persons of equally sound judgment who assert that the next Parliament will show by its action that the English nation are opposed to all fundamental change in our institutions. But whatever individuals may assert, it is pretty clear that the ordinary guides of opinion are haunted by a presentiment that anything is possible. It were unjust to believe that this instability of feeling arises purely from political causes. The true source of uncertainty is to be found not in external influences, but in internal doubts. Leaders hesitate partly because they do not know how far they may depend on the support of their followers, but still more because their own convictions are shaken. Conservatives, to give one example of my meaning, are not quite certain whether in Ireland "force" really will or can prove a remedy for evils which violence has never yet cured, and Liberals are harassed by secret scepticism as to whether further concessions will remove discontent which has appeared to English observers to increase with each removal of a just ground for its existence.

The last and the most startling singularity or anomaly in the popular sentiment of the day is its calmness or apathy.

The form of government in England is about to undergo a pacific revolution. No one can tell for certain what will be the tendencies for good or bad of the new electors, who, technically at least, will be masters of the situation. Every one knows that, theoretically at least, the carrying out of any change which law can effect is within the bounds of possibility, and that the introduction of grave changes into the constitution and the policy of the state are certainties. Under such circumstances, one might expect to hear of wild hopes on the part of all to whom radical innovations might bring advantage, and of panic or passion on the part of every man whose fortune or importance is bound up with the maintenance of existing institutions. But such an expectation, however apparently rational, is not justified by anything in the state of public opinion. The country is for the moment equally incapable of enthusiasm and of fear. Mr. Trevelyan and a few other politicians who may consider themselves the original authors of recent reform acts, may believe that the laborers are filled with gratitude to the leaders who gained for them the right to vote, and are elated by hope of the blessings to be gained from the possession of the full rights of citizenship. But gratitude and hope easily find for themselves means for their adequate expression: and if thousands of farm laborers utter no sentiments of thankfulness and joy, we may reasonably attribute the absence of all expressions of emotion to the absence of any emotions which require to be expressed. In any case, it is clear that the middle-class Liberals whose votes enabled the late Government to carry through a reform of Parliament, are not at all unduly elated by the prospect of a House of Commons really representing the convictions of the householders throughout the country. But Englishmen of the present day, if they hope little, fear nothing from changes which not forty years ago would have seemed to every man not a fanatic or a fool to be the certain precursors of violence and anarchy. Mr. Chamberlain is not frightened at charges of Socialism or of confiscation, and, what is much odder, Lord Hartington shows no dread of schemes which seem to imply that the owners of landed property ought to pay a "ransom" for the lands which they are allowed to possess, and that it is the duty of the rich to relieve the poor from the worst evils of poverty. No class are in general more morbidly sensitive about their corporate interests than the clergy; nothing can be clearer than that within a very short time the disestablishment of the Church may become the question of the day. Yet English clergymen, though their own position and the property of the Church are menaced, display an unruffled calmness and a serene good-temper which may be very becoming in Christian evangelists who are threatened with loss of prestige or money, but which is rarely exhibited either by priests or laymen when threatened with spoliation. If there be a thing on which the citi-

zens of a great country are in general sensitive, it is national prestige and power; and Englishmen might naturally be expected to be even morbidly alarmed by any proposal to destroy the unity of the United Kingdom. Yet seemingly, at least, Mr. Parnell's undisguised resolution to break up the union with Ireland has excited among the mass of the English people neither panic nor indignation. Oddly enough, the strongest protests against the methods and the policy of Irish agitators have proceeded from John Bright. The honesty, the patriotism, and the vehemence of his language form an impressive contrast to the indifference, the silence, or the calmness of younger statesmen. It is, however, impossible not to recollect that John Bright is not only in years, but in character, an old man; and it is equally impossible not to suspect that his words represent the tone of a past, rather than the prevailing sentiment of the present, generation. However this may be, the phase of opinion which I have tried to describe is assuredly well worth observation. In another letter I may attempt to analyze its causes; my object in this letter has been to note its existence and define its character. A. V. DICEY.

Correspondence.

AN ENGLISH WATER-COLOR COLLECTION.

To the Editor of The Nation:

SIR: I wish to commend to the American public the collection of English water-color drawings soon to open for exhibition in Boston. If it could be seen in New York and Philadelphia as well, I think it would be for the good of our art, for it is not only representative of the best water-color painting of England to-day, but of the best side of English art, which is in the water-color societies and not in the Royal Academy. I have had occasion in my letter to the *Nation* on the water-color exhibitions of this year, to notice several of the drawings included in this collection as the best of the year; and I believe that, with the exception of Mr. Watts's work, which is never in water color, this collection contains something of nearly all, if not all, the best and truest painters in England, and more really good art than is to be found in a Royal Academy exhibition on the average.

Its stay in America will be short, Mr. Blackburn tells me, and any negotiations leading to its being seen in New York and Philadelphia must be quickly undertaken. I hope that it may do much good in America by curing our water-colorists of the too prevalent tendency to mere slap-dash as the only way of expressing strength.

Yours truly, W. J. STILLMAN.

LONDON, September 27, 1885.

POST-OFFICE SINECURES.

To the Editor of The Nation:

SIR: It strikes me that in the matter of the reform of our civil service, we ought to insist that offices which pay their incumbents the salaries that our post-offices do in most of our cities, should be filled only by men who are in position to and willing to give the Government their entire services for the compensation, which is certainly large enough to secure efficient officers. One reason why there has always been such a scramble for these positions is the fact that, unlike good business houses, Uncle Sam pays for a year's services and gets in many instances hardly what would figure up a month; and thus it becomes a fat thing in connection with one's regular business.

That is the way of late it has been here, and I note that the newly appointed Postmaster, who is paymaster in one of our corporations, proposes to "give" the Government two or three hours (?) of his valuable time. Is this business-like? Is it as it should be?—Yours, CIVIL SERVICE.

LOWELL, MASS., October 5, 1885.

THE SWISS CONSTITUTION.

To the Editor of The Nation:

SIR: In a letter dated London, September 15, published in the last *Nation*, October 8, the writer says:

"The statesmen who in 1848 gave Switzerland a new constitution and a new life, were profoundly influenced by the lessons of American federalism. Indeed, a hasty glance at their work suggests an idea, which is at bottom profoundly erroneous, that Swiss politicians have achieved little else than the working out of a copy in small of their great American model."

All this is nearer the truth than Mr. A. V. Dicey is inclined to believe. Doctor Kern, who was for twenty-five years Ambassador from Switzerland at Paris, and previously the President of the Federal Polytechnic School at Zurich, was the framer of the Federal Constitution of the 12th September, 1848; and he told me a few years later that he had before him all the time the American Constitution, and followed it article by article as closely as was consistent with the previous political institutions and customs of the Swiss people. JULES MARCOU.

CAMBRIDGE, MASS., October 10, 1885.

FAVORITISM AND PERSECUTION AT GERMAN UNIVERSITIES.

To the Editor of The Nation:

SIR: Permit me to call attention to a little pamphlet published anonymously, at the beginning of this year, in Berlin and Leipzig, by the house of Wilhelm Friedrich. Under the title 'Die akademische Carrière der Gegenwart,' it discusses the treatment of privatdocents and the calling of new professors, and undertakes to expose the evils of a system "that has begun to sap the foundation of German credit (*Solidität*) at German universities."

We of America are unfortunately acquainted with many strange methods of selecting professors, but we hear with surprise that the German privatdocents are often systematically abused and persecuted, and we refuse to believe that scarcely one professor in *thirty* is appointed upon the ground of merit. In discussing the book recently with German scholars, we never heard its grave accusations denied, but we hold them to be exaggerated. Indeed, the sharpness and bitterness of the style suggest a personal interest incompatible with perfect calmness. It is probable that the author was badly treated at Tübingen.

The book has four chapters: 1. The Academical Aspirants (*Streber*). 2. The Trials (*Nöthe*) of the Docent. 3. Calls and Sham Calls. 4. (Proposed) Changes in the Method of Calling.

The trials of the docent are stated very effectively. At the outset of his career at a university, he must face two sorts of persons—the professors in his department and the social clubs of the university families. If he be poor, talented, and without strong friends, he is sure to be opposed by his Ordinarius as a dangerous rival for the students' fees. A powerful and hostile professor has a host of persecutions within reach: the *Habilitation* comes to resemble a Spanish bull-fight. There is no lecture-room to spare, no hour unoccupied, or no subject of lecture to assign; and, above all, direct and indirect slander may both ruin the docent in the estimation of the students, and destroy all chance of his promotion. As to the students, we believe them to be more independent than the author suggests. But slander is the chosen work of the clubs. These are the social reunions which furnish the sole recreation of the small towns. Dominated by the women, who are supplied with all Faculty secrets by their *tiefsinnige* but obedient husbands, these clubs discuss and decide the gravest university matters. The childless women, being less engaged at home, are said to be the most virulent, and the hysterical are the hardest to please.

If the persecution of merit is outrageous, the conditions of success are degrading. One must be the slave and eloquent admirer of his Ordinarius, dance and skate industriously with the ladies, especially the old and faded, be a blind follower of the club, active in private theatricals and music, and, to make sure, marry a professor's daughter. In a word, success means toadyism. Woe to the young scholar who is too manly to bow before all these tyrants; he is already judged and condemned.

The second part of the book discusses the calling of new professors. While the ultimate power of appointing and calling is vested in the Minister of Education, the university faculties have at present the lion's share of the decision. As in the treatment of docents, we find the professors in this case also equally mean-spirited, while the women are a genuine "calamity." We are told of recommendations made to order, of favorable letters suppressed—in short, of all the wiles that ungenerous and unscrupulous people can practise. Nobody seems to consider the real fitness of the candidate; he ought to be rich, but he must be *congenial*.

Such are the doings of the "world's schoolmasters." We are acquainted with the prejudice of friends and relations, but we cannot believe with the author that 96 per cent. of the German professors are appointed by this prejudice. It is, however, fair to state that our observations were made in North Germany, while the author's criticism is directed mainly against the small universities of South Germany.

It is, of course, in the proposed remedies that the practical value of the book is to be sought. In the choice of professors and the promotion of privatdocents the author wishes not to suppress the advice of the Faculty, but to increase the authority of the Government, and to secure greater fairness by taking the judgment of non-university men. He develops his plan at length, but is wise enough not to call it perfect. In his judgment, it will at least drive the women out of university politics into the nursery. But he is not ungenerous. In case the *Professorenfrau* should be absolutely and persistently childless, she may adopt poor children, knit stockings for the orphans, make socks for the boys in Congo and Kamerun, or cultivate herself in music.

The little pamphlet is good reading. We believe that it will profoundly interest that large circle of your readers who justly respect and admire the German universities.—Respectfully,

W. D. T.

UNIVERSITY OF NORTH CAROLINA, CHAPEL HILL, N. C., October 3, 1885.

Notes.

AT the same time that we welcome the removal of *Science* from Boston to New York, we can congratulate the publishers on the improved typography of this useful journal. The issue for October 9 has a timely article on Bulgaria and its inhabitants, with a folded map of Turkey in Europe. A novel feature is a Supplement, of which the most popular feature is an article, by Mr. J. Jastrow, on "Racial Characteristics of the Jews," illustrated by a "composite" derived by Mr. Galton from five photographs of

Jewish boys—these last being also exhibited along with the "type," which is much the most attractive of the lot of faces.

The Messrs. Harper have concluded an arrangement with Mr. W. D. Howells by which all the new writings of that author—his novels, short stories, descriptive sketches, and dramatic pieces—will be exclusively at their disposal from the beginning of next year. Mr. Howells is also to contribute monthly to *Harper's Magazine*, beginning with the January number, an editorial department having a relation to literature corresponding to that which the "Editor's Easy Chair" has to society. The new department will probably be styled the "Editor's Study." It will be purely literary in its character—not a review of books, but a discussion of literary topics suggested by the salient features of current literature in America and Europe.

We are requested by the family of Ralph Waldo Emerson to say that a number of his letters to Carlyle appear to have been stolen. They wish to caution all persons against buying, selling, or publishing any papers purporting to be the originals of letters from Emerson to Carlyle, and to ask that any one who may hear of the existence of any such letters will do them the favor to inform them where the letters may be found. Address Mr. Edward W. Emerson, Concord, Mass. These manuscripts were all given by Carlyle to a member of Emerson's family, and the right of publication, of course, belongs to the writer's family by law.

Mr. Francis E. Abbot will shortly publish through Little, Brown & Co., Boston, a work entitled 'Organic Scientific Philosophy and Scientific Atheism.' It is based on two articles contributed to the *North American Review* in 1864, and a lecture given last summer before the Concord School of Philosophy.

Lotze's 'Outlines of Psychology,' translated by Prof. George T. Ladd, of Yale, will be ready December 1, as Ginn & Co. announce.

Canon Farrar's 'Success in Life,' with a brief biography of the author, is in the press of Cupples, Upham & Co.

Lee & Shepard, Boston, have in press a Japanese story entitled 'A Captive of Love,' by Edward Greey, author of 'The Golden Lotus,' etc., and one of the translators of 'The Loyal Ronins.'

The sixth edition of Parkman's 'Montcalm and Wolfe' (Little, Brown & Co.) is before us—proof of the rapid popularity which this standard work has attained.

'Picturesque Russia and Greece,' by Leo De Colange, just published by Estes & Lauriat, of Boston, as one of their gift-books for this season, and dated 1886, is not a new book. It is simply a selection from a larger work called 'The Picturesque World,' published by the same firm in 1878.

Another gift-book recently issued by the same firm, and entitled 'Forest, Rock, and Stream,' twenty steel line-engravings by W. H. Bartlett and others, with descriptive text by N. P. Willis and others, is a selection of plates from a book published in London in 1840, with the title 'American Scenery.' The text is the same as in the old book, except that a few poems have been added to the prose descriptions.

Nothing flattering can be said of any of the figure pieces in the illustrated edition of Tennyson's Poetical Works just issued by Thomas Y. Crowell & Co.; nor can we believe that the designers themselves took much pleasure in them. On the other hand, the landscapes are few, but, as usual, much the best of the twenty-three woodcuts. The typographical execution is fair to the eye, but faulty proof-reading must be inferred when we meet with this grave error in "The Daisy":

"Nor knew Ae well what pleased us most,"

where, by a comical juxtaposition, *he* (for "we") can only refer to Columbus. So, on the next page but one,

"Sown in a wrinkle *in* the monstrous hill,

for "of." Defects like these are not compensated by gilt borders to the pages.

More pains in every way have been taken with the illustrated edition of 'Childe Harold's Pilgrimage,' which Ticknor & Co. offer as one of their holiday books. The result, however, so far as the designs are concerned, seems to us hardly less insufficient than that of the Tennyson volume. The majority of them are to us simply uninteresting, and we should much prefer in their stead the unadorned beauty of a well-studied page of letterpress.

We reach still a third grade of size and of pretentiousness in Whittier's 'Poems of Nature, illustrated from Nature by Elbridge Kingsley' (Houghton, Mifflin & Co.). The difficulties of so large a page have not been successfully overcome in the choice of type: elegance has been missed, and this is particularly true of the verses placed opposite the pictures which interpret them. As for the artist's part, Mr. Kingsley's style is both marked and familiar to our magazine readers. His designs are generally lacking in coherency of motive, construction, and lighting, and his sense of perspective is very weak. Thus, the solitary tree in foliage in the middle distance of "Mount Chocorua" may be 500 feet high, to say nothing of the icy appearance of the stream and bank in the foreground, and the utter misrepresentation of the divine shape of Chocorua. Again, the relative position of the two vessels in the "Night after a Storm at Sea" is preposterous. Very dubious is the rainbow in the "Storm on Lake Asquam," and at all events the angry dropping cloud against which it is set is quite different from the "spent, broken clouds" called for by the poet's text. All the plates are not so fantastic, and in several the poetic quality pleases while the draughtsmanship is inoffensive, if not quite true.

E. & G. Goldsmid, Edinburgh, have issued the first volume of their long-promised 'Complete Catalogue of all the Publications of the Elzevier Presses at Leyden, Amsterdam, the Hague, and Utrecht,' which forms part of their "Bibliotheca Curiosa." It embraces the letters A—D. The introduction, by Mr. Edmund Goldsmid, acknowledges that the present work is "no more than a revised and abridged translation" of Willems; and that his revision has not corrected a dozen errors. But he has adopted for convenience an alphabetical arrangement.

In response to a request from the Paris Geographical Society, Mr. Joseph Moore, jr., F.R.G.S., has been forming a collection of photographs of this section of the United States for the Society's Album. He has been assisted in the work by officers of the great railway lines, by Mr. F. Gutekunst, and others.

Schliemann's spades have unearthed the vaults and treasures, and the very skulls, of the Trojans, and the relics are photographed and described and exhibited in museums, and yet Professor Forchhammer, that veteran Hellenist of the University of Kiel, remains unconvinced of the fact that Homer painted real men and things of Troy, as he knew them to be or to have been. On the contrary, "in the twenty-fifth Olympiad" of his life—he was born in 1805—the professor most solemnly reiterates, in a learned epitome which we find in the *Beilage* of the Munich *Allgemeine Zeitung*, the Homeric theory which he matured while studying the topography of the Trojan plain, on the spot, half a century ago, and which he has since expounded and expanded in many wonderfully erudite works—namely, that the Iliad depicts not the clash and grapple of helmeted warriors, but the winter strife of the elements in the exceptionally exposed fields of the Scamander and Simois; that the Cyclic poets continued and completed the narrative down "to the burning of Troy—that is, to the total evaporation of the flood in midsummer," etc. Who, he asks, can doubt the correctness of this view after pondering on the "literal mention of cloud-gathering, of again and again returning mists, of totally flooded plains, of thunderbolt-hurling Zeus, of Hera wrapt in a cloud, of Pallas stalking with the ægis [wave], of the wandering of the gods to the Æthiopes, and on many allusions to kindred things?"

The German magazine *Auf der Höhe* will be merged in Paul Lindau's *Nord und Süd* at the end of the year. Its editor, Sacher-Masoch, writes: "After having suffered from the measles in September, 1883, and lost my son in March, 1884, I have become afflicted with an ocular disease which is getting more and more serious, thus making it impossible for me to read and prepare manuscripts; and besides this, the desire for solitude and seclusion from the world is becoming stronger every day."

The well-edited *Vom Fels zum Meer* (New York: F. W. Christern) has been materially enlarged and beautified with the October number. A folded panorama of the incomparable Ring-Strasse in Vienna is one of its attractions.

Among Novello, Ewer & Co.'s latest musical publications are Dvořák's "Spectre Bride" and "A Patriotic Hymn," F. H. Cowen's "Sleeping Beauty," T. Anderton's "Yule-tide," H. E. Hodson's cantata, "The Golden Legend," and Gounod's "Mors et Vita." In accuracy and clearness of print the Novello edition is among English publications what Breitkopf & Härtel's is among German editions; and nothing better could be said in commendation of it than that it is the edition of choral works commonly used by Mr. Theodore Thomas.

Apropos of Leopardi, writes still another correspondent, some readers may like to know of a recent Italian publication, 'Studio su Giacomo Leopardi,' a posthumous work of Prof. F. de Sanctis, of the University of Naples, edited by Prof. R. Bonari (Naples, 1885). We will add that No. 467 of Virchow and Holtzendorff's "Sammlung gemeinverständlicher wissenschaftlicher Vorträge," just received from Carl Habel in Berlin, is 'Giacomi Leopardi,' by Prof. Dr. F. Zschech.

No. 217 of the same publisher's "Zeit- und Streit-Fragen" treats of a topic discussed in our last issue by Professor Dicey, viz., 'Das Referendum in der Schweiz'; the essayist being Johann Adolph Herzog.

The last two issues of the Shakspere Quarto Facsimiles are perhaps the best illustration of the value of the series to students of Shakspere's text. They are of the two copies of "Lear" known as the first and second quartos of 1608. Of these the earlier, the so-called Pide Bull edition, considered surreptitious, was so full of errors that an attempt at revision was made while it was in progress, and consequently revised and unrevised sheets got bound up together, for the confusion of editors; it thus happens that of six copies collated only two agree. The second quarto is proved to have been printed from this; and incidentally the editor expresses his surprise at the late Mr. Grant White's statement that the priority could not be settled. It is of more interest that Mr. Daniel, who furnishes the Introduction, offers further support to his theory that the first folio was printed, in the case of "Lear," from a quarto copy corrected from the theatre's manuscript, and not from the latter directly; though his proof is not so complete as it was in the case of "Richard III." The varying states of the text may be clearly seen from these remarks, and the great convenience, if not necessity, of the thorough Shaksperian having the co-

pies at hand. The two volumes just published place the complete quarto text before us for the first time, in lithographic facsimile, with stars and daggers to show each line that differs from the folio. Of the few emendations which Mr. Daniel suggests we can only say that they are slight and seem reasonable. Fifteen of these quartos have already been issued, at the low subscription price of 6s, raised after publication to 10s. 6d. (London: B. Quaritch). Between twenty and twenty-five more will be printed.

—The first volume of a curious work of reference has lately been issued under the style of 'Alden's Cyclopædia of Universal Literature' (New York: John B. Alden). It furnishes an excellent oblique illustration of the advantages of a division of labors among compilers; for only by the aid of special dictionaries could it have been made, and after it is done it glares with those defects which are only possible to ambitious omniscience. Its 478 pages extend only from Abbot to Arnold, and the names included are fairly representative of the better known foreign literatures, particularly the Spanish, thanks to Ticknor, and the Greek; but it is in the American department that it relies for distinction, and its thoroughness in this may be judged by the fact that it sweeps from Hannah Adams, the first female author, whose venture had the phenomenal financial success of paying her debts and allowing her "to put out a small sum at interest," to Mrs. Allerton, the Kansas poetess, whose verses "are imbued with the fresh, vigorous spirit of civilized life on the broad fertile prairies." Under the circumstances it was inevitable that it should be highly spiced with theology, which occupies so much of American "literature." Not much can be said for the biographical notices, which are not condensed with intelligence from the obvious sources; but that does not matter, for the feature of the work is its extracts. We have never seen a more melancholy illustration of the way in which mediocrity in literature at last dribbles away to death, or been more impressed with the dead weight of classicism that time carries. Of course there are essays of Addison, and stories of Andersen, and songs of Anacreon; but what can be said of twenty fine-printed pages of Allison's prose, fifteen of the Duke of Argyll's, six of John Abercrombie's, and ten of Miss Alcott's? What will be done with Macaulay, Swift, Adam Smith, and Dickens in their turn we forbear to guess, but some hint of it may be found in the fact that Edwin Arnold has twenty-six pages to Matthew Arnold's eight, and of the latter's prose the writer seems practically acquainted only with the 'Discourses in America.' Mr. Aldrich is the leading American poet of the letter A, and has five pages; the poems quoted are from early texts, and carelessly copied, and of them three have been suppressed by the author; of his prose works not one is mentioned by name. But sufficient indications of the quality of this cyclopædia have been given; the extracts from the authors with whom we are acquainted are, generally speaking, indiscriminating, and as to the others, most of whom have probably now found their last publisher, when we read their works we expect to buy them by the pound.

—The Lawyers' Coöperative Publishing Co., which may rightly claim priority of announcement for the *Weekly Reporters* east of the Mississippi River, has issued, under dates of October 8 and 0, initial numbers of the *Western Reporter*, under the editorship of Mr. Robert Desty, with Mr. Benjamin Vaughan Abbott and Mr. James E. Briggs as associates; and of the *New England Reporter*, with Mr. James E. Briggs as editor, and Messrs. Abbott and Desty associates. The first number of the *Western Reporter*, containing eighty pages, and reporting twenty-three cases decided in the Supreme Court of Ohio between February 24 and June 16, may be taken as a favorable specimen of what the publishers promise. At first glance the form adopted, a double-column page about the size used in the well-known 'Abbott's National Digest,' strikes one unfavorably, and the type, brevier size, is smaller than is commonly used in Reports. But a very little use will discover that the excellent quality of the paper, the black ink, and the smooth impression, together with the short line of type, make the page easy and pleasant to read. An excellent departure is made in the head-notes, which, instead of being in the usual fine print, are in a rather larger type if anything than the text, and in addition to this advantage the novel idea has been adopted of emphasizing such words or phrases as contain the kernel of the head-note, by printing them in full-faced type. And this is so carefully done that the words in black-faced type, in nearly all cases, read as connectedly and smoothly as though they had been set out in a distinct paragraph; so that the busy lawyer can at a glance secure the main points of each case reported. Remarkable care has been exercised in making the typography aid in distinguishing the different parts of the text, and with marked success. The strong point in this number is the editorial work, which deserves nothing but most hearty commendation, and which would put to shame the work of most of the State reporters. While the opinions are reproduced *verbatim et literatim* from the records of the court, there are added, besides the head-notes, carefully prepared statements of each case, and concise abstracts of the briefs of counsel, retaining all citations of authorities; and, where needed, foot-notes and references to decisions of the United States Supreme Court. In all the added matter the first consideration seems to have been to furnish the lawyer as much valuable matter as possible, in such form as will enable him to use it with the least expenditure of time.

—We have been much amused by a pamphlet recently published by the owner of a "subscription" cook-book. "When the lady of the house opens the door"—so begin the "Instructions to Agents"—"look her *frankly* in the face, and say," etc.; and "when you have entered the house, *still looking her in the eye*, you can say," and so on. This advice is evidently important, for without it the Agent might appear with a sheepish or hang-dog air, in which case success would of course be hopeless; but what is to be done in case the door is opened by some one else than "the lady of the house"—by the small boy, for instance—the Agent is not told. But once in, and confronted by the Lady, the Agent must politely "point to a chair, and say 'Please sit down.' . . . Seat yourself beside her, place your open book on her lap, and say," etc., etc. These are among the general directions; we have space to mention hardly any of those adapted to special circumstances, which are, indeed, too numerous for mention. "If there happens to be a large chromo of the Pope in the room," the Agent is advised to "enlarge on the fish department," though why under these circumstances exclusively we fail to see, since people who get along without a large chromo of the Pope eat fish as often, if not so regularly, as those who enjoy this privilege. Of more general application is the direction "never, under any circumstances, permit yourself to be drawn into an argument with a customer." If the Lady replies, to the Agent's insinuating address, that she "has two (more or less) Cook-Books already," he is to assure her that ladies who have ten and thirteen ("a fact") cook-books buy his. If she is "'afraid the receipts are not good,' about the best answer is to say that you yourself have used it, . . . and *proved* the receipts to be good. *There is no answer to this, except to accuse you of lying.*" If the Lady remarks that she doesn't "like the subscription plan of buying books," the Agent is to assure her that "*all* the best class of books are sold in that way now." Finally, the Agent is cautioned against a little game which the lady, in her turn, may try: "'I may see you again when you are delivering, and possibly I may take a copy then.' *This is an attempt to get rid of you.*"

—The will of George Fox is the greatest curiosity in Mr. Henry F. Waters's tenth instalment of "Genealogical Gleanings in England," printed in the *New England Historical and Genealogical Register* for October. "I do give to Thomas Lower," it begins, "my sadle and bridle they are at John Nelson's and spurrs and Bootts inward leathers and the New England Indian Bible," etc. "And Sarah," continued the testator, addressing his step-daughter, the wife of William Meade, "thou may give Sarah Freckelton halfe a guinea for she hath been serviceable to me an honest carefull young woman G. ff." The will of Bold Boughey, Esq., Warden of the Fleete, 17 October, 1669, is also quaint reading. "Whereas," said this unfortunate matrimonial adventurer, "since my marriage with Jane the widow & relict of William Celey, Esq, by whom I have had no children, and who either hath or pretended to have a reasonable good estate, which I have not wasted or intermedled with; since which marriage I have lived but an uncomfortable life; I do therefore give and bequeath unto my said wife, for her better support," etc. In New England the name Boughey was written phonetically Boffee. Peter Hodges, "late of East West Guersey in America, planter," devises certain real estate near Burlington, N. J., "to my dearly and well beloved friend Elizabeth Willis, spinster, whom I intended for my lawful wife." John Cooper, again, leaves his wife the "benefit" of forty pounds during her widowhood, the sum to be divided afterwards between his brother and sister. "Yet notwithstandinge it it shall please God to afflict my wife in anie of his providences towards her that shee hath neede of all that I have," then the bequest to his own kin shall be void, "and shall not be exported from her." Such are some of the humane aspects of the documents here reproduced by Mr. Waters. The genealogical and historical interest, as in the case of Wheatland, Parris, Fish, Horsford, etc., is still greater. The Rev. F. J. Poynton, rector of Kelston, near Bath, England, writes as to John Harvard that he suspects the name to be "one of the many representations of the old name Herford or Harford"—the latter form being extremely common in the west of England. He traces, in fact, the successive changes down to Harvard in the Marshfield parish registers. Mr. G. D. Scull contributes some important documents relating to the Rev. Hugh Peters, including one from Thomas Shepard, of Cambridge, Mass., who writes to Peters on December 27, 1645, "Toleration of all upon pretence of Conscience I thanke God my soule abhors it." Early next year we are promised the Cleveland Genealogy, which takes account of both the Northern and the Southern branches of this family, viz., descendants of Moses Cleveland, of Woburn, Mass., 1635, the ancestor of President Cleveland, and descendants of Alexander Cleveland, of Bull Run, Va., 1635.

—Poetry, music, and pictorial art have entered into a charming combination in the collection of '*St. Nicholas* Songs' printed by the Century Company. Most of the poetry appeared originally in the *St. Nicholas* magazine, and the music was written by American and English com-

posers—among whom we note the familiar names of Damrosch, Gilchrist, Warren, R. Hoffman, Mosenthal, Millard, Molloy, Hatton, Foote, Bristow, Schlesinger, W. S. Pratt, the editor, and others. There are 112 songs by thirty-two composers, and 140 illustrations, many of them as amusing as they are appropriate. Of course real originality in music at the present day requires harmonic and rhythmic complications which would have been out of place in a collection of this sort; but from every other point of view these songs are interesting, and quite as good, at any rate, as our average magazine literature. The editor states that "the music is meant to be truly interpretative of the words"; and in general this claim may be allowed. But on page 19 occurs a passage which shows an amusing and quite Rossinian disregard for the text. That intellectual song "Hey! Diddle, Diddle" is set to allegro vivace time, but when it comes to the thrilling climax, "the dish ran away with the spoon," the composer puts in a "*motto ritenuto*," as if a dish were—a messenger boy.

—The illness of the compiler has delayed till the present year the issue of the reports of the observations of the total eclipse of the sun, August 7, 1869, made by parties equipped under the instructions of Prof. J. H. C. Coffin, under the provisions of an appropriation of $5,000 by Congress, made in response to the representations of the American Academy of Arts and Sciences, Boston, and the American Philosophical Society and the Franklin Institute of Philadelphia. The nature of the scientific results of these observations has, of course, been a long time known through the medium of the various periodicals in which they were early published in brief. The infinitude of detail which characterizes all such work is now, however, for the first time made accessible to those who take interest in the successful accomplishment of similar work in the future. It will be well to recall that the astronomers and others who were amenable to the instructions of Professor Coffin—some twenty-five in all—were divided into three general parties, observing in the State of Iowa. Stationed at Burlington were Professor Coffin, Doctor Gould, Professor Young, Professor Mayer, and Miss Mitchell; at Mount Pleasant, Professor Watson, Professor Van Vleck, Doctor Morton, and Professor Pickering; while at Ottumwa were Professor Alexander, Professor Himes, and Professor Gummere. To the reports of all these individual observers Professor Coffin has added reports from a number of others not formally connected with the expeditions. The rich materials contributed in general observations and notes on the corona, by Doctor Gould; in spectral analysis, by Professor Young; and in photography, by the "Philadelphia Photographic Expedition," organized by Professor Morton, are especially valuable. The photographs taken during the phase of total eclipse are described, and engravings of several of them are appended to the volume. Copies of these photographs have been distributed to observatories and individuals, so far as the limited means at hand have allowed. The remarkable spectroscopic achievements of Professor Young on the occasion of this eclipse have long ago become part of the history of astronomy. The admirably precise method which he then for the first time essayed, of observing spectroscopically the time of absolute contact of the moon's limb with the sun's, is perhaps unsurpassed; and the notable line, 1474 K, which he discovered on this occasion in the spectrum of the sun's corona, still remains the most distinguishing spectroscopic feature of that object, and has not yet been identified in the spectrum of any terrestrial substance. This eclipse was also about the first in which a thorough search for supposed intra-Mercurial planets was undertaken. The negative conclusions from Doctor Gould's careful work might well have been accepted by all observers of subsequent eclipses who have spent many precious moments in fruitless search for such objects.

—Tcheng-Ki-Tong, who now signs himself General Tcheng-Ki-Tong, encouraged by the success of his first book on China, will probably soon be ready with a second. He is now giving in the *Temps* a series of articles on the Theatre of the Chinese, full of details of private life and of allusions to things of all kinds that have nothing to do with the stage. He tells us, by the way, of "Chinese porcelain which is sold in China and which is not Chinese porcelain." He gives very amusing descriptions of the ceremonies of a Chinese banquet, tells us that his countrymen prefer, as many other people do, game and poultry to the fantastical dishes that travellers like to describe. "We do have a few special dishes," he admits: "autrement ce ne serait vraiment pas la peine d'être chinois." Toasts and after-dinner speeches are unknown in Chinese society; General Tcheng does not think that it is to be pitied on that account. Tcheng-Ki-Tong would not have been classed by Tom Hood among those who were in France without knowing the "lingo." His French is very idiomatic. He is thoroughly familiar with the technicalities of the stage, "l'argot des coulisses," and with what might be called the slang of polite society. He knows his La Fontaine and his Molière well and can quote them upon occasion, not directly and in so many words, but covertly, with an allusion to some passage well known to every educated Frenchman. Nor does he allow himself to be dazzled by the western civilization with which he is in contact. He takes a keen delight, while seeming to praise and admire, in showing the futility of certain pretensions, as when he tells us that in France "nos porcelaines sont trop connues pour être appréciées à leur valeur artistique." Incidentally the Chinese stage leads him to speak of marriage, of love-making, of the stereotyped ending of Chinese as well as of French comedies. Some officials and men of business, it seems, are not "more scrupulous in China than in Europe," and he adds, without taking pains to use quotation marks: "les affaires, c'est partout l'argent des autres."

SANBORN'S JOHN BROWN.

The Life and Letters of John Brown, Liberator of Kansas and Martyr of Virginia. Edited by F. B. Sanborn. Boston: Roberts Brothers.

THE present year seems likely to be remarkable for its series of authoritative biographies of men prominent in American history or literature. A laborious and almost exhaustive effort in that line is Mr. Sanborn's memoir of John Brown. Three biographies of the same person have preceded this, but Mr. Redpath's was rather sensational and journalistic; Mr. R. D. Webb's was that of a transatlantic sympathizer, who necessarily took his facts at second-hand; while Mr. Sanborn's own sketch, prepared for the Torrington (Ct.) celebration, was merely preliminary to this larger work. For the first time we have now the full facts, the correspondence, the contemporary testimony upon which the whole story rests. These have been collected with unwearying care, and are reproduced with a fulness of detail that would be excessive but for the historic interest of the subject. The claim made for Captain Brown as "Liberator of Kansas and Martyr of Virginia" will doubtless call forth criticism, as does every attempt to insert an epigram in a title-page; but it must be admitted that Mr. Sanborn amply exhibits his evidence as well as his verdict.

John Brown belonged to that class of men, among whom Savonarola is the most conspicuous example, into whom a certain excess or overconcentration of mind enters just enough to inflame the imagination, ennoble the aim, and finally defeat the immediate undertaking. There is nothing in history finer than the long and arduous career of self-devotion in the Brown family during the Kansas struggle and after it; and the one or two early instances mentioned by Mr. Sanborn where the zeal of the sons needed a little spurring from the father, only make the subsequent self-sacrifice more interesting because more human. Mr. Sanborn's claim is, that in the long pursuit of this career—during much of which he and his sons were almost outlaws—Captain Brown committed but one act that could possibly be charged with cold-blooded cruelty; and that this—the Pottawatomie affair—really turned the scale in the history of Kansas, and so was justified not merely by its provocations, but by its results.

This affair is the key to John Brown's mental make-up. Brown was a true hero in the sense that he had a high purpose in view, to which he sacrificed everything in life and life itself. The question whether he was mentally sound, or whether, during his later years, he was off his balance and ought to have been under mild restraint and medical treatment, must be answered by the view we take of the massacre which Mr. Sanborn calls "the Pottawatomie executions." An execution implies the coöperation of judge, jury, counsel, witnesses, and the sheriff—in short, due process of law. None of these were present at Pottawatomie Creek on the 23d of May, 1856, but, instead of them, one man leading six others armed with cutlasses, under cover of darkness, to the cabins of five other men, knocking at their doors and butchering them in their night-clothes as they came out. This was no execution, but a carefully-planned midnight assassination. There is only one way to save both Brown's moral character and his mental equilibrium in the presence of such a transaction, and that is to assume that he was divinely inspired in the Old Testament sense, as Samuel was inspired when he hewed Agag in pieces before the Lord in Gilgal. This Mr. Sanborn assumes with such high assurance that we wonder why he "long refused to believe that Brown participated in these executions" (p. 281). Was his belief in Brown's divine inspiration incomplete until the proof of his participation in the massacres was complete?

When a writer is fully persuaded that his hero "believed himself to be, and in fact was, divinely inspired," all rough places in his career ought to become smooth. But the Pottawatomie ghost will not down even in Mr. Sanborn's sight; for we have a labored argument to show that if Brown was a murderer, so also were Grant and Sherman and Sheridan and all the generals of the Union armies. It was not thus that Samuel justified himself when he hewed Agag in pieces. "Thus saith the Lord" covered his act with such an awful sanction that it was quite needless to add that Saul killed all the rest of the Amalekites. It is not necessary to point out the distinction between a government and private persons as "executioners," or between battle and midnight assassination. The Phœnix Park murderers and the Destroying Angels of Brigham Young can be defended in the same way that Mr. Sanborn defends Brown. Civilized society could not exist if such defence were allowable. This part of Mr. Sanborn's work is so full of pernicious teaching that criticism is puzzled to know where to begin or to leave off. Before passing to other chapters, we shall notice only his frequent sarcastic references to ex-Governor Robinson of Kansas, who, it appears, at times severely condemned Brown for his conduct at Pottawatomie, and at other

times spoke of the affair as highly advantageous to the free-State cause, because "it had the effect to strike terror into the hearts of all pro-slavery men." This is like saying, for instance, that the slayer of Jim Fisk committed an atrocious crime, but that, according to human ken, the removal of Fisk was an advantage to society. Both propositions may be true. They certainly involve no inconsistency. The teleological point of view gets the better of the historical in Mr. Sanborn's book constantly. A reader who had no other guide would be led to believe that Brown brought on the war. He is spoken of (p. 119) as "the restorer of the Republic" in the sense and to the degree that Washington was its founder. Of course all persons who reject the theory of inspiration, and who do not believe that Brown was a vulgar murderer, will conclude that much thinking on the wrongs of slavery had unsettled his mind, and that he was not quite responsible for what he did, or caused to be done, at Pottawatomie.

As to the main enterprise with which the memory of Brown will be forever identified, there was in it nothing savage or brutal. He used to say that the mountains of the Virginia "Blue Ridge" were designed by the Almighty from the foundation of the world as an ultimate refuge for fugitive slaves; just as Bishop Meade records that Washington had selected the "East and West Fort" elevations as the place to which he should lead the remnant of his army, if defeated in the War of the Revolution. To some such spot he proposed to conduct whole families and plantations of fugitive slaves, from time to time; with the alternative, if hard pressed, of making a sortie with them for Canada. This is what he intended—or, to speak more strictly, often intended—for in the mind of a brooding enthusiast a project may take as many varying forms as *Hamlet* saw in the cloud; and thus it undoubtedly was with Brown. But whatever his plan or plans, there is very little doubt that when he had once taken the mighty responsibility of facing the power of the United States Government, his overstrained mind swerved again from its balance, and he amazed his followers by remaining at Harper's Ferry to their common destruction. As is often seen, again, in such cases, his intellect recovered its poise when the crisis was past, and he accepted as unflinchingly the part of martyr as he had planned to enact that of deliverer. All this is plain from Mr. Sanborn's book; and though it only confirms in this respect the impression that had been already formed by thoughtful students, it is much to have it in a shape so cogent and convincing.

Mr. Sanborn's work as annalist and editor has been done, as already intimated, with great research and thoroughness, and by the aid of vast accumulations of material. There is sometimes a certain amount of inflation in his tone, and there are more serious literary faults. It is curious to note in him how the habit of journalism works both ways—to condense comment, but to amplify quotation. A letter or two more or less may not seem much to one accustomed to the vast and elastic columns of a daily journal; but the accumulated citations swell a book far more rapidly. Yet so far as Captain Brown's letters are concerned, it may be doubted whether the editor has given us one too many, for Brown never wrote a line that did not show his idiosyncrasies; and these will be the subject of renewed study, for many years, from all possible points of view. Sometimes, on the other hand, the reader grows a little impatient with the introduction of other letters or documents, given in full, where a smaller portion would have sufficed; as when an entire page is given (p. 513) to a letter from Theodore Parker to Emerson, which is exceedingly interesting of itself, but of which only a dozen lines relate to Brown. To balance this, there are other points where the author does not sufficiently amplify; as, for instance, in respect to Brown's refusal to be rescued. It is undoubtedly true, though Mr. Sanborn states it as probable only (p. 624), that it was Judge Russell who brought from Brown in Virginia this distinct announcement to his friends in Boston. But the book does not add, what is well known to be a fact, that Mrs. Brown was expressly sent for, by those friends, in the hope that her presence with her husband in prison might soften this magnanimous resolution on his part, and that if a rescue were attempted she might then be the medium of communication. This she was quite ready to do, it is understood, and had got so far as Boston when a telegraphic despatch was received from her husband, absolutely prohibiting her from coming to him, as if the writer comprehended the real purpose of her mission. It was not until after his trial and sentence that he consented to have her come. All this series of incidents—very important as illustrating the characters of both husband and wife, and also, perhaps, as indicating the fidelity of his Boston friends—is omitted by Mr. Sanborn. His only statement is: "When the struggle at Harper's Ferry was terminated and she knew that her husband's life-work was ended, she visited him and received his last messages" (p. 498).

Whatever faults may be found with the arrangement of the book, it covers a great deal of ground. It gives the most ample details as to John Brown's ancestry, childhood and youth; his home relations; his business life; his pioneer life in the Adirondacks; his career in Kansas, justly called the skirmish-ground of the Civil War; the maturing, interruption, and final consummation of his plans; the Virginia foray, and the final tragedy. Upon this last point so much has been written that it is hard to find new features in the event, though Mr. Sanborn has found them; but the part of the book in which most new light is thrown, next to the Kansas period, is the time of concealment in Virginia which preceded the final outbreak. The whole record of this is made intensely interesting, and nothing brings out more clearly the finer and more delicate traits in the Brown family than the letters of the sons during this period. Separated from those whom they loved most dearly—bound upon a desperate effort in behalf of men and women whom they had never even seen—they write uniformly in a tone nobler, because tenderer, than any that is recorded by Greek or Roman fame. "I would here say," writes Oliver, the youngest, to his mother, "that I think there is no good reason why any of us should be discouraged, for if we have done but one good act, life is not a failure" (p. 547). Watson, who was just twenty-four, and whose only child had been born in his absence, writes:

> "We have only two black men with us now; one of these has a wife and seven children in slavery. I sometimes feel as if I could not make the sacrifice, but what would I want to do, were I in their place? . . . Oh, Bell, I do want to see you and the little fellow very much, but I must wait. There was a slave near here, whose wife was sold off south, the other day, and he was found in Thomas Kennedy's orchard dead, the next morning. Cannot come home so long as such things are done here. . . . I sometimes think perhaps we shall not meet again. If we should not, you have an object to live for—to be a mother to our little Fred" (p. 549).

This, be it observed, was more than the Scriptural "remembering those that be in bonds as bound with them"—it was actually being bound, linked irrevocably with them. Both these young men lost their lives at Harper's Ferry; and Mr. C. W. Tayleure, a South Carolinian, writes that when he gave the wounded Watson Brown a cup of water—finding it "impossible not to feel respect to men who offer up their lives in support of their convictions"—he followed up this deed of mercy by the question, "What brought you here?" to which the young man simply answered, "Duty, sir" (p. 112). Thus much for the men; and during all this period the women whom they had left at home were living, for the sake of the enterprise, on a little mountain farm so high and cold that corn would not ripen there, and in such poverty that they could only pay postage on their letters by picking and selling whortleberries for that express purpose.

Mr. Sanborn's book will always remain the permanent *thesaurus* of knowledge in regard to John Brown and his enterprise; it can never be superseded, because no other writer will combine the same opportunities and the same zeal. It leaves the way open for a book of less than one-quarter the size, which shall give to all, and especially to the young, a brief and simple picture of the life of self-devotion here portrayed. As time goes on, this work of condensed estimate will be easier. Brown and his sons disarmed the prejudice of their captors even before they died. The tributes that have been paid to them by prejudiced eye-witnesses would of themselves fill a small volume, and the absence of a full bibliography of these and other tributes is a serious defect in the present volume. It would also be a great defect that Mr. Sanborn tells us next to nothing about John Brown's associates, did he not expressly inform us in his preface that he hopes to devote to them another volume.

RECENT NOVELS.

A Tinted Venus. By F. Anstey. D. Appleton & Co.

She's All the World to Me. By Hall Caine. Harper's Handy Series.

The Waters of Hercules. By E. D. Gerard. Harper's Handy Series.

Sweet Mace. By George Manville Fenn. Cassell & Co.

Nemesis, or, Tinted Vapors. By J. Maclaren Cobban. D. Appleton & Co.

The Bar-Sinister. Cassell & Co.

A New England Conscience. By Belle C. Greene. G. P. Putnam's Sons.

MR. ANSTEY'S farcical romance, 'The Tinted Venus,' inevitably challenges comparison with 'Vice Versâ.' It is better literary work, more rapid and direct, and attesting throughout the author's mastery of his idea and plan. The memory of it will be effaced sooner than that of 'Vice Versâ,' because there is not that serious undercurrent which gives to impression a permanence never achieved by unalloyed extravagance. We do not laugh at it so heartily, because we are not compelled by daring originality of conceit. The story of a statue of Venus quickened to life by the touch of a man who has slipped a ring on her brazen finger, and claiming the unlucky wight as her own, has often been told in prose and verse. Mr. Anstey refers to one or two English renderings, and is probably familiar with 'La Vénus d'Ille,' Prosper Mérimée's thrilling tragic version. When Leander Tweddle, hair-dresser, momentarily forgetful of his obligations as an engaged man, stung by the ironical chaff of an old sweetheart, slips his Matilda's ring on the curved finger of the marble Venus in Rosherwich Gardens, eager anticipation of awful consequences to the erring Leander is excited. The cleverness and fun of the story lie in the incongruity between the supernatural character of the events and the preëminent, unre-

mitting commonplaceness of Leander. After the first slight shock of alarm at seeing on his threshold the cold statue, now an inconveniently warm goddess, he applies himself briskly to the task of getting back Matilda's ring. Through all the harrowing complications that ensue he wastes no time in contemplating them with the eye of the imagination, or in idle speculation about their portentous strangeness. They excite him only because they may damage his business, impeach his respectability among the neighbors, and make a breach between him and Matilda. In avoiding and counteracting these calamities, he puts to noble use that astuteness which had led him to see profits accruing from "Tweddle's rejuvenator," "Tweddle's cream of coral" personally manufactured. In every exigency he displays that coolness which is sometimes the expression of trained intelligence, but seen to perfection oftenest in the absolutely prosaic and self-centred. As a passing acquaintance he is in every attitude entertaining, and, as a character study, acute and thorough. The lesser people keep up the farce with adequate spirit, but the naïveté of the Venus sometimes misses point. She is not such an unfettered innocent as Mr. Gilbert's *Galatea*, but Mr. Gilbert has no scruple about pushing a ludicrous conception beyond the limits prescribed by decorum. Mr. Anstey, on the contrary, though free from literary prudery, rigidly foregoes the temptation of the equivocal.

There is nothing cheap about Hall Caine's novel, 'She's All the World to Me,' except the title, which is as misleading as it is unworthy. On the wild west coast of the Isle of Man he has heard and idealized the "history of a love that was lost and a love that was won, of death that had no sting and the grave that had no victory." He has written a poem in strength and beauty of idea, in artistic unity and completeness, in the harmony between the expression and the scenes, incidents, and thoughts presented. It inculcates no more direct moral than may be derived from an extended and sympathetic contemplation of life. Every day, somewhere, an heroic deed is impelling a weak or erring multitude toward well-doing and high-thinking; of the multitude, there are some to whom the nature of the heroism pleads so specially that the impulse becomes a controlling power. Christian Mylrea was weak, selfish, untrustworthy. Measured by just standards of human conduct, he had been in more than one way criminal; yet we may believe that the splendid devotion of Danny Fayle effected a moral revolution in the man, and that the memory of it would shine before him as a star lighting the way to better things than he had ever known. The author believes such a result to be possible, and his moral has a much wider significance than that of many works which discuss exclusively situations and sentiments of austere, conventional virtue. It is the moral inevitably taught by martyrdom even for a mistaken cause, and by that art which, representing only the sublime, the heroic, and the beautiful, is the highest.

'The Waters of Hercules' is burdened in the beginning with a discouraging Roman legend and a prologue, neither of which is essential to the development of a picturesque modern story. The author has poached on Maurice Jókai's ground, Southern Hungary and Rumania; but he has sagaciously concentrated his strength on the foreign loungers at the baths of Hercules, by the Djerna River. Count István Tolnay, the valley-king, is, it is true, a prominent figure, but, being cosmopolitan by education, there are fewer obstacles to a successful delineation of him than are presented by the uncontaminated native of a superficially known region. All the romance centres round the search for the *Gaura Draculuí*, a yawning abyss on the mountain side, discovery of which, in an almost impenetrable forest, is rendered doubly difficult by the myths and superstitions of a semi-pagan peasantry. Miss Gretchen Mohr, the indefatigable leader of the search party, imagines herself to be a singularly just and logical person. She certainly does her best to live up to the trying reputation of a *prix de logique;* but, as her friend Belita Francopazzi frequently observed with sorrow, being a German, she could not escape the national taint of sentimentality. Therefore, in addition to the desire for a striking contrast to the brilliancy of the valley-king, the author probably made Vincenz Komers distressingly unpresentable in order to show that the sentiment which seduced Gretchen from the pursuit of happiness (mathematically reduced to known quantities, such as the possession of the largest and finest assortment of tangible possessions) was a spiritual exaltation, sweeping her beyond cognizance of stooping shoulders, a shuffling gait, and no eyesight worth mentioning. In the choice of characters to carry on the story, the author is particularly happy. The testy Englishman, with reverence for nothing but the British Constitution and the art of fishing, is an old caricature, but here has distinctly original improvements. He, with the *dulcêtia*-eating Rumanian Countess, the Italian Countess Belita, the insouciant Kurz, and the archæologists seeking rest, refreshment, and scientific facts, at the Government's expense, makes a company in which it is impossible to be dull. It is a pity that, in so good a book, so much indefinite description and loose phraseology may be found.

'Sweet Mace' is a romantic novel with the scene laid by the sea in Sussex, during the reign of King James the First. It is not in any sense historical, and the occasional spasms of antiquated phraseology do not seriously embarrass the flow of the narrative. In spite of the pretty name and gentle nature of the maiden who bears it, it is a very noisy novel, and would have been more enjoyable to a nervous generation if the author had gone about his work more quietly. We are intellectually deafened by the clashing of sabres, the crashing of shell, the long-echoing boom of exploding cannon and powder magazines, and the scolding of Mother Goodhugh, prolific both in prophetic imprecations and in wiles to make them good. But the story conducted with so much racket is ingenious and interesting. The characters are full of life, sometimes, as may be inferred, a little too full. Master Peasegood and Father Brisdone are remarkably pleasant foils to the very hearty cannon-founder and all the blustering sea-rovers. Whether they go a-fishing, or talk theology, or smoke tobacco, in private contempt of royal anathema upon the weed, we delight in them, and in the easy, friendly relation between the prosperous representative of a church but newly established and the forlorn, hunted priest of a church whose glory had so recently been extinguished in the land. The device which relieves the despair into which the supposed death of Sweet Mace has plunged her father, the founder, and her lover, the captain of the pirate-crew, is startling, but close attention to the plot assures us that the circumstances are possible. As for the twin villains, Sir Mark Leslie and Mistress Anne Beckley, they no doubt found their punishment in the discomfort bred in the married estate by equally apportioned fickleness, vanity, and selfishness.

The apparent craze for mystery and its shadow, the detective, is not yet exhausted, but we are hopeful that its days are numbered. It is a kind of fiction easily produced by persons of some small ingenuity and a facility in scribbling—a facility which by no means implies an ability to scribble to the amusement or instruction of any one whatever. The feeling that the whole class has worked itself out, is what makes us hopeful about an approaching lull in the production. To manufacture a marketable mystery, it is of course not necessary that the characters shall be more soulful than machines. Indeed, the machinists who give undivided attention to wire-pulling are the artists in their *genre*. He who does more, in the way of characterization, than to emphasize the peculiarly penetrating gleam of his pet detective's abnormally small gray eye, and the same detective's greatness in detecting, generally succeeds in providing the delectable morsel which is neither fish, flesh, nor good red herring. Another error, commoner, and always fatal in 'prentice hands, is opening with a number of clues to the perpetrator of the murder, or burglary, or whatever phase of crime has most allured him. There is a seeming, but purely illusory, advantage in this method. Ingenuity, failing to work up sufficient evidence to convict one person, may be freshened and invigorated by remorseless pursuit of another. But this is hard work, and always ends in exhaustion and collapse. The only respectable way out is to convict the most unlikely. Then comes the obligation to run over the MS. and in cert palpable hints, with intent to convince the reader that the end has been foreseen, provided for, and cunningly led up to. We cannot shake off the impression that the story, 'Silken Threads,' was constructed on a principle analogous to this. There are half-a-dozen people, any one of whom might have murdered Bryce Barclay, and most of the book is given to the vindictive pursuit of two. In two short chapters at the end the name of the murderer is revealed, with the method by which he effected the murder, and the means employed to convict him. The hint is to be found pally inserted in an early chapter.

'A Nemesis, or Tinted Vapors' has the merit of directness, and the novelty of a pair of clergymen in full tilt after the clues to a "strange disappearance." The reader very soon makes up his mind about the meaning of the disappearance of Mr. Lacroix, and has no more mental exercise than to follow the wildly misdirected, and therefore naturally futile, efforts of the Rev. Gerald Unwin to find the facts in the case. That half of the story represented in the title by "Nemesis" is peculiarly worthless, but the descriptive half belonging to the "Tinted Vapors" which, issuing from the chimneys of the Steinhardt chemical works, cast a scorching blight on animate and inanimate nature, is vivid and impressive. The mania for money-getting in an unhealthy, not to say filthy, occupation has transformed a once smiling Lancashire valley into an earthly hell. The people who toil from morning till night and sleep again till morning, in a poisoned atmosphere, ignorant of the beauty of a blue sky or a clear stream or a green tree, have the mental, moral, and physical development of imps. Of all this, Mr. Unwin, the narrator, discourses with sensibility and passion, and scores at the same time a rare success in making his disquisitions an integral part of his story. It is perhaps to be regretted that he paused so often to point out the "weirdness" of everything, since a nudge from an author is pretty sure death to appreciation.

To write a novel which shall help on a general agitation against a monstrous evil at once social and political, a high order of literary ability is as requisite as intense conviction. Mrs. Stowe was an abolitionist, but, before that, she was a story-teller. Though she had been filled to overflowing with a sense of the negro's wrongs, had she not known how to make those wrongs cry out to the popular imagination, 'Uncle Tom's Cabin' would have failed in its mission. The

author of 'The Bar-Sinister' is boiling over with abhorrence of Mormonism. She has extensive and accurate information about the system in all its pernicious ramifications, but she has none of the distinctive qualities of a novelist. She can excite neither interest in her plot nor sympathy with her people, and the fervor of her feeling vents itself in intemperate and frequently ungrammatical invective, which is as tiresome as it is useless. The principal incidents are necessarily disgusting, and that very necessity is demonstration that the subject is unfitted for treatment in fiction. The Mr. John Quimby of the tale is probably a representative specimen of the men who embrace a creed founded on fraud, fostered by lust, and depending for its perpetuity on the voluntary or enforced degradation of women. His repentance and recantation of Mormon doctrine are, like his conversion, matters of personal gratification, and there is not any doubt that he would incontinently become a Mahommedan should his business lead him to Turkey.

'A New England Conscience' is little more than a sketch of some of the strange, irrational forms of religious belief and worship which always are finding adherents in New England towns—the fungi without substance, shooting up in a night round the roots of the oak of orthodoxy. Illustrating through her characters the wide variations, both absurd and pathetic, in the New England conscience, the author gives us some notion of the peculiar susceptibility of the practical Yankee to spiritual aberration. Some of these characterizations are telling and novel, but the lady who expressed her intention to seek out Beethoven in heaven had probably been reading Miss Phelps assiduously. The slight romance is unimportant, and, though there are hints of power in the delineation of Desire Fielding, it is incomplete and inconsistent.

SCRIBNERS' STATISTICAL ATLAS.

Scribners' Statistical Atlas of the United States. By Fletcher W. Hewes and Henry Gannett. Charles Scribner's Sons.

THE present is a good time to get out a statistical atlas of this country. A comparison of the work before us with the atlas published by General Walker in 1874 shows how greatly the stock of available statistical information has been added to during the last decade, thanks, be it said in passing, largely to the labors and influence of General Walker himself. Nor is it only the supply of statistics which has grown: the demand for them has increased quite as rapidly. With the coming to the front of economic and administrative questions, and the more general understanding of the important part which statistical science must take in their proper settlement, there has sprung up a desire for full and accurate statistics upon all important matters. To the average man, however, tables of figures tell no tale. Their lessons must be put in another dress if he is to profit by them. The tables and their details must be given form and color. The census reports must be turned into an atlas in which the "present condition" and the "political, social, and industrial development" of the country are shown by "graphic methods."

This is what Messrs. Hewes and Gannett have undertaken to do. No one who turns over their 151 plates can doubt that they have labored faithfully, intelligently, and withal successfully to attain their end. Many of the maps are wonderfully suggestive. Thus, that which shows the political complexion of each county in the United States at the election of 1880 cannot fail to raise the question how it came about that some counties are overwhelmingly Republican, while others, it may be next adjoining, are as heavily Democratic. The answer may be found, perhaps, in the topographical or climatic conditions of one or the other group; in the original character of their settlement; in the circumstance that a half-century ago one of them was interested in an industry which it was supposed a protective tariff would benefit; in the fact that in the thirties a knot of determined residents of one took up abolition principles; that in the fifties there was a bitter personal feud between the popular political leaders in the two; or that in the seventies the local government in one set had become very corrupt, and in the other had remained reasonably decent. The knowledge that in Eastern Tennessee and Kentucky, in a region in which the negro vote is inconsiderable, there is a continuous tract of land, in area larger than Massachusetts, comprising numerous counties, every one of which is Republican, would modify not a few impressions as to the solidity of the "Solid South." Still more surprising would it be to learn that Garfield carried a couple of Arkansas counties in which the colored vote is proportionably not one-nineteenth as heavy as it is in Boston.

The material for any amount of study, investigation, and discussion is furnished by the maps which show respectively the relative membership in Protestant churches and the proportionate number of illiterates to total population, and which, when taken together, apparently indicate that the church is usually strongest in the most ignorant communities. The maps which make clear the enormous preponderance in the South of the very "uncavalier" sects of Baptists and Methodists, ought to suggest to every one who is not a professional stump-speaker the absurdity of tracing all Southern peculiarities to the manners and customs of the Cavaliers. Most persons would rub their eyes and look again to see if there was not a mistake somewhere, when the map setting forth the comparative proportion of the total population employed in gainful occupations showed that there were relatively more persons engaged in money-making in the far Southern States than in any other portion of the country east of the Mississippi River. The list of pregnant suggestions which may be drawn from the Atlas could be indefinitely extended, for the plates portray the growth, political history, progress, population, mortality, education, religion, finance, commerce, agriculture, live-stock interests, manufactures, mining, fisheries, and transportation agencies of the country. There are maps, charts, and diagrams, as the case may be, for everything, whether it be the political complexion of the counties of the country or the number of mules and asses to the square mile; the location of the law schools or the annual manufacture of rolled brass; the per capita wealth by counties, or the deaths from nervous disorders; the yearly production of sulphur, or the proportion of Presbyterians to total population.

Indeed, if the scope of the work is open to any criticism, it is that it includes too much. There are plates and diagrams, making comparisons between States and sections, which are necessarily deceptive because of the inaccuracy or insufficiency of the statistics upon which they are based. For example, one map purports to show the relative prison population of the respective States. It is constructed from the figures furnished by the Tenth Census, but in the Census reports the "novice" was expressly warned "against confiding in any deductions drawn from comparisons which may be made between the number of prisoners in one State and in another." The "novice" is like enough to see the Atlas. Unfortunately he will find in it the comparison without the warning. As the *Nation* some time ago demonstrated, no reliance can safely be placed on the returns of true wealth contained in the Seventh, Eighth, and Ninth Censuses. In the Atlas there are a series of maps based upon these returns.

In a work whose contents are so varied the way in which the indexing is done is of prime importance. In this respect its compilers have left nothing to be desired. If you know even but vaguely what you want you can find it in a moment, or be satisfied that it is not in the book. The maps, charts, and diagrams have been designed with good judgment and practical sense. They are both comprehensive and minute, while the too common error of so loading them with names and details that they convey no clear impression to the eye, has been avoided. Certain classes of statistics, such as those relating to religion, were specially collected for the Atlas, but, of course, in most cases its compilers made use of those which are contained in the Census reports and the various unofficial statistical publications. It is to be regretted that in a few instances more care was not taken to discover and correct typographical and other errors in the statistics copied from these authorities. Thus, the hypsometric, temperature, and rainfall maps are a reproduction upon a smaller scale of those published in the first edition of the population volume of the Census, with all their errors as these were pointed out by the *Nation* at the time, including as well those which were subsequently corrected in the second edition as those which were not. The map showing the political complexion of the counties of the United States in 1880 is based upon the returns published in the *American Almanac*. In an almanac of the sort some typographical slips are inevitable. Ordinarily, however, such of them as occur among the election returns can be readily detected by any one familiar with the results of previous contests. A good many have been carried over from the *Almanac* to the Atlas; thus, following the former, in the latter, the counties of Banks and Douglas, in the State of Georgia, which ought to have been colored Democratic, appear as Republican, while on the other hand the counties of Cape May, N. J., Sumner, Kan., Sherburn, Minn., and Taney, Mo., and the Parish of Terrebonne, La., which voted for Garfield, are on the map given to Hancock.

When the amount of work involved in the preparation of the Atlas and the comparative novelty of some of it is considered, the number of errors which have struck us has not been great, though some of them, it would seem, could have been very easily prevented. Such, for instance, is the statement on plate 7, that in 1832 neither Wirt nor Floyd carried any State, although in fact the former received the vote of Vermont and the latter that of South Carolina; or the blunder by which, on plate 51, a map showing by States the ratio of white persons over 21 unable to write to total white persons over 21, is said to show the ratio of white persons unable to write to total white persons—with the result that on opposite pages two different and differing maps are said to indicate the same thing. A similar mistake is made on the same plate with reference to the map showing the proportion of colored persons over 21 unable to write to total colored persons over 21. On plate 25, by an obvious misprint, grade 7 in the key appears to be uncolored. On the map giving the political complexion of counties in 1880, Jefferson County, Ark., and the Parish of East Carroll, La., are colored as if they were Democratic, although they gave in fact a Republican majority, while the counties of Johnson, Iowa, and Monroe, Ill., and the Parish of West Carroll, La., which voted for Hancock, are represented as having been carried by his opponent. General Weaver is deprived of one of the few counties in which he had

a plurality by the crediting of Douglas County, Mo., to Garfield.

The coloring on plate 7 of the map showing how the States voted in 1824 in such a way as to make it appear that Jackson and Adams represented one political leaning, and Clay and Crawford another, is perhaps only an error of judgment, but no such excuse can be made for portraying the Mormon vote in Utah in 1880 as Republican, as is done on plate 11. That class of religionists care little for either party, and if they prefer one to the other, the Republican is certainly not their favorite.

There are not many noticeable errors in the letterpress, though some have attracted our attention. For example, on page xlvi. it is said that 40 out of the 45 cities in the country having over 40,000 inhabitants are situated between the thirty-ninth and the forty-fourth parallels of north latitude. In fact, the cities of Charleston, Louisville, Minneapolis, Nashville, New Orleans, Richmond, St. Louis, St. Paul, San Francisco, and Washington—ten in all—are outside these limits. On page xlix it is said that in Arizona, Nevada, Dakota, Minnesota, and California the foreign-born element forms more than half the total population, when what is meant is, that in numbers the foreigners are more than half as numerous as the natives.

In some instances the methods of reasoning followed are open to severe criticism. Particularly is this the case with reference to the discussion of the relative rates of natural increase among the native white, the colored, and the foreign white classes of our population. The conclusion arrived at is, that the growth of the first-named is most rapid. This may or may not be true, but much of what seems by the editors to be regarded as conclusive evidence in its favor is altogether irrelevant. Thus, in arguing for the superior fertility of our native stock, they begin by showing that the increase between 1870 and 1880 in the number of natives in the country was greater in proportion than that of the foreigners. This is, of course, utterly beside the question. Let us suppose an island which in 1830 had a population of 100 natives and 100 foreigners. In 1880 all of both of these classes are dead. The natives have left 80 descendants; the persons sprung from the foreigners number 200. They were all born on the island, and consequently a census taken in 1881 would report a native population of 200. *Ergo*, according to the editors of the Atlas, the native stock was the most productive. After making a good deal of this argument, the editors say that perhaps it will be objected to on the ground that among the natives are included children of foreign-born parents. To remove the objection they make the comparison between the rate of increase in the number of persons with native parents and the number of persons of foreign parentage, and arrive at substantially the same result as before. It would be very strange if they did not, as the principle of the two methods of comparison is the same, and both are equally unsound, the only difference being that in one the vitiating element is introduced one generation further back than in the other.

It will be worth while to test the difference in the rates of natural increase as determined by the methods employed in the Atlas, and the true rates. The increase in the number of native whites from 1870 to 1880 was at the rate of 31.25 per cent.; in the number of persons of native white parentage, 28 per cent. The number of white inhabitants in 1870 was 33,589,377. In 1880 it was 43,402,971. The increase was 9,813,593. The immigration during the decade was 2,812,191. The increase due to an excess of births over deaths was therefore but 7,001,402, or at the rate of 20.84 per cent. The method of estimating the reproductive powers of the native stock by the increase in the number of natives, is a favorite one with the editors of the Atlas; for later on they remark that an increase of 30 per cent. in the decade in the number of native inhabitants in the State of New York is a proof that the American race is not dying out.

In the discussion of the comparative rates of increase in the white and colored races, it is not easy to make out what is the proposition which it is wished to prove. All that is shown is that, during any considerable period of time, the number of white inhabitants of the country has increased more rapidly than of negro—something which no one of adequate information doubts, the apparent exception of the decade from 1870 to 1880 to the contrary notwithstanding. What the editors sometimes appear to have had in mind, however, is the much more important question of the relative rates of natural increase, the factor of immigration being eliminated. As since the census of 1810 there has been practically no colored immigration; as before 1820 the white immigration was inconsiderable, and since that time statistics of it have been preserved, it is easy to say just what proportion of the white increase during any decade was due to an excess of births over deaths, and what to the coming in of foreigners. As the point is of moment, and the treatment of it in the Atlas unsatisfactory, we will here separate the increase into its two component parts, as is done in the following table:

Decade.	White Increase, All Causes.	Immigration.	Natural.	Colored Increase, Natural.
1810-20.....	34.12	.....	34.12	28.57
1820-30.....	34.03	1.83	32.20	31.41
1830-40.....	34.72	5.78	28.94	28.28
1840-50.....	37.74	12.30	25.44	26.61
1850-60.....	37.09	12.83	24.86	22.06
1860-70.....	24.76	9.00	15.76	9.80
1870-80.....	29.21	8.37	20.84	34.85

It is clear that the negro race in this country has never grown as fast as the white race at one time did, a large portion of the apparent gain in negro population between 1870 and 1880 being beyond all question fictitious. But whether the causes which have so steadily lowered the rate of increase among the whites, or others of like tendency, have had an equal influence upon the blacks, cannot be determined until another census shall give us data for a comparison with that of 1880. In the last twenty years the whites have gained by natural increase 42 per cent., the blacks 48 per cent.

THE ECSTASY OF WOE.

Die Wonne des Leids. Von Oswald Zimmermann. Leipzig: Carl Reissner. 1885.

GERMAN pessimism has never produced a more curious fruit than this little book. The author's deities are Hamerling, Wagner, and Schopenhauer, and his title is taken from one of Hamerling's poems, in which is contradicted the common notion that sadness is the source of poetry: "Joy alone is ever its only source; even where it seems to spring from bitterest sorrow, its fountain yet is in the *ecstasy of woe*." This "ecstasy of woe," or "Wonne des Leids," Zimmermann regards as a phase of emotion entirely distinct from pleasure or pain, pure and simple; and so long as it is not the outcome of morbid sensualism, he feels inclined to place it "higher than mere pleasure, higher *even* than pain, despite its ethical import." This "even," which we have italicized, is a delicious pessimistic touch. Unfortunately, this ecstasy of woe is an emotion which Philistine souls are as incapable of experiencing or even conceiving as a blind man is of perceiving colors. The author is especially sarcastic on the Philistine newspaper critics who, instead of greeting his discovery of a new emotion as a scientific revelation, cracked poor jokes about it. He should console himself with the thought that it has always been so: the average man can conceive no use for the Promethean fire if he cannot light his cigar with it. A tone of scientific martyrdom is also assumed in the preface, where the author tells us that the first edition of his work was confiscated by the Austrian Staatsanwaltschaft, on account of his remarks on certain reprehensible and morbid manifestations of the "ecstasy of woe" in mediæval monasteries. These remarks have been removed in the new edition, and the book otherwise improved and enlarged.

Herr Zimmermann's ethical standpoint is infinitely exalted not only above that of the great masses who avoid the anguish of pain because "it hurts," but above that of the philosophers, from Spinoza and Kant to Bain and Spencer, who seem to look upon pain as an evil because it implies a lowering of the vital energies. Herr Zimmermann's doctrine is, that although an increase of intelligence is accompanied by an increased susceptibility to pain, there goes along with it, at the same time, a greater capacity of enduring the pain which has been recognized by the pessimistic mind as being inevitable. And then comes the final ethical attitude—for which the author coins the word "Dionysian"—which enables a superior mind not only to endure pain with indifference, but actually to derive pleasure from it; to use his own words: "die dionysische Wirkung des Leids, die dahin geht dass der Mensch dem Schmerze Wonne abzugewinnen weiss."

This capacity of deriving delight from anguish—this Dionysian element, or ecstasy of woe—is, according to our author, the distinguishing trait of modern art and literature. Though most conspicuous in the music-dramas of Wagner, the poems of Hamerling and Lingg, and the novels of Turgeneff and Sacher-Masoch, traces of it are—as he endeavors to show in his chapters on "Die Genieperiode" and "Die classisch-romantische Epoche"—to be found throughout German literature, as in Goethe's poem "Wonne der Wehmut," and in Heine *passim*. Other chapters are concerned with the ancient festivals of Dionysius and Aphrodite, the Mediæval Flagellantes, Mysticism, Beauty in Art and Nature, Death, and Love—in each of which spheres the writer endeavors to show mankind revelling in the luxury of woe. His reasoning unfortunately bears always the character of a *non sequitur;* for he soon forgets his emotional paradox—that the ecstasy of woe is a unique feeling, differing from ordinary pleasure—and contents himself with showing how often pleasurable and painful feelings are mingled in our experiences. He subscribes to Hartmann's assertion that "there is *no* pleasure which does not contain an element of grief, and no pain unmixed with pleasure"—to which there are obviously many exceptions, though as a general rule it holds good; and the chief interest of Herr Zimmermann's book lies in the copious illustrations of this theme which it furnishes.

If the author could have made up his mind to sacrifice his metaphysical fetish—the notion that the "ecstasy of woe" is something *sui generis* and capable of explaining anything—he might have rendered a real service to psychological research. He is right in claiming that pleasure mingled with woe is more potent than pleasure undiluted; but the reason of this strange phe-

nomenon is not, as he imagines, because pain itself yields a pleasure—because there is "Eine Lust am Schmerze," an ecstasy of woe, but simply because of the power of contrast. If a person suffering the pangs of home-sickness or of the loss of a friend is unwilling to purchase freedom from anguish at the cost of memory, this is not because the anguish itself is enjoyed and valued, but because all feeling has a regular pulsation or rhythm, so that hours of anguish are always interrupted by intervals of hope and happy reminiscence, which appear doubly delicious and dazzling by contrast with the dark depths of despair. Hence it is, also, that an uncertain lover gloats over the anguish of doubt and jealousy: for when the reaction of hope and confidence comes he enjoys an ecstasy of the imagination of which an always-confident lover has no conception.

There is another interesting point regarding these mingled feelings of joy and sadness, which is very inadequately treated by Herr Zimmermann, and which is one of the most perplexing and disputed problems in emotional psychology. Is there such a thing in fact as a mixed emotion? do pleasure and pain ever coalesce in one feeling? Nahlowsky gives a negative answer to this question. He thinks that the attention is fixed on only one feeling at a time, and that it is only their rapid succession which makes two feelings appear simultaneous. We prefer, however, the view of Hume, as expressed in his remarkable Dissertation on the Passions:

"If we consider the human mind, we shall observe that, with regard to the passions, it is not like a wind instrument of music, which, in running over all the notes, immediately loses the sound when the breath ceases; but rather resembles a string instrument, where, after each stroke, the vibrations still retain some sound, which gradually and insensibly decays. The imagination is extremely quick and agile, but the passions in comparison are slow and restive; for which reason, when any object is presented which affords a variety of views to the one and emotions to the other, though the fancy may change its views with great celerity, each stroke will not produce a clear and distinct note of passion, but the one passion will always be mixt and confounded with the other."

This admirable passage explains very clearly why it is that the majority of our emotions are mixed moods, and why the pleasure of sadness, the "ecstasy of woe," is less of a paradox than it seems.

A Treatise on the Adjustment of Observations, with Applications to Geodetic Work and other Measures of Precision. By T. W. Wright, B.A., C.E., late Assistant Engineer U. S. Lake Survey. D. Van Nostrand. 8vo, pp. 437.

In the formation of the wonderful product of modern science, especially during the present century, perhaps no factor has been so potent as the conviction on the part of scientific men of the necessity of precision of measurement. Two results have followed from this conviction—first, an unwearied effort to attain absolute precision; and secondly, the knowledge that absolute precision is unattainable. Nevertheless, the unattainable must be continually striven after if the attainable is to be of any value. The old Greek philosopher Thales held that there is no such state of anything as perfect rest: everything is in a constant state of flux; the ultimate elements are always moving among themselves. That which in the time of Thales was merely a disputed hypothesis, is now known to be a physical fact. Nothing in the material universe ever remains for twenty-four consecutive hours in the same condition; and were our methods of observation sufficiently refined, we should undoubtedly find the statement equally true for any twenty-four consecutive seconds. Hence arises the impossibility of constructing any absolute standard of measurement. It will, no doubt, prove interesting, especially to the general reader who has never been engaged in scientific work requiring measurements of precision, to notice two or three of the difficulties which, among others, render the attainment of absolute precision impossible.

The first great obstacle is change of temperature. Suppose that upon a straight metal bar, kept at a certain temperature, two fine marks are made, intended to be just one metre apart. Now, if the bar be exposed to varying temperatures, the distance between the two marks will constantly vary. This fact is known to every one acquainted with the elements of physics; but there is another fact not so generally known. If, after making the marks, the bar be exposed to considerable changes of temperature and is then brought to the same temperature as at first, the distance between the marks will not be the same as it was originally. Restoring its temperature exactly does not exactly restore the length of bar or the distance between the marks. The instruments which the observer employs are also affected. Thus, "if while the observer was measuring horizontal angles the sun shone on one side of his instrument, its adjustments would be so disturbed that good work could not be expected."

In certain kinds of measurement one of the most potent causes of error is atmospheric refraction. Thus, in determining the difference in elevation between two stations by "trigonometrical levelling," the discrepancies produced by refraction between observations made at different hours of the same day is often astonishing to the uninitiated. Mr. Wright says (p. 382):

"For example, in India, where in certain districts the triangulation has been carried for hundreds of miles over a level country, with stations ten or twelve miles apart and from eighteen to twenty-four feet high—just high enough to be mutually visible at the time of minimum refraction—numerous instances are recorded of the vertical angles varying through a range of six to nine minutes, corresponding to an apparent change of altitude of 100 to 150 feet in the course of 24 hours."

No satisfactory method of subjecting these variations to any fixed law has been found.

Another source of error is found in the constitution and temperament of the observer himself. Thus, in attempting to determine the exact instant at which a star passes over a meridian, some observers invariably fix it a little earlier, others a little later, than the true time. The more skilful and experienced the observer becomes, the more this error tends to become a fixed quantity, technically called his "personal equation," for which he always makes due allowance.

The above are only specimens of the numberless sources of uncertainty in all measurements. But the nicety of construction, the facility and exactness of adjustment of modern mathematical instruments, the skill with which they are handled, the refinement and ingenuity of the methods of making observations, have all become so great that the observer is able to obtain data from which, though still discrepant within narrow limits, he evolves results which excite the wonder and admiration of the ignorant, and answer all the requirements of practical life and scientific exactitude.

The points which we have briefly noticed, with many others of similar character, are also only briefly, but very clearly, treated by Mr. Wright. The construction, adjustment, and manipulation of instruments; the physical and mental condition which the observer should strive to attain; the methods of observation which he should follow, are only treated so far as is necessary to render intelligible that which is the main object of the book, namely, the course to be pursued when the observer transforms himself into the mathematician, and seeks to evolve from many discordant results one which, on the whole, shall be more probable and more trustworthy than any afforded by observation alone. In doing this, the constant employment of the differential and integral calculus and the calculus of probabilities becomes necessary, and Mr. Wright uses them in the development and demonstration of his formulæ with the ease, freedom, and clearness which come only from long-continued study and practice.

The number of original authorities cited by Mr. Wright, in every language in which anything of value can be found, is very great, and the manner in which they are referred to and in many instances commented on, makes it evident that he cites them not to parade his learning, but to confirm his statements, and to indicate the sources of information to those who may wish to study any point on a more extended scale than can be done in Mr. Wright's or in any other single work. Indeed, a bibliography of more than average extent might be made up from his pages.

Another characteristic of his treatise is the tone of common-sense and sobriety which pervades it. The author rides no hobbies, and discusses doubtful points with none of that passion and apparently personal feeling which are so often found in the writings of German scientists. A noteworthy example of this is afforded by his discussion (p. 131, *et seq.*) of the question of the "rejection of observations." It often happens that in a long series of observations some one will be found to differ in a very marked degree from the "general run" of the rest of the series. The question immediately arises, What rule shall be followed in deciding whether the discrepant observation shall be taken into account, or shall be wholly disregarded in the final adjustment? After discussing with judicial fairness the various criteria proposed by different authors, he gives one of his own remarkable for its simplicity and ease of application; but instead of insisting on its universality, he merely says that any observation which does not stand the test "should at least be bracketed and attention called to it." The final decision he relegates to common-sense and that feeling of fitness which results from long experience.

Although Mr. Wright's book contains much that is interesting to the general reader, it is eminently a professional treatise. The physicist, the astronomer, the engineer, and all others whose professional duties involve "measures of precision," by providing themselves with it and with the English translation of Kohlrausch's 'Physical Measurements' will find themselves, so far as books are concerned, in possession of sufficient aid to enable them to do good and praiseworthy work.

The English and Scottish Popular Ballads. Edited by Francis James Child. Part III. Boston: Houghton, Mifflin & Co.

The third part of this work embraces twenty-nine ballads, and among them are some of the best and best-known. As in the two previous publications, every form the ballad assumed has been given, and in the introduction prefixed to each of these there is furnished the same wealth of information, based upon the widest knowledge of its literary history, and of the variations which the story told in it has undergone both in our own and in other literatures. A careful examination of this part only confirms us more strongly in the view expressed in our notice of part first, that this edition, when completed, will be the most important contribution that American scholarship has yet made to any subject primarily connected with literature. Here will be found everything that is now known, and un-

fortunately everything that is likely to be known, of these celebrated pieces.

The immense labor already expended and to be expended upon this work might well prevent the suggestion of anything additional to the task undertaken and thus far so successfully completed. Yet it is to be hoped that in connection with this edition of the individual ballads, or as a supplement to it, Professor Child may give us a history of these productions as a whole. It is a chapter as yet unsupplied in the story of English literature. The account even of the revival of interest in these poems during the last century, the imitations to which that revival gave rise, and the influence exerted by it upon modern poetry, has never yet been more than slightly told. Professor Child is the highest living authority upon the whole subject; and years will certainly pass, and generations may, before any one will bring to its consideration the same store of full and exact information combined with the same clearness of judgment.

Wild Flowers of Colorado, from Original Water Color Sketches drawn from Nature. By Emma Homan Thayer. Cassell & Co.

HERE is a handsome gift-book, betimes, for the coming holidays; a quarto, with letterpress, descriptive of a journey into the Rocky Mountains of Colorado, printed in large type upon paper as like card-board as that of the illustrations. These, twenty-four in number, have more artistic than botanical merit. Most are quite good in their way, but we could not advise a comparison of the author's mountain columbine (painted purple instead of blue, and with hooked spurs and uncompounded leaves) with that of Sprague's 'Wild Flowers.' Nor does one relish the name of fairy lily for the mountain flax, nor that of aster for a yellow-flowered composite. The figures are nearly all characteristic of the region, and will serve well as souvenirs.

Messrs. HENRY HOLT & CO.'S

NEW BOOKS:

SOUVENIRS OF A DIPLOMAT.

Private letters from America during the Administrations of Presidents Van Buren, Harrison, and Tyler, by the Chevalier de Bacourt, Minister from France. 12mo. $1 50.

We do not hesitate to say that a more readable, and, in the main, more discriminating picture of the period covered by them does not exist, due regard being had to the scope of these private jottings. At every page our pencil has made marks, to satisfy which would involve practically a translation of the entire work.—*The Nation.*

AN ILL-REGULATED MIND.

By Katherine Wylde (Author of "A Dreamer"). 16mo, Leisure Hour Series, $1; Leisure Moment Series, 25 cents.

MUSIC. By Henry C. Banister, Professor of Harmony and Composition at the Royal Academy of Music. 16mo (Hand-book Series). $1.

'CHOUANS ET BLEUS.' By Paul Feval. Edited with notes, introduction, and map for the use of schools, by Charles Sankey, M.A., head master of King Edward's School, Bury St. Edmunds. 12mo, $1.

Dr. Sauveur's Educational Works.

A copy of any of Dr. Sauveur's Works will be sent to teachers by the author, on receipt of half the retail price.

Schools can obtain from Dr. Sauveur his new volume, *'Grammaire Française pour les Anglais,'* at the introduction price of 80 cents, and the *'Corrigé des Exercices de la Grammaire Française'* at 25 cents. The books are sent C. O. D., unless otherwise agreed upon. Descriptive circulars will be sent to applicants.

Address, DR. L. SAUVEUR,
GERMANTOWN, Pa.

Have You a Collection of Books?

The Library Catalogue and Index is intended for private collections. It is arranged so that any book can be entered under author and title of work. Highly approved by those who have used it. The Library Catalogue and Index is handsomely bound and lettered in one volume, quarto (6¾x8½ inches), made of the best paper, and will be mailed, post-paid, to any address on receipt of $2.50 by the publishers,

SHEPARD & JOHNSTON, 146 Monroe St., Chicago, Ill.

HORATIO SEYMOUR, JR., LAND Agent of the Michigan Land & Iron Co. (Limited), Marquette, Michigan. Advice given as to the purchase of mineral and timber lands in the Upper Peninsula of Michigan.

SEND STAMP FOR THE "ADIRONDACK Forests and the Great Natural Water-ways of the State of New York," to
J. B. HARRISON,
Franklin Falls, N. H.

E. & J. B. YOUNG & CO.'S

NEW BOOKS.

TILES FROM DAME MARJORIE'S CHIMNEY-CORNER, AND CHINA FROM HER CUPBOARD.

By F. S. J. Burne and H. J. A. Miles. Oblong 8vo, illuminated paper boards, colored edges, $1.50.

This unique volume is illustrated with twenty-seven drawings in imitation of the old Dutch Tiles, but with Modern Figure Drawing, illustrating the Days of the Week, Seven Ages, The Seasons, etc. Each tile is accompanied with a descriptive verse. There are also representations of 56 rare specimens of Blue China, selected from some of the best collections.

A, B, C.

Drawn and colored by Pym. Square 16mo, illuminated paper boards, colored edges, 75 cents.

Each letter of the Alphabet is charmingly portrayed in Figures and Flowers, daintily colored; and on opposite pages is a verse, with an appropriate illustration printed in brown ink.

GORDON:

A Life of Faith and Duty. The text by W. J. G. With colored illustrations by R. André. Small 4to. Illuminated paper boards, 30 cents net.

JULIANA HORATIA EWING AND HER BOOKS.

By Horatia K. F. Gatty. With a portrait by George Reid, R.S.A. Illustrated by fac-similes from Mrs. Ewing's Sketches, and a cover designed by Randolph Caldecott. Small 4to, paper boards, 30 cents net. *In Preparation.*

LOB LIE-BY-THE-FIRE; OR, THE LUCK OF LINGBOROUGH.

By the late Mrs. Ewing. Illustrated by Randolph Caldecott. Small 4to, paper boards, 30 cents net. *Nearly Ready.*

Mrs. Ewing was engaged up to the time of her death in preparing, in conjunction with Mr. Caldecott, this work for the press. It received her last cares, and reflects in its external appearance, as well as in its contents, the cultured mind of the authoress.

Cooper Union, Fourth Ave., New York.

CATALOGUE NO. 77

OF

STERLING NEW and OLD BOOKS.

Just ready and will be sent free on application.

Dodd, Mead & Company

WILL PUBLISH IMMEDIATELY:

Sakoontala; or, The Lost Ring.

From the Sanscrit of Kalidasa. By MONIER WILLIAMS, Professor of Sanscrit at the East India College. Octavo, cloth, $2 50.

"The Hindus possess a distinguishing treasure in their drama. The most charming specimen of this known to us, as yet, is Sakoontala, an episode drawn from the Mahabharata, and constructed by Kalidasa. Goethe paid this play the following magnificent compliment:

"'Wouldst thou the blossoms of the spring, the autumn's fruits,
Wouldst thou what charms and thrills, wouldst thou what sates and feeds,
Wouldst thou the heaven, the earth, in one sole word compress,
I name Sakoontala, and so have said it all.'"

From Alger's Poetry of the Orient.

From Shakespeare to Pope.

An Inquiry into the Causes and Phenomena of the Rise of Classical Poetry in England, being the lectures delivered the last winter before the Lowell Institute and Johns Hopkins University. By EDMUND GOSSE, Clark Lecturer in English Literature at the University of Cambridge. 12mo, cloth, $1 75.

Mustard Leaves. A Glimpse of London society.

A Novel. By D. T. S. 16mo, cloth, $1.00.

Hunting Trips of a Ranchman.

Sketches of Sport on the Northern Cattle Plains, together with Personal Experiences of Life on a Cattle Ranch. By Theodore Roosevelt, author of the 'Naval War of 1812.' The Medora Edition, printed for subscribers, and limited to 500 numbered copies, beautifully printed in quarto form, on fine paper, and copiously illustrated with etchings and engravings on wood from designs by Frost, Gifford, Beard, and Sandham. Cloth extra, $15.

From New York Tribune.

"One of those distinctively American books which ought to be welcomed as contributing distinctly to raise the literary prestige of the country all over the world. . . . The make-up of the work is really magnificent, and the publishers may well be proud of this elegant production of their 'Knickerbocker Press.' The illustrations are plentiful and excellent, and the engravings are effectively printed on Japanese paper in the daintiest possible style. . . . Mr. Roosevelt's hunting experiences embrace all the game on the plains. No writer on sport has a keener or more sensitive perception of natural beauties, while it is evident on every page that he has made special studies of the different birds and animals, and his natural history observations and his running sketches of scenery and phenomena add a wonderful charm and interest to the book. Many of his narratives are enriched by bits of vivid realism which linger in the memory like snatches of poetry."

From Atlantic Monthly.

"Mr. Roosevelt has given a peculiar charm to his book from his intense love of nature and his capacity to communicate to others his own impressions. A great debt is due to him for having preserved in such a charming manner one of the most important chapters in the long history of the conquest of the American Wilderness. The 'Hunting Trips of a Ranchman' is a model of fine bookmaking; it is handsome in type, paper, and form, and good taste reigns throughout. The illustrations are numerous and excellent."

From Saturday Review, London:

"One of the rare books which sportsmen will be glad to add to their libraries. Nothing so good of the sort has appeared for years. . . . Nothing can be in better taste than this luxurious quarto, with its thick hand-woven paper, admirable type, and above all, with its spirited engravings and etchings of ranch life, sporting scenes, and picturesque prairie game. . . . The book will take rank among the sporting classics. . . . What we like about the author is the certainty that he is thoroughly trustworthy, and we feel that we may receive his sporting experiences for gospel. . . . His narrative is a repertory of thoughtful woodcraft or prairie craft."

From Athenæum, London:

"Mr. Roosevelt's volume is as readable as it is handsome. . . . The illustrations are excellent, the typography could hardly be improved, and the paper and presswork would rejoice the heart of the most exacting bibliophile. The author is an eager sportsman and a good writer. His pen is as elegant as his rifle is effective. . . . The book presents all the charm of prairie life."

G. P. Putnam's Sons,

27 and 29 W. 23d Street, N. Y.

Houghton, Mifflin & Co.'s

NEW BOOKS.

[*READY SATURDAY, 17TH.*]

POETS OF AMERICA. By Edmund Clarence Stedman, author of 'Victorian Poets,' etc. 1 vol. crown 8vo, gilt top, $2.25.

Contents: Early and recent Conditions; Growth of the American School; William Cullen Bryant; John Greenleaf Whittier; Ralph Waldo Emerson; Henry Wadsworth Longfellow; Edgar Allan Poe; Oliver Wendell Holmes; James Russell Lowell; Walt Whitman; Bayard Taylor; The Outlook.

In this book Mr. Stedman continues the admirable work begun in his volume on 'Victorian Poets.' Or, rather, in this later volume he does for all American poets the service which in his earlier volume he did for the poets who have made English literature illustrious during the reign of Queen Victoria.

STUDIES IN SHAKESPEARE. By Richard Grant White, author of a 'Life of Shakespeare,' 'Words and their Uses,' 'England Without and Within,' etc. Uniform with 'Words and their Uses; also uniform with the Riverside Edition of Shakespeare. 1 vol. crown 8vo, $1.75.

Mr. White possessed in a rare degree qualities and acquirements which peculiarly fitted him to interpret Shakespeare with great profit to all who read him. The present volume contains the ripe results of years of study, and its insight, thoughtfulness, and vigorous sense render it a rich and permanent contribution to Shakespeare literature.

OBSERVATIONS ON THE Growth of the Mind. By Sampson Reed. New Edition, with a Biographical Sketch of the Author by Rev. James Reed, and a Portrait. 1 vol. 16mo, $1.

This book many years ago won hearty praise from Emerson, Carlyle, and Harriet Martineau.

Mr. Reed believed profoundly in the views of Swedenborg, and his thoughtful book is based upon, and permeated by, the New Church philosophy. Its ability and earnestness commend it to a new and wider circle of readers.

RUTLEDGE. A Novel, by Miriam Coles Harris. New Edition, $1.25.

This novel enjoyed a remarkable popularity when it was first published. In its new form it will reach another circle of readers who will doubtless find in it the same charm which its earlier readers found.

*** For sale by all booksellers. Sent by mail, post-paid, on receipt of price by the Publishers,*

J. B. LIPPINCOTT CO.

HAVE JUST PUBLISHED

A New Thoroughly Revised and Greatly Enlarged Edition of

Lippincott's Biographical Dictionary.

A UNIVERSAL PRONOUNCING DICTIONARY OF BIOGRAPHY and MYTHOLOGY. By JOSEPH THOMAS, M.D., LL.D., author of the system of pronunciation in 'Lippincott's Gazetteer of the World,' of 'A Complete Pronouncing Medical Dictionary,' etc. In one imperial 8vo volume, containing 2,550 pages and several thousand new names. Library, sheep, $12 00; half turkey, $15 00; half russia, $15 00.

The publishers have the pleasure of announcing that this magnificent work, which for more than fifteen years has been in its department without a rival in the estimation of scholars, has lately undergone such a complete revision as the lapse of time since its first issue rendered necessary, and is now offered to the public in a greatly enlarged and improved volume, extending to 2,550 pages, and embracing, besides the revisions of old articles, several thousand new biographical sketches, many of them constructed from original data, and now for the first time appearing in print.

*** For sale by all Booksellers, or will be sent, free of expense, on receipt of the price by*

715 and 717 Market St., Philadelphia.

Important Publications IN *Economic Science.*

I. PRACTICAL ECONOMICS, a consideration of certain recent economic experiences of the United States. By David A. Wells. Octavo, cloth, extra, $1.50.

Among the subjects treated in this volume are A Modern Financial Utopia, The True Story of the Leaden Statuary, The Silver Question, Gold and Silver as Measures of Value, Tariff Revision, Recent Phases of the Tariff Question, Pauper Labor, The Taxation of Distilled Spirits, etc., etc.

II. THE POSTULATES OF English Political Economy. By Walter Bagehot. Edited with introduction by Prof. A. Marshall. 8vo, cloth, $1.

". . . I propose to take the principal assumptions of Political Economy, one by one, and to show, not exhaustively, for that would require a long work, but roughly, where each is true and where it is not. We shall then find that our Political Economy is not a questionable thing of unlimited extent, but a most certain and useful thing of limited extent. . . ."—*Extract from Author's Preface.*

RECENTLY PUBLISHED:

III. SIX CENTURIES OF WORK and Wages. The History of English Labor. By James E. Thorold Rogers, M. P. 2d edition. Octavo, cloth, $3.

"The book is a strong pleading of the cause of labor, and the spirit in which it is written, no less than the great amount of valuable matter which it contains recommends it to thoughtful perusal."—*Advertiser, Boston.*

IV. THE SCIENCE OF BUSI- ness. A Study of the Principles Controlling the Laws of Exchange. By Roderick H. Smith. Octavo, cloth, $1.25.

"An eminently practical book. It is a book intended for business men, and treats of topics of vital interest to them in the transaction of general business."—*Journal of Education, Boston.*

"Is not a dry book, but on the contrary an original and decidedly entertaining volume."—*Commercial and Financial Chronicle, N. Y.*

**** Putnam's Economic Lists sent on application.

SECOND EDITION.

Sanborn's Life of John Brown, one of the most important historical works of the year and a book which must find its way into all well-selected libraries, is heartily endorsed by the martyr's family.

"After carefully reading the 'Life and Letters of John Brown,' by F. B. Sanborn, we consider it the most complete, impartial, and *truthful* record of father's life and acts that can be written by any person now living."

[Signed], JASON BROWN,
HENRY THOMPSON.
RUTH B. THOMPSON.

"My expectations in regard to the book, which were very high, are more than realized. It is a most worthy production in every respect—worthy of the subject worthy of yourself as its author, and worthy of high praise as a specimen of printing and binding."

[Signed], JOHN BROWN, Jr.

One handsome volume, with portraits and fac-similes. Price $3 00. Sold everywhere. ROBERTS BROTHERS, Publishers, Boston.

NATION—FULL SET.—For sale cheap by A. S. CLARK, 34 Park Row, New York.

BOOKS.

ARTISTIC AND DAINTY COLOR-BOOKS.

ROSEBUDS. One of the most charming color-books for children which have ever been published. Sixty-four pages of designs of little ones in many colors and in mono-tints, by Virginia Gerson. Beautifully printed in the highest grade of color work. Bound in double covers, with design of rosebud and little children. 4to, boards, varnished covers, cloth back, $2.00.

LITTLE BLOSSOMS. MERRY LITTLE PEOPLE. TINY MEN AND MAIDENS. Each one of these three books contains a part of 'Rosebuds,' and each one of the three has its own separate and distinct cover of most delicate and beautiful coloring. Boards, varnished covers, cloth back. Each book, $1.00.

A HUMOROUS AND ATTRACTIVE BOOK FOR LITTLE ONES.

By F. OPPER (of *Puck*) and EMMA OPPER.

SLATE AND PENCIL PEOPLE. Large first edition already sold. Second in press. The illustrations are amusing, and are engraved so that their lines appear in white upon a black ground, in "slate and pencil" style. With bright colored cover designed by F. Opper. Large flat 4to, boards, $1.00.

RECENT AMERICAN ETCHINGS. A collection of recent etchings made or selected especially for this book. With text, including an essay on etching in America. By J. P. W. Hitchcock. Size of page, 17½ x 3 inches.

A companion to the extremely successful 'Some Modern Etchings,' of which every copy has been sold.

Original plates by some of our foremost American etchers, comprising:

BRETON COURTYARD (An Impression of Sunlight), by J. S. King.—CHRISTMAS EVE, by W. H. Shelton.—A SEASIDE RESIDENCE, by Henry Farrer.—A MORNING WALK, by Hamilton Hamilton.—MOONLIGHT AT LOW TIDE, by T. C. Nicoll.—THE DUCK'S PARADISE, by Charles Volkmar.—GRANDPA, by Katherine Levin.—GOATS, by J. A. S. Monks.—BEACH AT GLOUCESTER, MASS., by Kruseman van Elten.—THE MANDOLIN PLAYER, by J. J. Calahan.

Regular impressions on etching paper. Bound in dark olive-green cloth, with remarkable stamping on cover in white and gold, $10.00; same, in black portfolio, $12.50. Each copy numbered.

THE ABOVE PRICES WILL BE INCREASED WITHOUT NOTICE AS SOON AS FEW COPIES REMAIN UNSOLD.

Only six of the proof copies remain unsold.

STUDIES FOR PAINTING FLOWERS. By Susie Barstow Skelding. Studies of many flowers printed in the highest grade of color work in reproduction of this celebrated artist's water-color designs. 4 series, each containing 12 different designs. Size of plate, 8 x 9 inches. Price, each series in a neat box, $2.00.

Prepared in deference to frequently expressed wishes for Miss Skelding's designs in this shape.

A COMPANION TO 'FIFTY SOUPS.'

BREAKFAST DAINTIES. By Thomas J. Murrey, formerly professional caterer of the Astor House. With many valuable hints and directions concerning breakfast breads, fruits, beverages, and dainty dishes. Mr. Murrey's own recipes. A most desirable little volume. Attractively printed on fine laid paper. Covers in colors, with dainty and appropriate design. 16mo, boards, 50 cents; cloth, stamped in gold and color, 75 cents.

A NEW EDITION OF

VALUABLE COOKING RECIPES. By the author of 'Fifty Soups.' Cloth, attractively bound, 75 cents.

A REMARKABLE NOVEL.

A MISSION FLOWER. By George H. Picard. The Publishers are confident of marked success for this excellent piece of work. Most attractive ly printed and bound, with design of apple-blossoms stamped in colors on cloth cover, $1.

A WELCOME LAUGH-PRODUCER.

THE GOOD THINGS OF LIFE. Second Series. Selected from the brightest American humorous paper, *Life*. A collection of the best things which have appeared in it since the issue of the 'The Good Things of Life.' First Series.

Oblong quarto, with highly ornamental and humorous design on brown cover in red and gold.

Cloth, bevelled boards, gilt edges, $2.

TWO ADDITIONS TO THE 16MO SERIES OF DAINTILY-BOUND POETICAL WORKS.

THE GOLDEN TREASURY. Edited by Francis Turner Palgrave.

CHARLES DICKENS'S POEMS. Now first collected in one volume, which will be an agreeable surprise to lovers of Dickens.

Each of these two is beautifully printed on the finest laid paper, uniformly with the other volumes in this now noted series.

The other volumes in the series are:

1. Charlotte Brontë's Poems.
2. George Eliot's Miscellaneous Poems.
3. George Eliot's Spanish Gypsy.
4. Thomas Gray's Poems.
5. W. M. Thackeray's Poems.
6. Goethe's Faust.
7. London Lyrics. Locker.
8. London Rhymes. Locker.
9. Heine's Book of Songs.

New Illuminated Parchment Paper Binding for this series.

Each volume bound in limp, parchment-paper with hand-illuminated design in colors and metal on cover, title and back printed in red ink. Separate design of each volume, $1; cloth, new colors, gilt tops, novel design in metal, $1; half calf, extra, new colors, gilt top, $2.50; limp, full pocket-book calf, round corners, red-under-gold edges, $3.50; tree calf, new colors, gilt edges, $4.50; mottled calf, solid gilt edges, elegant (new), $6.50.

NOTE.—The Series now numbers 11 vols., including the above two, and a new very plain and neat binding is ready, in which they will be sold in SETS ONLY at $10 for the 11 vols.

FIELDING'S NOVELS. I. The New "Favorite Edition," printed from the same plates as the octavo edition, on good paper. With numerous new illustrations, made especially for these novels. In a neat and attractive binding. Four volumes, brown cloth, extra, $1.50 per volume.

Any of the above books can be had of your bookseller, or will be sent to any address at publishers' expense, on receipt of advertised price.

WHITE, STOKES & ALLEN, Publishers,

182 Fifth Avenue, New York City.

G. P. PUTNAM'S SONS,

27 and 29 W. 23d St., New York,

HAVE NOW READY:

I. THE HISTORY OF A GREAT TREATY.

A Review of the War of the Spanish Succession and of the Treaty of Utrecht. By James W. Gerard. 8vo, cloth, $3.00.

Mr. Gerard has given his attention to the period embraced in the reigns of William III. and Queen Anne of England and the latter part of the reign of Louis XIV. of France.

The Treaty of Utrecht, which closed the war of the Spanish Succession, brought about greater changes in the map of Europe than had occurred since the Treaty of Westphalia, which terminated three-quarters of a century earlier, the long struggle of the Thirty Years' War. The influence of the Treaty of Utrecht upon the history and the conditions of Europe of to-day has proved most significant. The curious intrigues at the Spanish Court, the military events of the war, the diplomatic negotiations for the peace, and the bearing of the Treaty upon the present national conditions will be found of interest to the general reader as well as to the political student.

Mr. Gerard's narrative is forcible and picturesque, and is enlivened by much curious anecdote and previously unprinted correspondence.

II. THE TRAVELS OF MARCO POLO.

Edition for Boys and Girls, with Explanatory Notes and Comments by Thomas W. Knox, author of 'Boy Travellers in the East,' etc. Quarto, with over 200 illustrations. Uniform with the Boy's 'Plutarch' and 'Herodotus.' $3.00.

It was from Marco Polo that Europe first learned of the existence of Japan, and from him, too, it derived its first knowledge of the Land of Darkness in the Far North, and of the Arctic Ocean beyond. His description ranges from Siberia to Ceylon, and from the Adriatic Sea to the Pacific Ocean. The story of his travels was received with incredulity, and he died while Europe was gravely doubting its truth. It has remained for later generations to establish the correctness of his narrative and accord him the praise he so richly deserves.

THE NATURAL HISTORY OF PLINY THE Elder. Edited for Boys and Girls, by John S. White, LL.D. Uniform with 'Herodotus' and 'Plutarch.' Quarto, with 52 illustrations. Extra cloth, $3.00.

Cuvier says: "The work of Pliny is one of the most precious monuments that have come down to us from ancient times."

III. THE STORY OF THE NATIONS.

1. THE STORY OF GREECE. By Prof. James A. Harrison. 12mo, beautifully printed and bound. $1.50.

"A writer of rare grace, whose skill in the art has been abundantly proved. . . . Familiar with the land and its people as well as with its recorded history. . . . A good index at the end and a good analytical table of contents are features to be commended."—*N. Y. Commercial Advertiser.*

"It is told in a delightfully fascinating way, and it is as interesting as any novel."—*N. Y. School Journal.*

2. THE STORY OF ROME. By Arthur Gilman. 12mo, cloth, $1.50.

These will be immediately followed by 'The Story of the Jews,' by Professor Hosmer, and 'The Story of Chaldea,' by Z. Ragozin.

IV. SONGS AND RHYMES FOR THE LITTLE Ones. Compiled by Mary J. Morrison. The "Ruby" Edition. Quarto, with varied illustrated borders printed in tints. Cloth extra, $2.50.

"A book of gems. . . . A household treasure for every family with young children."—*Woman's Journal.*

V. OLD-TIME CLASSICS. Selected and edited by John S. White.

1. PLUTARCH'S LIVES. 2 vols. $2.50.
2. THE HISTORIES OF HERODOTUS. 2 vols. $2.50. 16mo, printed from new type, and fully illustrated.

"There is nothing better in all secular literature for young readers."—*Independent, N. Y.*

VI. REPRESENTATIVE ESSAYS. Being selections from 'Prose Masterpieces from the Modern Essayists,' comprising papers by Irving, Lamb, De Quincey, Emerson, Arnold, Morley, Lowell, Carlyle, Macaulay, Froude, Freeman, and Gladstone. Octavo, cloth, $2.

"Your selection is carefully made, and I cannot but think that such a book will vastly benefit classes in English style, composition and rhetoric."—*Prof. James A. Harrison, Washington and Lee University.*

"The idea of issuing such a volume is an admirable one, and the selection of the essays could hardly be better done."—*Prof. Bliss Perry, Williams College.*

"A more valuable book could not be placed in the hands of the student of oratory and English style, the selections being as they are 'masterpieces' of the age."—*H. T. Hotchkiss, Collegiate and Polytechnic Institute, Brooklyn.*

The Nation

VOL. XLI.—NO. 1060 THURSDAY, OCTOBER 22, 1885. PRICE 10 CENTS.

Scribner & Welford's

LESSING'S WORKS. Translated from the Ger- man. Vol. I.—Tragedies and 'Nathan the Wise.' Vol. II.—Comedies. Vol. III.—Laokoon, Hamburg Dramatic Notes, &c. 3 vols., $4.80. With portrait, &c.

KANT'S PROLEGOMENA AND METAPHYSI- cal Foundations of Natural Science. Translated, with Memoir and Introduction, by E. Belfort Bax, author of 'Jean Paul Marat.' With portrait of Kant. $2.00.

MOLIERE'S DRAMATIC WORKS. A new Translation in English Prose, by C. H. Wall. With a short Life and a Portrait. 3 vols. $4.20.

WILL PUBLISH ON SATURDAY:

FINE ILLUSTRATED EDITION.

Rudder Grange.

By FRANK R. STOCKTON.

Illustrated by A. B. FROST. 1 vol., 12mo, gilt top, $2.

The first edition (5,000 copies) exhausted before publication.

The new 'Rudder Grange' has been illustrated in a strikingly original and unconventional way. Mr. Frost has given a series of interpretations of Mr. Stockton's fancies, which will delight every appreciative reader; sketches scattered through the text; larger pictures of many great and memorable events; and everywhere quaint ornaments. It is, on the whole, one of the best existing specimens of the complete supplementing of one another by author and artist. The book is luxurious in the best sense of the word, admirable in typography, convenient in size, and bound in a capital cover of Mr. Frost's design.

The Panama Canal.

Its History, its Political Aspects and Financial Difficulties. By J. C. Rodrigues, LLB. 1 vol., 12mo, $1.50.

A most interesting and accurate history of the Panama Canal from the first suggestion of its feasibility until the present time. A complete statement of all the treaties, concessions, surveys that have been made looking to its construction. An examination of the diplomatic and financial schemes of Ferdinand de Lesseps and his co-laborers. The *Nation* says "it is a mine of facts for editors and diplomatists." Invaluable as a book of reference.

A LAYMAN'S STUDY OF THE English Bible considered in its Literary and Secular Aspects. By Francis Bowen, LL.D. 1 vol., $1.

The views presented in this volume are strikingly independent and free from the trammels of the schools, but at the same time they are wholly reverent and in accord with the spirit of the Bible. The point of view is secular as opposed to the usual theological and doctrinal position.

COMMON SENSE IN THE Nursery. By Marion Harland. 1 vol., $1.

A practical and sensible little book which will receive the same welcome, no doubt, as that extended to the author's earlier works in the Common Sense Series.

**** These books for sale by all booksellers, or sent, post-paid, on receipt of price, by*

BOOKS OF THE WEEK 348

TERMS OF SUBSCRIPTION.

Three Dollars per year, in advance, postpaid to any part of the United States or Canada; to foreign countries comprised in Postal Union, Four Dollars.

The date when the subscription expires is on the Address-Label of each paper, the change of which to a subsequent date becomes a receipt for remittance. No other receipt is sent unless requested.

The paper is stopped at expiration of the subscription, unless previously renewed.

Remittances at the risk of the subscriber, unless made by registered letter or by check or postal order payable to Publisher of the NATION.

When a change of address is desired, both the old and new addresses should be given.

Address THE NATION, Box 794, *New York.*

Publication Office, 210 *Broadway.*

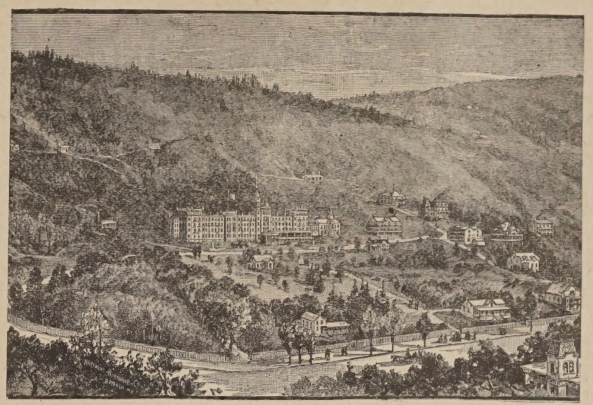
The Portable Bookcase manufactured solely by Lockwood, Brooks & Co., 17 Franklin Street, Boston, Mass., is the most perfect thing of the kind, it being easily moved, and adjustable for books of all sizes. Send for circular or call and see it.

The Sanatorium, Dansville, N. Y.



[Long Known as Our Home on the Hillside.]

An institution for the scientific treatment of chronic invalids, as well as for rest and recuperation of those who are tired out. It is under the management and personal care of a corps of regularly educated and experienced physicians, devoted to their work. Massage, Electro-Massage; Doctor Taylor's Swedish Movements; Electricity (Galvanic, Faradic, and Franklinic, the latter from most approved Holtz machine); Inunction; and all forms of baths, including the Moliere Thermo-Electric, Turkish, Roman, and Russian, are employed according to individual needs. The plan of treatment comprehends proper regulation of daily life, including diet, exercise, etc., together with cheerful and helpful social and religious influences. The comforts and pleasures, without the cares of home; entire freedom from taxations of fashionable life; and opportunities for recreation and amusements, under reasonable regulations, are enjoyed. Thoroughly skilled attendants administer to every want.

The Sanatorium consists of a main building and nine cottages, located on an eastern mountain slope overlooking the town of Dansville, and 1,200 feet above the level of the sea. For beauty of scenery, healthfulness of climate, and purity of air and water, it is unrivalled. Winters exceptionally mild for this climate. *Malaria utterly unknown.*

The main building, occupied since 1883, is 300 feet long, five stories high, of brick and iron construction, and

ABSOLUTELY FIREPROOF.

It is constructed to meet every need of the invalid or seeker of rest and quiet, and is complete in minutest sanitary details. Among its attractions are light, airy rooms, ventilated after the best plan, and heated by steam; open grates in public and many private rooms; safety elevators; electric bells in every room; spacious halls and corridors, kept at uniform heat; perfect sewerage (closets in annex, separate from building, but connected by warmed corridors); best modern appliances in culinary department; abundant, varied, and well-prepared dietary; extensive apartments for treatment, arranged to secure entire individual privacy, etc.

Autumn and winter months are considered most favorable for treatment. Throughout the entire main building a uniform and agreeable steam heat is constantly maintained, and this, with the perfect ventilation, induces many to prefer a winter residence here to one in a tropical climate.

Special rates to clergymen and physicians. Dansville is accessible from all quarters by Del. & Lack. and by the Erie R. R. For illustrated descriptive pamphlet, circular, and other particulars, address

FACULTY OF THE SANATORIUM,
Dansville, Livingston Co., N. Y.

MEISTERSCHAFT PUBLISHING CO.,
Herald Building, Boston, Mass.

G. P. PUTNAM'S SONS,

27 and 29 W. 23d St., New York,

HAVE NOW READY:

I. THE HISTORY OF A GREAT Treaty. A Review of the War of the Spanish Succession and of the Treaty of Utrecht. By JAMES W. GERARD. 8vo, cloth, $3.00.

Mr. Gerard has given his attention to the period embraced in the reigns of William III. and Queen Anne of England and the latter part of the reign of Louis XIV. of France.

The Treaty of Utrecht, which closed the war of the Spanish Succession, brought about greater changes in the map of Europe than had occurred since the Treaty of Westphalia, which terminated three-quarters of a century earlier, the long struggle of the Thirty Years' War.

The influence of the Treaty of Utrecht upon the history and the conditions of Europe of to-day has proved most significant. The curious intrigues at the Spanish Court, the military events of the war, the diplomatic negotiations for the peace, and the bearing of the Treaty upon the present national conditions will be found of interest to the general reader as well as to the political student.

Mr. Gerard's narrative is forcible and picturesque, and is enlivened by much curious anecdote and previously unprinted correspondence.

II. THE STORY OF THE NATIONS.

A series of graphic historical studies, intended to present for young readers the stories of the different nations that have attained prominence in history. The subjects of the different volumes will be planned to cover connecting as far as possible consecutive epochs or periods, so that the set, when completed, will present in a comprehensive narrative the chief events in the great "STORY OF THE NATIONS." The stories will be printed in large type, and in handsome 12mo form. They will be fully illustrated and furnished with maps and indexes.

III. THE STORY OF ROME. By ARTHUR GILMAN. 12mo, cloth, $1.50.

PREVIOUSLY ISSUED IN THIS SERIES:

I. THE STORY OF GREECE. By Prof. JAMES A. HARRISON. 12mo, cloth, $1.50.

"He has so succeeded in telling the splendid story of Grecian achievements as to fire the imagination of a bright boy or girl with a keen desire to know more of a people whose life was so artistic, whose work was so varied and so wonderful in its perfection, and whose influence remains among the foremost, if not the foremost, in all history."—*Christian Union, New York.*

IV. PRACTICAL ECONOMICS. A Collection of essays respecting certain of the recent economic experiences of the United States. By DAVID A. WELLS, LL.D., D.C.L. Octavo, Cloth, $1.50.

V. POSTULATES OF ENGLISH POLITICAL ECONOMY. By the late WALTER BAGEHOT, with an introduction by PROF. ALFRED MARSHALL, of Cambridge, England. Cloth, $1.00.

*** Putnam's New Catalogue sent on application.

The School Herald

Has Just Published:

1. LESSONS IN CURRENT HISTORY. Price 10c. Containing topical outlines of the history of 1881-85, with references and dates, full history of Afghan question and other specimen narratives. Illustrated with maps and portraits.
2. QUESTIONS FOR THE YEAR '84-'5. Price 20c A catechetical review of the events of the year. Illustrated.
3. CIVIL GOVERNMENT IN THEORY AND PRACTICE. Cloth. Price 75c.

A text book on the nature, origin, and history of the "Powers That Be" in direct comparison with the United States Government.

For further particulars and sample copy of SCHOOL HERALD, address, W. I. CHASE, 125 Clark St., CHICAGO. (Mention this Paper.)

*LECTURES ON THE APOCA*lypse; or, Book of the Revelation of St. John the Divine. By the Rev. F. D. Maurice, M.A. Second Edition. 12mo, $2.

THE LIGHT OF ASIA AND the Light of the World. A comparison of the Legend, the Doctrine, and the Ethics of the Buddha, with the Story, the Doctrine, and the Ethics of Christ. By S. H. Kellogg, D.D., Professor in the Western Theological Seminary, Allegheny, Pa., late Missionary to India, etc., etc. 12mo, $2.

"Professor Kellogg disposes effectually of 'The Light of Asia,' vindicates 'The Light of the World,' and ought to put an end to the attempts to bring Buddhism into favor with men possessing the light of Christianity. The book is timely, conclusive, tells us clearly all we need to know on this subject, and is written in a spirit that commands admiration."—*Christian Intelligencer.*

"Professor Kellogg affords them an opportunity of learning what Buddhism really is, from one who has actually seen it. There is no other book in the English language which fills exactly the place of this book, and the American reader will appreciate Professor Kellogg's work none the less because it comes from an American scholar rather than from a German or an English one."—*Sunday-school Times.*

"We earnestly commend this masterly volume. It will be to them a new revelation as to the real Buddhism."—*Christian Union.*

"Doctor Kellogg has done a good service to the cause of Christianity in the preparation of this work, and one that will be highly appreciated by the Christian public."—*Herald and Presbyter.*

MACMILLAN & CO.,
New York, 112 Fourth Avenue.

To buyers of books who do not consider themselves book-buyers.

The October number of BOOK NEWS is so nearly gone that we shall sell no more at the price. The price is now 25 cents for the number. All the numbers since the Author Portraits began are scarce, prices as follows:

July (Hawthorne)	$1.00
August (Stowe)	.50
September (James)	.25
October (Longfellow)	.25
November (Emerson)	.03

November not yet out. The price for a year is 25 cents.

Can't find out how many to print. More every month but never enough. Here we are, short with a third of the month before us. And "book time" not yet begun!

Nearly half of the books of the year have got to be bought between now and Christmas. They have got to be thought of beforehand, or money wasted. How will you think of them without BOOK NEWS? In the store the books themselves bewilder you. The best, perhaps, escape you altogether. The biggest piles are not always the best books. BOOK NEWS puts them all in a row, pictures and contents and prices—our prices.

Whatever you think beforehand, when the pressure comes you'll have BOOK NEWS or lose much more than it costs. A single number isn't enough. You feel the pressure more these Christmas months perhaps; but it's just as helpful and economical all the year round.

Did you ever think of this? The more books you buy, the less disposition you have for less improving diversions. Books well chosen are more than time and money and transient pleasure. Well chosen—there's the rub! For nobody knows but yourself what books to choose. You don't know? You will learn by choosing, if you go the right way about it. BOOK NEWS again. Whatever way you turn you bring up against it. That's what we make it for. If we could cover all our merchandise with buying counsel as well as we cover books, what easy shopping! what insurance against mistakes!

BOOK NEWS or blunders—which shall it be?

JOHN WANAMAKER,
PHILADELPHIA.

The Nation.

NEW YORK, THURSDAY, OCTOBER 22, 1885.

The Week.

Two features of the Ohio election have not received the attention which they deserve. One is the fact that it was the first important election in the country for many years in which the Federal Administration had not taken an active interest. The most censorious Republican could find no evidence that the Democratic officials at Washington were employing their influence in any way to affect the result, while there was no attempt whatever to extort campaign contributions from persons in the Government service, or to make them vote for a particular party. There was, in short, absolutely nothing to indicate that the Administration favored either party, and the people of the State were left to make their choice, free from all attempts to affect the result on the part of United States officials. No less noteworthy is the fact that the successful party made its canvass this year for the first time since 1860 solely upon the merits of its cause, and without any assistance from the Federal Government. There could not be a more complete answer to the old theory of the professional politicians, that "patronage" is essential to the success of a party, than the victory of the Republicans in the first campaign for a quarter of a century in which they got no help from Washington.

If any Democrat should suggest that the defeat of his party was due to the lack of Federal interference in its behalf, it would be sufficient answer to point to the result in the same State two years ago. In 1883 the Republicans sent the Washington clerks home to vote, put Federal officials upon the stump, and used all the power of the national Government to elect their ticket in Ohio, and yet they were badly beaten. Granting that the Democrats did not profit by the change of Administration at Washington, and, therefore, stood on the same footing in 1885 as in 1883, it remains true that the Republicans lost the State when they had the Federal "Machine" in their favor, and carried it when they had no help from Washington. The same lesson had been already taught more than once on a national scale. In 1860 the Democrats controlled the Federal Government, while the Republicans had no offices, and the Republicans carried the day. In 1884 the Republicans had all the offices and used them "for all they were worth," while the Democrats had no help of this sort, and the Democrats won. The idea that a party must have and use the offices in order to carry an election is not only unrepublican, but untrue in the light of our political history.

The President evidently regards the matter in its true light. All accounts agree that he is not in the slightest degree disturbed over the result, and refuses to consider his Administration as in any way involved. The Washington correspondent of the *Sun* reports a Democratic Senator as saying that he went to the White House "expecting to find Cleveland either ugly or humble," but that he "was both surprised and disappointed, for the President did not act as if anything had happened, and was as complacent as Nero was when Rome was burning." And why, pray, should the President not be "complacent"? The Ohio Democrats had put themselves under the lead of a man who did all he could last fall to elect Blaine, and who has been the bitter foe of Mr. Cleveland's policy from the day of his inauguration. There certainly was nothing in the defeat of the party under such management to make Mr. Cleveland either "ugly or humble." The Democratic Senator aforesaid furthermore declared that "he had made up his mind that Mr. Cleveland cared nothing whatever about the success of the Democratic party, but intended to go on as he had been doing, indifferent to everybody but the Mugwumps." The idea that the President would change his policy and break his pledges because "Johnny" McLean had not succeeded in buying the Senatorship, is an extraordinary one for anybody to have harbored, but there is no doubt that a great many Democrats have really cherished such a delusion. After the calm way in which he accepts the Ohio result, we probably shall hear no more about Mr. Cleveland's "yielding" to the worst elements of his party.

The returns from Ohio confirm the early indications as to the dimensions of the Republican victory, while they make more plain the desperate tactics to which the McLean gang, who managed the Democratic canvass, resorted in their attempt to capture the Legislature, and thus secure the United States Senatorship. It is clear that this gang not only "sold out" Hoadly, who was the best Democratic candidate in the field, but employed bribery and corruption at the polls, and attempted, if they did not carry out, gross frauds in the count of the ballots in Cincinnati, which they expected would decide the political control of the Legislature. Happily they appear to have been beaten outside of that city, and will not succeed in their scheme to change the result in Cincinnati, but the exposure of their methods makes the Democratic defeat cause for profound rejoicing on the part of all friends of good government.

There is a vast amount of speculation among politicians and newspapers as to the causes of the result, much of which is utterly ridiculous. The true explanation undoubtedly is that the voters regarded the election as really being what it theoretically was—an issue as to which of the parties would give the State the best local administration and the best man for United States Senator. The people knew that the last Democratic Legislature was a bad body, which handed over the Senatorship to the highest bidder, interfered with municipal administration for purely partisan purposes, and muddled the liquor question. They saw that even worse influences controlled the Democratic canvass this year. They observed that Thurman was snubbed by the party managers, and they saw reason to fear that if the Democrats secured the Legislature, the party would actually go to such lengths as to elect a notorious corruptionist to the Senate. On the other hand, they knew that a Republican Legislature would reelect Sherman, who, despite all his faults, is worthy of the honor, and that it would be more likely to legislate wisely regarding State affairs. Hoadly suffered the fate of poor dog Tray, while Foraker profited by being in good company; but the real question was whether the Republicans should elect a fit man to the Senate, or the Democrats send to Washington a corruptionist. The election is seen to have been decided by German and American voters of independence, and they gave victory to the Republicans simply because the Democratic managers had made it impossible for Independents to support their party. The result means not that Ohio rejects Cleveland's civil-service reform policy, nor that the State will vote for a Republican candidate on a bloody shirt platform in 1888, for neither of these questions was at issue; but that the men who held the balance of power are thoroughly disgusted with the McLean school of politics, and will have no more of it.

It is plain that the Election Law of Ohio is in a deplorable state of inefficiency when it is possible for the judges or inspectors to withhold the returns of the city of Cincinnati forty-eight hours after the closing of the polls. If the Republicans have carried the Legislature, it will be their first duty, and they should esteem it their highest privilege, to pass an election law like that of New York, or one equally stringent, which shall provide for the canvassing of the votes and the public declaration of the result before the judges of the election adjourn, and also for the immediate arrest and imprisonment of any judge or clerk who fails of this duty. Election frauds are most commonly prompted and made possible by the withholding of returns in certain precincts until other precincts can be heard from, so that the ballot-box stuffers can find out how much fraud is necessary for their purposes. The most effective safeguard of elections is the simultaneous counting and publication of the returns, giving no time to villains to confer together and prepare their post-election campaigns. The State of Illinois has recently enacted the principal parts of the New York election law as applied to large cities. Ohio can provide for her future security in this way much more effectively than by mobbing the Cincinnati *Enquirer* office, or by lynching a few ballot-box stuffers.

The election in Ohio showed very clearly that the prejudice against the negro which survives in the North is chiefly confined to the foreign element in the population. In Hamilton County, of which Cincinnati composes the greater part, the Republicans put a colored man on their legislative ticket, while the Democrats nominated one of the race on their legislative ticket in Cuyahoga County, of which Cleveland is the seat. The Cin-

cinnati negro was "scratched" more or less everywhere, but suffered most in the Irish and German wards, where he ran so far behind that he is doubtless beaten even if the other candidates on the ticket prove to have been elected. The Cleveland negro in like manner ran far behind in the foreign wards of that city, while in the score of country towns, which are chiefly inhabited by natives, he was within 149 votes of the highest candidate, and in several places was not "scratched" by a single man. It is those classes of the whites which are newest to the privileges of American citizenship that resent most bitterly the admission of blacks to participation in those privileges.

The same rule holds true as to all movements directed against equal rights. The Pacific Coast agitation against the Chinese had its origin in San Francisco, which has the smallest proportion of native-born residents among all our cities, and its fit leader was an Irish immigrant. The recent massacre of Chinamen at Rock Springs, Wyoming, was entirely the work of foreigners, and foreigners who have so little in common with this country that they had not even become naturalized, so that it is a fact, of which we may well feel proud, that not a single American citizen was implicated in the outrage. There was a time, a generation ago, when the catchword "America for the Americans" found a good deal of acceptance among the descendants of the original settlers, but things have changed since then. Nowadays it is the people who represent the original stock that insist most strenuously upon fair play for newcomers, while the man who is loudest in crying that somebody else "must go" from this country is pretty sure to be a man who has only recently come to it himself.

After the Chinese outrages in Wyoming, it is refreshing to find evidence that a healthier public sentiment prevails in some parts of the extreme West. After the Rock Springs massacre last month, attempts were made to start a no less deadly warfare against the Chinese in Oregon and Washington. For a short time there seemed to be some danger of serious trouble, but the peril was soon past, for it was found that the governing forces in those regions were sound. The beginning of an agitation in Seattle, Washington, was promptly followed by the organization of a large committee of the leading men of the place to keep the peace, and threatened troubles in Portland, Oregon, were speedily averted by the evidence that the people would not endure any lawlessness. The *Oregonian*, the leading newspaper in that part of the country, has forcibly demonstrated the folly and absurdity of the "scare" about the Chinese, and declares that the effort to drive them out of the country will fail, "because it is senseless, absurd, and carries with it suggestions of disorder, outrage, and crime." That is the sort of talk which is needed, and it speaks well for the extreme Northwest that it has not been carried away by the craze which has swept so generally over that part of the United States.

General Carr, the Republican candidate for Lieutenant-Governor, ought either to bridle his tongue or keep off the stump during the present campaign. If he keeps on in the style of his speech in this city on Wednesday week, a great many thoughtful men will conclude that he will be most useful to his country as a private citizen. He coolly announced on the occasion in question that "he was not there to argue upon any of the questions in this canvass." In that case he ought not to have been there at all. The only good excuse for the appearance of a speaker in this canvass is his willingness to argue on the questions of the canvass. Instead of this, General Carr's sole reference to public affairs was the following:

"Are you willing to be governed by traitors, by men who sought to dissolve the Union? For myself, I am willing to forgive and forget, but I am not willing to condone or to reward traitors, as the President of the United States has been doing ever since he has been in office. It seems to me that Mr. Cleveland, in selecting his Cabinet and the officers of the Government, made a mistake that he did not pick up the roster of the Union army instead of the roster of the rebel army from which to make his selections."

The silliness of this is difficult to describe. There are no technical "traitors" in the United States except such as the law has pronounced traitors; and there are no real traitors except such as are actually engaged in plotting for the overthrow or discredit of the United States Government. If General Carr meant anything by this talk, he must have meant that President Cleveland, and Messrs. Bayard, Manning, Garland, Whitney, Lamar, Vilas, and Endicott are engaged in seeking the ruin of the Government which they have sworn to uphold and administer. This General Carr knows well to be either a deliberate falsehood or a foolish joke. Nothing does more to discredit the Republican party and diminish its chances of getting back to power than gabble of this sort from its leading men. That one of its picked representatives should, in a contest like this now pending in this State, have nothing better to offer by way of informing the judgment of the voters than this bit of bar-room vituperation, must inevitably damage the party with that increasing body of voters on whom the old catchwords have lost their influence. General Carr is not governed by "traitors." He is governed to-day by far honester men, and better patriots, than the Blaines, Chandlers, Robesons, Tellers, Belknaps, Hattons, and Delanos, under whom he so long managed to live very comfortably.

A squad of stump speakers, including Senators Sherman, Logan, Miller, and Evarts, Judge Foraker and Congressman McKinley, of Ohio, is to be sent out by the State Committee presently to arouse the voters in behalf of Davenport. It is announced that Senator Sherman will make one speech and Senator Logan three. If we may be allowed the suggestion, we think it would be the part of discretion for the Committee to be careful where they allow these two orators to make their appearance, unless they talk in a different strain from that of their recent speeches. New York is a very different State from Ohio. We know all about the bloody shirt and the treason-stained saddle of Robert E. Lee here, and nothing that Messrs. Sherman and Logan can tell us will be either new or interesting. If they propose to talk about these things, it would be wisest to let them loose in remote corners of the State, where the people have seen no newspaper nearer in tone to the present epoch than an occasional copy of the *Weekly Tribune*. In this part of the State thousands of voters are considering mainly the question of good government as it will be affected by the election of either Hill or Davenport, and if they are asked to turn from that and look at the uninteresting relics which Messrs. Sherman and Logan are exhibiting with such grotesque solemnity, they will be likely to make disrespectful remarks.

Senator Logan was in Richmond recently in close consultation with Mahone concerning the Republican campaign, but there is no statement made concerning his intention to take the stump there for the Republican ticket. We hope he will do so, however, for it would be very interesting to see what would happen. Mahone's newspaper organ is claiming support for the Republican ticket on the ground that the Republican members of the Virginia Legislature voted in favor of pensioning rebel soldiers, and the Bourbon members defeated the bill. The Republican platform also favors rebel pensions. Logan's position in the North is, that the Bourbons of the South are rampant with treason, and that in Virginia they are worshipping the "treason-stained saddle" of Robert E. Lee. It would be great fun to see Logan "harmonizing" his views with Mahone's upon the stump.

Mr. Cleveland apparently believes that the business of a President is to supervise the administration of the Federal Government, and not to "run" State elections. The White House has seldom had an incumbent who paid such close attention to the proper duties of an executive, and who was so prompt to exercise his prerogatives when occasion required. There is something refreshing about the summary way in which he brought to book one of his appointees in New Mexico last week. A few months ago the President was persuaded, upon the strength of hearty endorsements, to make William A. Vincent Chief Justice of New Mexico, although it afterward came out that Vincent was concerned in a land controversy in that Territory some time ago, in the course of which he was imprisoned for contempt of court. On Wednesday week news reached Washington that he had appointed "Steve" Dorsey one of the three Commissioners to draw grand and petit jurors for the Territory, although Dorsey notoriously has many disputed land claims pending in the courts, and was thus given the power to pick out his tools as jurors. Upon learning these facts Mr. Cleveland promptly suspended Vincent, and his judicial career is undoubtedly ended. There is no part of the Federal service which needs closer watching than that in the Territories, and an object-lesson such as the President has given in the Vincent case will do an immense amount of good.

We think the question will suggest itself to a large number of the President's friends and supporters why, if it was proper to remove Judge Vincent for appointing Dorsey—and it certainly was proper—it is not also proper to

remove Hedden and Beattie, or at least Hedden, for appointing Sterling. The selection of Sterling for a weighership, after making room for him by the removal of a competent officer, was certainly as gross an abuse of a trust as Judge Vincent's selection of Dorsey for a Commissionership of Jurors. It showed just the same want of judgment, the same obtuseness as to the condition of public opinion and as to the condition of fitness in a public officer, and the same ignorant disregard of the President's policy. If a man who thinks Dorsey is fit to be a Commissioner of Jurors is not fit to be a judge, surely a man who goes straight to a pot-house to look for a Custom-house weigher is not fit to be the Collector of a great port.

Mr. Cleveland's idea of conducting the Government upon business principles is being carried out by Mr. Whitney in regard to the book-keeping of the Navy Department. It would be hard to imagine anything more unbusinesslike than the state of things which has existed. Each of the bureaus had its own system of accounts, and there was also a set of books belonging to the branch of the Department known as the Secretary's office, but there was nowhere a central and clearly organized method of book-keeping. The consequence was that the Secretary could only find out how much money had been expended, or how much was still on hand, by sending for his bureau chiefs and securing reports from all of them. Moreover, there was no effective check upon expenditures, since the auditing officers were connected with the Treasury Department, and only discharged their duties after the money had been paid, when there was no way for the Government to recover it in case it had been misspent. Mr. Whitney, soon after assuming charge of the Department, employed an expert accountant to reconstruct these involved and roundabout methods, and a simple system has been substituted, which enables the Secretary to know at any time the exact financial condition of the Department, and prevents any requisition for money from being approved until it has passed through the hands of the accounting officers of the Department and has been checked by them. This is one of those reforms which could hardly have been accomplished short of a revolution in the political control of the Government, so strong is the force of tradition and custom.

The Boston Fish Bureau, embracing the bulk of the capital in New England invested not in fishing but in the fish trade, have issued a circular stating the reasons why an arrangement should be made for reciprocal free trade with Canada in the products of the sea. They say that the opposition to such a policy comes from "one hundred vessel owners." On the other side are all the consumers of salted and smoked fish in the United States, who are mainly people of moderate means, and all the dealers in such fish. They mention another fact not so generally known, viz., that the labor employed in catching these fish is mainly Canadian, and therefore that the usual argument in favor of protecting home labor does not apply, or applies only to a limited extent. Upon this point they say:

"The pretence that protective duties on fish are an encouragement to American fishermen, and the argument that the fisheries furnish a training school for our navy, were long since exploded by the fact that a very large proportion of the men who fish in American vessels are citizens of the British provinces. Hordes of them come here every spring, man our vessels for the fishing season, and return home when it is over. It is estimated that from 50 to 75 per cent. of the men in the Gloucester mackerel fleet are citizens of the Dominion of Canada, and the same is true to a greater or less extent of other fishing ports. It is acknowledged that without them we should be unable to man our fleet. These men have no interest in our country and its institutions, and in event of war with England would be found in the enemy's fleet. Is it fair that we should be taxed for their support, or that a few owners of fishing vessels should reap an advantage obtained at the expense of the great body of consumers of fish in all parts of the country?"

So it appears that the fisheries clauses of the Treaty of Washington, the subject of so much deliberation and painful anxiety, which led to the payment, on our part, of $5,000,000 in gold to Great Britain, were abrogated, and the whole question was thrown open to a fresh international controversy and a new negotiation, in order to accommodate the interests, or the supposed interests, of one hundred owners of fishing smacks. As to the American sailors employed, it is certain that they will get their living by fishing just the same, whether fish are admitted free of duty or not, and will get just as good wages in the one case as in the other, since they are brought into competition with Canadian fishermen on the decks of their own vessels. Viewed in the light of these facts, the fisheries dispute becomes a glaring case of much ado about nothing.

According to the latest advices, it appears as if Servia had satisfied Turkey that her armaments were not directed against the Sultan, and that if she should now begin hostilities, they will be directed against Bulgaria, which includes within its new limits a piece of territory claimed by the Servians as part of "old Servia." In any such conflict King George, of Greece, would probably be compelled by his people to take part, they, too, hating the Bulgarians cordially and longing for a slice of Macedonia. Of course, Turkey could not keep very long out of a mêlée of this kind, but the latest accounts of the condition of her army are so deplorable that it is not likely she could interfere with any effect. It appears clear that, besides the garrison of Constantinople, she has only about 25,000 ill-armed and ill-clothed troops ready for active service, and since the last war nothing has been done to replenish the military stores, or organize a transport or commissariat service. From all this, it is still safe to infer that the Powers will not permit any serious fighting, though King Milan may be carried into a fray of some kind.

The claim of Servia is for territory which the Berlin conference refused to give her, when setting aside the San Stefano Treaty. It is not likely that the Bulgarians, in their present position of uncertainty over the intentions of Turkey and of the Powers, would be willing to fight, and it is not likely either that just at this juncture the Servians will force a crisis, unless the army has got from under the control of the King more completely than has been supposed. The aim of Servia is to obtain her old mediæval boundaries in case there is to be a rearrangement of territory in the Balkans. If she fights now she is very likely to bring on interference which might spoil her game ultimately.

There has been no fighting as yet in the Balkans, and the probability that there will not be increases, no matter how near it may be allowed to come in appearance. All the great Powers know well that they cannot allow any of the combatants to win; that they would have to interfere sooner or later, and consequently that war would be a mere waste of life and treasure. The spectacle of these small principalities, just emerged from barbarism, beginning their national existence with a complete stock of uniformed kings and armies, is a melancholy one for the philosophical observer, but it would be more melancholy still if they were allowed to use them.

Premier Tisza's declarations in the Hungarian House of Representatives in reply to interpellations concerning the Emperors' meeting at Kremsier and the Bulgarian imbroglio, are the only ministerial enunciations regarding those affairs which have yet reached us, and as such are interesting. The meeting, he says, was merely a matter of courtesy, Alexander III. returning Francis Joseph's visit at Skierniewice. Assurances of amity were exchanged and peaceful intentions emphatically expressed. The annexation of Bosnia and Herzegovina as a contingency was not spoken of, nor was the possible union of Bulgaria and Eastern Rumelia. The revolutionary outbreak in Rumelia, the work of a conspiracy, was a surprise, though the agitation which preceded it was well known. Austria-Hungary recognizes the right of the Porte to maintain and restore in the Balkans, by every means at its disposal, the order of things established by the Treaty of Berlin. If Turkey fails to do it, it will be the duty of the Austro-Hungarian Government so to act, in accord with all the signatory Powers, that affairs shall be settled agreeably to that treaty, as far as possible, a general conflagration be prevented, and the equilibrium created at Berlin maintained. It is the obligation of the signatory Powers so to act. But, barring the right of Turkey, it is not the business of any single Power to intervene by force and arms. Austria-Hungary certainly does not meditate any such thing. Nor is the Ministry of Foreign Affairs conscious of any other Power's inclination to discard its neutrality in case the determination of Turkey to restore the *status quo* should lead to an armed conflict between her and Bulgaria. The signatory Powers have done their best to prevent the revolutionary movement from spreading in any direction. They also agreed, meeting an invitation of the Porte to intervene in an amicable way, that their ambassadors should convene in Constantinople in a preparatory conference for the consideration of the most burning questions. Austria-Hungary has positively no intention to profit by the complication for annexing Bosnia and Herzegovina, or for an advance on Turkish territory. However, should unforeseen events baffle all peaceable efforts and endanger the vital interests of the empire, the Government will know how to guard its freedom of resolution.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, October 14, to TUESDAY, October 20, 1885 inclusive.]

DOMESTIC.

PRESIDENT CLEVELAND some months ago, on the recommendation of Congressman Springer and others, appointed William A. Vincent, of Illinois, to be Chief Justice of the Supreme Court of New Mexico, in place of Judge Axtell, removed. On Wednesday the President suspended Justice Vincent for having appointed Stephen W. Dorsey one of three Commissioners to draw grand and petit jurors for the Territory. The President is determined that no land speculators' ring shall run the affairs of the Territory.

Complete unofficial returns from Ohio give Foraker (Rep.), for Governor, 17,688 plurality. Omitting Hamilton County, the closest analysis that can be made is that the Republicans have elected to the House 58 members, the Democrats 41, doubtful, Stark County. The Senate, omitting Hamilton County, contains Republicans 17, Democrats 16. Hamilton County is in doubt, and can only be determined by the official count.

Governor Hoadly denies having admitted that the Republicans have a majority in the Ohio Legislature. Both parties claim a majority of three on joint ballot. The result probably hinges on Hamilton County, where the official count is proceeding very slowly. Frauds were unearthed in Columbus on Monday. 300 Democratic votes had been added in one district.

The Democratic plans for election frauds in Cincinnati have caused great excitement there, especially among the Germans, and on Thursday night crowds gathered, and open threats were made against John R. McLean, of the *Enquirer*, and other bosses. The *Enquirer* office was under guard of the police.

On complaint of the Cincinnati Committee of One Hundred, Colonel Edwin Hudson, the Chief of Police, was arrested on Saturday, charged with wilfully failing to serve the warrants of arrest which were secured by the Committee against offenders under the Registry Law. The Chief Deputy of the Sheriff's office was also arrested.

Dorman B. Eaton has written a letter fully vindicating the Civil-Service Commission from the charges of partisanship made by the Democratic State Convention of New York.

Mr. Carl Schurz has written a letter on the political outlook in this State, in which he says: "We have to choose between Mr. Davenport and Mr. Hill for the Governorship. Both have been in conspicuous positions which tested their qualities. Mr. Davenport has proved himself a man of ability and high character, thoroughly devoted to his public duties, and in sincere sympathy with those reform movements which aim at the improvement of the public service and the elevation of our whole political life. Mr. Hill has on many occasions proved that he looks upon official power as a means of party service and of personal advancement, regardless of the public interest, and that he is in thorough accord with that class of politicians who do all in their power to obstruct and defeat a healthy reformation of our public concerns, and thus to keep alive those demoralizing practices which for so long a period have degraded our political life and endangered the public welfare. They are both partisans, but Mr. Davenport represents the best tendencies not only in his own, but in both political parties, and Mr. Hill the worst. We have a President who is honestly and earnestly endeavoring to carry out certain reforms of the highest importance. In this endeavor he is embarrassed and obstructed by a very active element in his own party, which insists upon the distribution of the public offices as spoils, upon the organization of the public service as a party machine, and upon breaking down whatever stands in the way in the shape of laws and regulations or adopted methods and practices. Of this element Mr. Hill is a recognized representative. Now, it is clear that, if Mr. Hill, as a representative anti-reform man, is this year defeated in this important State of New York, in which last year another Democratic candidate was victorious as a representative reformer, the anti-reform element which seeks to baffle the President's efforts will thereby be materially weakened, and the cause of reform will gain new strength. Mr. Hill ought therefore to be defeated."

Timothy J. Campbell was nominated by Tammany and Irving Hall on Saturday night to succeed S. S. Cox in Congress from the Fifth District of New York.

The chief clerk of the Post-office Department says that the contingent fund has been so carefully managed under the present Administration that, for the first time in the history of the Department, Congress will not be called upon to make a deficiency appropriation. There will probably be a surplus of more than $1,000.

During the fiscal year ended June 30, 1885, the carriers in the Free Delivery Postal Service delivered 464,996,842 mail letters, 104,742,598 mail postal cards, 143,406,578 local letters, 78,226,576 local postal cards, 3,187,965 registered letters, 256,054,602 newspapers. They collected 469,858,875 letters, 140,630,704 postal cards, and 83,432,673 newspapers. The total number of pieces handled was 1,741,537,413, or an average per carrier of 400,307. The aggregate cost of the service was $3,985,952, an average cost of 2.3 mills per piece, or of $912 90 per carrier.

Lieutenant George M. Stoney, commanding the Northern Alaska Exploring Expedition, reports to the Secretary of the Navy from Pipe Point, August 24, that he has established his winter quarters at Fort Casmas, 330 miles up the Putnam River, the most central point for sledging. He has at the fort ample stores for twenty months. He intended to begin his explorations and surveying at once, working the river until it freezes, and then sledging. He was perfectly fitted out and needed nothing.

Senator McPherson, of New Jersey, has been making some very emphatic representations to the Washington authorities relative to the management of the New York Custom-house. He maintains that there are not less than 100 Republican employees assigned to duty in New Jersey, who take an active part in the politics of that State, in opposition to the Democratic party. He thinks that these clerks should be removed on the ground of offensive partisanship, and has so informed Collector Hedden; but the latter has suggested that it would be necessary to present more serious charges than that a man is politically opposed to the Administration to secure his removal.

The Connecticut Tariff Reform League was organized in New Haven on Wednesday at a private meeting called by Professor William G. Sumner and J. B. Sargent, of New Haven; David A. Wells, of Norwich; James L. Cowles, of Farmington; and A. W. Thomas, of Waterbury. In the call they say: "The undersigned, believing that the time has come when the citizens of Connecticut, irrespective of party, who favor a reform and reduction of our existing tariff, a repeal of our antiquated and absurd navigation laws, and the adoption on the part of the Federal Government of a more liberal commercial policy in its intercourse with foreign nations, should organize for the purpose of disseminating their principles and of making their votes, if need be, potential in State politics." Fifty gentlemen, mostly manufacturers, representing all parts of the State, were present. It is proposed to circulate economic tracts and to hold public meetings throughout the State. J. B. Sargent, New Haven, was elected President.

At the annual meeting of the stockholders of the Western Union Telegraph Company in this city on Wednesday Colonel R. C. Clowry, of Chicago, was elected a director in place of Mr. John Pender, of London, resigned. The lease of the American and Rapid Company's wires, and the sale of the pole yard in Chicago to the city for the purpose of extending a street, were approved.

The street-car troubles broke out afresh in St. Louis on Sunday night, and a riot at Park Avenue and Third Street had assumed alarming proportions when a heavy rain came up and scattered the mob. Several of the mob were slightly injured.

William S. Warner, who secured the most of the funds of the bankrupt firm of Grant & Ward, surrendered himself to Commissioner Shields in this city on Saturday morning, saying that he understood there was a warrant issued against him.

Cardinal McCloskey's funeral services were held in the Roman Catholic Cathedral, in this city, on Thursday morning. It was the most solemn and elaborate ceremonial ever held in a Catholic church in this country. Archbishop Gibbons preached the sermon. The Cardinal was buried in the Cathedral crypt.

Henry W. Shaw, better known as "Josh Billings," the humorist, died in Monterey, Cala., on Wednesday, of apoplexy. He was sixty-seven years of age. His birthplace was Lanesborough, Mass. He led a roving life in his youth, and did not write any of his sketches until he was forty-five years of age. His quaint spelling first attracted attention. He made a great deal of money out of his lectures and almanac.

Mr. Malcolm Hay, ex-First Assistant Postmaster-General, died at his residence in Allegheny on Tuesday morning. Mr. Hay was a prominent lawyer of Allegheny City, and was about forty-three years of age. He had taken an active part in Democratic politics, but had never held political office other than as a member of the Pennsylvania State Constitutional Convention in 1873, until his appointment in the Post-office Department by President Cleveland. As the distributor of fourth-class post-offices he showed an unwillingness to yield to the general demand for spoils, and his resignation, which was compelled by ill-health, was looked upon as a great loss to the public service.

FOREIGN.

Great activity prevailed on Wednesday in military circles throughout Turkey. Troops were hastily armed and equipped for immediate service. The Sultan has determined to fight against a further dismemberment of Turkey, and large bodies of troops are being rapidly concentrated on the frontier at strategic points within easy striking distances of Bulgaria, Greece, and Servia. The Moslems are enthusiastic, and volunteer in large numbers.

As an outcome of the conference at Constantinople, the Powers have sent a note to Prince Alexander at Sofia, urging him to pacify Rumelia, and warning him that otherwise he will run the risk of losing the union. In any event he must recognize the suzerainty of the Sultan.

A Bulgarian envoy in London gives this interpretation of the warlike movement of Servian troops toward Sofia, Bulgaria: "King Milan must fight or lose his throne. He applied to Austria for advice, and was told that he might mobilize his army. Now, having done that, he cannot stop. The conclusion is that the present movement is a blind to conceal a sudden attack upon Turkey. The envoy believed war inevitable, and that Turkey would be left by the Powers to fight it out alone."

Servia on Thursday protested against the decision of the ambassadors on the Rumelian question, and began military operations against Bulgaria. A large force of Turkish troops were on Friday ordered to advance in the direction of Nissa.

The ambassadors presented a note to the Porte on Friday, in which they say that further time will have to be afforded them so as to obtain a complete European understanding

respecting the Rumelian difficulty, and advise the Sultan to continue his peaceful policy. They do not, however, dispute the Porte's right to send troops into Rumelia to assert its rights in that province.

The situation in the East again assumed a serious aspect on Monday, owing to the bellicose attitude of Servia. Prince Alexander, after endeavoring to patch up an agreement with King Milan, telegraphed the latter that he intended sending Minister Grekoff to the Servian Court on a special mission. King Milan declined, however, to receive the mission.

The Bulgarians were on Tuesday reported to be exasperated by Servia's attitude, and resolved to resist any violation of the frontier. War was considered inevitable. Prince Alexander on Tuesday summoned the whole of the national militia in Bulgaria and Eastern Rumelia for immediate service.

The Council of Candia, the largest city in Crete, has voted in favor of a union with Greece, but the populace refuse to revolt against the Turkish Government before Greece declares war. The Greeks are wild with enthusiasm. Thirty thousand men of the reserves have been enrolled during five days, and thousands are arriving at Athens from all parts of Greece and the islands in the Ægean Sea. The people are clamoring for war.

The London *Daily News* of Saturday morning, in a powerful editorial, declared that Lord Hartington's leadership of the Liberals is a thing of the past. It said that Mr. Chamberlain is now the leader, and that Lord Hartington has only himself to thank for his retirement. Comparing Mr. Chamberlain's advance in politics with Lord Hartington's decline in influence, the *News* regrets the latter's dragchain policy. It continues: "If the Whigs wish to retain their influence, they must move forward. They can hardly grudge Mr. Chamberlain the position he has won with his abilities, courage, and sincerity. If the Liberals were all prepared to follow Mr. Chamberlain, things would go on right enough. The country, however, would like to feel more certain of the policy of the Liberals." The article was probably inspired.

Lord Londesborough has seceded from the Whig party, and will preside at a Tory meeting. Others, it is said, will follow Lord Londesborough's example. That gentleman, while in favor of a wide extension of suffrage and reform in taxation, is not prepared to adopt the whole of Mr. Chamberlain's policy, as promulgated in his various speeches.

Mr. Chamberlain delivered a brilliant speech on Monday evening before a caucus at Birmingham. He violently assailed Lord Randolph Churchill, whose bright particular star, he said, was now eclipsed by the heavy hand of his master, Lord Salisbury. Lord Randolph's vaunted brilliancy was all gone and only coarse abuse remained. Mr. Chamberlain, amid an outburst of enthusiasm, concluded with a plea for extended liberties and confidence in democracy. He predicted that in the coming elections the Liberals would have the largest majority for half a century. He said he gloried in being abused.

Lord Randolph Churchill spoke at Kings-Lynn on the same evening. He advised a reduction of the school fee to a penny a week for purely elementary education. On the general questions he said: "If you want gilded programmes, go to the Liberals; if you want good government and prudent progress, then I earnestly recommend the great landed interest to close its ranks and support the Conservative party."

Seven hundred unemployed workmen in Birmingham on Tuesday marched to the residence of Mr. Chamberlain. When they arrived they found the house surrounded by policemen. After a consultation, a deputation of three of the unemployed men were admitted to see Mr. Chamberlain. They detailed their grievances, and flatly accused Mr. Chamberlain of making a row with the wealthier classes to alienate sympathy for the suffering poor for personal political aggrandizement. Mr. Chamberlain refused to attend the meeting at the Town Hall in aid of the Distress Fund. The men then returned to their place of meeting, howling against Mr. Chamberlain.

Lord Randolph Churchill, Secretary of State for India, has acceded to a request for a searching inquiry into the affairs of India, apart from questions of policy.

British troops are massing in the direction of Burmah. The London *Telegraph* asserts that the Government has given the Earl of Dufferin carte blanche to act as occasion may require.

King Theebaw, of Burmah, has answered the communication sent by the Chief Commissioner for British Burmah, in accordance with instructions from the Indian Government, with reference to the dispute between the Burmese Government and the Bombay and Burmah Trading Association. The King replied in an arrogant and insulting manner, and refused to discuss the claim of the trading company with the Indian Government.

An ultimatum has been sent to the King, ordering him to reduce the claim against the company and the restrictions against English traders, and to accept a British resident at Mandalay. Gunboats have been ordered to Rangoon to await orders to enforce the Government's demands by a demonstration at Mandalay. The annexation of Upper Burmah has been practically decided upon by the British Government.

Anarchy prevails in Burmah. A very hostile feeling is shown toward all foreigners and a general massacre is feared. The Italian Consul at Mandalay has been threatened with imprisonment.

Sir Henry Drummond Wolff, Special British Envoy, and the Porte have signed the protocol respecting the Government of Egypt.

Field Marshal the Right Hon. Hugh Henry Rose, Baron Strathnairn, is dead. He was born in 1803. He succeeded Lord Clyde as Commander-in-chief in India, and directed the amalgamation of the Queen's forces with the armies of the late East India Company, reforming many old-standing abuses. In 1865 he resigned and took command of the British forces in Ireland. He was raised to the peerage as Baron Strathnairn in 1866, and was advanced to the rank of Field Marshal in 1877.

Thomas Davidson, the English scientist, is dead, at the age of sixty-eight. His researches were principally connected with geology and palæontology. His large work on 'British Fossil Brachiopoda,' in five quarto volumes, is considered one of the most complete monographs ever published. He has also published eighty scientific papers.

The Recorder, in charging the jury in London on Monday in relation to the Armstrong abduction case, urged them to return true bills against the prisoners for abduction, conspiracy, and indecent assault, stating that the motives alleged by the accused were not a legal defence. The Grand Jury accordingly on Tuesday found a true bill against Mr. Stead, editor of the *Pall Mall Gazette*, and the other prisoners.

The action of Mr. Ross Winans, the Baltimore millionaire, who owns an extensive deer park in Northern Scotland, in closing a roadway on his property so angered the people in that vicinity that they mobbed and stoned him on Sunday last. Mr. Winans has offered a reward of £500 for the capture of the culprits.

The second ballots for Members of the French Chamber of Deputies on Sunday passed off quietly. It is believed that the new Chamber will comprise 205 Conservatives and 391 Republicans or Radicals. The Republicans polled 61,000 votes in Paris and the Conservatives 31,000. The last Chamber contained 462 Republicans and 95 Conservatives.

The French Conservatives accuse the Republican prefects of intimidation during the recent elections. The Brisson Ministry will not resign, though several members of it, who failed of reëlection, have already resigned.

President Grévy, of France, has officially announced that he will enter the coming contest for the Presidency of that country.

Admiral Miot, commander of the French forces in Madagascar, has been recalled for disobeying an order of the War Office in fighting the Hovas on the 10th of September last. The French Government is treating with the Hovas for a peaceful settlement of the difficulty through the Italian Consul at Tananarivo.

There were forty-two deaths from cholera in Spain on Monday. At Palermo, Italy, on the same day there were forty-four new cases and twenty-one deaths.

A heavy shock of earthquake was felt at Palermo on Thursday morning. The disturbance caused a three-story house to fall, burying its occupants beneath the débris. Eight corpses were recovered.

The Italian Government has received advices confirming the report of the death of Osman Digna. After his death the rebels scattered, but continued to fight bravely. The march of the Abyssinians to Kassala has been checked.

The long continued arbitrary policy of King Christian of Denmark in refusing to dismiss the Estrupp Cabinet in compliance with a vote of Parliament, and levying alleged unconstitutional taxes because Parliament refused to vote the Budget, has led, so read an alarming despatch on Tuesday morning, to a number of serious riots and imposing demonstrations in Copenhagen against the King and the Estrupp Ministry. The people seem determined that their representatives in Parliament shall have some voice in the affairs of the Government, and have become so threatening in their demands that the King has ordered the garrison of Copenhagen to be largely reinforced. These popular manifestations are general throughout Denmark. It is expected that a state of siege will be declared, and it is feared that a revolution will ensue if the King persists in refusing the concessions asked by Parliament. Later news throws doubt on these representations.

The British steamer *Greyhound*, trading locally in Chinese waters, has arrived at Hong Kong, and her second officer reports that a daring attempt was made by Chinese pirates to capture the vessel. The captain of the *Greyhound* was inveigled on board a pirate ship, and was killed. The pirates then attempted to seize the *Greyhound*, and a desperate fight ensued, in which the other officers and the engineers of the latter vessel were badly wounded. The *Greyhound* put on a full head of steam and escaped.

The Amir of Afghanistan has rejected indirect overtures from Russia, and remains loyal to England.

It is understood in London that Riel's death sentence will be commuted to life-long servitude.

The Arctic steamer *Alert* arrived at Halifax on Sunday from Hudson's Bay, bringing fourteen of the eighteen observers who spent the past fifteen months at stations along the shores of Hudson's Strait and Bay, having been sent by the Dominion Government to take observations of temperature, movements of ice, etc., so as to determine the great question of opening up to American and Canadian northwestern traffic the Hudson's Bay route to Europe. Captain Gordon, commander of the vessel, is confirmed in the opinion that the whole route is feasible for navigation four months of the year by properly built and equipped steamers, and it is simply a question whether the opening up of the route with such a short season of navigation will pay, in competition with existing routes.

During the fiscal year ending June 30, 1885, the Canadian Government has spent over $350,000 on immigration. Assisted immigration since 1880 has cost Canada about $1,500,000.

SINCERITY IN POLITICS.

THERE is one part of Mr. Schurz's letter on the approaching election in this State which particularly deserves the attention of Republican politicians. He says: "The professions of Republican politicians in favor of civil-service reform would deserve and receive more confidence if, while censuring real mistakes or violations of correct principle, they proved themselves at the same time willing to encourage with just recognition all the good that is done and all the honest efforts that are made in the right direction, no matter under what party auspices." This is important because, if there be one thing more than another which has produced and is strengthening Mugwumpism and loosening the old political ties, it is the weariness of voters of an independent turn with partisan denunciation, or "arraignment," as it is called. The young generation who have not inherited the hates and prejudices created by the anti-slavery struggle and the war, are applying to politics the common sense which governs them in the transaction of their private business, and out of this has grown the demand for that application of business methods to the work of government which is known as "civil-service reform." Civil-service reform, in fact, is neither more nor less than the infusion of rationality into the transaction of public business; and rationality in the transaction of business means also rationality in talking about business.

Now the talk of politicians about their opponents has long ceased to be rational. It was not rational to maintain, as Republican orators and writers did in the last campaign, that the Democratic party, containing nearly half the voters, was made up of traitors and thieves, whose main objection in trying to get possession of the Government was to break it up and rob the Treasury, or to lay prodigious taxes on themselves for the purpose of compensating a few thousand Southern slaveholders. It was not rational to maintain that no Democrat was a patriot, or cared for the safety, honor, or welfare of his country. It was not rational to assert that every Democrat who, like Tilden and Cleveland, attempted in any public office to effect any reform, was doing so from vile motives, or as a cover for some scheme of public wrong or private gain. It was not rational to assert that everybody, no matter what his character or antecedents, who asked for a change or revision of the tariff, was paid for so doing by foreigners and had no convictions of his own on the subject. It is not rational, either, to proclaim, in every party newspaper article and party platform, that the opposite party is, in *everything* it does, aiming at public ruin. Anybody who talked in this way down in Wall Street, or in any other haunt of business men, would be considered a lunatic. If a man were to go about from office to office maintaining on every possible occasion that any large body of apparently respectable men, who paid their debts, and supported their families by diligence and industry, devoted all their leisure time to schemes of villany, and played the hypocrite whenever they commended honesty, or truthfulness, or decency, he would be treated as a crank, and people would soon get chary of making contracts with him. Yet this is exactly what party newspaper editors and party orators constantly do about their political opponents. The "arraignment" planks in party platforms, in fact, read like the compositions of a man who has been demented by long brooding over a grievance, so utterly opposed are they to all our experience of human nature and of human affairs. Society in America could not hold together for six months if the Democrats were as bad as the Republicans annually declare them to be, or if the Republicans were as bad as the Democrats annually declare them to be.

Now the younger generation of voters is getting very tired of this stuff. When they "talk politics" they want to talk it in the language of ordinary life and business, saying what they mean and meaning what they say. They see very clearly that the Democratic half of the American people is not made up of criminals and traitors, and that there are a great many men in it animated by patriotic impulses, and capable of striving for the public good and of effecting solid reforms. They see in Mr. Cleveland one of these men. Like all his Republican predecessors—like Lincoln, like Grant, like Hayes, and like Garfield and Arthur—he is not perfect. He occasionally makes mistakes; he is occasionally deceived by false testimony and bad advice. He now and then yields to considerations of party expediency, though in a far less degree than any man who has occupied his place within the last half century. They see all this, and are willing to say it and have it said. But they see also that he has done a great number of things in the interest of reform; that he has made a large number of excellent appointments, and has refrained from making a vast number of removals which Republican usage would have fully justified him in making; and that he has in a hundred ways, some small, some great, fostered and encouraged the idea that public office is a public trust, and that public business should be transacted in the same manner as private business. Consequently, when they find Republican orators and writers picking out the bad things the President has done and ignoring the good ones, or maintaining that the good ones are only a disguise for bad ones, and that his whole public career has been a piece of hypocrisy, and that he and his Cabinet are mainly occupied with designs against the public peace, and credit, and security, they get sick and disgusted. They refuse to believe that this senseless and perpetual "arraignment" indicates any real interest in reform at all. They conclude that a writer or speaker who cannot see that Cleveland has made any good appointments whatever, or has done anything to break up administrative abuses, cannot be himself a reformer, and does not know reform when he sees it. They demand, in fact, as proof of sincerity, from every man who makes a display of reforming zeal, a full and frank recognition of such reforms as are made, no matter who makes them, and encouragement of everybody who makes them, no matter to what party he belongs. A Republican who cannot bear to have the Post-office or Custom-house improved by a Democrat may be a good Republican, but to call him a reformer is an abuse of language. The disposition of the rising generation is, in fact, to consider him both a humbug and a bore.

WHY PROHIBITION DOES NOT PROHIBIT.

THE *Evening Post* prints a long-delayed letter from Mr. Neal Dow, explaining why prohibition has not proved as great a success in the State of Maine as its friends could wish, but denying that it has proved as great a failure as its enemies maintain. His theory is a very old and familiar one, which has done much service in defence of laws that were not enforced, viz., that the law would work very well if it were not for the opposition of bad men. It is true, for instance, he admits, that in Bangor prohibition does not prohibit; but why? Simply because the people of that city "are peculiar":

> "The moral and religious tones there are very low. Fifty years ago there was a great land speculation in Maine, of which Bangor was the centre. Many men of bad character became very rich and influential there, and by their example they poisoned the moral and religious character of the people, the virus remaining there to this day. By common consent of the churches, and the influential people of the city, including parsons and deacons, the grog-shops are permitted to run openly in defiance of the law and in violation of the official oath of Mayor, Aldermen, Sheriff, and his deputies, the City Marshal, and the policemen, the condition being that the Paddies, the Macs, the O's, and the rest of them shall vote the Republican ticket, which they do."

Here we see that the statute is not executed because the whole community, including the parsons and deacons, agree to make it a dead letter. The very officials charged on their oaths with its execution refuse to execute it.

Bangor is, however, not the only example of the futility of the law. Says Mr. Dow:

> "The actual condition of the matter in Maine is this: In every city in the State under Republican government, there is an alliance, either open or implied, between the grog-shops and the Republican bosses, who are in desperate competition with the Democratic party for the rum vote of the State. In not one of these cities is the law enforced, except by private citizens, with no help from the officials, all whose influence is exerted to screen the violators of the law.
>
> "In Portland—a Republican city—at the last municipal election, we overthrew the Republican bosses because they were in open league with the grog-shops, electing a Democratic administration by a large majority, and in two weeks every grog-shop in the city was shut up. From the Republican Mayors, Sheriffs, and Marshals down to the Governor, all seem to be following the policy of protecting the liquor traffic, against the Constitution and against the homes of the people. In Maine we had a popular vote whereby prohibition was put into our Constitution by a majority of 47,075—the affirmative vote being within a small fraction three times larger than the negative vote, the majority being twice larger than was ever before given in Maine for any party or for any proposition. Notwithstanding that, the Republican bosses pursue the policy of protecting and fostering the grog-shops."

The Republican party, in Maine, be it remembered, as elsewhere, is supposed to contain more of the intelligence of the population than any other, and more of the liquor-hating portion than any other, and yet, whenever it is in power, all its officials, Governors, Mayors, Sheriffs, and Marshals, get rapidly into a league with the grog-shop keepers, and allow them to violate the law with impunity. In the country districts, Mr. Dow says, this state of things does not exist: the grog shops are shut up, and a generation has grown up which knows nothing of them. This may be true, but has

a generation grown up which knows nothing of secret tippling and soaking on smuggled liquor? On this point he is unfortunately silent, and probably because he has nothing to say. He says "half a million will cover all the cost of the liquor smuggled into the State and sold in violation of the law." But what does he know of this? What can he know? The testimony of those who have resided in country districts in Maine of late years, and have been brought much in contact with the farmers and mechanics, points to the clandestine consumption of a vast quantity of liquor, and the growth of that most objectionable and deadly of all forms of drinking, private, solitary guzzling, from a secret bottle or demi john.

Mr. Neal Dow is apparently unconscious what a powerful weapon the admissions of his letter put into the hands of the anti-Prohibitionists. It is a virtual confession that Prof. Fisk P. Brewer, an old but converted Prohibitionist, who has been ably arguing against it in the last *New Englander*, is right in his position that prohibition requires for its successful enforcement the use of "government operations and methods of a sort" to which the English race will never submit. The history of the movement in all parts of this country proves clearly that although it is possible, owing to the almost equal strength of the two great parties, for the Prohibitionists every now and then to procure the passage of stringent legislation, they can never get it enforced on a large scale in the places in which it is most needed. Nothing is easier than to stop or greatly reduce the liquor traffic in country districts, where public opinion is strong enough to dispense with the aid of police. But as soon as the experiment is tried in the large cities and densely-populated districts, where opinion acts feebly, and the work of repression has to be done by the arm of the law, then it fails, and its advocates admit, as Neal Dow does, that it fails miserably.

He says the reason of this is that the officers of the law will not do their duty, and the people behind them do not insist on their doing it. This is simply another way of saying that the law is of no use because the wicked resist it. We must remind Mr. Dow, however, that the first requisite of a good law is that it shall be so framed and so supported that the wicked cannot resist it. The framers of a prohibitory law have to take the wicked into account. A law which cannot be enforced is indeed no law at all: it is simply a wish or an aspiration. What is needed for Maine, for instance, is an act which even "the churches and influential people" of the cities cannot set at defiance, and which can stop selling liquor not only where very few people want to buy it, but where a great many want to buy it. Nothing can be more unfortunate and mischievous than the habit into which politicians fall only too readily of passing laws which they never mean to enforce, as bunkum to satisfy a small body of voters. The Prohibitionists have fostered this habit more than any other class of voters. Its direct result is to bring all law into contempt, to make law-breaking seem a light matter, and to infuse into party platforms and speeches every year a larger and larger share of humbug and unreality.

THE APPRECIATION OF GOLD.

THE discussion started by Mr. Goschen and taken up by Mr. Giffen relative to the "appreciation of gold," and now going on in England and the United States, possesses much scientific interest apart from its relations to the silver question. Both Mr. Goschen and Mr. Giffen are of the opinion that there has been in late years an appreciation of gold in obedience to the law of supply and demand—that is, that the supply of this metal has fallen off relatively to the demand, or that the demand has increased relatively to the supply. They reach this conclusion from a study of the course of the general prices of commodities, which has unquestionably been downward during the past fifteen years, although there was a temporary advance during the "boom" period of 1879-1882.

There is, perhaps, no question in political economy more intricate—none the data of which are more elusive—than this. The influence of other causes than gold scarcity to bring prices to a lower level is everywhere apparent. Take for example the article of steel, the cost of which the Bessemer and the Gilchrist-Thomas processes have reduced, within ten or twelve years, from $100 per ton to $25 per ton. The lessened cost of this article has had a tremendous and world-wide influence upon the prices of all articles which need to be transported, and there is hardly any article of commerce which does not need to be transported a greater or less distance. The compound engine for ocean steamers came into use about the same time, cheapening the cost of sea transportation in nearly as great a ratio as the Bessemer rail lessened that upon land. The two together brought a vast amount of fertile and hitherto virgin territory under the plough, which could not have been cultivated otherwise—that is, they caused the supply of agricultural products to be increased in all the markets of the world, and by consequence the prices of the same to be lessened. Other inventions and improvements more nearly related to agriculture have contributed to the same end, so that the prices of cereals, and latterly those of meats and dairy products, have been forced downward simultaneously with those of all manufactured goods. The progress of invention, its illimitable scope and its resistless power over prices, is universally perceived, but *how much* it has contributed to lower prices we have no measuring rod to determine accurately. We can only say that before reaching any conclusion on the supposed "appreciation of gold" these things must be taken into account. So also must be taken into account the introduction of new agencies, grouped together under the general name of "banking facilities," which enable mankind to dispense with the use of gold. One of the most potent of these is the telegraph, by means of which transfers of money and exchanges of property are now effected in a single day between countries on opposite sides of the globe. Mr. Mulhall, in a recent article in the *Contemporary Review*, shows that the use of bank checks in London and New York has increased since the year 1850 *twelve times* faster than the ocean-borne commerce of England and America has grown in the same period of time.

It is clear from what has been said that we want a definition of the phrase "appreciation of gold." It cannot mean the same thing as depreciation of goods, since other and most potent causes are at work to lower prices, apart from the gold supply. It is safe to say, for instance, that the price of steel would have fallen nearly or quite as much as it has fallen, even if the gold supply had kept up to the standard of 1848-60, when the rich placers of California and Australia were pouring their treasures into the lap of commerce. It is begging the question altogether to say that because general prices have fallen there must be a shortage of gold. The truth is, that there is now three times as much gold in the commercial world as there was at the beginning of the present century, yet general prices have fallen about 50 per cent. The supposed rule does not work. Has the demand for gold increased? There is no evidence to show such a state of things, for to offset the growth of commerce we have the vastly greater growth of the substitutes for gold which commerce has invented. Commodities formerly exchanged for gold are now exchanged for each other by bank agencies to an ever-increasing and almost limitless extent.

To ascertain whether there have been within the last hundred years such variations of general prices as may without doubt be ascribed to the greater or less amount of the precious metals, we shall naturally look first at the period immediately following the gold discoveries in California and Australia. There is a striking difference among English statisticians on this question. The matter is carefully examined in the sixth volume of Tooke's 'History of Prices,' and the conclusion is stated that although the *annual* supply of gold in 1856 and the four preceding years had been fourfold greater than it had been in 1848 and previously, and although the *addition* to the metallic circulation of the leading commercial nations had been more than one-third of the preëxisting stock, yet the range of general prices had not been at that date (1857) noticeably influenced in England. Mr. Mulhall, in his article already cited, allows a small advance in general prices in the decade 1851-60 over the preceding decade—not more than 6 per cent., as against 33 per cent. of increase in the metallic money of the world. Even this small rise of prices he does not attribute to the increase of the money supply. On the other hand, Professor Jevons, in his paper read to the Statistical Society in 1865, holds that there was a rise of prices, in consequence of the new gold, somewhere between 11 and 21 per cent., probably nearer the latter than the former figure.

It is quite certain that there have been variations in general prices, comparing one decade with the next succeeding one, during the present century, much greater than any discoverable variation in the decade, or the two decades, following the Californian and Australian gold discoveries. Therefore we cannot affirm that the slight change which was then perceived was due to the new gold. There has been a pretty steady decline in prices from 1820 to the present time, which was interrupted during the twenty years following the new gold discoveries. If the admission is made that the increment of new

gold, which, between 1850 and 1870, nearly doubled the pre-existing stock of that metal, arrested for the time being a persistent decline of prices due to the cheapening processes of machinery and invention and improved facilities of transportation, this is all that can be safely affirmed. All the world is striving to put goods into the market at lower prices. That is what every farmer and manufacturer, every railway and steamship, every inventor and artificer, is striving to do, and what they strive to do they actually accomplish. There is no evidence that commerce requires an increment of the stock of gold proportioned to an increment of commercial transactions, or any increment at all. There is abundant evidence that forces are at work to reduce prices—have been at work from the dawn of civilization, and never more actively than now—which no possible gold supply could counteract.

OVERPRESSURE IN SCHOOLS.

Doctor Hertel, whose book upon this subject has just been published by Macmillan, instituted an inquiry into the state of health of the school-children of the better classes in Copenhagen, which, for thoroughness of method and reliability of results, outranks all investigation yet made upon this important subject. This inquiry took place in the autumn, when children were fresh from vacation. Failures to answer any questions of his extended list were thrown out instead of being set down (as most might have been) as cases of ill health. If the disorders were very slight, or even too imperfectly described to come under his headings, they were also disregarded; so that his percentages must be regarded as very moderate. He found that about one-third of all school-boys were suffering from some more or less serious chronic complaint. In the mixed schools 18 per cent. enter sickly, and in the third school year the number of sickly boys is about doubled, while in the second classical class over 41 per cent. were sickly. Especially worthy of note is the sudden increase in the proportion of feeble boys when they reach the age of about twelve and one-half, due, as Doctor Hertel no doubt rightly conjectures, to the development of manhood which begins then. The complete change which the whole organism then undergoes is "preceded by a short period of greater delicacy than usual, with greater susceptibility to unfavorable external influences." Doctor Kotelmann has shown that while from nine to twelve years of age boys grow about five and one-half inches in height and increase nineteen pounds in weight, and between seventeen and twenty years they grow in height but two and one-half inches and in weight twenty-three pounds, the triennial period of from thirteen to sixteen is marked by a growth of nine and one-half inches in height and an increased weight of forty-four pounds. During this latter period the entirely artificial condition which school life involves in the habits and feelings of the child is, in the author's opinion, the chief cause of the alarming invalidism his tables show.

With girls the case is still worse, although their schools are exempt by law from state examination, and the courses of study are more elective and the freedom of individual scholars more complete. Twelve per cent. enter school, and 61 per cent. emerge from it, more or less sickly. Before puberty the most common ailment of both sexes is scrofula, and after that period, anæmia, nervousness, headache, frequent nose-bleeding, with great and constant increase of eye diseases. In all these returns the number of cases exceeds the total number of sickly children, for no account is taken of the many cases in which the invalid children are suffering from more than one complaint. Although no comparison can be instituted with children who do not go to school, because attendance is enforced by law, no other important factor can be found adequate to explain the deterioration of health; and the author concludes that it is "an established fact that the school as now conducted, with all the concomitants of school life, undoubtedly exercises a pernicious influence upon the health of the child."

In a long introduction, Dr. J. Crichton-Browne, of England, complains of Doctor Hertel's moderation in view of the "juvenile serfdom" he describes, and thinks very radical changes needed if the Danes are to remain a vigorous and healthy people. In England overpressure falls not on all alike, but chiefly on clever children, who are forced forward to win scholarships, etc.; and, with some "difference of incidence," Doctor Hertel's observations will apply to still other countries. The stimulus of competition and the worry of examination, provoking boys, whatever they are trained to, to be something better, and to think it a disgrace to die where they are born, Ruskin calls "the most entirely and directly diabolic of all the countless stupidities into which the British nation has been of late betrayed by its avarice and irreligion." There are many teachers "so possessed by the demon of education," and so "professionally nearsighted," that they claim the almost exclusive right to the child's time, so that he has no opportunity to pursue privately studies that may especially attract him, and no chance for independent growth. Thus, many students come up to colleges and universities with so little knowledge of their own interests and powers that it is almost a matter of chance what branches they take up. Long before a child's capabilities can be known, parents with false views of life and of school, and perhaps not without vanity and cupidity, not only allow but sometimes encourage teachers to overpress their children, and sow seeds of suffering and incapacity. The narrowness of mind and weakness of character, the paucity of information and slowness of intellect shown by so many originally bright boys after long years of expensive schooling, the long period of listlessness and perhaps depression, the "loss of that keen interest in life which even healthy young animals should feel," are the too common symptoms of that nervous exhaustion, impaired nutrition, poverty of blood, imperfect appetite and sleep which is distinctively school-bred. The case is always worst of all with girls, who feel emulation and the dangerous thrill of success or failure more than boys. They are more susceptible to all these psychical disturbances which Ross tells us are likely to exercise a more and more predominant influence in the production of disease as civilization advances. The highest functions of the nervous system are latest evolved and the earliest to decay; and it is precisely to these that the strain is applied. The brain, we are told, is made up of explosive material, the explosiveness of which may be increased or diminished; and it is the brains of girls that are more likely to become over-excitable. True education, especially of girls, which is the great want of our time, must be first of all hygienic.

The ignorance of teachers on this subject is appalling. Many reported their schools to Dr. Hertel as exceptionally healthy, and were indignant at the least suspicion to the contrary, when a careful examination revealed that one-third of all their pupils were really sickly. They do not realize that without a good appetite for a hearty breakfast, and a solid sleep of eight or nine hours, children are drawing upon their constitutional reserves in being in school at all, because the activity of nutrition is suffering to a degree often irreparable, the nervous system is slowly taking on neurotic habits, and bodily growth being reduced below what it would naturally be. "We must," says Dr. Hertel, "put aside all illusions, and openly confess that the present generation of young girls is weakly, anæmic, and nervous to an extraordinary degree. The nervous and anæmic young people of the present day need much more considerate treatment than has hitherto been accorded them if there is to be any prospect of deriving from the future generations physically and mentally strong." He also describes a home under the guardianship of mothers thus enfeebled by excessive school work, and agrees with Dr. Hasse's characterization of phases of insanity due to overpressure.

The state of things in the Danish schools, it should be distinctly said, is probably worse than in most European States, both as regards the number of hours of work and the hygienic environment of school children; and our author's conclusions, which we have tried to give as far as possible in his own phraseology, do not apply as forcibly in the United States. When we reflect, however, on the mere incipiency of sanitary science among us, the indifference with which attempts to place our schools under the control of such sanitarian experts as we have encounters, and the violent opposition to all plans for shortening school hours, it is obvious that we, too, are in real and grave danger.

Among the remedies suggested are a reduction of the number of studies, an intermission of a few minutes each hour, a decided reduction of work from the thirteenth to the fifteenth year, especially for girls, with increased attention to bodily development; the avoidance of all that causes even temporary "nervousness," and, for children of the better classes, more exposure and less petting and less society. Special care is required in schools of superior grade. "A lad of eighteen ought not, as a rule, to go to school any more"; and Doctor Pilger adds, after much special attention to the subject, "It is a matter of fact that within the last few decades a considerable proportion of the youth at our high schools [in Germany] has mentally and morally degenerated to a great extent." A health-record book for each pupil filled up by the family doctor, parent, and teacher; an eight or seven o'clock opening of school, as in Sweden, with correspondingly early close, and more physiological systems of gymnastics are also recommended. Since the publication of Doctor Hertel's book the Danish Government has officially reinvestigated the subject with still greater thoroughness, and tabulated reports of nearly 30,000 children, with results which confirm Doctor Hertel's in nearly every particular.

The decrease of country population, the increasing haste and excitement of city life, the increasing demand of extensive at the cost of intensive education, the universal demand for luxury and pleasure—all favor precocity and make a simple, quiet, healthful life for childhood increasingly hard. To keep our 500,000,000 brain cells all in good tune, especially if we are brain workers (who perform, according to the recent estimate of a physiologist, about eight times as much mental work as a manual laborer), requires more rest and more sleep; a late, if not an artificially retarded, development; frequent holidays and vacations; an only moderate interest in romance or in theology; no enforced music lessons, for piano practice is sometimes the direct cause of nervousness in girls; restraint of the fatal inclination of nervous children to associate with others with like defects of temperament; the inculcation of the existence of other and higher objects of endeavor than money. In a word, the teachers of to-day must study long and hard the wider and more ethical bearings of their voca-

tion, to make the school a moralizing and not an insidiously demoralizing agency, if the hold our educational systems have laboriously secured upon public confidence is to be longer maintained and justified.

ENGLAND: THE PARTY PROGRAMMES.

LONDON, October 9, 1885.

As was perhaps to be expected, the truce between parties which followed the close of the Parliamentary session was a very short one. Within three weeks Lord Hartington had taken the stump, and he was soon followed by Mr. Chamberlain and Sir W. Harcourt. Mr. Chamberlain has been incessantly active, speaking in London, in the north of England, in Scotland, and has in fact—partly by his own aggressive energy, partly by the help of the Tories, who now direct most of their fire upon him—fairly won his way to the most prominent position, after Mr. Gladstone, in the ranks of his party. The Radicals, whose views he proclaims, are becoming more and more numerous and powerful, and will constitute at least two-thirds of the Liberal party in the next Parliament. Still, they are not the whole party, and therefore Mr. Chamberlain could not be deemed the authoritative exponent of the Liberal programme. It is to Mr. Gladstone that the right of speaking for all belongs, and his manifesto, issued on September 19 in the form of an address to the electors of the county of Edinburgh, is now the official platform of the Opposition, almost as much as if it had been adopted, as in America, by a national party convention.

Such a platform is a comparatively new thing in our politics, and it is another mark of the extent to which statesmen address their reasonings directly to the electors, instead of, as formerly, simply standing on their general merits and party character, and reserving argument for the House of Commons. No doubt platforms will be the rule in future. But there is a special reason for their importance at this crisis. There is no one issue on which the general election turns. The late Government fell upon a minor question, in an accidental way. The present Government has done little, in its four months of power, for which it can be arraigned. Both parties appeal to the nation, not so much in respect of past performances as of services to be rendered in the future; and neither has up till now been at all clear about what those future services are to be. The Liberals had not agreed what they should propose, nor the Tories what they should resist. Both felt that for the two millions of new electors there must be prepared a new bill of fare, and that it ought to contain something striking, something taking—something, in short, worthy of the occasion. But as most of the old questions have been used up, while new questions have ripened slowly, it was not easy even for the party of change to prepare a list of reforms which should attract the newly admitted working class, without alienating the sober upper and middle classes. Some of Mr. Chamberlain's propositions had alarmed these last, and at one moment a split between him and the moderate Liberals seemed imminent.

To avert such a split and give his whole party a flag to which they can rally, was the function of Mr. Gladstone's declaration of principles. It is a long document, longer even than his famous election manifesto of 1874; yet not diffuse, for it deals with a great variety of subjects, and upon all of them goes deeper than the oratorical commonplaces one expects at election times. It has that remarkable and characteristic feature of all Mr. Gladstone's writing and speaking—a large flexibility of expression, which ordinary readers find at first sight vague, but which has plainly not been vague to the writer, and is found, when analyzed, to convey, or at least to indicate, a much wider significance than it had appeared to bear. He is charged sometimes with obscurity, sometimes with over-subtlety, sometimes even with a wish to mislead; but the explanation lies partly, no doubt, in the habits of caution which a long official life has formed, yet mainly in the constitution of his mind, which takes the whole of a subject into its comprehensive view, and strives to express at once the leading principles and the various limitations under which those principles must be applied. In his present address, besides a vindication of and apology for the policy of his Ministry from 1880 till last June, there are contained declarations of policy as to four questions ripe for treatment, and three others belonging to the more remote future. He promises to deal forthwith with the procedure of the House of Commons, with local government and taxation, with the reform of the land laws, with the registration of Parliamentary voters. He discusses the reconstitution of the House of Lords, the proposal to disestablish the Established Churches of England and Scotland, the demand that elementary education should be made universally gratuitous, indicating his opinion upon all these points, which, however, he conceives to be beyond the scope of his own political action, which can hardly last for many years more. Finally, he intimates, as regards Ireland, that he is prepared to pursue the policy of largely increasing the liberty of self-government in local matters—a liberty which is to be limited only by the necessity for maintaining "the supremacy of the Crown, the unity of the Empire, and all the authority of Parliament necessary for the conservation of that unity."

Sufficient time has now elapsed since the publication of this manifesto to enable its effects to be estimated. The first, and for the moment the most important, has been to save the harmony of Liberal leaders and the militant unity of the Liberal party. Lord Hartington, whose intellect is rather solid and sensible than creative, had said little to feed the hopes or touch the sentiment of the masses. Mr. Chamberlain had put forward bold schemes of policy, but some of them alarmed cautious men, and had provoked keen criticism from persons occupying the detached yet influential position of Mr. Goschen. Mr. Gladstone's four practical proposals had the merit of being at once constructive, practical, and yet moderate. They furnish a ground on which both Mr. Chamberlain and Mr. Goschen may stand, so both these eminent men have hastened to declare their adhesion to the Midlothian programme, while the one claims his right to go somewhat beyond it, and the other to examine the details which it may involve. As the Tories have been reckoning all through upon a split in the Liberal ranks, the effect of this rally to the old flag, borne by the old leader, is for the moment immense. Even those who think that a schism must soon come, that when Mr. Gladstone retires, his successors will, like the generals of Alexander the Great, celebrate his departure with bloody battles, are glad that they can stand shoulder to shoulder under his leadership once more, and secure a majority at least for the opening of the new Parliament.

The second thing to be noted regarding the manifesto is the studied reserve and large admission of possible solutions in the language which Mr. Gladstone uses regarding Ireland and the Parnellite claim for a separate legislature. He was, of course, bound to insist—every English statesman must insist—on maintaining the unity of the British Empire and the supreme authority of the Imperial Parliament. But there is nothing in his phrases inconsistent with the creation in Ireland of a central national council or parliament subordinate to that of the three kingdoms. I do not say that he contemplates such a solution. Its difficulties are obvious, and one of them is that there is little ground for hope that such a solution would be accepted by the Nationalist party. But he does not repudiate it; he even admits the claim of Ireland to a somewhat larger measure of local self-government than it is proposed, by the approaching reforms, to confer upon the various parts of Great Britain.

There remains, in the third place, his expression of opinion on the question of established churches. It is an intimation, guarded but distinct, of his belief that the time will come when religious establishments will cease. That time, he thinks, will not fall within his own life. Much discussion must come first, many enormous practical difficulties will have to be considered and overcome before so strong and so old an institution as the Church of England can be severed from the soil which her roots have so deeply penetrated. There is no encouragement in Mr. Gladstone's words to any immediate agitation. But in avowing that he believes this great change will ultimately come, he has gone further than any statesman of similar rank ever went before, and has unquestionably given an immense stimulus to the hopes of the party, active and steadily growing, which desires to effect a complete severance of Church and State. And in the same measure he has alarmed the friends of establishments. It is all very well to be told that an institution you love and revere will last for years yet—will probably last, if you are an elderly man, beyond your own allotted span on earth. But this is, after all, somewhat cold comfort. A landowner does not greatly enjoy looking at a clump of tall trees upon his lawn, which he has watched for fifty years rising to superb maturity, when he knows that the next heir will cut them down as soon as he dies. To the clergy of the English Establishment, and to most of the most zealous and religious laymen, the struggle for her existence seems to have already begun when an ex-Prime Minister, and one whose attachment to religion and to episcopacy has always been profound, predicts her approaching fate.

It was impossible for the Tory party to leave Mr. Gladstone's programme unanswered. That they had kept silence so long (for since Parliament rose Sir Michael Hicks-Beach and Lord R. Churchill have each of them spoken rarely, and said little to enlighten the electors, while Lord Salisbury had not spoken at all) was in itself surprising, when contrasted with the aggressive vivacity and copious constructiveness of Mr. Chamberlain. People had begun to surmise that the Tory chiefs really did not know what to say, or were too much divided in opinion to be able to agree on a platform. Their position is certainly embarrassing. They have got three sets of supporters to satisfy, and cannot satisfy any one set without offending one or both of the others. There are the country gentlemen, the capitalists, the upper classes generally, and the farmers, all of whom desire no political change whatever, unless it be one which would improve the value of land and revive our drooping agriculture. These classes have been the mainstay of Toryism in time past. They would be supreme in the Tory party now, were it not that their attachment is so well secured that they do not need, like doubtful adherents, to be frequently propitiated. Then, further, there is the Conservative middle and working class in the towns, an element which the Liberals used to ridicule, but whose existence, nay whose power, they have had to admit ever since the election of 1874. These people do not know what they want from a Government, unless, to be sure, something that would improve trade, but they are by no means op-

posed to change, or perfectly satisfied with the world as it stands. They don't want to let the Radicals have all the credit of proposing new measures. They hate the Radicals rather from pure party spirit than because they fear their measures; they admire Lord R. Churchill because they think he is not only a hard hitter, but abreast of the time, prepared to dish the Radicals by outbidding them if necessary. This section has now become so important, since the large towns have got additional members and the franchise has been extended in the counties, that it must be fed with something positive, and not merely bidden, as of yore, to rally in defence of the old institutions of the country. The temptation to offer it some kind of protection by a tariff against certain kinds of foreign goods would be strong, were it not that, in such a case, a duty on foreign corn would have to be also offered to the farmers. But the proposal of such a duty would in its turn alarm the townsfolk, and give a terrible opening to the Liberals. Hence this subject of protection has to be very gingerly handled. The minor lights of the Tory party may refer to it, and in the general restlessness of people's minds suck, or think they suck, some small advantage thereout. But the leaders do not venture to make it a part of their platform.

Then, lastly, there are the Irish Nationalists. One must not indeed call them supporters of the Tory Ministry: they are rather allies, temporary allies, allies till the election is over, against the Liberals, whom the Nationalists hate, not only on account of the coercion acts of the expiring Parliament, but because, being a stronger party than the Tories, they are more likely to come into conflict with Nationalist views in the new Parliament. The Tory chiefs cannot afford to quarrel with Mr. Parnell, because they want the votes of the Irishmen in England; it is a heavy vote in the northern and western cities. On the other hand, they cannot yield to him, or hold out any hopes of conceding the demand for home rule, without alienating the old-fashioned Conservatives of England, and losing the last chance of tempting away from the Liberal camp those moderate men whom the Radicals have terrified. Already Lord R. Churchill has damaged his party infinitely more by coquetting with the Nationalists and persuading the Cabinet to depart from Lord Spencer's policy, than he has helped it by stimulating the pugnacity of the new Tory democracy. He has, in fact, been the most powerful helper Mr. Gladstone could have desired: he has frightened back into the Liberal fold many straying sheep who dislike his methods and his tone even more than they disapprove of his practical proposals.

In these circumstances, the position of the Tory chief is not an easy one. No wonder Lord Salisbury has waited till now to speak; no wonder that he has spoken with unusual moderation and prudence. His platform has been less ambitious, but also more liberal, than most people expected. It may be described as a qualified and limited edition of Mr. Gladstone's platform, omitting, but not refusing, alterations in Parliamentary procedure; declaring for a reconstruction of local government and reforms in the land laws (while ridiculing some of Mr. Chamberlain's plans for that object); treating Irish demands in carefully non-committal phrases, which, while they agree with Mr. Gladstone in insisting on maintaining the unity of the Empire, do not negative the suggestion of an Irish Parliament; and showing very little of the traditional Toryism till the Church question is reached. There, indeed, Lord Salisbury becomes explicit, earnest, vehement. He and his party will oppose any and every proposal for disestablishment or disendowment, and he appeals not only to all Conservatives, but to all friends of the Church of England, to rally round him for her defence.

It was a matter of course that the opening which Mr. Gladstone's deliverance on this subject gave should be used as it has been. It gives a genuinely Tory character to what would otherwise be almost a Liberal programme; it will make a good cry at the elections. Apart from this, there is little or nothing in the Conservative promises to excite enthusiasm. But the cohesion of that party is so great that it can dispense with allurements and enthusiasm more readily than can the Liberals; and the Tories may now at least say that they are as ready as their opponents to give local government to the counties, to cheapen the transfer and simplify the laws of land. When one considers how many rocks lie around Lord Salisbury's course, he must be given the credit of having thus far steered with watchful judgment. Y.

WHY ENGLISHMEN ARE NOT ALARMED AT THE POLITICAL CRISIS.

LONDON, October 10.

IN my last letter I described the strange calmness of public opinion in the face of impending political revolution. My object in this letter is to explain the reasons for the firmness, indifference, or apathy with which modern Englishmen contemplate constitutional innovations.

The causes of this temper, which differs radically from the tone of 1832, of 1848, or even of 1868, are various, and are closely connected as well with the weaknesses as with the strength of the national character. The first, the strongest, and the least rational ground for the confidence with which modern Englishmen believe that such vital alterations in the Constitution as an immense extension of the Parliamentary franchise will not seriously affect the prosperity of the country, is the unavowed belief in English luck. Fortunate nations, like successful men, believe in their own good fortune. Chances have turned out in their favor hitherto, and what has been they anticipate will be. Now England has for the last sixty years been the luckiest of countries. During centuries the land has been free from invasion; for the Revolution of 1688 was a national movement, though aided by Dutch troops. More than sixty years have passed since any large body of persons had serious reason to dread that England might be the victim of invaders. Nor do the mass of Englishmen now living remember a time when any part of Great Britain was threatened by serious internal disturbance. English experience shows, or seems to show, that English good sense or English good luck has carried the State harmless through all the rocks or quicksands on which less favored nations have made shipwreck. Liberal or democratic reforms have with us averted instead of stimulating violence. Socialism itself has passed among Englishmen from a dangerous political heresy into a discussable opinion, which good men and sensible men can argue over without displaying loss of temper, or fearing that appeals to reasoning may soon be superseded by an appeal to physical force. The very trades unions which were, ten years ago, the bugbear of all alarmists, have become, or seem to have become, the supporters of sound economic doctrine, and are relied upon (whether rightly or not, I cannot say) to resist the plausible fallacies of fair trade. Contrast all this with the experience of France, of Germany, of Italy, one might almost say of all Continental Europe. The ordinary politician is mainly guided by the very narrow experience afforded by the few years over which his own memory, or at most the memory of persons he has known, stretches; and if he talks of the lessons of the past, means, whether he knows it or not, the teaching of the last half century. To any one who forms his anticipations of the future solely with reference to the impressions produced by a vague knowledge of English history since say 1832, it must seem as clear as day that Englishmen have somehow or other been always able to avoid the calamities which have injured or crushed the prosperity of foreigners. Whether we attribute this success to skill or to luck makes little odds. If Englishmen are more skilful than others, why, it is thought, should their political talent fail them? if they are more fortunate, why should their luck turn? The good luck of England is the mainstay of English confidence.

A second and more creditable ground for absence of panic is, that in England permanent liberty of discussion has at last produced one of its most beneficial results. It has made it possible for thousands of citizens to argue about the most serious public affairs without losing either their temper or their heads. In England we have come to perceive the truth, hardly yet grasped by Frenchmen or even by Germans, that the avowal of dangerous doctrines does not at all necessarily lead to the doing of dangerous acts. We can allow a great deal for the immense interval which, at any rate in political matters, separates the word from the deed. Our politicians abuse each other heartily; but we all know, though we have not all of us the audacity to say it, that invective is the ornament of debate. There is not the least reason to suppose that Mr. Chamberlain and Lord Salisbury could not sit down together with the greatest pleasure at the dinner-table of a common friend, and for my part nothing would surprise me less than to find, within the course of the next ten years, Lord Randolph Churchill seated in the same Cabinet as Mr. Chamberlain. It is fair to myself to add that an event which would cause me no surprise would certainly cause me no gratification. Many coalitions which are possible would, should they occur, be of very bad omen for the country.

Now the fact that Englishmen are little perturbed by public discussion leads to a further and less satisfactory consequence. It creates among the majority of the nation an unavowed but none the less real scepticism as to the genuineness of the attacks which leading public men make upon each other, and as to the reality of the dangers which our political teachers attribute to any policy which does not meet with their approval. Were a statesman to arise endowed with all the eloquence of Fox and the prophetic foresight of Burke, his denunciations of mistakes in policy, or his prophecies of public calamities, would go very little way to influence the permanent feelings of the electors. It is possible that such a man might gain their votes, but it is almost certain that he would not seriously rouse their alarms. So many persons have cried "wolf" without any wolf making his appearance, that the result has followed which the fable leads us to expect. The nation has been warned so often that the Constitution was on the point of being undermined, that Democracy meant Socialism, and that Socialism meant revolution and violence, that it has at last come to fancy that the Constitution will take care of itself, and that Democracy and even Socialism may after all not be such terrible evils. "Sufficient for the day are the evils thereof," is the principle which governs the political conduct of thousands who never formulate their grounds of action.

My aim, let me carefully note, is neither to defend nor to attack this condition of opinion. Those who think it worth while to read my letters must remember that I am acting as the reporter, not as the critic, of prevailing sentiment. Whether it be a blessing to the nation that its members should become tolerant of free discussion, is a matter which each of your

readers must decide for himself. What I insist upon is the existence of such toleration in England, and its immense effect in calming down the fever of political contests. The news of this very week shows us how different in this matter is the condition of France. The unexpected return by the electors of a large Conservative Opposition has perturbed the Republican party throughout the country, and has already led to riots at Paris. This alarm may not be groundless; the noticeable thing is its existence. But though Frenchmen have not yet acquired the coolness of Englishmen, the existence of something like freedom of discussion for the greater part of nearly a century has already done a good deal to strengthen the State's political nerve. Events like the late elections would, less than a century ago, have at once produced insurrections or *coups d'état*.

The last and the best reason which a reflective Englishman can adduce for his calmness in the midst of changes which may certainly lead to grave national calamities, is the conviction, which the knowledge not only of England but of all other modern civilized countries forces upon a candid observer, that changes in the form of a constitution—in what Mr. Frederic Harrison ingeniously calls the "State system"—of a country, and especially of such a country as England, do not produce (directly, at least) anything like the amount of effect which is naturally expected from such innovations by their promoters or by their opponents. Not fifty years ago the greater number of educated Englishmen believed that democratic government led all but certainly to the most obvious and grossest tyranny of numbers. The poor, it was argued, are and must be in every community the vast majority of the people; the poor must of necessity wish to share in the blessings of wealth. In a democratic community the majority—that is to say, the poor—are the sovereign power; the sovereign, whether consisting of one man or of a million, will follow his apparent interests; and where the poor are sovereign, their apparent interest will be to plunder the rich. Confiscation, therefore, and agrarian laws are not the accidents but the natural fruit of democratic government. This line of reasoning, in one form or another, was, and it seems to me still is, in substance, the strongest argument against an extended suffrage. No one can deny that it has in it elements of truth, and no one can wonder that, when reinforced by what seem to be the obvious lessons of the French Revolution, it should have moulded the convictions of the well-to-do classes throughout Europe. Every one, however, feels rather than knows, that for practical purposes this kind of argument has lost its hold on the world. The poor are still the vast majority in every country; rich men care as much for their property in the year 1885 as they did in 1800; yet not in England only, but in most countries of the civilized world, rich men feel no deep dread of an extended suffrage. The reason of this is plain: the formal possession of legal sovereignty, it has been found by experience, does not really make the poor supreme. Property, somehow or other, asserts its weight everywhere. It is not the spoliation of the rich, but the corruption of the poor, which, if we are to trust to experience, constitutes the worst disease of modern democracies. However this may be, the one thing which appears to be certain is, that millionaires may live and flourish in countries where universal suffrage is the basis of the national polity. This fact, like many obvious facts, may probably have produced an undue effect on the political sentiment of the day. That it has produced an immense influence is past a doubt. Conservative orators occasionally express rhetorical wonder at Lord Hartington's willingness to sit in the same Cabinet with a politician such as Mr. Chamberlain, who is not afraid of the name of a Socialist. Tories might just as well, by the way, wonder why a rich man like Mr. Chamberlain should patronize principles which, as it is alleged, would, if carried out, lead to the division of his wealth among his workmen. But no one really finds it hard to answer such inquiries. The reply is, that Lord Hartington and Mr. Chamberlain, and thousands of other men with them, do not really believe that the formal possession of political power makes the poor the rulers of the nation.

Correspondence.

PERSONAL LEADERSHIP.

TO THE EDITOR OF THE NATION:

SIR: There is a feeling of jealousy and resentment among our people at any reference to English political methods in comparison with our own. But at a time when American inventions like the reaper and the sewing-machine are used all over the world, when English politicians have argued that the Senate of the United States as an institution is preferable to the House of Lords, and when the civilized world is studying with admiration the working of our Supreme Court, it seems as if that feeling was out of place. This country has arrived at a point where it need not fear comparison with anybody, and it is the part of wisdom to study all the lessons which political experience has to offer.

There are three men in England whose position at this moment is full of instruction for us: Mr. Parnell, Mr. Chamberlain, and Mr. Gladstone. Mr. Parnell comes nearest to what we call a "boss." He proposes to dictate the nomination and the election of candidates in almost every district in Ireland, and it is quite probable he will succeed. But observe the vast difference when personal power is accompanied by personal responsibility. His strength is in the advocacy of home rule for Ireland; but he cannot declaim on the general subject and get all the advantage of this, and then step out and leave the details in the hands of some person or persons for whom he is not responsible. Every eye in the three kingdoms will be upon him for months to come, and every word and action will be watched by friend and foe. Any serious suspicion of using his position for personal advantage would kill him instantly. And he must not only be personally pure, but he must succeed. For the Irish people the movement is embodied in him, while for the English he is the centre of attack. It is he who must formulate the demand, and he must put it in such shape that it can be answered by yes or no. The mere abstract question might lead to violent revolution, and it is just this personal intervention which renders possible a clear test of the popular will. Either side may of course prefer civil war to submission, but the alternative is clearly defined.

It pleases Mr. Joseph Chamberlain to pose as a Radical demagogue. His proposals of a graduated income tax and the forcible expropriation of land on behalf of peasant proprietors is worthy of General Butler. But he cannot simply arouse popular passion and then evade personal responsibility. If he secures sufficient popular support, he must sooner or later take the Premiership, and put his plans into definite shape—in itself an extremely sobering process. The battle will rage, not about indefinite generalities and through the exasperating method of calling names, but about particular measures embodied in his personality. Both will be thoroughly discussed, and the result, whatever it is, will be a clear expression of the will of the majority of the people, which is, and must be, in popular governments, the final arbiter.

As to Mr. Gladstone's position, I wish to refer only to one particular point, which cannot be better expressed than in a recent issue of the London *Spectator*:

"The 'split' in the Liberal ranks, over which the Tories are so exultant, does not matter much, as it is in the main a split among leaders who, if Mr. Gladstone will command in chief, will soon arrive at some compromise; but what does matter is the confusion among the candidates. There are 500 of them in Britain alone; they are besieged by fanatic sections among the voters, and in the absence of guidance they are pledging themselves to all kinds of crude ideas, and are unable to defend themselves by the usual argument that the leaders have decided upon a possible plan of action. This anarchy should be terminated at once, or we may see the Liberal party reduced to 500 individualities, each declaring that he is compelled by his peculiar relation to his constituents to fight for his own hand. Mr. Gladstone must speak out soon even if it be on paper."

Since then Mr. Gladstone has spoken out, with the result of so closing up the Liberal ranks as to render their success almost certain. But does not this extract describe almost perfectly the condition of our politics and our candidates *at all times*?

The only way of arriving at this personality and these definite measures in place of our chaos of generalities and anonymous committees is Cabinet responsibility, and the sooner we come to it the sooner we shall get our Government into some kind of working condition.

G. B.

BOSTON, October 19, 1885.

REPUBLICAN INDEPENDENTS IN CINCINNATI.

TO THE EDITOR OF THE NATION:

SIR: Although there were many indications in the Cincinnati vote of last November which justified the *Commercial Gazette's* boast that it had trampled out Independency from the Republican party of the city—save from a handful of young men—there are some very hopeful signs shown by the election of this week that the leaven of the Mugwump has permeated a considerable body of Republicans who draw the line of their right to bolt at Presidential nominations. Several notoriously bad nominations for important county offices were made by the Republican Convention of Cincinnati. The conduct of the party organ was pretty nearly the same with regard to these nominations as toward the candidacy of Mr. Blaine. Before the Convention it denounced them as thoroughly unfit and unsafe to be made. After the Convention it derided the idea that an honest Republican could serve his party or his city best by refusing to obey the dictates of a reckless nominating body. Its denunciations of bolters were indeed less frantic and indecent than during the campaign for Blaine and Logan, for the stake was smaller and the nominees were too near home to make any temporary varnish efficacious to hide their well-known character. It is a token of returning sanity among reputable Republicans that in the suburban districts, which contain the largest body of intelligent Republican voters—such as Mt. Auburn, Walnut Hills, Avondale, and College Hill—these offensive nominees were so thoroughly "scratched" that their defeat is placed beyond peradventure, even while the result of the rest of the voting in Hamilton County is in doubt awaiting the official count.

Evidently the fear of the party organ is abating, and the custom of carrying sovereignty under the hat is gaining popularity in Cincinnati. The Spartan band of Cincinnati Mugwumps may rejoice at this as an evidence that their good seed, sown amid much contempt, was not cast into barren soil, even though its harvest was some-

what laggard. Blaine and Logan are not the only candidates who illustrate the principle that the only sure way of keeping a party out of the hands of unworthy men is to refuse to vote for the bad men, even in spite of the apprehension that the opposite candidates are no better. The business of an honest Republican is first to rid *his* party of scoundrels. Then he may have time to attend to the knaves of the other party.

INDEPENDENT.

CINCINNATI, O., October 17, 1885.

THE ATTORNEY-GENERAL AND THE BELL PATENT.

TO THE EDITOR OF THE NATION:

SIR: Speaking of the action of the President in "bringing under review the suit instituted in the Attorney-General's office to set aside the Bell telephone patent," you say:

"Attorney-General Garland does not make a satisfactory defence of himself; for, although it is true that he did not order or authorize the suit to be begun, it was his duty, upon his return to his office, to have done what the President has now done—that is, to have reviewed the action taken by the Solicitor-General in his absence. And this was all the more incumbent on him since he was a party having an interest in the suit. All that needs to be said is that the President has gained in public estimation through this incident as much as some other people have lost."

What has been said in the Democratic press on "this incident" has been quite uniformly in the direction of defence of the Attorney-General—if "defence," implying, as it does, something to be defended, be an appropriate word in this connection; and what has been said by way of fault-finding or criticism in the matter has, as a rule, appeared in Republican journals, to whose utterances attention was scarcely to be expected. But when the *Nation*, even to the extent above indicated, unites in this criticism, the animadversions upon the conduct of the Attorney-General deserve notice.

Supposing Mr. Garland to have been solicited to act personally in the matter, what action could he have taken that would have escaped criticism?

A patent, than which few more valuable have issued, is alleged to have been procured under circumstances involving deliberate and more than usually reprehensible fraud. Here is broached a question in which every citizen of the United States has a deep interest. The accusations against the Bell patent (in respect of the truth of which I have no opinion, as I have no concern), charge upon the patentee such violations of right and propriety as imperatively demand the fullest and closest inquiry, and deserve the severest punishment possible under the law.

But it is said that it is, at the least, a question whether investigation of this charge can be had without action on the part of the Government through the Department of Justice. Waiving discussion of this question, let us concede that such action is necessary, and that the Attorney-General is the only person from whom must come the necessary authorization of the action.

Now it happens that the Attorney-General, being the holder of stock in a corporation adverse to the Bell interests, would, to an extent, be benefited by *substantiation* of the charge in question. Concede that, in this aspect of the matter only, that fact should stay his hand; is every one else who is interested—and what citizen of the United States is not?—to be deprived, even for a season, of the clear right to have the accusations *investigated?* Has the public mind been schooled by the more recent past of our history to presume wrong motives, rather than the contrary, on the part of our highest officials? And, in the case in hand, is it impossible that an official should act as his conscience and judgment dictate, with assurance of credit for right motives at the hands of his fellow-citizens? Assuming, then, an application to the Attorney-General, he being the only person who could act, what should he have done in this matter?

In point of fact, however, all that he could have done would be to enable the investigation to be had; no one pretends that he could determine the real question in issue, viz., whether the charge against the Bell patent was true or false. On this question those interested in the patent should have been the first to court inquiry, and in determining the question the Attorney-General could play no part; that is the function of established and familiar tribunals.

Finally, you say that "it was his duty, upon his return to his office, to have done what the President has now done—that is, to have reviewed the action taken by the Solicitor-General in his absence." What! although any action on his part in the premises would have been improper, yet some action by him which might have ratified and confirmed what was done by the Solicitor-General was his duty! Is it fair even inferentially to number the Attorney-General among the "some other people" who have lost "through this incident"?

HENRY E. DAVIS.

WASHINGTON, October 19, 1885.

[We would ask our correspondent what happens if a suit to which a corporation is a party comes before a judge who is a stockholder. Does he not either refuse to try it or divest himself of his interest in the stock? Is this because "the public mind has been schooled by the more recent history of our past to presume wrong motives, rather than the contrary, on the part of our highest officials"? Certainly not; it is because judges have not only to be pure, but to avoid positions in which even the evil-minded will doubt their purity. In this case Attorney-General Garland occupied a judicial position even in ordering an investigation, because the mere ordering of an investigation by an official of his standing raised a presumption in the public mind against the Bell Telephone Company sufficient to affect the value of the stock. The Attorney-General, therefore, owed it to his office as well as to the public either to refuse to act until he had got rid of all personal interest in the proceeding, or until he had publicly, and for reasons stated, turned the decision of the question over to some other officer. In other words, it is the duty of all judicial and quasi-judicial officers not only to satisfy the reasonable but the unreasonable that they are impartial, for on matters of this kind the unreasonable are in a majority. The President's action, in fact, is as good an illustration as we need of the way in which the Attorney-General's course affected even favorably disposed bystanders. He surely did not look at it with a jaundiced eye.—ED. NATION.]

THE DUTY ON AN ARCHITECT'S TOOLS.

TO THE EDITOR OF THE NATION:

SIR: Having noticed Mr. Warren's communication in your issue of September 10 (No. 1054), I cannot forbear mentioning—in contrast to his—my experience under similar circumstances on arrival at the port of New York last June. My fate on that occasion, though much more fortunate, only serves to corroborate his assertions as to the arbitrary and contradictory interpretation of the law governing the admission of books and photographs for use in professional work.

An architect, I had, like Mr. Warren, brought home with me a quantity of books and photographs, to the value of $300. These were passed readily on my simple statement as to my profession, without the necessity of producing a certificate from the Consul-General in London. I had been advised to procure this certificate as a precaution, by an artist friend who had had sad experience in the uncertain ways of our customs officials. It would be interesting to know whether Mr. Warren was armed with any document of this kind; and I should like to ask if it is not required by law. Whether it be required or not, the fact remains that in its absence one may or may not have to pay a duty of 25 per cent., according to the mood or temperament of a man in blue coat and brass buttons. Is this carelessness and stupidity on his part, or want of instructions from headquarters? What is the law, and why is it not uniformly enforced?—Respectfully,

WALTER COPE.

GERMANTOWN, PHILADELPHIA, October 12, 1885.

A CORRECTION.

TO THE EDITOR OF THE NATION:

SIR: In the last issue of the *Nation*, in the course of an article on "Burgoyne's Hanau Artillery," occurs this sentence: "Mr. William L. Stone . . . procured a copy of the diary of G. Pausch, . . . which he found in the State Library at Cassel." In the last clause of this sentence, if for "he found" the reader should substitute "was found by Mr. E. J. Lowell," the statement would be correct. Mr. Lowell procured me the copy of Pausch at my request, and rendered me much courteous assistance in the matter. Kindly print this as a matter of justice to that gentleman. WILLIAM L. STONE.

JERSEY CITY, October 16, 1885.

"SCIENTIFIC THEISM."

TO THE EDITOR OF THE NATION:

SIR: Permit me to correct a typographical mistake, of more than usual importance, in your announcement of my forthcoming book in your last issue. It reads: "Mr. Francis E. Abbot will shortly publish through Little, Brown & Co., Boston, a work entitled 'Organic Scientific Philosophy and Scientific Atheism.'"

The title as thus printed would give to many readers a very unfortunate and injurious impression of the character of my book; for it seems to imply, either that "organic scientific philosophy" is itself "scientific atheism," or else that it considers science atheistic, and therefore attacks it. Nothing could be further from the truth. The words "organic scientific philosophy" are no part of the title of this book, but simply indicate that it is one of a series of books which I hope eventually to complete. The title itself is 'Scientific Theism,' not 'Scientific Atheism.' The main purpose of the book is to show that modern science, philosophically interpreted, leads not to atheism, not to agnosticism, not to idealism, but to a *realistic spiritual theism*, which will satisfy both "head" and "heart." There is, in my opinion, no such thing as "scientific atheism," for atheism is simply the most unscientific and unphilosophical view of the universe that the human mind can form. FRANCIS E. ABBOT.

CAMBRIDGE, MASS., October 16, 1885.

Notes.

THE January issue of *Lippincott's Magazine* will be on the first of the month, and this practice will be maintained, thus bringing another monthly periodical into line with the *Century*. The new editor announces that he has made arrange-

ments for publishing simultaneously with their appearance abroad stories, essays, and sketches by various well-known English authors, from Matthew Arnold and Swinburne to "Ouida," F. Anstey, and W. H. Mallock.

J. B. Lippincott Co. have nearly completed a work on India called 'The Queen's Empire,' by Joseph Moore, jr. It will be finely illustrated with fifty full-page phototypes, and in other respects will be very handsomely made.

An interesting anthology, 'Representative Poems of Living Poets, Selected by the Poets Themselves,' is in the press of Cassell & Co. Miss Jeanette L. Gilder devised and has edited this compilation, and Mr. George P. Lathrop will furnish an introduction. 'Oberon and Puck: Verses Grave and Gay,' by Miss Helen Gray Cone; and 'Along Alaska's Great River,' by Lieutenant Schwatka, are also announced by the same firm.

A volume of poems, 'In the King's Garden,' by James Berry Bensel; and a 'Life of Grant,' by E. E. Brown, will be published by D. Lothrop & Co., Boston.

Doctor Holmes's *Atlantic* papers, "A New Portfolio," will in book form bear the title, 'A Mortal Antipathy.' The publishers, Houghton, Mifflin & Co., also announce two novels, 'Bonnyborough,' by Mrs. A. D. T. Whitney, and 'High-Lights' by an anonymous writer.

'Broken Bonds,' a novel by W. A. H. Stafford, is in the press of W. L. Mershon & Co.

Potter, Ainsworth & Co. have nearly ready a 'New Word-Method,' by J. Russell Webb.

D. C. Heath & Co., Boston, publish immediately 'Elements of Descriptive and Qualitative Inorganic Chemistry,' a text-book in practical laboratory work, by James A. Shepard, of the Ypsilanti (Mich.) High School.

'A Woman's Work,' memorials of Eliza Fletcher, by the Rev. C. A. Salmond, of Glasgow, will be published here by A. D. F. Randolph & Co.

We are glad to learn that Mr. Eugene Schuyler intends to print the lectures which he is now delivering at Cornell University on "American Diplomacy and the Furtherance of Commerce." With them he will join the lectures also given by him at Johns Hopkins University last winter on "Our Consular Diplomatic System." There is hardly a more striking instance of the distinction between the art of government and the art by which public office has been made (in Lowell's caustic phrase) "a tramp's boozing-ken," than the recent history of our ordinary foreign relations affords. On no subject is the popular ignorance denser, as we see when applicants arise for places in our diplomatic and consular service; and this ignorance is one cause of the long acceptance of obsolete ideas of protection. Mr. Schuyler's book ought to go far to dispel it.

The seventh number of Mr. J. H. Hickcox's excellent Catalogue of United States Government Publications (Washington) goes a step beyond the previous scheme of this publication. Nearly all of it is devoted to a very detailed list of the issues of Government maps and charts issued during the past six months. Such a list has, we believe, never before been attempted, though the making of it is a service which the undevout bibliographer ought to have wasted time and money over long ago. Mr. Hickcox has greatly enhanced the value of his Catalogue by this extension of it.

Mr. Andrew Lang's 'Books and Bookmen' will be published about the 1st of December. It will be illustrated, and will include papers on the Elzevirs, on Book-binding, and on Literary Forgeries. It is to be the first of a series of "Books for the Bibliophile," which Mr. George J. Coombes proposes to publish at intervals. The second volume, to appear toward the end of January, will be 'Ballads of Books,' edited by Mr. Brander Matthews. This will be a selection of the poems about books (as books, and not as literature). It will contain poems written expressly for it by Mr. Austin Dobson, Mr. Edmund Gosse, Mr. Cosmo Monkhouse, Mr. Lang, and Mr. H. C. Bunner.

A series not unlike "Books for the Bibliophile" is announced by M. Édouard Rouveyre in Paris. It is to be called "Causeries d'un Ami des Livres." It is to appear at irregular intervals, and will describe conditions, give prices, note original editions, etc., etc. The first three numbers will be devoted to the Romanticists, the first volume to the Poets, the second to the Prose Writers, and the third to the Minor Romanticists.

The English translator of Bacourt, 'Souvenirs of a Diplomat' (Henry Holt & Co.), has not improved his opportunity as he might have done. He ought to have supplied not half a dozen, but fifty notes in elucidation or correction of the text, going to the daily press of the period (1840-1842) and quoting freely. Then if he had supplied what the original lacked, an index, he would have conferred a real boon upon the student of our history, besides making a very much more entertaining book. We must find fault, too, with his reproducing the Frenchman's blunders in spelling our proper names; or, let us say, not his blunders, but those of the transcriber from his MS., or of the French printer. They are unjust to so cultivated a man. The translation is rather careless, though seldom inaccurate; yet M. de Bacourt, in writing from Washington that Charles Dickens is in the United States (*aux États-Unis*), is made to say he is "here"—*i. e.*, in Washington. We notice also the vulgar phrase "laid down," for "lay down," on page 219. However, all deductions made, it is a gain to have this work made more accessible than before. A full appreciation of it was given in the *Nation* of October 26, 1882.

Ginn & Co., Boston, have just published a 'New High School Music Reader' for the use of mixed and boys' high schools, which may be safely pronounced the best work of its kind in the market. It is edited by Mr. Julius Eichberg, who not only is one of the most thorough musicians in the country, but has embodied in this work the results of eighteen years' experience as director of musical instruction in the Boston public schools. Perhaps he has somewhat abused the editor's privilege by inserting no fewer than fourteen of his own compositions; and he might have improved the index by adding the names of the composers. Yet these are the only possible criticisms on the book, which contains a most admirably arranged and varied collection of folk-songs, national hymns, chorales, easy selections from oratorios, etc.

The latest American additions to the Tauchnitz series are Mr. Crawford's 'Zoroaster,' Mr. James's 'Little Tour in France,' Mrs. Jackson's 'Ramona,' Miss Fletcher's 'Andromeda,' and Mr. Howells's 'Rise of Silas Lapham.'

Mr. George J. Coombes is the American agent for the large-paper copies of the new edition of Jesse's life of 'Beau Brummel,' illustrated by portraits in colors.

Mr. W. R. Benjamin has for sale now the large-paper copies of Leigh Hunt's 'Book of the Sonnet,' printed years ago, but only recently placed on the market.

As the fever for *éditions de luxe* abates, the fondness for large-paper copies seems to increase. Often the large-paper edition of a book is intended for the use of the "extra-illustrator," that he may not have to cut down the prints, portraits, views, autographs, etc., with which he adorns his chosen volumes. It is, for instance, for his benefit chiefly that there will be printed a large-paper edition of Mr. Stedman's study of the 'Poets of America'; and the extra-illustrator is much aggrieved that there are no large copies of Mr. Laurence Hutton's 'Literary Landmarks of London'—a book which fairly begs for "inserted plates." But the large-paper editions of certain beautiful little books—the "Parchment Library," the Golden Treasury Series, the poems of Mr. Dobson, Mr. Locker, Mr. Lang, and Mr. Gosse—appeal not merely, indeed not chiefly, to the extra-illustrator, but rather to the true lovers of books as books. Even in the large-paper condition Mr. Dobson's 'Old-World Idylls' is a handy and medium-sized volume, with no suggestion of clumsiness about it. The publishers of the new and admirably made Riverside Aldine Series issue a so-called first edition, uncut in plain boards, with a simple paper label, but as yet we have seen no announcement of a large-paper edition, for which a demand may yet arise.

In the *Revue Historique* for September-October, H. Forneron gives the third and concluding paper on Louise de Kéroualle, Duchess of Portsmouth. It begins with the arrival in England of Barrillon, the French ambassador. The interest of the narrative, of course, ends with the death of Charles II., after which his mistress retired to her French estate of Daubigny, now one of the titles of her descendant, the Duke of Richmond. The remaining fifty years of her life contained nothing worthy of note. She died in 1734 at the age of eighty-five years.

Science publishes a letter from Director Otto Struve, of the Russian National Observatory at Pulkova near Saint Petersburg, to Messrs. Alvan Clark & Sons, from which the quality of their work in figuring the thirty-inch object-glass furnished to that institution may readily be inferred. On behalf of the Government he informs them that, in acknowledgment of the excellent performances of the great object-glass, the Emperor has conferred upon them the golden honorary medal of the Empire, given very rarely and only for quite extraordinary merits, and by Alexander III. bestowed only on the Messrs. Clark and on Repsold, the maker of the mounting of the great telescope, the largest and most powerful in existence. On good nights, reports Struve, all the most difficult double-stars discovered by Burnham with the Washington refractor can be easily measured with this one—testimony which shows that the perfection of telescopes need not decrease as the size is increased.

'Die Annalen Asurnazirpals (884-860 v. Chr.)' (Munich, 1885) is the title of a learned inaugural dissertation by a graduating Ph.D. of the University of Leipzig, Heinrich Lhotzky. It contains, however, only a portion of the 'Annals,' transcribed from the British 'Western Asia Inscriptions,' translated and annotated. The rest is to appear shortly. The notes will be found interesting by Semitic philologists, but few cuneiform monumental inscriptions are more disgusting than these which immortalize the Ninevite conqueror. The dedication to Adar is tolerable in comparison with similar pieces of adoration, but the pages of self-glorification which follow are unbearably stupid. It is all in this strain: "Asurnazirpal, the mighty king, the universal king, the king without an equal, king of the four quarters of the world, the sun of all the nations, . . . the humble." And this kind of Ninevite humility is sometimes compared by Assyriologists to that of the royal psalmists of Zion!

—Doctor Robinson's 'Nasal Catarrh' (Wm. Wood & Co.), one of a long list of books for the body which have come to us, is the second edition of a purely professional work. Its omission to refer to cocaine as a local anæsthetic in rhinitic operations, illustrates the common fact that the latest formal scientific books are never quite abreast of the most advanced teaching and practice. It is to be hoped that the opium vice is not

general enough to create a popular demand for Dr. J. B. Mattison's 'Treatment of Opium Addiction' (Putnams), which seems plausible, but which should concern medical men rather than patients. Dr. B. W. Palmer's 'Sanitary Suggestions' (Detroit: George S. Davis) is a compilation of good advice upon disinfection, apparently published in the interest of a firm of manufacturing chemists. If 'The Invalid's Tea Tray' (by Susan Anna Brown; Boston: J. R. Osgood & Co.) contained no more than its directions for making quickly a single saucer of ice cream, it would be worthy wide circulation. Many an invalid should be the happier for this dainty collection of dainty dishes, easily made and clearly described. The receipt for "shells" (p. 60), directing a cupful of shells, without specifying the kind, to be boiled in a quart of water, may be a stumbling-block to some of the present generation, who have not learned to associate the word with cocoa. The distinction between technical cooking and the technology of cookery is well observed by Mr. Mattieu Williams in his 'Chemistry of Cookery' (Appletons), a series of charming essays upon the philosophy of food and of feeding. He treats in a broad, economic way, as well as with concrete directness, the immediate preparation and use of such diet as is the subsistence of the modern Briton. As far as we have noticed, he is scientifically correct, admitting, as he does, that the last chapter, on the philosophy of nutrition, traverses what is yet debatable ground. But, although we believe he is orthodox, he is interesting enough to be perfectly heretical. It is not often that such truths are set forth so attractively. The author's range extends from "raw" water to adulterated wines, discussing all the ordinary solids by the way, and seasoned throughout with many pungent and stimulating thoughts. Our limits do not admit the quotation that they deserve. To him, and justly, Rumford is the apostle of scientific cookery, and he devotes many pages to exposition of the views on this subject of that many-sided American. This is not a cook-book, but it is a book that every intelligent person who can control a cook should master. Those housewives who have been blessed with Mrs. Henderson's 'Practical Cooking' will not hesitate to accept gratefully what further she may offer in that direction, and where, in her 'Diet for the Sick' (Harpers), she writes of her own experience about puddings, panadas, and soups, she is a benevolent and infallible saint. But when she remarks, even on Dio Lewis's authority, that the tomato contains calomel (p. 22), or that in "rheumatism, dyspepsia, catarrh, etc., . . . there is a sporous condition or an animal or vegetable growth on the coatings of the stomach or respiratory tubes," and that "the tendency of hot water is to . . . excite an action of the mucous membrane of the tubes and stomach which throws off or detaches diseased matter" (p. 47), she is transferred into a false prophet whose doctrines, as far as intelligible, are doubtful or untrue. It is unfortunate that a very good book should be damaged by this incorporation of medical half-truths and untruths.

—Mr. J. Scott Keltie's Report on Geographical Education (London: J. Murray) is the latest of several efforts made by the Royal Geographical Society to promote the study of geography in Great Britain. It is an elaborate account of the position which instruction in that branch occupies in the school and university courses of Great Britain and the principal countries of Europe. A series of appendices give examination papers, courses of study in various places with lists of text-books and apparatus, together with the opinions of the most eminent geographers as to the value of the study in general education. Especial prominence is given to the manner in which *Heimatskunde* or "home-knowledge" is taught in the German primary schools. From Mr. Keltie's investigations it certainly appears as if Great Britain were behind even Italy and Spain in the interest which is felt in geography. In the universities and the public schools it is hardly recognized as a distinct subject of education, but mainly as an adjunct, in one aspect of geology, in another of history. And we may remark in passing that this is probably a fair statement of the condition of things in this country. Our Commissioner of Education has instituted a series of inquiries into the subject at Mr. Keltie's request, but the data had not been received in time to be used by him in this report. The Franco-German war of 1870 gave a great impulse to the study of geography on the Continent, but especially in France, where, naturally, the military aspect of the subject dominates. The pupils of the German high schools, says the report, "leave school with a sound working knowledge of geography. The teaching in English, for example, is generally so good that the average boy can both write and speak it intelligibly after his school course; and, from what I have observed, geography is quite as really and thoroughly taught." The foundation of lectureships at the universities is recommended, as well as "short courses of special lectures on the educational field and methods of geography" for teachers. An exhibition of "text-books, atlases, wall-maps, diagrams, geographical pictures, globes, telluria, reliefs," etc., collected by Mr. Keltie on the Continent, is to be opened in November.

—We have never met with two books on kindred subjects so similar in method and so unlike in spirit and tendency as are the two latest works on matters of Hebrew history which have come under our observation. Both pretend to be strictly critical; both are apologetically polemical, and full of indignation at the falsity of the historical views combated. But the one exhibits fervent reverence for the religion and literature of ancient Israel—as embodied in both Testaments—and deep repugnance towards all attempts at critically shaking the traditional belief in the authenticity and early origin of the Hebrew Scriptures. Its object is to discredit the arguments of recent rationalistic criticism by pointing out its want of harmony and the misuse of its weapons. The other evinces contempt for the religious and national faith, the aspirations and practices, of the ancient Hebrews, as inspired by their prophets and priests and reflected in their books and history; and it aims at glorifying a man whom, down to our time, all history has branded as a detestable opponent of the Jewish national spirit. Decidedly the more elaborate work is the former, 'The Pentateuch, its Origin and Structure; an Examination of Recent Theories,' by Edwin Cone Bissel, D. D., Professor of the Hebrew Language and Literature in the Hartford Theological Seminary (Charles Scribner's Sons, 1885). The author's attacks are directed against all the prominent upholders of the "various-documents" theory of the composition of the Pentateuch, but chiefly against the cumulative criticism of Vatke, Reuss, Graf, Kuenen, and Wellhausen, to which learned Germany is now almost universally yielding allegiance. He finds the conclusions of those scholars "futile," "perverse," "balefully false," of "astounding audacity," and occasionally worthy of "an asylum for imbeciles"; destructive of the faith in revelation, miracles, and the sacrificial dogma; in a word, involving "the impossibility of that which as believers in Christ we must make an unalterable premise in all our reasoning"—and he makes at least a learned effort to prove it. His bibliography of the subject—"Literature of the Pentateuch and the related Criticism of the Old Testament"—is as impartial as it is full.

—If Professor Bissel writes like a Christian charged to defend the word of God, Mr. John Vickers, the author of 'The History of Herod; or Another Look at a Man Emerging from Twenty Centuries of Calumny' (London, 1885), is still more zealous. He seeks to prove that the Idumean who ruled Judea at the time of the birth of Christ was the wisest monarch that ever sat on the throne of David, and that the Israelites of old were the most vicious people known to history. The Jews, he tells us, were completely unworthy of such a king as Herod. They rebelled and conspired against him; their rabbis thwarted him in every attempt to do them good; their historian, Josephus, shamefully slandered him. Herod's aim was to divert them from their fanatical ways and national peculiarities, civilize them in the Greek and Roman fashion, assimilate them to their heathen neighbors, and keep them in quiet subjection to the Romans, whose rule was beneficent and generous. This they could not brook, for they were barbarously conceited, full of inveterate hatred toward all mankind, intellectually indolent, priest-ridden, and fiercely turbulent. The Jews were not a religious people, but merely superstitious. The priests who wrote their history falsified it—in the Bible, in the Apocrypha, everywhere. Their glory is a sham. Solomon tried in vain to reform them by patronizing the various worships of the surrounding nations. The Assyrian and Chaldean monarchs reformed and benefited a part of the Hebrews by carrying them away and scattering them among various peoples. Alexander of Macedon redeemed others from their Levitical thraldom by taking them to Egypt. Antiochus Epiphanes failed in his civilizing endeavors through the unfortunate opposition of the Maccabees, who were a set of blind fanatics, conquerors who resembled brigand chiefs, and cruel oppressors. Herod would have done better than Shalmaneser, Nebuchadnezzar, or Antiochus, had there only been no Asmonean pretenders, no rabbis, and no Jewish traditions. He and his Idumean kindred were exceptionally noble spirits. He was always right, his people always wrong. It is true, he was sometimes rather harsh, as when he punished a number of rebellious subjects "so severely . . . that, to leave none to avenge them, their whole families were destroyed," or when he had his sons and his wife Mariamne slain; but it was always Asmonean intrigue or religious opposition which caused the mischief. Thus, "with the best desire to promote their welfare, the reformation which Herod wrought among the Jews was, after all, much less than that of the great Gentile conquerors who broke down their Levitical aristocracy, destroyed their holy city, and effected their dispersion . . ." Much of all this we are told by Mr. Vickers, with more or less variation, a hundred times—we use this expression in the literal sense.

—The Greek prepositions may be counted among the many crosses of the classical schoolmaster, and every one who has taught Greek will sympathize with the trouble of the practical teacher who finds that the grammars relegate the full treatment of the prepositions to the dictionaries, while the dictionaries fall very far short of doing justice either to logical or to historical development, and give very little help in the important matter of prepositional compounds. Dr. F. A. Adams, in his little book on 'Greek Prepositions' (D. Appleton & Co.), has tried to face these difficulties by sheer thinking—for there is no trace of historical or statistical study—and has faced them with a measure of success that might not have been expected. Starting with

what seems to him the indisputable local meaning of each preposition, he has applied what seems to him the legitimate inference from that local meaning to a relatively small number of instances, taken very much at random from Greek generally. Many of the problems are well met, many of the explanations are well put. It is not philological work, but it is work that will not be without interest for philologians. A wider acquaintance with the literature and methods of recent research would have made Dr. Adams lower his note of certainty in some instances, and would have kept him from unnecessary expansion in others. Still, we should have lost the fresh and vigorous tone which makes the book much more attractive than the run of treatises on such subjects. It would be a mistake to recommend the book to learners unconditionally, but teachers cannot fail to get useful hints from it in the way of illustration, if in nothing else. Typographical errors in the Greek are unhappily too numerous.

—"Volapük," one manufactured universal language, has been followed by another, "Pasilingua"—a curious experiment, which has no chance of success except in the mind of the inventor. The lines of this hopeless *lingua franca* are laid down in the German edition of the Elementary Grammar with exercises (B. Westermann & Co.), the inflections being modelled in the main on the Romance group, while the vocabulary is professedly based on English, which, as the author, Herr Steiner, says, is to have the lion's share in the material of the new tongue. In his preface Steiner maintains that it is impracticable to make any existing language the universal language because all the existing languages are difficult, all national, all "one-sided" in pronunciation and construction, and all exposed to the jealousy of other tongues. The very preference which he himself has given to English—at least theoretically—shows that there is a significant drift which will overcome all opposition, and make some simplified form of English much more nearly universal than the wildest dreams of the admirers of "Pasilingua" can expect for this strange manufacture. If there is to be a universal language, it must make its way to predominance just as a dialect makes its way to the character of a national speech. The way can be traced after it is made, can be in a measure presaged, but it cannot be prepared artificially. The "Pasilingua" syntax is simple enough. Like the Sanskrit, its forms are so perfect as to need no syntax, which may be regarded simply as the legislation of a decayed speech. One specimen of this language must suffice, and in selecting the specimen regard has been had to the English element, which, theoretically dominant, as we have said, is sometimes sadly deficient. This, then, is the way in which Matthew ii: 13, appears in "Pasilingua":

"Et quando ils partitefer schire to angelo decde apparrur Josephobi in uns trauma sagano: arisire, takare ton jungon childon et toen matren et flichire in Egypta et ere ibis, quoad mi bringar tübi wordas, car Herodes seekarar ton childilion pro 'lon detruar."

MALTHUS.

Malthus and His Work. By James Bonar, M.A. Macmillan & Co. 1885. (Also, Harpers' Handy Series.)

WE have long wondered that no one should have undertaken the defence of Malthus. Such an opportunity for an *Ehrenrettung* would not have been so long neglected in Germany, and the delay in England can only be explained by supposing that no one reads his books. They were never much read. The 'Essay on Population,' like Darwin's 'Origin of Species,' brought on a furious tempest of replies and refutations, but in both cases it is evident that many of the critics did not know what they were criticising. It was enough for most of them that doctrines they disliked had been advanced, and they attacked the authors with all the resources of bigotry and passion, not having the patience even to hear their arguments. As Mr. Bonar says, the general public were not alone at fault: "Even Nassau William Senior, perhaps the most distinguished professor of political economy in his day, confessed with penitence that he had trusted more to his ears than to his eyes for a knowledge of Malthusian doctrine, and had written a learned criticism, not of the opinion of Mr. Malthus, but of that which 'the multitudes who have followed and the few who have endeavored to oppose' Mr. Malthus, 'have assumed to be his opinion.'"

It would be interesting to inquire why Darwin should have lived to see the abuse that was heaped upon him recoil upon his adversaries, while Malthus's name is still held in undiminished odium, but we can do little more than allude to the inquiry. Malthus's book was certainly pregnant with the doctrine of natural selection—he uses the very expression "the struggle for existence"—and doubtless the doctrine was more repulsive in the first place, when it was applied to man, than afterwards, when it was applied to the lower animals. Then, at the worst, Darwin's theory relates to our very remote ancestors, and has no especial practical application, while Malthus's conclusions affect existing human beings and prescribe their present conduct. But, at all events, though Malthus still remains "the best abused man of the age," it is pleasant to remember that he told Miss Martineau that except for the first fortnight after the publication of the essay, during which time he was somewhat grieved at the general misunderstanding, he remained wholly undisturbed by all the railings of his adversaries.

It is pleasant to remember this, because Malthus was among the best of men. It is impossible for any human being to suppress a certain delight in logical success. One may sincerely regret that he is right instead of his opponent, but this feeling cannot altogether extinguish the exultation of victory. Whatever satisfaction is displayed by Malthus in his merciless demonstrations is to be referred to this cause. He stood to society in the attitude of a wise physician, telling truths that were wholesome but painful—truths that society needed to know, but which it was unwilling to believe. When society disregarded his conclusions, he confirmed them with new researches, and he could not escape assuming the "I-told-you-so" attitude. But his whole aim was benevolent. He loved his fellow-men, he was distressed at the misery which he saw them suffering, and he devoted himself to the discovery of the causes to which this misery was due. So earnest was his devotion to this labor, and so deep his sympathy with humanity, that his natural gayety of disposition was lost. He did not become morose, but there was a gravity in his cheerfulness that was attributed by those who knew him well to the preoccupation of his mind with the ills of the race. Those who have had the curiosity to look into his writings do not need to be told of the spirit of the writer, but to this evidence Mr. Bonar has added an immense amount of contemporary testimony, which is all the more effective because of the artless way in which he has introduced it. Perhaps the most striking of these anecdotes is the remark of Mackintosh, with which he concludes his book: "I have known Adam Smith slightly, Ricardo well, Malthus intimately. Is it not something to say for a science that its three great masters were about the three best men I ever knew?"

Although the effect of Mr. Bonar's book is certainly to create in the mind of a reader a feeling amounting almost to affection toward its subject, yet this effect is wrought quite incidentally. In fact, there is nothing systematic about the treatise. The author begins with an account of the circumstances that first directed Malthus's attention to his subject, and discourses in an agreeable but rambling way of his father's influence, of Godwin and his theories, of Pitt and Paley, of Rousseau and Condorcet, and a host of eighteenth-century notables in the world of political speculation, displaying always a complete understanding of all the phases of the thought of that period, and a minute and accurate acquaintance with the writings of the leaders of opinion, even of those whose writings are now unread. Then he goes over much the same ground again in discussing the successive editions of the Essay, and in a more critical examination of its positions. This examination amounts to a complete summary of Malthus's work, and is a very scholarly piece of work. Then Mr. Bonar takes hold again, and gives us an equally able disquisition upon the general economical doctrine of Malthus, as stated or implied in the Essay, and as restated or modified in his other writings. This leads to some very keen and clear discrimination between the positions of Malthus and Ricardo. Mr. Bonar points out that Malthus had laid hold of the main truths which the economists of our day think they have established against Ricardo, and notes the fact that it was Malthus who first clearly expounded the doctrine of rent. His analysis and comparison of Malthus's and Ricardo's views upon wages and upon value in general is very elaborate and thoughtful, and is full of references to the events of the time, without some acquaintance with which the development of this branch of political economy cannot be fully understood. In fact, this portion of the book falls little short of being an economic history of one of the most interesting stages in the progress of the English people. In this connection Malthus's publications on the Corn-Laws, the Poor-Laws, and General Gluts are taken up and admirably illustrated.

After this, Mr. Bonar once more starts from the beginning of things and proceeds to expound the moral and political philosophy of Malthus. This inevitably takes him over ground that he has already covered, and yet his method of exposition is so pleasing that we are disposed to forgive him numerous repetitions. It may be said, indeed, that the 'Essay on Population' was itself a medley, and that it is impossible to give a systematic account of what has no system about it. Still, we are hardly prepared for two more treatises, one upon "The Critics," and one entitled "Biography." The critics have necessarily been previously considered, and the whole book is full of biographical matter. But we cheerfully admit that it is a pleasure to read what Mr. Bonar writes, no matter whether he is systematic or not, and there is nothing tedious about his repetitions. His knowledge of his subject is so thorough, and his style so easy and engaging, that we lay down his book with the feeling that we should be glad to have more of it rather than less. It not only brings before us the development of one of the most important doctrines in social science, in the mind of a remarkable man, and at a most interesting period, but it also has a very substantial value as a critical exposition of several of the leading principles of political economy. The scholarship of the author in this direction is in very agreeable contrast with the reckless trust in unverified authorities that characterizes most of the writing upon these subjects. His immense and careful reading will doubtless produce other works in this department of history, which we shall gladly welcome; but our welcome will be a little more hearty if more

attention shall be given to the arrangement of their contents.

THE FAIRFAXES.

Life of Robert Fairfax, of Steeton, Vice-Admiral, Alderman, and Member for York, A. D. 1666-1725. Compiled from Original Letters and other Documents, by Clements R. Markham, C. B., F. R. S. Macmillan & Co. 1885. 8vo, pp. 336.

In this interesting volume Mr. Markham has turned aside from his incessant labors as editor of old chronicles of travel and modern discoveries, to resume the story of family history so ably commenced by him in 1870, in his life of the great Parliamentary general, Lord Fairfax.

The Fairfaxes have never risen to the first rank in England, and they are not enrolled among the "Great Governing Families" commemorated by Sanford and Townsend, a few years ago. One branch obtained the rank of Viscount Fairfax of Emley in the peerage of Ireland in 1628, extinct in 1741; another, in 1627, that of Baron Fairfax of Cameron in the peerage of Scotland, which passed to Brian Fairfax of Virginia as eighth baron, and now is held by his descendants. The name, however, has never figured in the English peerage nor on the roll of the House of Lords. Nevertheless, owing to two circumstances, it has obtained a deserved prominence, and, while many a loftier title has been forgotten, Fairfax is still a name to conjure with. The great services of the third Baron Fairfax at the time of the Commonwealth, his ability as a soldier, and his uprightness as a man have never been forgotten. He was a conspicuous figure in a great epoch. In the second place, the accident which brought the title to an American citizen, a position unique in our history, has kept the name fresh in the minds of a public which takes little interest in the European peerage as a rule. We may add that a third reason is to be found in the fact that the history of the house has been so well told at different times, including in the narrative the book under review.

By a most remarkable piece of good luck, a vast amount of family papers were rescued from destruction in 1822, and passed into the hands of an appreciative antiquary. In 1848, Bentley of London published two volumes of the Fairfax Correspondence, edited by George W. Johnson; in 1849 he published two more volumes (most exasperatingly numbered also as I and II), edited by Robert Bell. These were at once recognized as documents of the highest authority and value. In 1868, Munsell of Albany published a volume of Fairfax Papers, edited by Edward D. Neill, the originals of which had been preserved in the Virginian branch. Most of the letters were to and from the American Fairfaxes, but one bundle was of earlier date, and supplemented those printed in England. Then in 1870 Mr. Markham issued a very careful, thorough, and interesting memoir of the great General, and he has now done justice to a Fairfax of a later generation. The family, moreover, has had two antiquaries in its number to preserve its pedigree and records, and in the sixth volume of the *Herald and Genealogist* (London, 1871), the genealogy was worked out with a fulness rarely shown in English pedigrees.

The family is traced for four generations to William Fairfax, Bailiff of York in 1249, who bought the manor of Walton and founded the family. For eight or nine generations the line prospered, adding to their lands by fortunate marriages, until Richard Fairfax, who died in 1480, was able to establish a junior branch. Of his three sons, William continued at Walton, Guy was a judge and settled at Steeton, and Nicholas, a Knight of St. John, distinguished himself at the siege of Rhodes.

The elder line at Walton and Gilling was ennobled, as we have seen, in 1628, but the first viscount died in 1636. His son, the second lord, died in 1641, leaving a son who died in 1648 aged eighteen, but who was father of the fourth viscount, who died in 1651. It is doubtless owing to these repeated changes and successions of minors that this branch took so small a part in the conflicts between King Charles I. and the Parliament. The fourth viscount was succeeded by his uncle Charles, who died, when the title went to Nicholas, son of a third brother. Again a son and a younger brother succeeded, and then the heir was to be found among the issue of the first viscount. The ninth viscount of this line was father of the tenth viscount, who died in 1741, when the title became extinct. The sister of the last lord married Nathaniel Pigott, whose son assumed the name of Fairfax on inheriting Gilling Castle, but the name is not to be continued. It is by no means improbable that there are Fairfaxes traceable to the Walton line, but none are now recognized cadets, excepting Sir William Fairfax, of Edinburgh.

But while the senior line thus lingered along in wealthy obscurity, the junior branch at Steeton acquired imperishable renown. Sir Guy of Steeton, the judge, was father of Sir William, also a judge, whose son Sir William, High Sheriff of York in 1535, married a great heiress, Isabel Thwaits. His wealth enabled him also to found two branches, his son Thomas having Denton and Nunappleton, and his son Gabriel inheriting Steeton and Newton Kyme. Of these Sir Thomas had a numerous and famous progeny, including Edward Fairfax, the translator of Tasso. The eldest son, also a Sir Thomas of Denton, was made Baron Fairfax of Cameron in 1627 and died in 1640. Of his numerous sons, Charles was a lawyer and a noted antiquary, and three more were slain in the wars in one year. Ferdinando, the second baron, was a member of Parliament, and from the start was opposed to the Royalists. In 1642, as one of the members for Yorkshire, he headed the movement in favor of Parliament, and in December he commanded at the fight at Tadcaster. His son, Sir Thomas Fairfax, naturally began as his subordinate, but a very short time sufficed to bring the son to the front place, and thereafter the father resumed his political duties. In 1643 the Fairfaxes, father and son, were the sole support of the Puritan party in Yorkshire, and the campaign under their joint leadership was of the utmost value, both for what was done and what was prevented. Early in 1644 Sir Thomas Fairfax won the battle of Nantwich, and was one of the three generals at the siege of York. His share in the victory of Marston Moor was a distinguished one, and he added to his reputation by the capture of various castles which had been held for the King.

Early in 1645 the Parliamentist army was remodelled, and on January 21 Sir Thomas was appointed Commander-in-Chief, being then only thirty-three years old. In June he won the victory of Naseby, and a year later he received the surrender of Oxford. In August, 1648, he captured Colchester, and he was still in the chief command when the King was tried and condemned in January, 1649. Though personally opposed to the execution, he was powerless to prevent it. After that event he was one of the Council of State for a year; but when the Scots recognized Charles II., Fairfax separated from his friends on a matter of conscience. He opposed the plan of attacking Scotland, believing that the nation was still in a solemn covenant with England. Accordingly, on June 25, 1650, he resigned his commission and retired into private life. He lived in honored obscurity till the death of Cromwell, when he again came to the front; single-handed presenting himself to the troops commanded by Lambert, and winning them over to the royal cause. His honesty, firmness, and popularity forced Monk to espouse the same side, and to Fairfax is justly due the credit of the Restoration. His only child was the wife of the second Duke of Buckingham, and she died without issue. We have already traced the later course of the title. Lord Fairfax died on November 12, 1671, after a short illness. He was conspicuously an honest man, sincere in his religious convictions, free from bigotry and cant, and a born general. He lacked ambition, and was ill-fitted to join in the political intrigues of the time.

The junior branch of the Fairfaxes at Steeton was founded by Gabriel Fairfax, whose son Sir Philip was first cousin to Sir Thomas; and the son of the latter, Ferdinando, first Lord Fairfax, married a sister of Sir Philip's wife. Philip's son, Sir William Fairfax, was thus own cousin on the maternal side to General Fairfax, and joined him in espousing the Parliament side. He served with distinction at Marston Moor, and fell soon after in the battle for the relief of Montgomery Castle. His oldest son, William, was the father of William and Robert, the latter being the Admiral whose life has just been described by Mr. Markham. He was born in 1665, and in 1680 went to sea in a vessel engaged in the Mediterranean trade. In January, 1688, he entered the royal navy as a volunteer under Admiral Strickland, and in 1689 was commissioned as lieutenant. He served at the relief of Londonderry, and in 1690 was in the fight at Beachy Head. In November of that year he was made post-captain, and appointed to the *Conception*. For more than two years he was stationed at our Boston, under the orders of Governor Phips. In 1694 he returned to service at home in the *Ruby*, and in July he succeeded his older brother as owner of Steeton. Later in the same year he married, but he still remained in commission. In 1708 he was in the attack on the French fleet in Cancale Bay; in 1704 he served at the capture of Gibraltar, and in 1705 at the capture of Barcelona. In 1700 he was made Vice-Admiral, but was deprived of the rank by a scandalous job. Prince George of Denmark, then Lord High Admiral, took up the case, and appointed him one of the Board of Admiralty. The death of the Prince led to a change in administration, and Fairfax was dismissed. He soon transferred his residence to Newton Kyme, dismantling Steeton, and in 1713 was elected to Parliament from the city of York. In 1715 he was defeated on a new election, but was chosen Lord Mayor of that city. Admiral Fairfax died October 6, 1725, leaving a son, Thomas, whose male representative, Guy Thomas Fairfax, is now the owner of Steeton and Newton Kyme.

Although Admiral Fairfax cannot rank among the great sailors of England, his life is an admirable epitome of the naval régime of that period. The details collected by Mr. Markham from the family papers are admirably supplemented by the editor's notes from other authorities. The book is such a record as can be furnished for few of his contemporaries, and its perusal gives us a fresh interest in the history of a period when the English navy obtained some of its most glorious victories.

Annals of a Sportsman. By Ivan Turgeneff. From the French of H. Delaveau. (Authorized Edition.) By Franklin Pierce Abbott. Henry Holt & Co.

The publishers would have done well if they had substituted a brief history of 'The Annals of a Sportsman' for M. Delaveau's preface of criticism (however just) upon his predecessor, M.

Charrière. It is all but forty years since the first of these sketches appeared in the first number of the *Contemporary*, a famous though short-lived Russian magazine of liberal tendencies. It is twenty-six years since the French version was published from which this translation was made. Thirty years ago there was an English translation from the careless, curiously stilted French of Charrière, but that is now so long out of print that very few readers of English only know anything of this work, which in its time played so remarkable a part in the history of human progress. Say what we may of the rigors of the censorship, the fact remains that all these sketches and half-a-dozen others not included here passed without a word of objection. There seems now no doubt that when collected in a volume in 1852 they were recognized by friend and foe as an appeal for the emancipation of the serfs; but Turgeneff himself explicitly states his own conviction that his two years' confinement upon his estate was solely due to a misapprehension on the part of the local authorities. His letter of explanation to the heir apparent has recently been reprinted, and it is a well-known fact that his liberation was one of the first acts of Alexander II.

It is an odd proof how much the current knowledge of Russia is a mere matter of tradition, that it is commonly asserted that the book cannot be bought in Russia. On the contrary, it forms the first volume of the edition of the author's works printed at Moscow in 1874, and the second of the edition which was in press at the time of his death. More than this, it has had by itself so large a sale that in the final arrangements made in Turgeneff's last letters the copyright was estimated as worth 20,000 rubles; he himself saying that in the stereotype edition it had brought him each year for a long time more than 1,400 rubles ($1,120). These figures are for Russia only, and they quite dispose of the story that the book is not permitted there.

Of literary merit in a work of such long-established reputation it were needless to speak, were the reader not obliged to judge of it through the obscurity and sometimes the distortion of a double translation. The French version followed is better than Charrière's, which at best could only be described by the phrase "after the Russian," so absolute was the liberty taken with the original. M. Delaveau, however, does not make good all his claims to superiority. The multiplicity of impersonal verbs in the Russian and the pliancy of the participial forms make possible a close-knit sentence, by its brevity far stronger and more graphic than M. Delaveau's diffuse rendering. We forbear citations, for a score or two of mistakes would in themselves be of no consequence. It is the general treatment that is at fault. Like the average Frenchman, he is convinced that anything transferred to his own language can be improved in expression, while he has no keen sense either of humor or pathos to aid him in the interpretation of the original. As a narrative of facts, as an account of scenery or costume, it will do. As a reproduction of a finely studied piece of art, it is like a copy of an ivory carving in which every edge should be rubbed off, every point be dulled. Mr. Abbott, has followed the French fairly well. Control of a wider English vocabulary would have given greater exactness as well as variety, while it would not have been difficult now to make clear Russian words and things which in 1859 were nearly inexplicable. The repeated mistakes in spelling are, no doubt, due to the innate perversity of type, and to the difficulty of dealing with syllables which to the untrained eye are little better than hieroglyphics. Some mistranslations of French words convey an entirely wrong impression. Thus, *image* should be always "picture." Mr. Abbott takes it as it is, "image," as if it meant statue or bust, which would imply something almost shocking to the pious Russian. *Sectaire* should not be "sectary" but dissenter, as the recognized name for one who separates himself from a State Church. "Annals," in the title, is a large word for the French *Récits*, and quite out of proportion for the unpretending Russian, which means only notes or jottings.

But to return to the original. Turgeneff, in the disappointment at what it would not be right to call the failure, but the slight success, of his poems, set himself to describe the daily life he had known in Orel from a boy. The first sketch was "Khor and Kalinitch." The phrase, "from the notes of a sportsman," was added by a friend. Gradually, as the others followed, it began to be seen that just in proportion to their literary skill was their power as an argument. No loud philippic, no high-colored picture, would have been tolerated. These simple, quiet stories made no startling revelations of the woes of the serfs, but they opened the eyes of the masters to their own forlorn, hopeless position. These sad, stunted existences are our brothers, ourselves. To this has our injustice brought us. Let us save our children from the like. So Alexander II. found a body of men among the lesser nobility and the middle classes ready with the support without which not even an autocrat could have carried out his great reform. At this point comes an inevitable comparison with 'Uncle Tom's Cabin.' We pass questions of literary quality with the single remark that, even if we accept all that has been said in praise of Mrs. Stowe's book, there is still the difference between a work of genius and one of great talent. Moreover, it has to be said that her book did not solely of itself create its great popularity. The way had already been opened. It had the good fortune to ride the crest of a mounting wave. To make the parallel complete, it should have been written by a Southerner, a son of slaveholders, with the effect of rousing an important number of Southerners to see the necessity of abolition for their own sakes.

'The Annals of a Sportsman' is best described as a piece of pure realism, all the more remarkable since the Romantics were still the supreme rulers in 1847. It is realism in that sense which applies not to choice of subject, but to method of treatment. It sets before the reader the scene, the character, in such clear white light that he may judge of them with his own eyes, his own thought. By any such word or phrase as impartial, impersonal, or disinterested curiosity, the same thing is meant. To set forth the subject not in our own way, not in our party's way, not to serve a special end, but to represent life perfectly—this is realism. We repeat, not to serve an end, for there is no little contemporary evidence that the reception the book met with, the effect produced, were alike unexpected to Turgeneff. True, he had pledged himself from boyhood to fight against serfdom: "It was my oath of Hannibal." But he thought with his friends that the opportunity for direct personal effort was still far off. "We were all waiting before a door bolted and barred." Meanwhile, as a means of subsistence (for, notwithstanding the fact that his mother's estates maintained 5,000 souls, he was without an income), he began what seemed a very humble work in these modest "notes." His sole aim as to subject and form was the artistic one, but while his endeavor to reach it defined and declared his own genius, a voice was given to the truth to which no one could be deaf. Never was a great opportunity greatly used with more unconsciousness.

One last word as to style. The French of M. Delaveau has not the richness, the strength of Turgeneff's concise simplicity; the English is rough, without the smooth flow as of a delicate melody. Those who heard Turgeneff himself read from the sketches were wont to say it was like listening to a sonata of Beethoven. The reader must not judge from these imperfect transcripts. Twice within our time there has appeared a style which would have been worthy—once in the French of 'La petite Fadette,' and once in the English of 'The Lights and Shadows of Scottish Life.'

The Rise of Silas Lapham. By W. D. Howells. Boston: Ticknor & Co.

In 'The Rise of Silas Lapham' Mr. Howells depicts one character distinctively of his time, aggressively of his nation, with a vividness and completeness unapproached in contemporary English fiction, apparently unapproachable by any contemporary writer in the English tongue. Silas Lapham, standing beside Bartley Hubbard, will at least postpone that oblivion which, as a graceful talker in the story says, overwhelms all authors, poor fellows, at last. And perhaps Lapham and Hubbard will get their full meed of praise from remote posterity only. Just now, with so many of them about, it is difficult to find a large public able to appreciate them unreservedly without doing violence to domestic affections. For Lapham is no more a creature of the imagination than Hubbard. He is a literal, merciless representation. With the representation is blended a searching and comprehensive interpretation. Directing and perfecting both is the quick, subtle, mocking spirit of the author, flashing in a phrase or comparison, gleaming in a jest at the sober unconsciousness of the subject who provides the opportunity. From the cleverness of Lapham as literary work it is as impossible to detract as it is to dispute the antipathy his personality excites in people of good taste, or to deny his practical virtues. His almost unmitigated offensiveness is a large part of his truth. His vulgarity is neither exaggerated nor underestimated. To impress his conviction that there is no finer thing in God's universe than Lapham's Mineral Paint, is not to belittle either the quality or quantity of his sentiment. Even to have endowed him with more moral courage than an inherited New England conscience entails and the alert eye of the Puritan wife enforces, would have been to diminish the force of the portrait and to negative its sincerity. Except in literary form, it has, of course, no beauty. And it is in this studied ignoring of beauty, this expenditure of power on the essentially unbeautiful, that the Realist of the passionless every-day falls short of high or good art. There is no inspiration for any one in the character of Silas Lapham. It rouses no tender or elevating emotion, stirs no thrill of sympathy, suggests no ideal of conduct, no notion that the world at large is or can be any less ugly than Lapham and his paint. If it is to be conceded that Mr. Howells and his school are great artists in the highest reaches of their art, then the language is in sore need of words to define Sir Walter Scott and Thackeray.

What has been said of the perfection of Lapham's delineation cannot be applied to all the characters of the novel. Bromfield Corey is a charming contrasting figure, but touched very lightly. Tom Corey, too, commands respect for his persistence in an unpromising love-affair, if not for his taste in the choice of a sweetheart. But the women, especially the young women, are deplorably unattractive, and, moreover, if they represent any truth, it is only half a truth, and the worst half at that. If the young women introduced by Mr. Howells in the novels wherein he stands committed to Realism are representative, the "Woman Movement" in New England should be towards reform of temper and restriction of the freedom of the tongue. But we are

disposed to imagine that Boston girls are neither dolts nor vixens, that the passion of jealousy does not rage in their breasts to the exclusion of any other, and that all, whether well-bred Coreys or Laphams of no breeding at all, are not habitually impertinent to their elders, more especially to their helpless, hapless mothers. Here the most unpleasant and the most unnatural girl is Penelope Lapham. Mrs. Corey said she was a "thoroughly disagreeable young woman," and Mrs. Corey did not know that what is called her "drolling" was most brilliant when she was ironically snubbing her relations, or urging her sister to inextinguishable laughter by mimicking their father. Irene Lapham, the beauty, is probably the most extraordinary girl ever graduated from a Boston grammar-school. She mentally connected Sir Walter Scott with a school-fellow who, she said, had a habit of apostrophizing him, prefixing "great" to his name, and she but vaguely conjectured that he was not an American. In a recent speech before a woman's college, Mr. Lowell said, encouragingly, that he believed they could educate women there who would know the difference between literature and books. If Irene Lapham is not a gross caricature, that college must beware of girls from the Boston grammar-schools, else fulfilment of Mr. Lowell's rosy vision is far off indeed.

The slightest review of this novel would be incomplete without a reference to the illustration of those class barriers in America which excite hostility in the mass of citizens in a republic, and derision or affected incredulity in the subjects of a monarchy. These social distinctions, which are natural and not artificial, have, of course, been harped on by many novelists—grotesquely exaggerated by one or two. Mr. Howells makes their existence and their reason of existence perfectly clear by the simple method of illustrative contrast. Even in a republic—indeed, most of all in a republic—the Laphams are compelled to realize that there are social privileges which money cannot buy. Mr. Howells would have done well to let his effective argument go without comment. But in a paragraph summing up the whole matter he says: "It is certain that our manners and customs go for more in life than our qualities." As an aphorism on society this would be a truism; by extending it to life, the author is narrowing life down to availability as a diner-out.

Small Yachts: Their Design and Construction. By C. P. Kunhardt. *Forest and Stream* Publishing Company.

THIS book fills a blank in American yacht literature, and will be found a valuable addition to the libraries of our American yachtsmen. The subject-matter, although covered in a measure by such works as Dixon Kemp's 'Yacht Designing' and his 'Yacht and Boat Sailing,' is presented in more attractive form, is much condensed, and is procurable at less than half the cost of those volumes. It is practical throughout—practical in the treatment of what is popularly called theoretical; and the chapters on Resistance, Displacement, Stability, Beam and its Relations, make plain the course of the amateur designer when he launches his ship on the drawing-board with his tools and the assistance of the chapter following on Computations, which is also presented in the simplest possible form. The yachtsman who understands the principles of design and their results, derives much more satisfaction from one of the manliest of sports than the man who is willing to sail a passenger in his own ship, and is content to pay for all professional services; and hence we can recommend the book, notwithstanding its title, 'Small Yachts,' to all yachtsmen, without reference to the size of their vessels, existing or in prospect.

Under the head of General Information, the reader will find such subjects as Yachts' Papers, International Rules of the Road, Cautionary Signals of the U. S. Signal Service, together with many useful tables, such as weights of materials, gear, wind pressure, etc., etc. A large portion of the book is devoted to the lines of many existing small yachts, with sail plans, plans of accommodation, specifications of construction, and general description, which will be found of much interest; and the classification by type, with remarks on the features of each, has a wholesome tendency in the direction of an uncapsizable boat (unlike the yacht *Torpedo*, which recently capsized and drowned three of her crew). This classification is as follows: Centre-board cat-boats, keel cat-boats, light-draft centre-board sloops, light-draft keel yachts, deep-draft keel yachts, compromise keel and centre-board, beamy cutters, cutters of moderate beam, cutters of small beam, and yachts of special class, embracing sharpies, buckeyes, canoes, etc.

The World's Lumber-room: a Gossip about some of its Contents. By Selina Gaye. Cassell & Co. 1885. 8vo, pp. xii, 315.

THE object of this little volume is to give in popular form an account of some of the many ways in which refuse matter is made and disposed of, first and chiefly by nature and secondly by man. To do this the author has begun with dust, showing what dust is and where it originates, the natural forces which are busy making, transporting, or accumulating dust, and what becomes of it in nature. Organic refuse is then treated of, and the various plants and animals which appropriate, modify, or utilize it. Lastly, the refuse which gathers about the habitations of man and his manufacturing establishments is mentioned, and the manner in which many apparently waste products or rejected materials are ingeniously converted into something of use or value.

Although making no pretence to completeness, a great variety of facts are brought together and told in an interesting and unsensational way. There are a number of very fair illustrations and a satisfactory index. The book is neatly printed and bound. In such a compilation it would be remarkable if there were not some inaccuracies, but we have observed but few, and those of no great moment. We are inclined to think the author credits our countrymen with even more than their just quota of ingenuity when she states that they make currant jelly and Jamaica rum out of old boots, but they may attain to that in time by a careful study of the methods of our French and English neighbors. On the whole we can cordially recommend the book.

HAVE JUST PUBLISHED:

I.

History of the Formation of the Constitution of the United States.

By GEORGE BANCROFT. One volume, 8vo, cloth. Price, $2.50.

This volume includes the original two-volume edition of the work, with an Appendix containing the Constitution and Amendments. It is designed for the convenience of students, and is sold separately from the other volumes of Bancroft's History.

II.

Babylon.

A NOVEL. By GRANT ALLEN. 12mo, paper cover. Price, 50 cents.

Grant Allen is well known as the author of brilliant magazine papers, and hence his appearance as a novelist will be welcomed with interest. The scene of the early part of 'Babylon' is divided between England and the United States, and describes the struggle of two rustic lads, one American and the other English, born with a genius for art. Later the two heroes meet at Rome, and thence ensue interesting incidents and complications.

III.

A Text-Book of Nursing.

FOR THE USE OF TRAINING SCHOOLS, FAMILIES, AND PRIVATE STUDENTS. Compiled by CLARA S. WEEKS, Superintendent of Training School for Nurses, Paterson. 12mo, cloth. Price, $1.75.

The text-book here offered has been prepared not merely to give information and lay down rules, but to guide systematic training on a practical subject, and to facilitate thoroughness of school-work.

*** *For sale by all booksellers; or will be sent by mail, post-paid, on receipt of price.*

D. APPLETON & CO.,
PUBLISHERS,
1, 3, and 5 Bond Street, New York.

The Poems of Henry Abbey.

NEW, REVISED, AND ENLARGED EDITION.

1 vol. 12mo. 260 pp. long primer type, cloth. Price $1.25.

From the Syracuse (N. Y.) Standard.

Announcement is made by the London *Academy* that a complete revised edition of Henry Abbey's poetry will appear this season, the collection comprising the poems heretofore published by D. Appleton & Co., with a considerable later verse. Mr. Abbey's verses are familiar to lovers of choice work in England and Scotland, as well as in his own country, who appreciate the imagination, simplicity, and tenderness that mark his inspiration.

Of the edition of 1879 the Boston *Commonwealth* said: "Mr. Abbey's poems are earnest, fiery, melodious, humane, and are equally facile in rhyme and strong in expression.

A copy of the New Edition will be sent to any address on receipt of the price, $1.25.

Messrs. Roberts Bros.'

NEW BOOKS:

A LITTLE COUNTRY GIRL.

By SUSAN COOLIDGE, author of 'The New Year's Bargain,' 'What Katy Did,' etc. With illustrations. 16mo. Cloth. Price $1 50.

This is the first continuous story produced by its author in five years. The scene is laid in Newport, a place so full of fascinations for the young that it is a matter of wonder that it has not before now been chosen by some of our writers as the framework for a juvenile fiction.

THE JOYOUS STORY OF TOTO.

By LAURA E. RICHARDS. With 30 humorous and fanciful designs by EDMUND H GARRETT. 12mo, Cloth. Gilt and black. Price, $1 50.

'The Joyous Story of Toto' is one of those happy inspirations which, like 'Alice's Adventures in Wonderland,' delight all readers, both old and young, and make their authors famous. Mrs. Richards is a daughter of Mrs. Julia Ward Howe.

SUGAR AND SPICE AND ALL THAT'S NICE.

A collection of Nursery Rhymes and Jingles, selected by the editor of Quiet Hours. Fully illustrated. Square 12mo. Cloth. Gilt. Price, $1 25.

HIDDEN SWEETNESS.

"Oh, when shall it be fully granted me to see how sweet thou art, my Lord God?"—*Thomas à Kempis.*

The poems by MARY BRADLEY, the illustrations from drawings by DOROTHY HOLROYD. Small 4to. Cloth, Gilt. Price, $1 50.

R. H. Stoddard says: "It will be read now and hereafter by the lovers of sacred verse. We say hereafter, for we believe it will live when the hand that penned it is still. It certainly ought to, for it is as exquisite as it is reverential."

PARIS IN OLD AND PRESENT TIMES.

With special reference to changes in its architecture and topography. By PHILIP GILBERT HAMERTON. A library edition containing all of the sixty-five woodcuts. Small 4to. Cloth. Gilt. Price $3 00.

Sold everywhere. Mailed, postpaid, by the publishers, ROBERTS BROTHERS, Boston.

NATION—FULL SET.—For sale cheap by A. S. CLARK, 34 Park Row, New York.

SECOND EDITION.

"BALZAC IN ENGLISH. The time should now be ripe for the introduction of English-speaking people to an author who by right of genius stands alone among his contemporaries. . . . There ought to be, in the United States and England, at the present time, enough lovers of good literature to make such an undertaking as a complete translation of this author remunerative. . . . The translation of 'Père Goriot' is very good, and Balzac is not the easiest author to translate. The publishers cannot do better than to intrust the succeeding volumes to the same capable hands, for it is a meritorious deed to have turned into excellent, nervous English the prose of this great Frenchman, whose fire and fervor, clear sight and powerful description, when contrasted with the average novel of the day, shine forth with redoubled splendor, and whose brilliant genius in the analysis of human character casts altogether into the shade the amateurish essays at psychologic fiction which are gravely spoken of in these degenerate times as the promising productions of a new and higher school of literary art."—*Extract from an exhaustive review of Balzac in the New York Tribune of October 13th.*

PERE GORIOT, the first volume in Roberts Brothers' Series of Translations of Balzac's Novels, has reached a second edition. (Nearly ready, 'The Duchesse De Langeais.') Price, bound in half morocco, French style, $1 50. ROBERTS BROTHERS, Publishers, Boston.

The Nation

VOL. XLI.—NO. 1061. THURSDAY, OCTOBER 29, 1885. PRICE 10 CENTS.

Scribner & Welford's

NEW BOOKS.

Flying Leaves from East and West.

A Journal of Travel in the Orient and through the United States and Canada. By Emily Pfeiffer. Crown 8vo, cloth, $2.25.

*** This book is not a mere repetition of the guide book, but is a volume of vivid interest and real merit, by a keen-sighted, quick-witted woman.

Assyria: its Princes, Priests, and People.

By A. H. Sayce, LL.D., M.A. Forming No. VII. of "By-Paths of Bible Knowledge." Illustrated. Cloth boards, $1.25.

This book has been written to replace one on the Society's list called 'Assyrian Life and History.' Professor Sayce gives in a small space all that is known definitely and that will interest the Biblical student about the history, habits, literature, and religion of the Assyrians.

Egypt and Syria.

Their Physical Features in Relation to Bible History. By Sir J. W. Dawson, Principal of McGill College, Montreal; F.G.S., F.R.S.; author of 'The Chain of Life in Geological Time,' etc. Being No. VI. of "By-Paths of Bible Knowledge." With many illustrations. Crown 8vo, cloth, $1.25.

Sir William Dawson has recently visited Egypt and Syria, and in this little work he shows what light geology and physical geography throw upon the sacred records. The book contains much new and valuable information, put in a clear and interesting form.

THE LIFE AND TIMES OF Chrysostom. By Rev. R. Wheeler Bush, M.A., F.R.G.S., author of 'St. Augustine: His Life and Times.' Crown 8vo, cloth, $2.00.

JOTTINGS FROM THE PACIFIC. By the Rev. W. Wyatt Gill, B.A., author of 'Life in the Southern Isles,' and joint author of 'Work and Adventure in New Guinea.' Illustrated. Crown 8vo, cloth, $2.00.

THE KING'S WINDOWS; or, Glimpses of the Wonderful Works of God. By Rev. E. Paxton Hood, author of 'Vignettes of the Great Revival,' etc. With forty-four Illustrations. Uniform with 'The Harvest of a Quiet Eye.' Imp. 16mo, cloth, bevelled bds., gilt edge, $2.50.

WOMEN'S SUFFRAGE. By Mrs. Ashton Dilke, with introduction by Wm. Woodall, M.P. New volume of the series "The Imperial Parliament," edited by Sydney Buxton, M.P. 12mo, cloth, 50 cents.

THE POSTULATES of ENGLISH Political Economy. By Walter Bagehot, M.A., and Fellow of University College, London. Student's Edition. With preface by Alfred Marshall, Professor of Political Economy, Cambridge. Crown 8vo, pp. 124, cloth, $1.00.

THE TALMUD OF JERUSALEM. Translated for the first time into English by Dr. Moses Schawb, of the Bibliothèque Nationale, Paris. Vol. I. THE TREATISE OF BERAKHOTH (BLESSINGS). 4to, paper, $3.60.

Bohn's Libraries.

A Series of Standard Works of European Literature in the English Language. Full Catalogue sent, post-free, to all parts of the world on application.

RECENT ADDITIONS TO THE LIBRARIES.

A GUIDE TO THE STUDY OF ENGLISH COINS, from the Conquest to the Present Time. By H. W. Henfrey. New and revised edition by C. F. Keary. With a Historical Introduction by the editor. Numerous plates. 12mo, $2.40.

CENTENARY EDITION.

BOSWELL'S LIFE OF JOHNSON, with the Tour in the Hebrides and Johnsoniana. New Edition, with Notes and Appendices by the Rev. A. Napier, M.A., Trinity College, Cambridge. With Frontispiece to each vol. 6 vols., $8.40.

GOLDSMITH'S WORKS. A New Edition in 5 volumes, containing pieces hitherto uncollected, and a Life of the Author, with Notes from various sources. By J. W. M. Gibbs. Vol. IV. (just published). Biographies, Criticisms, Later Collected Essays. Vols. I., II. III. (previously published). Each vol. in 12mo; per vol., $1.40.

COLERIDGE'S MISCELLANIES, ÆSTHETIC and Literary: to which is added The Theory of Life. By Samuel Taylor Coleridge. Collected and arranged by T. Ashe. 12mo, $1.40.

COLERIDGE'S AIDS TO REFLECTION. Confessions of an Inquiring Spirit and Essays on Faith and the Common Prayer Book. New Edition. $1.40.

COLERIDGE'S LECTURES AND NOTES ON Shakespeare and other English Poets, including Mr. Collier's transcript of the Lectures of 1811, and the Bristol Lectures of 1813, now first collected. By T. Ashe, B.A. $1.40.

COLERIDGE'S TABLE-TALK and OMNIANA. Edited by T. Ashe, B.A. $1.40.

WALTON'S LIVES OF DONNE, HOOKER, etc. New Edition. Revised by A. H. Bullen. With numerous illustrations. $2.

GRIMM'S GERMAN TALES. With the Notes of the Original. A New Translation, by Mrs. A. Hunt. With Introduction by Andrew Lang, M.A. 2 vols. $2.80.

VASARI'S LIVES OF THE PAINTERS. (In 6 vols.) Vol. VI., just published, being a Commentary, containing Notes and Emendations from the Italian Edition of Milanesi and other sources. By J. P. Richter, Ph.D., author of 'The Literary Works of Leonardo da Vinci,' &c. $1.40.

PLUTARCH'S LIVES. Newly Translated, with Notes and a Life, by A. Stewart, M.A., late Fellow of Trinity College, Cambridge, and the late George Long, M.A. 4 vols. $5.60.

GILBART'S THE HISTORY, PRINCIPLES, and Practice of Banking. Revised to the Year 1881 by A. S. Michie, Deputy Manager of the Royal Bank of Scotland, London. With Portrait of Gilbart. 2 vols. $4.

SPINOZA'S CHIEF WORKS. Translated, with Introduction, by R. H. M. Elwes. 2 vols. Vol. I.—Tractatus Theologico-Politicus, Political Treatise. II. —Improvement of the Understanding, Ethics, Letters. $4.00.

DANTE.—IL PURGATORIO: a Literal Prose Translation. By W. E. Dugdale. With the Text of the Original and Explanatory Notes. $2.00.

DANTE.—THE INFERNO: a Literal Prose Translation, with the Text of the Original collated with the best editions, printed on the same page, and Explanatory Notes. By John A. Carlyle, M.D. $2.00.

LESSING'S WORKS. Translated from the German. Vol. I.—Tragedies and 'Nathan the Wise.' Vol. II.—Comedies. Vol. III.—Laokoon, Hamburg Dramatic Notes, &c. 3 vols., $4.80. With portrait, &c.

KANT'S PROLEGOMENA AND METAPHYSICAL Foundations of Natural Science. Translated, with Memoir and Introduction, by E. Belfort Bax, author of 'Jean Paul Marat.' With portrait of Kant. $2.00.

MOLIERE'S DRAMATIC WORKS. A new Translation in English Prose, by C. H. Wall. With a short Life and a Portrait. 3 vols. $4.20.

*** *The above books will be sent upon receipt of advertised price. Catalogues of our regular stock will be mailed, if desired, to those interested. NEW CATALOGUE OF CHOICE, RARE, AND SECOND-HAND BOOKS, READY. New Musical Catalogue ready.*

SCRIBNER & WELFORD, 743–745 Broadway, N. Y.

Charles Scribner's Sons'

NEW BOOKS.

MOVEMENTS OF RELIGIOUS Thought in Britain during the Nineteenth Century. By John Tulloch, D.D. 1 vol., 12mo, $1.50.

"As a literary performance merely the work may rank as a British classic."—N. Y. Sun.

FROM THE TABLE OF CONTENTS:

Coleridge and his School—The Early Oriel School and its Congeners—The Oxford or Anglo-Catholic Movement—Movement of Religious Thought in Scotland—Thomas Carlyle as a Religious Teacher—John Stuart Mill and His School—The "Broad Church."

THE PANAMA CANAL. ITS History, its Political Aspects and Financial Difficulties. By J. C. Rodrigues, LLB. 1 vol., 12mo, $1.50.

A most interesting and accurate history of the Panama Canal from the first suggestion of its feasibility until the present time.

A LAYMAN'S STUDY OF THE English Bible considered in its Literary and Secular Aspects. By Francis Bowen, LL.D. 1 vol., $1.

The views presented in this volume are strikingly independent and free from the trammels of the schools, but at the same time they are wholly reverent and in accord with the spirit of the Bible. The point of view is secular as opposed to the usual theological and doctrinal position.

TWO YEARS IN THE JUNGLE. The Experiences of a Hunter and Naturalist in India, Ceylon, the Malay Peninsula, and Borneo. By William T. Hornaday. 1 vol., 8vo, with maps and illustrations. $4.

From the New York Sun:

"Since the visit of Mr. Wallace to the Malay Archipelago no such important addition has been made to the data of natural history as is embodied in this record of exact and ample observation, a seldom penetrated field."

From the N. Y. Journal of Commerce:

"Mr. Hornaday is a born Nimrod and naturalist. No journey too long, no privation too severe when engaged in his favorite pursuits. . . . The effect of his original and independent observations appears on every page of his work."

From the Brooklyn Union:

"From every point of view Mr. Hornaday's book is of extreme value, and should interest naturalists no more than the lay reader."

The Book Buyer.

A Monthly Summary of American and Foreign Literature.

Annual Subscription, 50 CENTS.

The November Number Contains:

PORTRAIT OF GEORGE W. CABLE.

Readings from New Books. Editorial Notes.
London Notes. Reviews of New American Books.
Authors at Work—Sketches of Mr. Cable and Mr. Stoddard. Foreign Notes.
News and Notes. Books of the Month.
Special Articles, etc.

With the October number, which contained a fine portrait of R. H. Stoddard, a series of portraits of famous authors whose pictures have not become hackneyed by frequent reproduction was begun. A portrait of Frank R. Stockton, engraved by Kruell, will be given in the December Holiday Number (price 10 cents).

A sample copy will be sent on application.

*** *These books for sale by all booksellers, or sent, post-paid, on receipt of price, by*

GOLD MEDAL, PARIS, 1878.

BAKER'S

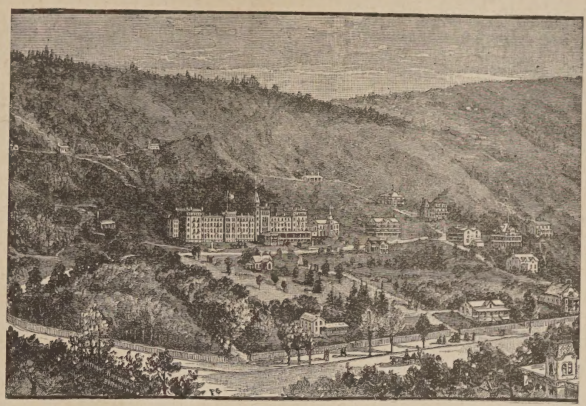
Breakfast Cocoa.

Warranted ***absolutely pure Cocoa,*** from which the excess of Oil has been removed. It has *three times the strength* of Cocoa mixed with Starch, Arrowroot or Sugar, and is therefore far more economical, *costing less than one cent a cup.* It is delicious, nourishing, strengthening, easily digested, and admirably adapted for invalids as well as for persons in health.

Sold by Grocers everywhere.

W. BAKER & CO., Dorchester, Mass.

The Sanatorium, Dansville, N. Y.



[Long Known as Our Home on the Hillside.]

An institution for the scientific treatment of chronic invalids, as well as for rest and recuperation of those who are tired out. It is under the management and personal care of a corps of regularly educated and experienced physicians, devoted to their work. Massage, Electro-Massage; Doctor Taylor's Swedish Movements; Electricity (Galvanic, Faradic, and Franklinic, the latter from most approved Holtz machine); Inunction; and all forms of baths, including the Moliere Thermo-Electric, Turkish, Roman, and Russian, are employed according to individual needs. The plan of treatment comprehends proper regulation of daily life, including diet, exercise, etc., together with cheerful and helpful social and religious influences. The comforts and pleasures, without the cares of home; entire freedom from taxations of fashionable life; and opportunities for recreation and amusements, under reasonable regulations, are enjoyed. Thoroughly skilled attendants administer to every want.

The Sanatorium consists of a main building and nine cottages, located on an eastern mountain slope overlooking the town of Dansville, and 1,200 feet above the level of the sea. For beauty of scenery, healthfulness of climate, and purity of air and water, it is unrivalled. Winters exceptionally mild for this climate. *Malaria utterly unknown.*

The main building, occupied since 1883, is 300 feet long, five stories high, of brick and iron construction, and

ABSOLUTELY FIREPROOF.

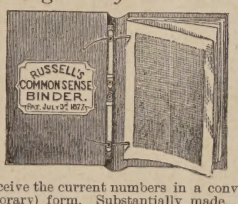
It is constructed to meet every need of the invalid or seeker of rest and quiet and is complete in minutest sanitary details. Among its attractions are light, airy rooms, ventilated after the best plan, and heated by steam; open grates in public and many private rooms; safety elevators; electric bells in every room; spacious halls and corridors, kept at uniform heat; perfect sewerage (closets in annex, separate from building, but connected by warmed corridors); best modern appliances in culinary department; abundant, varied, and well-prepared dietary; extensive apartments for treatment, arranged to secure entire individual privacy, etc.

Autumn and winter months are considered most favorable for treatment. Throughout the entire main building a uniform and agreeable steam heat is constantly maintained, and this, with the perfect ventilation, induces many to prefer a winter residence here to one in a tropical climate.

Special rates to clergymen and physicians. Dansville is accessible from all quarters by Del. & Lack. and by the Erie R. R. For illustrated descriptive pamphlet, circular, and other particulars, address

FACULTY OF THE SANATORIUM,
Dansville, Livingston Co., N. Y.

Reading Case for the Nation,



To receive the current numbers in a convenient (temporary) form. Substantially made, bound in cloth, with *The Nation* stamped on the side in gold. Holds about one volume. Papers easily and neatly adjusted. Sent, post-paid, on receipt of $1.

For convenience of subscribers wisbing to permanently and uniformly bind their volumes, we can now furnish

Covers for the Nation,

In regular book form, ready for use by any bookbinder. These have black cloth sides, roan back and corners, and are stamped in gold on back *The Nation* and the number of the volume. Price 60 cents each, post-paid.

These covers will fit all volumes from XXXIII. to XL., *i. e.* since the increase in size to 24 pages each issue. (For the earlier volumes we cannot furnish covers.) In ordering state the volume-number wanted.

Address Publisher of the *Nation*, Box 794, New York.

Dr. Sauveur's Educational Works.

A copy of any of Dr. Sauveur's Works will be sent post-paid to teachers by the author, on receipt of half the retail price.

Descriptive circulars, giving the retail price and the *introduction price* of each volume, will be sent to applicants.

Address, DR. L. SAUVEUR,
GERMANTOWN, Pa.

Have You a Collection of Books?

The Library Catalogue and Index is intended for private collections. It is arranged so that any book can be entered under author and title of work. Highly approved by those who have used it. The Library Catalogue and Index is handsomely bound and lettered in one volume, quarto (6¾x8½ inches), made of the best paper, and will be mailed, post-paid, to any address on receipt of $2.50 by the publishers,

THE ABOVE FOR SALE BY

LEON & BROTHER, Booksellers,

Under 5th Ave. Hotel, cor. 5th Ave. and 23d St., New York.

The Shakespeare Library.

Collected by the Eminent Shakespearean,

JOSEPH CROSBY, Esq.,

of Zanesville, Ohio, is now offered for sale *en bloc.* It contains upwards of 500 titles, embracing more than 1,500 volumes, about equally divided between text and *anæ.* Almost all the principal editions from Rowe's (1709) to the Riverside (1883) are present, and most of the standard Shakespearean criticism and illustrative literature in the English language. Mr Crosby's studies lay principally in the field of textual criticism, and many of his books are enriched by numerous marginal notes and emendations neatly written by him in pencil. These, of course, render the Library unique, and, it is believed, materially increase its value. The present owners dislike to disperse this valuable collection without giving some gentleman or institution the opportunity to possess it entire. Inquiries should be addressed to

JOHN J. INGALLS, Zanesville, Ohio.

The Nation.

NEW YORK, THURSDAY, OCTOBER 29, 1885.

The Week.

THE discussion of the "Ethics of the Tariff" at the Church Congress in New Haven on Wednesday week unfortunately ended in a row, as tariff controversies are very apt to do. One speaker, Mr. Clark, the editor of a trade paper in Philadelphia, maintained that Ireland and India were brought to their present condition by free trade, which, somehow—the report does not make it clear how—Mr. Courtney, an English clergyman resident in Boston, looked on as a slander, and said so, whereupon there was, of course, much excitement. The truth is, that the tariff is a question which it is very difficult, even for professional moralists, to discuss calmly, because there is so much "money in it." In this it closely resembles slavery. It was the enormous amount of capital invested in slaves which made quiet discussion with slaveholders almost impossible for twenty years before the war. The editor of a trade paper from Philadelphia was, on this account, utterly out of place in participating in the ethical treatment of it by a Church Congress. The argument that because there is free trade in Ireland and India, and Ireland and India are poor, therefore free trade must be the cause of the poverty, is one of which an educated man ought to be ashamed, because it contains one of the well-known fallacies described in all the text-books of logic, and which even young boys are sometimes punished by stern teachers for using. Gravely produced to an audience mainly clerical, it deserves censure and ridicule; but how it can be treated as a violation of the Ninth Commandment we do not see. There is a crank in Philadelphia who maintains that the downfall of the Ottoman Empire is due to free trade, because the Ottoman tariff is low and the Empire is falling. So also it might be argued that because a consumptive wears dark clothes, dark clothes are a cause of consumption.

The *Sun* has a story of the President's contributing $1,000 to the Democratic campaign fund in this State as to which we will say, what we said weeks ago apropos of President Cleveland's supporting the candidate of his own party—namely, that it would be magnificent if he did not do it, but it would not be war. We are not particularly concerned about the donation, however, for two reasons. One is that the money will do Hill no good; the other is that the President has contributed $10,000 to the Davenport fund. In other words, he has blown a blast on his bugle horn which is worth fully $10,000 to Davenport, inasmuch as it is a most emphatic repetition of his adhesion to the cause of civil-service reform, no matter what may happen, or how the elections go, or what the politicians of either party think about it. As Hill has been nominated, and as his supporters are trying to elect him for the avowed purpose of showing the President that the spoils system is the true Democratic one, every fresh expression of this kind we look on as a kick for Hill, and a bank check for Davenport.

The *Evening Post* prints some warm protests from Independents against the folly of bringing a man like Judge Foraker here to repeat the "bloody shirt" rant he has been using in Ohio. We have said our own say on this subject, as also on the frantic talk indulged in on one or two occasions by General Carr. Our Republican friends must remember, as some of them apparently find difficulty in doing, that the object of a canvass is not to enable a number of emotional gentlemen who feel badly about something to relieve their feelings on the stump, but to persuade people to vote the party ticket. If this had been remembered in time, George Bliss would not have been allowed to draft the platform, and Judge Foraker would not have been brought here with his Ohio balderdash, and General Carr would have been shut up in the office in which he is so useful and efficient. But Independents must also remember, on the other hand, that they do not cast their votes to punish managers for inviting silly orators, or silly orators for making silly speeches, but to give their State a good government. Their rôle in politics forbids their being influenced one way or the other by anybody's foolish talk. One of the letters declares that many voters, presumably Democrats, who were intending to vote for Davenport, will not vote at all now, and there is likely to be a widespread loss of this kind to the Republicans because of this silly and unnecessary bloody-shirt oratory. Instead of counting as two votes for Davenport, as it would when cast directly for him, the vote of every Democrat who stays at home on election day will merely count as one.

The State Committee would be wise to consider this point seriously in reference to General Logan's forthcoming appearance in the canvass. As a sectional roarer Logan is even more damaging than Foraker, because he makes more noise and attracts more attention. He is to be let loose exclusively in the rural regions of the State, but he ought to be cautioned about his utterances, for they will all be sent here by telegraph. That tremendous passage in his regulation speech about the "treason-stained saddle of Robert E. Lee," for example, might be left out, together with everything else of the same sort. We have all heard it, and have a very poor opinion of it as an "argument." Why not pay the voters of the State the compliment of assuming that they are neither fools nor fossils, and see how that would work? It would give Logan a chance to prepare the greatest, because the most original, effort of his life.

The activity of the trades unions is one of the noticeable features of the present political campaign, and we may add that it is a healthful feature. Keen personal interest in the political movements of the State and nation is a sign of vigorous political life. It is the exact fulfilment of the republican idea of government that every citizen should take care of his own interests through the medium of the ballot box. If he does not take care of them for himself, nobody else will take care of them for him. Eternal vigilance is the price of liberty and of nearly everything else worth having in this world. Therefore the movements of "organized labor," the questioning of candidates, and the holding of public meetings specially directed by laboring men to their special ends, are signs that the persons or classes engaged in such endeavors have rightly apprehended their duties as members of a democratic republic, and are to be encouraged in all honorable efforts to promote their common interests through political agencies and the forms of law. It is for other persons or classes who may think that the trades-union programme is injurious to *their* interests, or to the public interests, to oppose them with the same weapons—that is, by voting for different men, measures, and policies.

The growth of independence in the Democratic party is strikingly illustrated by the action of the Young Men's Democratic Club in Brooklyn on Monday. This club is an organization of progressive young men, who have consistently thrown their influence in favor of the best movements in their party, and who did good work in securing the election of Cleveland delegates from Brooklyn to the Presidential convention last year. The present municipal campaign is the first test of their consistency in the more difficult rôle of standing against the party when it is in the wrong, and there has been much interest as to the result. The meeting was largely attended, the issue was thoroughly discussed, and the friends of reform won a decisive victory, a motion to endorse the candidate for Mayor of the Democratic Machine being defeated—92 to 80. A motion to support General Woodward, the Independent candidate, received an even larger majority, and although it lacked the two-thirds vote which the Club's constitution requires to constitute a formal endorsement, the whole moral influence of the larger and better portion of the organization will be vigorously exerted in General Woodward's favor. This action is one of the most significant and hopeful developments of recent politics. The immediate and local bearing of the Club's course is extremely important, since it gives a great impetus to the Independent canvass in Brooklyn, and justifies the hope of a non-partisan uprising which will elect General Woodward over the candidates of both the Democratic and the Republican Machines. The broader aspect of the incident is equally noteworthy, since it shows that the revolt within the Democratic party against ring rule, which made itself felt even in Ohio a fortnight ago, and which now threatens Senator Gorman's overthrow in Maryland, is spreading and gaining strength. The Independent Democrat did not appear quite so soon as the Independent Republican, but he has come at last, and he "means business."

The almost incredible announcement is made that the Republicans of the North have decided to make Mahone's cause in Virginia their own by sending money and speakers to his aid. Among the speakers who are said to be going upon this extraordinary errand are Judge Foraker, General Logan, Congressman Kelley, of Pennsylvania, and Senator Sherman. Senator Hoar's name is not on the list, but it ought to be to make it complete. Three of the men named, Foraker, Sherman, and Logan, are, next to Mr. Hoar, the Republican leaders of the North who are most deeply concerned about the importance of the sectional question and its bearing upon the "rights of the poor negro." They say that this is the overshadowing issue in national politics, and that nothing will induce them to abandon its agitation. Yet they are going to Virginia to help Mahone, in the name of the Republican party, thus identifying him and his cause with the cause of the Republican party, and making his work in the South typical of what the Republican party would like to see sustained there if it were in power. It is not possible to say of these men, especially of Messrs. Sherman and Logan, that they do not know what Mahone stands for in Southern politics, for they have been in the Senate with him, and were there partners with him in the disreputable political bargain by which his vote was purchased for the Republicans in return for the absolute control of the Federal patronage of Virginia. That such a bargain was made and kept is a matter of political history. Messrs. Sherman and Logan are entirely consistent in still standing by their old confederate; but their audacity in doing it, in the present state of public opinion, and in the face of their sanctimonious utterances about the poor negro, is almost bewildering.

The most effective answer to the bloody-shirt agitators who are howling upon the Northern stump about the condition of the Southern negro, is made by the negro himself. Louisiana is one of the States where the blacks are alleged to be terribly wronged by the whites, yet we observe that at a large public meeting held in New Orleans the other evening in preparation for the approaching reopening of the exhibition, a prominent part was assigned to a colored clergyman. This speaker, too, so far from discerning any of those perils to his race which so sadly distress the Hoars and Forakers, bore emphatic witness to the revolution in public sentiment among the whites when he said that slavery was a curse to master as well as to slave, which polluted every stream of social life, and that "none now more readily admit the fact and rejoice in its overthrow than those who spilled their blood or lost their limbs in bloody conflict to sustain it." Mississippi is another State where the negroes are declared by Northern Republican stump-speakers to be held under the heel of their former masters in a condition little better than that of actual slavery; yet we read in the morning papers that there opened in the capital of Mississippi on Monday the first agricultural and industrial exhibition ever held by the negroes of that State, the display being highly creditable to the progress of the race, while the whites have manifested their hearty coöperation by contributing $1,500 in the way of premiums, and by encouraging the blacks throughout the State to participate in the enterprise.

The recent session of the Georgia Legislature was the longest ever known, and one important cause was the fact that members had free passes over the railroads. The result was that the larger share of them were away from the capital every week from Friday night to Tuesday morning, and two days out of six were regularly wasted. The question whether passes corrupt legislators or not may be dismissed from consideration, and yet leave remaining ample reason for abolishing the practice in the fact that it everywhere increases the length of the session and the cost to the taxpayers. It is the same way in New York and in every other State as in Georgia. And the evil grows worse every year, as the railroad system is extended and it becomes possible for a larger and larger proportion of members to reach their homes easily. If legislators had to pay their way like other people, they would stay at the capital and work six days a week like other people. It would seem as though it were about time for the public to have mastered this simple idea.

The growing acceptance of the President's idea that public office is a public trust is well illustrated by the speech which Congressman Findlay, of Baltimore, made at a great anti-Gorman meeting in that city on Thursday evening. At a meeting of the regulars the previous evening Mr. Findlay had been arraigned for his course on the ground that he was a Democratic Congressman, taking Democratic money for his services, and then speaking against the party which paid him his salary. Mr. Findlay denounced this as "an anti-civil-service idea," and added: "I deny that I get my pay from the Treasury of the United States as Democratic pay, but as from a common fund contributed by the whole people, irrespective of party, who expect me to honorably represent them in the halls of national legislation." Mr. Findlay gave an interesting account of an interview which he had just had with the President, in which he assured Mr. Cleveland that the anti-Gorman men of both parties accorded him entire sincerity of purpose and were not working against his Administration, but for the overthrow of a man who had no sympathy with his policy. The President replied that on account of his high position he could take no part in the politics of Maryland—that he did not even meddle in the politics of his own State; but, he continued, "I have understood the movement is not against me." The Gorman crowd have been making a desperate attempt to connect their cause with the Administration, but they get no countenance from the President.

The "special delivery" system has now been in operation long enough to give some idea of how it is likely to work, and the indications are not encouraging to its permanence, at least in its present form. The trouble is twofold. In the larger cities people generally continue to rely upon the telegraph or the private-messenger service for the transmission of any message where haste is essential, rather than take their chances at the hands of the postal authorities. In smaller places it is evident that as a rule there will not be enough patronage for the new system to make capable boys willing to serve as messengers, and indeed some postmasters are already paying something out of their own pockets to keep the present messengers from throwing up their places. It seems very doubtful whether the system can be so modified as to make it work smoothly. At best it must remain a somewhat abnormal development of the postal service rather than a healthy growth. Such growth should continue steadily in the direction of prompter delivery of all letters at the regular rate of postage rather than of special facilities at a higher rate. The trial of the experiment will doubtless strengthen the popular demand for such development of the service, and thus it may prove a good thing for the public, although in itself a failure.

General Hazen lately wrote to the *Herald*, saying that he had sent a book by Judge Mackey on the Hazen court-martial for review, and asking that "some fair-minded, unbiassed man" should be selected to review it, and saying that "every expense connected with it would be met." This being construed by the *Herald* as an offer to pay "the fair-minded, unbiassed man" for reviewing favorably, the General now writes to explain that, as "he knew nothing of the methods by which a journal like the *Herald* could be compensated for such a review, he thought the employment of a reviewer should be remunerated by himself." There is no objection in the world to General Hazen's "remunerating" as many reviewers as he pleases for reviewing his books, but it is only fair to the public to let it be known that the reviewers are in his pay. To put forth reviews of his own books, or books concerning him, as the work of "fair-minded and unbiassed men," when they were in reality the work of men hired by him, would, we are sure he will see on reflection, savor of fraud. He seems so simple-minded that we strongly advise him to have nothing to do with an occupation so full of traps for the innocent and unwary as book reviewing.

As the season for Thanksgiving Day approaches, there is renewed discussion of the proposition that a fixed day of the year shall be selected for the holiday, and one several weeks earlier than the traditional time. It is urged that the latter part of November is a bleak period, and that the middle of October would be a much more agreeable time. It is suggested that the celebration might be given an added significance by holding it upon the 12th of October, and thus recognizing the day when Columbus first sighted land on his Western voyage in 1492. It may be doubted, however, whether the advocates of a change will make much headway. The weather consideration is not of so much weight as in the case of some other holidays, like Decoration Day, since Thanksgiving must always remain essentially an indoor, family festival, and is even given a keener zest to many people by a touch of winter in the outside air. Besides, the harvest season is not over so early as the middle of October, and the customary season of observance is a time of much more leisure for the farming population.

The idea of making the day a memorial of Columbus will hardly prove very popular. Everybody "thinks well of him" undoubtedly, but a people which finds it so hard to raise funds for monuments to heroes of its own generation cannot be expected to grow very enthusiastic at this late day over a man who died nearly 400 years ago. Moreover, the selection of a fixed day of any month for Thanksgiving would deprive it of its present unique character among our national holidays as one which always comes on a certain day of the week.

Judge Barrett is rendering a great public service, and one too often neglected by the New York bench, in keeping the counsel in the Ward trial in order. His rebuke to the mellifluous Mr. Bourke Cockran for an unseemly attack on James D. Fish while on the witness stand, his stern refusal of delay to General Tracy in order to examine certain books, and his summary shutting up of the same gentleman when orating against introducing "the name of that man who fought for his country," not to mention other things of the same sort, were all attempts to put a stop to what is a national disgrace—the length to which trials of the simplest kind are dragged out in our courts. Most of this is due to the feebleness or timidity of the judges toward the members of the bar, coupled with the love of the latter for prolixity and notoriety. Frivolous and incessant objections to evidence, prolonged and ingenious attempts to get in what the Court has already refused to let in, tedious harangues, in measured and stentorian tones, upon all sorts of trifles, are the curse and shame of our legal procedure. It is an evil, too, which is always aggravated by putting inexperienced and mediocre men on the bench. It takes some time for the best lawyer to get assurance enough on the bench to do his duty. Apropos of this, we should like to ask why the Bar Association does not consider the desire to take the place on the bench of a good judge, whose term of office has expired, as a sign of unfitness for the office on the part of a lawyer? In other words, is not a lawyer's willingness to be run by a political organization against an experienced and upright judge an indication that his own conception of the judicial office is very imperfect?

Modern reformers are often depressed by sudden discovery that not only the practices which they strive against are of old date, but so also are their own supposed newly-invented methods of dealing with them. From the late publication in England of 'The Court Leet Records of the Manor of Manchester' we learn that some devices for dealing with the drink question which appear among late legislation have in fact the prescription of three centuries. For instance, in 1560 it was ordered, under the penalty of ten shillings, that persons should not brew beer to sell "unless they be able to make two honest beddis." Here we have our familiar three bed-inn license provision, not so long since produced as the best fruit of nineteenth-century wisdom, more than 300 years ago flourishing, but doubtless speedily decaying as in our own day. Moreover, it was ordered in 1573 that a drunken person should be fined, and if unable to pay, "the good man or good wiffe of the howse where he contynued drynking" was to be mulcted in his stead. This again is in spirit, or even in terms, identical with modern measures which have been either adopted or proposed. Such resurrections as these are, as we have said, often depressing to the reforming mind. Whether they rightly are so, or should not rather be stimulating, is another question, or in fact is no question, because the recorded history of human experience ought to be part of every reformer's mental furniture. He should profit in his vocation by men's failures as much as by any other thing, or perhaps even more than by any other. Unfortunately the reforming temperament, being necessarily fervid, is impatient of waiting and study, and prefers to invent a starting-point for the mere pleasure of beginning. The consequence of which is that often the reformer, after the exhilaration of much assumed progress, finds himself some centuries in arrear of his own time, his good dispositions and well-meant energy all wasted, for want of knowing what the Patent-office terms "the existing state of the art."

The course of the prosecution in changing the charge against Stead, of the *Pall Mall Gazette*, from felony into misdemeanor, in order that he might be out on bail, and might not, in case of conviction, be exposed to hard labor, has called forth a good deal of unfavorable criticism from those who believe Stead to be a sensational charlatan, deserving no indulgence. These criticisms will be strengthened by the unexpected evidence of Dr. Harwood Smith, produced on the trial on Tuesday, which proved that he had been paid a fee by Stead for chloroforming and examining the unfortunate child, Eliza Armstrong. To understand the atrocity of this, one must remember that Stead published in his paper an account, without names, of this Armstrong case, as a specimen of the horrors he was unearthing, the fact being that the whole thing was manufactured by himself, and proved absolutely nothing except that he was himself an unscrupulous and somewhat disgusting self-advertiser. The mortification which lies in all this for the archbishops and bishops who were humbugged into listening to his revelations, is obvious enough.

One of the curious incidents in the movement for the disestablishment of the English Church which the Radical element in the Liberal party have begun to set on foot, is the outspoken opposition to it of both Cardinal Newman and Cardinal Manning. They both profess to see in the English Church one of the great bulwarks of Christianity itself. Dr. Döllinger, the great Catholic German divine, who distinguished himself in 1870 by his opposition to the infallibilist decree of the Vatican Council, has spoken recently in the same sense. That the danger is considered serious by the English clergy is shown by the defences of the establishment produced at the diocesan conferences and other clerical gatherings. Some of these defences are rather odd. The Dean of Peterborough argues that the House of Commons ought not to touch the Church because it is older than the House. Another is that the dissenting ministers are the ministers of the rich, while the Anglican ministers are the friends of the poor; the converse of this being one of the main arguments of the friends of disestablishment. In fact, the Radicals are relying largely on the influence of the dissenting ministers among the poor for their majority in the counties in the coming election.

The repeated false stories of the passage of the Bulgarian frontier by the Servian troops shows how very delicate the situation in the East is, but the failure of the Servians to commit as yet any overt act of war, excited as they have been, shows also how tight the rein is which the Powers are keeping on the small States. The longer the peace is kept the less the danger of war grows. The forces on both sides are composed mainly of militia, and they bear inaction and absence from home very badly, so that as the days pass, and nothing is done, they are less and less eager to do anything. The Porte, on the other hand, is apparently collecting troops merely to give itself a good standing with the Powers. The lesson of 1877 was so severe that even if the Sultan were as well prepared now as he was then, from the military point of view, he would not venture to use his army without permission from his European patrons, for he knows that the next mistake he makes will lose him Constantinople.

The reference of the dispute about the Caroline Islands, between Germany and Spain, to the Pope as arbitrator, has excited more or less of a sensation in Europe, first because such a very realistic statesman as Bismarck should have proposed it, and secondly because it looks like a restoration of the Pope to the place he occupied in the days when he divided the New World between Spain and Portugal. Of course the Pope has not sat on the matter himself. Sovereigns acting as arbitrators always refer the question in dispute to competent lawyers and publicists in their own service. For this sort of work the Pope has a staff of unequalled capacity, as far as learning and casuistical acuteness go, and then he is just now, fortunately for himself, "out of politics," as his predecessors have not been for fourteen hundred years. The only bit of political work he has to do is to renew his protest annually against the doings of the "Subalpine Usurper" in the matter of the temporal power, but this has now become very perfunctory. He consequently lives in a serener air than any other arbitrator that can be found, and if his work is satisfactory in this Carolines dispute, he may have a good deal more of the same sort offered to him. The decision is said to be already made. If it is in favor of Spain, there will probably be no further trouble, as Bismarck really cares very little about the matter. But if it is against Spain, it remains to be seen how the Spaniards, who are very much excited, will take it. A reference to the Pope of the Anglo-Irish quarrel would be a crucial test of his fitness for the work of arbitration. If the Irish accepted an adverse decision without any abatement of their attachment to the Church, it would be a great triumph for the Papacy.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, October 21, to TUESDAY, October 27, 1885, inclusive.]

DOMESTIC.

THE President has found it necessary greatly to restrict the hours for the reception of visitors, and issued an order on Tuesday limiting the time within which he will see applicants for office and other persons to the hour from ten to eleven of three days of each week until the assembling of Congress. The reason for this is, that the President finds it absolutely necessary to gain time to study the important questions which he will present to Congress in his message.

The President has stated to a gentleman whom he called in consultation on Friday, that he will rigidly adhere to his civil-service reform policy, whatever may happen in or out of his party, and that he is confident that ultimately the country will approve his course. Of one thing he is sure, that neither political party can openly espouse any policy which is antagonistic to the civil-service reform idea. The only thing for any party hereafter to do, as to that question, is to decide whether it will sincerely support a policy which it will be compelled to endorse, or covertly seek to nullify it. Mr. Cleveland intends, in the reorganization of the Civil-Service Commission, which will probably be made so soon as competent persons can be found, to make clear his purposes in this matter.

A gentleman who is in a position to know the conclusion at which the President has arrived on the Indian question, expresses the opinion that the main feature of the Indian policy of the Administration, as it will be announced to Congress, will be a recommendation that there shall be a radical change in the methods of purchasing and issuing provisions and all other supplies. Almost every feature of the present system is disapproved by the President. He will suggest that the authority to purchase and distribute be transferred from the civil to the military authorities; that the purchase of provisions for the Indians be made in the same manner as the purchase of supplies for the army, in the best markets, and by experienced commissary officers. It is not more difficult, it will be maintained, to supply the Indian reservations than to provision remote military posts.

Civil-Service Commissioner Thoman has tendered his resignation and it has been accepted by the President to take effect November 1st next.

Secretary Manning has requested and received the resignation of Mr. Coon, Assistant Secretary of the Treasury. Mr. Coon has been in the Government service for twenty years, and is a most efficient man. He is a Republican. Mr. Coon recently explained that he had remained in the office at Secretary Manning's request, that their relations had been very pleasant, and that it was understood that the Secretary might feel called upon to request his resignation. A few days ago Mr. Manning had informed him that that time had come. Mr. Coon then sent his letter of resignation. When asked the reason for his removal Mr. Coon said: "Oh, it's plain enough, I suppose; it's doubtless owing to the pressure which has been put upon him. He has been unable to withstand the Bourbon howl for my scalp."

The terms of service of Commodore J. G. Walker as Chief of the Bureau of Navigation and Commodore Montgomery Sicard as Chief of the Bureau of Ordnance in the Navy Department expired on Wednesday. Both officers will, however, be reappointed for another term of four years. Secretary Whitney is in favor of rotation among naval officers, but these cases are notable exceptions to that rule on account of the excellent service rendered by the officers, and their entire mastery of the duties of their respective bureaus. Commodore Walker is next to the Secretary in the management of the affairs of the Department.

Commodore Chandler, of the Brooklyn Navy-yard, has received a letter from Secretary Whitney, in which he says: "It is your duty to disregard every consideration except the efficiency of the men as workmen. I am quite aware that the clamor for places in the Navy-yard is so great as to involve great disappointment on the part of those who cannot be given employment, and that you will be subjected often to unjust criticism, from the effects of which it is my duty to protect you. That I will do. But I shall from time to time investigate the manner in which you conduct affairs in this regard, and if in any case I shall ascertain that men have been taken into the yard —men who are not competent workmen—for political reasons, I shall consider it sufficient ground for the dismissal of any foreman, and shall dismiss him. Your deviation from the correct rule will be seen in the employment of inferior men, in constituting an inefficient force, and in the subordination of the yard as a workshop to the interests of political friends. This can be readily detected by your superiors, and will result in your dismissal in any such case."

The Postmaster at Boston recently refused to forward by special messenger a postal card to which an immediate-delivery stamp was affixed. His interpretation was that a postal card could not be included under the general term of "letters" mentioned in the Special-Stamp Delivery Act. The Post-office Department has ordered that postal cards to which special-delivery stamps are affixed shall be distributed by special messenger the same as if they were letters.

It is estimated that the deficiency in the postal revenue for the past fiscal year is $7,000,000.

Mr. Randall declares that he will not enter the Speakership contest in the coming Congress.

A meeting of subscribers to the fund of $250,000 which was raised in 1880-81 for the benefit of General Grant was held in this city on Thursday. It was resolved: First, that the fund be placed in the hands of trustees to pay the income to Mrs. Grant during her life, and after her decease to the children of General Grant during their respective lives, and on their decease respectively that the fund be distributed to their descendants per stirpes, and not per capita; second, that a committee of two be appointed to prepare the trust deed, and submit the terms of the same to the donors at a future meeting to be called; third, that the United States Trust Company act as trustees, and that on the transfer of the funds now in the hands of Messrs. Jones and Hoyt they be discharged from all further responsibility and liability; fourth, that Judge Noah Davis and Henry Day be appointed as a committee to prepare the trust deed.

Governor Hoadly carried Hamilton County, Ohio, by a majority of 599 over Foraker.

The National Committee which conducted the campaign for the Independents during the last Presidential election have issued an address in which they say: "We suggest the coöperation of all Independent supporters of the President in defeating David B. Hill by so decisive a vote that its significance cannot be mistaken; and we invite the Democratic supporters of Grover Cleveland, with whom we joined in 1884 to defeat the spoils candidate for President, to join with us in 1885 to defeat the spoils candidate for Governor. We congratulate good citizens of both parties on the happy dilemma in which they are placed by the excellence of several nominations on both sides, and we urge them to a wise discrimination in their votes for the candidates on either party ticket. We rejoice also at the non-partisan renomination of good judges through the joint action of the two parties. We look forward to a time when political questions, national or State, shall again emerge from the confusion in which party managers have involved them, when party platforms shall again have meaning, and when Independent voters will range themselves, especially in elections for Congress and the Legislature, on either side of the questions on which political parties will then divide."

The Republicans of the Second Albany Assembly District, on Monday, nominated Smith O'Brien for the Assembly. The nomination is equivalent to a renewal all through the county of the old factional Republican war.

A bronze statue of the late William E. Dodge, erected by voluntary contributions under the auspices of the Chamber of Commerce, was unveiled on Thursday afternoon in this city at Broadway and Thirty-fifth Street. The figure was designed by J. Q. A. Ward. Mr. Abram S. Hewitt delivered an address.

A street car was blown up by dynamite in St. Louis on Friday evening by the strikers. One woman was seriously injured. The outrage was repeated on Sunday. No one was then injured.

A private meeting took place in the St. Louis jail on Friday evening between Samuel N. Brooks, of Hyde, England, and his son, Hugh Matham Brooks, alias Maxwell, who stands charged with the murder of C. Arthur Preller. The father's identification of his son was immediate.

Mrs. Mary Ann Booth died of pneumonia at her home in this city, on Thursday, aged eighty-three. Mrs. Booth was the widow of the famous tragedian Junius Brutus Booth, and mother of Junius Brutus, jr., Edwin, John Wilkes, Joseph A., Asia, and Rose Booth. Her maiden name was Holmes. She was married to the elder Booth in England and came with him to this country. She was never on the stage.

Ex-Governor John B. Page, of Vermont, died in Rutland, Vt., on Saturday, at the age of fifty-nine. He was elected Governor in 1867.

FOREIGN.

On Sunday it was reported that the Servians crossed the line into Bulgaria on Saturday night by way of Klissura. A force of Bulgarians advanced to meet them. The Servians halted just within the frontier lines. A slight skirmish was reported to have taken place between the Bulgarian and Servian pickets. These reports were officially denied by the Servian Government on Monday, which is kept as busy in correcting the newsmongers as in meeting the crisis.

Although the Servians have not actually crossed the Bulgarian frontier, they are making important movements in readiness for an invasion. The roads are in a bad condition from heavy rains, and the transportation of artillery is difficult.

The whole Servian cavalry force has been ordered to proceed to the frontier with sabres sharpened.

Reports from the Servian frontier on Tuesday asserted that Bulgarian regulars fired upon Servian customs officials at Negotin and Raduyevatz, and that the officials withdrew from their posts pending orders, but afterward reoccupied them. The latest communication from the Powers to the Servian Government promised that the status quo ante in Rumelia should be restored, and demanded that the Servian army be demobilized. The Servian Government has replied, refusing to disarm the Servian troops until an equilibrium in the Balkans has been restored.

The Porte continues massing troops at points available for offensive operations in Eastern Rumelia in the event of extreme measures being resorted to. A despatch from Smyrna on Tuesday said that 20,000 men of the reserves had gone to Salonica.

The Porte has decided not to send troops into Eastern Rumelia without a European mandate.

The various diplomats in Constantinople consider the aspect of the situation as very serious, and fear that the Turkish circular, the discussion of the matter by the ambassadors, and the action of Servia may impart a European character to the Bulgarian question, which the Powers desire to localize. The Porte, however, will not admit that it is only a local question.

The Porte has issued a circular inviting the Powers to a conference at Constantinople to be held for the exclusive object of settling the Rumelian difficulty. This conference will assemble on October 28.

Herr von Radowitz, the German Ambassador at Constantinople, has informed the Porte that Prince Alexander has guaranteed that Bulgaria shall not disturb the present order of things.

The London *Standard* on Saturday morning, commenting on the Balkan question, says: "England cannot approve and will not sanction, though she may not resist, a settlement that disappoints the legitimate and harmless wishes of Bulgaria and Rumelia. Even should Russia insist upon, and the Powers acquiesce in, deposing Prince Alexander, it is doubtful whether they would succeed without disturbing peace. Lord Salisbury will labor hard in favor of Bulgarian hopes." The *Times* announces that the Government has consented to enter the Balkan conference. France has agreed to do so.

A St. Petersburg despatch of Tuesday afternoon asserts that the Czar has agreed to the proposition to make Prince Alexander Governor of Eastern Rumelia on certain conditions.

A fight has taken place on the frontier of Montenegro between Albanian and Montenegrin troops. Three Albanians and six Montenegrins were killed.

It is announced that the British Parliament will be dissolved on November 18.

A desperate attempt was made at five o'clock on Wednesday afternoon in Copenhagen to assassinate Premier Estrup by a youth, one Rasmussen, a compositor. Rasmussen fired two shots from a revolver at the Premier. When in the act of firing a third shot he was seized by two detectives, a number of whom have constantly been in attendance on the Premier for some time, owing to the extreme hatred of the populace toward him and the other members of the Cabinet. The first shot struck a button on Herr Estrup's coat and glanced off. The second went wide of the mark. Rasmussen declares that his motives were political, as Herr Estrup's conduct in the present political controversy in Denmark is inimical to the State.

The Landsthing or Upper House of the Danish Parliament has unanimously endorsed the policy of M. Estrup, President of the Council, and denounced the recent attempt to assassinate him

Lord Randolph Churchill spoke at Birmingham on Friday night. Mr. Chamberlain, he said, sought a renewal of the confidence of his constituents. Mr. Chamberlain gave splendid promises in regard to the future, but refused to explain the past. He remained silent concerning the enormous sacrifice of gallant Englishmen in the Sudan. Mr. Gladstone had issued a long and vague manifesto explaining nothing and leaving the situation of the Liberals baffling and confused. The speaker dwelt at length upon the want of unity displayed by the Liberals, and then referred to the contempt shown by the Liberal party for the question of colonial option, adding that a similar policy had caused England to lose her American colonies. Touching the present depression in business, Lord Randolph said that a sound foreign policy and the economical management of the country's finances would go far toward reviving the trade of Great Britain. Referring to the Burmese troubles, he said that a war with Burmah would probably result in the annexation of that country by the Indian Government. The Radical theory that a foreign policy is useless was denounced by the speaker. The meeting was uproarious throughout, but was generally favorable to Lord Randolph Churchill.

The Marquis of Lorne, the Liberal candidate for Hampstead, went down to Brentford, a town seven miles west of London, on Friday, to deliver a campaign speech. While addressing the electors, a mob assaulted him with rotten eggs, and some of them, gaining the platform, smashed his hat over his head. The supporters of the Marquis rushed to his rescue, and a fight ensued, during which he escaped to the railway station, and immediately departed for London. Meanwhile the row continued, the supporters of the Marquis being severely handled, and they finally retreated, leaving their contestants masters of the field. The latter then seized the platform and passed a resolution condemning the policy of the Liberals.

While Mr. Mitchell Henry, member of Parliament for Galway, was addressing a political meeting at Glasgow, on Monday, a party of Irishmen stormed the hall and a free fight ensued. After twenty minutes of uproar the intruders were ejected. Miss Helen Taylor, the Radical candidate for member of Parliament for Camberwell, held her first election meeting on Monday night. The meeting was disturbed by a free fight. Mr. Gladstone will speak at Edinburgh on November 11, at West Calder on November 17, and at Dalkeith on November 21.

Mr. Gladstone will go to Midlothian on November 10.

A book has been published in London called 'Why Am I a Liberal?' Fifty prominent men answer the question. Robert Browning contributes a sonnet. Mr. Gladstone sends the following definition: "The principle of Liberalism is trust in the people, qualified by prudence. The principle of Conservatism is mistrust in the people, qualified by fear." Earl Rosebery answers: "Because I wish to be associated with the best men in the best work." Mr. Chamberlain writes: "Progress is the law of the world. Liberalism is the expression of this law in politics."

Professor Tyndall has written a letter in which he says: "England has been governed by a clever but irresolute group of men, who advanced by impulse and retreated as if frightened by their own audacity."

The English Farmers' Alliance has adopted a resolution stating that, to avert the ruin of the present race of farmers, landowners must forthwith reduce the rents of farms, and the Government must formulate a measure which will prevent the raising of rents on the improvements of tenants.

Lord Dufferin, the Viceroy of India, has received orders from the home Government for the immediate despatch of troops to Burmah.

The contingents of the Indian army from Madras and Calcutta are being rapidly transported to Rangoon, where the expeditionary force is being assembled for the invasion of Burmah. The Burmese Government is actively preparing to resist the advance of the British troops. British officers expect that the campaign in Burmah will be a short one.

Unless King Theebaw's complete acceptance of the Indian Government's terms be received at Rangoon by November 10, hostilities against Burmah will begin on November 11, and another prince and regency will be substituted for the present Government of that country.

A private telegram from Mandalay asserts that King Theebaw is desirous of settling the dispute with the Indian Government without resorting to arms.

Advices from Burmah say the Shans have risen against King Theebaw. They have burned a number of villages on the west bank of the Salwen River. The Burmese fled on the approach of the Shans.

It was rumored in Rangoon on Tuesday that a revolution had broken out in Mandalay, and that King Theebaw, of Burmah, had been murdered.

The Privy Council in London on Thursday decided against Riel, the half-breed leader, on every point of his appeal. It is believed that he will be hanged. Riel's execution has again been postponed until November 11.

It was officially announced in Ottawa on Saturday that a medical commission, composed of one American, two French, and two English Canadian doctors, is to be appointed for the purpose of determining Reil's mental condition. L. O. David, the rebel's friend, says this is merely a dodge of the Government to escape responsibility, as his execution has been arranged.

The trial of Mr. Stead and others indicted in the Eliza Armstrong case was begun in London on Friday.

The Right Rev. James Fraser, D.D., Bishop of Manchester, died suddenly on Thursday at the age of sixty-seven.

The Right Rev. James R. Woodford, D. D., Bishop of Ely, England, died on Saturday, at the age of sixty-five.

The marriage of Prince Waldemar, third son of King Christian, of Denmark, and Princess Marie, daughter of the Duc and Duchesse de Chartres, was celebrated on Thursday at the Château d'Eu, France, the residence of the Comte de Paris. Among those present were the Queen of Denmark, the Crown Prince and Princess of Denmark, the Prince and Princess of Wales and their three daughters. The handsome park and gardens surrounding the château were brilliantly illuminated. The town was decorated, and many private houses were also illuminated in honor of the event. At the wedding breakfast the Prince of Wales proposed a toast to the health of the bride and bridegroom.

The Brisson Ministry in France is now uncertain about its ability to hold a majority of the new Chamber of Deputies, as a serious split in the Republican ranks is threatened. The Republicans were united to carry those districts which required a second ballot in the recent elections, but now each faction insists on the adoption of its own programme.

Paris advices from Tonquin say that French troops recently made reconnoissances from Songhoa and Huanquan and found formidable numbers of Black Flags in the vicinity of those places. Three thousand reinforcements are about to start from France for Tonquin.

General de Courcy, commander of the French forces in Anam, telegraphs from Hanoi that he has defeated the Black Flags in an engagement.

At a meeting of the French Academy on Tuesday, M. Pasteur furnished proof of his theory that inoculation was easily practicable, and had cured hydrophobia. M. Vulpian gave additional proof confirming the assertions of M. Pasteur.

Emperor William on Monday visited the cathedral chapel in Berlin to inspect the new altar picture, the "Adoration of the Magi." The Court Chaplain related to the Emperor the history of the picture. The Emperor, in congratulating the Chaplain, said: "In these, my latter days, I call heaven to witness that I have always considered religion the only foundation on which depends everything. It is the highest possession of my people."

Two-thirds of Switzerland have voted in favor of cantonal local option.

Intelligence reached Halifax on Tuesday that a great storm raged off the coast of Labrador on October 11, doing immense damage among the fishing fleet gathered there. Eighty vessels were wrecked or driven ashore, and at least seventy men from the crews of the vessels lost their lives. Two thousand persons are now ashore in a destitute condition. The news created great excitement in Halifax. Steamers will be immediately despatched with provisions, clothing, and other comforts for the use of the castaways.

NAVAL POLITICS.

STRONG and, we believe, well-founded complaints have been made of late of the way in which the force has been filled up at the Brooklyn Navy-yard under the present Administration. It is charged that a large number of men have been employed who could not get third-rate places from any private employer, and that they have been in a large degree the nominees of local politicians. It is quite true that, if the yard has been manned in this way, it has been done in strict accordance with Republican precedents. When the Democrats went out of office in 1861, the navy-yards were sinks of political corruption, and one of the modes of preparing for an election by the party in power was to fill them with worthless laborers and mechanics a week or two before election. The Republicans adopted the system in its entirety, and made improvements in it, and kept it up for twenty-five years. This mode of robbing the Treasury and debauching the voters was never more effectively practised than under Mr. William E. Chandler, the late Secretary of the Navy.

But then nobody expected anything better from Chandler, nor from the party which put men like him in power. From Mr. Whitney people do expect a great deal more. Even the Republicans show they expect it by complaining if he falls below the very highest standard in the smallest particular, while proclaiming that nothing good can come out of the Democratic party. That he has made, and is making, energetic efforts to break up the abuses in the navy-yards no one doubts, but what has occurred in the New York Custom-house shows that it is no easy matter to get local officials to believe that the Administration is in earnest in such efforts. In spite of all the President and members of the Cabinet have said about their determination in the work of reform, Messrs. Hedden and Beattie evidently did not take it seriously, or else they never would have ventured on the appointment of a man like Sterling in the place of a man like Bacon; and yet the machinery of civil-service reform had long been at work in the Custom-house, and the officials there were tolerably familiar with the principle. In the navy-yards the traditions of the spoils system are perhaps stronger and more deeply rooted than in any other department of the public service. The civil-service rules have never penetrated them. They are governed by "naval regulations," which can be conveniently suspended, or allowed to fall into desuetude. Nowhere else, too, has the shameless spectacle been witnessed annually, and above all quadrennially, of an enormous temporary increase of the force as a cover for bribery of voters on a large scale, at the instigation or with the countenance of the President and Cabinet.

Mr. Whitney addressed himself some time ago to the correction of the evil, by an order making the foremen strictly responsible for the character and capacity of the men they employ, subject to the approval of their superior officers. Things have improved under this to some extent, but it appears as if in Brooklyn at least he was not taken quite seriously, for the abuses he aimed at have been there continued. He has therefore sent out a second circular, reiterating the instruction that it is the foremen's "duty to disregard every consideration except the efficiency of the workmen," and warning them against succumbing to political influence in the heat of a political canvass. He closes by saying very significantly and peremptorily:

"I do not expect to investigate the politics of men employed, and I am quite aware that whatever you do will probably displease and disappoint. But your deviation from the correct rule will be seen in the employment of inferior men, in constituting an inefficient force, and in the subordination of the yard as a workshop to the interests of political friends. This can be readily detected by your superiors, and will result in your dismissal in any such case."

We will only add to this, that while circulars like this doubtless do great good, nothing will really convince the old hands that the Administration is in earnest but the actual punishment of offenders. The dismissal of one or two foremen for putting workmen in to oblige politicians would be worth all the circulars that can be written. The dismissal of Judge Vincent in New Mexico for appointing Dorsey will do more to protect us against such appointments in future than a hundred rebukes on paper. The suspension of Sterling was an excellent thing, but it will not produce one-tenth part of the effect in keeping the Custom-house clear of liquor-dealing politicians that the dismissal of Hedden would do. The class of men who make such appointments are not much affected by platforms and circulars. They have been long accustomed to consider the speeches of party chiefs in favor of reform as bunkum, and they take nothing seriously but the official axe. When they see the head of a spoilsman in the basket, they will feel that reform is a serious thing, but not till then.

One other practical remedy we think is worthy of Mr. Whitney's attention, and that is a prohibition of all increase in the force in the navy-yards, say for two months before election. As long as it is the custom to fill up the yards with workmen in the fall of the year, nothing will convince the public that the work of reform is going on, at least at that particular time; nor will any orders or admonitions prevent the foremen from succumbing to the demands of politicians in making their appointments, or make it easy to detect and punish them when they do it. Radical reform, in short, must begin by cutting the force down in September, October, and November, and not going vigorously to work till December or January. The navy, we are sure, would not suffer by this. It has waited so long to be reconstructed and repaired that trifling delays of this kind could not hurt it, and they would satisfy the American people, as nothing else will, that the navy-yards were "out of politics."

THE GERMAN TAX ON SPECULATION.

SOME months ago we called attention to a scheme for taxing speculation which was then under consideration in Germany. The bill which contained this scheme has since been carried through various stages, and was made law on May 19 last. It is printed in full in a recent number of the *Jahrbücher Für National-Oekonomie*. As compared with what was originally proposed, the law is a very mild measure, and one hardly likely to have any great results. But it still deserves attention because it is very characteristic of public opinion in Germany on economic and social subjects, and also characteristic of the present condition of German politics.

As an economic measure, it is the first practical outcome of the agitation against speculative gambling in stocks and goods which has been going on for the last ten or fifteen years, and which is only one manifestation of the whole movement of German thought on economic matters. It is of a piece with the acquisition and management of railroads by the Government, with the legislation for a State guarantee to every laborer of support for himself and family, with protection to manufacturers and landowners, and with "Socialistic" legislation in general. The idea underlying it all is, that the principle of free and unfettered development of industry and trade is a mistaken one; that Government ought not to wait and see whether industrial evils may not cure themselves, but should step in without hesitation, and try to cure them off-hand.

In the case of this particular evil there is another current which sets in the same direction. This is the anti-Jew agitation. The Jews are the chief bankers, brokers, and speculators of Germany. They are, moreover, the keenest and most successful speculators. They are apt to get the better of Teutonic rivals, partly because they are more ready-witted, and partly, it must be confessed, because many of them are less sensitive to public opinion. The feeling against the Jews, of which there have been so many manifestations in the last ten years, is a curious compound of race antipathy and of jealousy, and one of its manifestations is the denunciation of the gambling and speculation of the Jews; and this combines with economic theories and prejudices to bring about the present effort to check the evil of speculation.

The effort, however, is not a very vigorous one. It consists in a tax on what are supposed to be the speculative transactions. The tax, which is in form a stamp-tax on brokers' notes or sale memoranda, amounts to 1-10 per 1,000 on sales of stocks, bonds, and negotiable securities in general, and to 1-5 per 1,000 on sales of general merchandise. It is to be collected on all sales of securities, whenever and however made. All such sales, it seems, are presumed *ipso facto* to be speculative. But in the case of merchandise the tax is restricted to certain specific kinds of sales. It is to be collected only on those sales of merchandise which take place under the rules and customs of any mercantile exchange, and for which there are regular quotations of prices on such an exchange. And even for these the tax is not to be levied on goods which are produced by one of the contracting parties, but only in case both parties are dealers.

Obviously enough, the articles which will mainly be affected by the tax on mercantile sales are agricultural products, like grain and provisions; for there are few other articles in Germany for which there are regular mercantile exchanges. This explains another curious feature in the new law, namely, that the tax

on goods is twice as high as the tax on stocks. Here we come across the political aspect of the measure. The law is one made largely at the instance of the Conservatives and landowners, who form the bulk of Bismarck's supporters. The notion has got abroad among the German landowners, as among the farmers with us, that speculation in agricultural products grinds down the farmer and landowner. They seem to think that every speculator must be a bear on the market, or that at all events the dealers and speculators are natural enemies of the plain, poor man from the country. So they tax the business of buying and selling grain and provisions twice as heavily as that of buying and selling stocks and bonds. Bismarck has been giving aid and comfort to the landowning gentry ever since he broke with the Liberals in 1876–77, partly because he belongs with them by blood and sympathies, and partly because he wants their political support. He gave them protective duties on grain, and prohibited American pork for them. Now he lets them give a little blow to those whom they consider their enemies at home.

Of course, the rate of taxation is so low that the effect of the measure will be little felt. On stocks it amounts only to $1 on every $10,000 worth sold. On grain, provisions, and any other goods whose sales may be reached by it, the rate will be only $1 on every $5,000 worth sold. That is not likely to check much speculation. Of course, the tax will give some little revenue to the Government. In so far as such revenue does come out of purely speculative transactions, it comes from a source which one is willing enough to see making some clean contribution to the public welfare. But the revenue will come in large part out of dealings that are not speculative, but are a part of the natural and healthful movement of industrial affairs. The tax will bear on the man who buys stocks as an investment for his savings, or buys grain in the legitimate and necessary course of his business. It is not obvious why these dealings should be taxed any more than those of buying a house or a cow. As a matter of principle and of economic policy, one does not see that this sort of legislation is of much avail for carrying out the moral ends put forward. It does not encourage any thought of imitating the Germans in a legislative tendency which they have been latterly in the way of proclaiming loudly to be the only true, and moral, and enlightened one. One can but suspect that in such a measure as this there is a good deal of class prejudice and petty jealousy, and that it is no more than a weak and crude attempt to meet an evil of which the meaning and importance are not grasped with much intelligence.

A USEFUL OPENING FOR CAPITAL.

We believe it was strongly urged on Jacob Sharp, after he got his Broadway railroad scheme safely through, that he should start a line of modern omnibuses in Fifth Avenue. It was not done, and we presume the reason it was not done was to create enough public inconvenience to prepare the public mind for the Fifth Avenue railroad enterprise, which is now being pushed with considerable vigor. We are, therefore, heartily glad to see that the omnibus scheme has been either produced or revived, and that there is a fair chance of our seeing on Fifth Avenue, what New York has never had, a line of stages of the modern improved type.

Nothing in New York life has been more singular than the way in which conservatism, driven from nearly every other field, fastened itself on the omnibuses in this city, and kept them during the whole fifty years of their existence exactly what they were when they first started—heavy, lumbering, uncomfortable, and slow. In every other great capital in the world they had gone through several phases of evolution. The same influence, whatever it was, too, until very recently kept the New York hotels supplied with that arklike vehicle, "the Concord coach," as a means of carrying their guests to and from the railroad station. The Concord coach was devised early in this century as the best form of stage coach for the long journeys over bad roads which travellers were then compelled to make. It has exceedingly strong and heavy running-gear, and is slung in leather straps of tremendous power attached to C springs. In fact, it is built to stand great jolts without danger to the life or limbs of passengers. No number of horses could get great speed out of it.

Five miles an hour is a great pace for it. Its proper field is, and has always been, the trails which out on the Plains are called roads, and which in the earlier days connected the large cities at the East, through the thinly-peopled hamlets along the Atlantic Coast. Its retention in cities like New York, down to our day, as a street vehicle for bringing weary travellers to their hotel, is one of those odd survivals which one looks for in England or Germany rather than the United States, but it is hardly odder than the late New York stage was. What a queer thing that was, no one can appreciate who has not seen the results of fifty years' growth in the street omnibus in European capitals. The London omnibus is perhaps not more comfortable than that of Paris, but it is faster. It has, as all European omnibuses have, a conductor, who stands behind and performs the duties of our car conductor, only more efficiently. The floor is a level surface, instead of rising in a steep grade toward the horses, and there are places on the outside for men and boys who care for the open air, or a view of the streets in fine weather. It is lightly built, and is expected to go six or seven miles an hour. In the mornings from some of the London suburbs stages run in with business men at a speed of eight or nine miles an hour. Our old Fifth Avenue stages went at a pace which made it easy for a brisk walker to keep up with them between the City Hall and Forty-fifth Street, or about four miles an hour. We say this as the result of frequent experimentation. It was this slow, lumbering pace, which their heavy and cumbersome build rendered almost a necessity, which made them so much of an obstruction in the streets. They were in the way of everything but loaded carts or drays, and were very slow in getting out of it. They impeded all hacks, carriages, and express wagons.

A line of modern omnibuses, with the latest improvements, and built with the lightness which is the characteristic of all other American vehicles, and which Europeans envy but cannot imitate, handsomely painted, doing six or seven miles an hour, with good horses and uniformed conductors, and with drivers whose hours of work were short enough to keep them out of the comatose condition in which the old stage drivers passed most of the day, would not only be an immense convenience to the public on Fifth Avenue and the neighboring streets, but would give very agreeable life and animation to the streets. It would be well worth ten cents a ride to any one going up toward the Park, and would be nearly as fast as the elevated railroad, taking into account the time lost in ascending the stairway and waiting for the train. Moreover, instead of causing the pavement of that magnificent thoroughfare, Fifth Avenue, to be neglected, as the construction of a street railroad on it would do, it would cause greater attention to be given to it than ever by making its defects more noticeable.

To women, too, the omnibus, if properly constructed—that is, if easily entered and quitted, with a conductor to look after the door and the stopping—will always be more convenient and attractive than the street railroad. The platform of the street car, with its crowd of male passengers, through whom way to the interior has to be made almost by main force, will always be a serious obstacle to women, children, and infirm persons, to say nothing of the crowding in the interior. Moreover, the street cars seem to have got into the same rut in the matter of construction in which the omnibuses so long travelled. There has been hardly any improvement in them in the essentials of comfort or convenience, since they first appeared in the streets. The ventilation is better and the windows made larger, but the seats are no more comfortable or better arranged. Those of the newest type on Broadway are actually covered with woollen carpeting—that is, the best-known material for the transmission of infection and the retention of dirt. Moreover, that very simple device in use on the elevated road, the division of the seats, so as to prevent any one spreading himself or herself over more than one seat, and to enable every passenger on entering to see at a glance where there is a vacancy, has not been adopted by a single line of street cars. Instead of this we have electric bells for stopping the car, which nobody ever uses, and larger plate-glass windows, to which everybody turns the back of his head. In fact, enterprising, progressive omnibus proprietors have a chance on Fifth Avenue to treat the city to a most agreeable and—we believe for the promoters—profitable sensation.

THE DANISH CONFLICT.

"The Folkething has been bitter in its denunciation of the Premier and his colleagues, and has refused to vote the budget." "The Landsthing, or Upper House of Parliament, has unanimously approved the policy of M. Estrup, President of the Council." These are fragments of a telegram from the Danish capital, of October 23. Barring the word "unanimously," which is hardly quite correct, the same succinct report would have fitted the Parliamentary situation in the little kingdom of Denmark in a score of instances

within the last ten years—that is, since the time when Jakob Estrup first appeared in the legislative halls as head of King Christian IX.'s Cabinet. The history of this long-lived Cabinet is as melancholy as it is monotonous. The Minister of Finance introduces a budget. The Folkething, or popular branch of the Rigsdag, in which the Democrats have a vast majority, strikes out or reduces a considerable portion of the appropriations asked for. The Landsthing, which represents the gentry and wealth of the country, readily votes for everything demanded. Each house clings to its resolution. A committee of conference is appointed by the two houses. The Landsthing, anxious to help the Conservative Administration, yields many points in order to save some; the Folkething, bent on clogging the wheels of the hated Government, remains stubborn. The conference has no effect. The Government prorogues the sittings of Parliament, and on its reassembling renews its demands. The result is the same. The Government dissolves the Folkething. In the new elections the Opposition triumph. Meanwhile the Government, profiting by a clause in the Constitution which allows the raising of money for running the administrative machine by a provisional law when the Rigsdag is not in session, has made expenditures which the Folkething cannot avoid assenting to retroactively. Some bargainings also succeed, and occasionally the Folkething is entrapped into voting an ill-defined provisional budget. Then follow new demands and refusals, new denunciations and bickerings, new prorogations and dissolutions —everything over again, with the same result.

The Government relies on the army, and has its support in the commercial classes, the great centres, and especially Copenhagen, till recently a Conservative stronghold; it appeals to the patriotism of the much-tried nation. The most obstinately contested appropriations are demanded in the interest of the army and navy, of fortifications for the defence of the capital. Shall the latter, with its port and fleet, be left exposed to attacks and disasters like those inflicted upon it by the British in 1801 and 1807? Does not the rivalry of England and Russia constantly threaten new dangers to the feeble state on the Sound? Is not Seeland menaced by the enmity of Germany, which holds Stralsund, Kiel, and Flensburg? Shorn of her great naval strength in the beginning of the century, robbed of Norway in 1814, despoiled of Schleswig-Holstein in 1864, would Denmark survive another sudden catastrophe? To this the leaders of the majority in the Folkething—Berg, Boisen, Holstein-Ledreborg, the Brandeses, and others—answer: "Denmark cannot rely upon fortifications. The mighty Dannevirke did not save Schleswig in 1864. The resources of the country are insufficient to make its centre impregnable. They are needed for improvements in the interest of the masses. Germany must be conciliated. Democratic freedom will create a bond of union between nations formerly hostile. The King's policy is one of dynastic interests, which must be discarded. And, above all things, you, Estrup & Co., are usurpers and tyrants. You have been beaten, over and over again, by the verdict of the nation, and yet continue to govern. It is the Folkething that represents the people: the Landsthing is an aristocratic body, acting in the name and interest of a small minority. Taxes not voted expressly by the popular branch of the Legislature are illegal. Ministries condemned by its majority must retire. Such is the fundamental doctrine of all real parliamentarism. You must go! The Government belongs to the Left."

These arguments, with all possible variations of passionate and offensive invective, have been a thousand times thundered into the ears of the Ministers by Liberals, Radicals, ultra-Radicals, Socialists, representing the various shades of the Opposition, or of what is collectively designated as the Peasants' party. All this has no effect whatever. Stubborn, resolute, and backed by the King, Estrup and his associates coolly remain at their posts. They return insult for insult, deriding the discord that prevails among their opponents, their lack of policy, their demagogy and impotence. The charge of usurpation they deny *in toto*. They boldly declare that Denmark is not a parliamentary government in the English or Belgian sense; that the Landsthing is a perfectly coördinate branch of the Rigsdag; that indefinite provisional budgets are valid until repealed by both houses; that to surrender the helm of Government to the majority reigning in one house would be a breach of trust toward the majority in the other and the King; that the country was never so prosperous, the financial condition never so favorable, as under the present régime; that under Utopian and ochlocratic leadership it would speedily become a prey to anarchy, and go to ruin: that the brain and marrow of the nation is with the Cabinet; that absolute duty keeps them at their post. They dismiss opponents from office, prosecute offenders against their authority whenever the law gives them an opportunity, stretch their powers to the utmost, use the King as a shield and occasional mouthpiece, increase their resources by voluntary contributions, and take advantage of every excess in the hostile camp. Against these uses and abuses of power, the Left have finally resorted to threats of revolution, to the distribution of arms, to military drilling in schools and elsewhere. The Government answers with prohibitions, arrests, and fines. The passions on both sides become daily more inflamed—the attempt on the life of the Premier, made last week by a young compositor, shows to what a degree. A violent clash seems imminent. The throne of Christian IX., connected with so many others by ties of blood, is believed by some observers of the crisis to be tottering.

INSANITY AND CIVILIZATION.

Professor von Krafft-Ebing, the well-known alienist, estimated in 1879 that in the most highly civilized communities there is among every five hundred persons at least one case of insanity. Recent statistics show that it would be more correct to say one case in four or even three hundred; and, in the current number of the *Rundschau*, Professor Ludwig Meyer, of Göttingen, has an article in which he attempts to show that there is a steady increase in the number of cases, quite out of proportion to the growth of population. It has been frequently urged that this increase is only apparent, being due to the facts that in modern medical nomenclature insanity is a more comprehensive term than formerly, and that patients live longer and therefore accumulate in the asylums, owing to more rational treatment. These are doubtless mitigating circumstances, yet they do not fully account for the steady increase within the last few years, during which there has been little if any change in these respects. That the multiplication of asylums has not perceptibly influenced the results is shown, as Prof. Meyer points out, by the fact that in Germany, where only 30 per cent. of the patients are placed in hospitals, the results are substantially the same as in England, where 90 per cent. of the patients are in the hospitals; and the Professor has reason to think that, notwithstanding the additions to asylums, the number of patients privately treated has also increased.

The notion that the growth of insanity is promoted by modern social arrangements is as old as Kant, who, however, regarded the matter from a purely philosophic point of view, since he looked upon insanity as a psychic anomaly merely, and not as a brain disease amenable to medical treatment. A strong argument in favor of Rousseau's views regarding the disadvantages of civilization was furnished by observations showing the great rarity of mental disease among savages and semi-civilized peoples. Humboldt noticed this peculiarity among the Asiatic and American tribes. The well-known French alienist, Moreau de Tours, states that he found very few cases of insanity in the Orient, and none in the Sudan. And in Cairo, with 300,000 inhabitants, Spengler found only sixty-five patients in the lunatic asylum; whereas Berlin, with four times that number of inhabitants, has thirty times as many patients in the hospitals, and wants room for more.

By the slipshod method of reasoning pursued by philosophic writers of past generations, it would be easy to draw from these data the pessimistic conclusion that the human brain is weakening and deteriorating under the influence of civilization; a conclusion which would agree with the theory that the brain is a sort of parasite which can only flourish at the expense of the physical vigor of the body. The facts, however, do not warrant any such inference. A razor is, in its place, a stronger implement than an axe, but it is more easily spoiled if improperly used. Since intellect has ousted muscle from its supremacy, the human brain has become a sharper and more delicate instrument; but in his ignorance of and marvellous contempt for the laws of health, civilized man persists in treating it as if it were a coarse axe. No wonder, therefore, that it often gets out of order. Civilization itself, *i. e.*, refinement of manners and customs, intellectual culture, and moral restraint, and attention to personal and public hygiene, tends directly to reduce the liability to mental disease. But there are certain accidental and artificial concomitants of social progress which favor the growth of mental disease, and these, being vaguely included in the term civilization, have given rise to the paradoxical notion that an increase of brain disease is a natural sequence of progressive culture. The principal of these artificial concomitants of civilization are (1) the general movement of population toward cities; (2) the use of nerve stimulants and subtle poisons; (3) the universal struggle for wealth, fame, and luxury. It can be shown that, while each of these factors swells the numbers of patients in the lunatic asylums, remedies are not so difficult to find as they seem, and that indeed they are already being applied.

That the liability of city people to insanity is much greater than that of the rural population

has been demonstrated by accurate statistics. In England the ratio between agricultural and manufacturing counties was found to be as 28 to 44. Paris has three to four times as many cases of insanity as the neighboring departments; Rouen three times as many; and a comparison of the cities with the purely rural districts revealed a ratio as high as six to one in favor of country life. Now the gradual concentration of the population in large cities is one of the most striking phenomena of the period, which thus would seem to prophesy the rapid multiplication of insane asylums. Yet it must not be overlooked that it is becoming more and more customary for not only the wealthy, but those in moderate circumstances, to spend the summer in the country. And nervous people who notice how quickly they "brace up" in the country, cannot doubt for a moment that the remarkable immunity from mental disorders enjoyed by savages is principally due to their constant life in the open air, free not only from offensive and dangerous city odors, but from noises which do not allow an overworked brain to enjoy a really sound and refreshing, dreamless sleep. Moreover, these nuisances are capable of abatement; and, as causes of insanity, may be expected to disappear in time.

At least 20 per cent. of all cases of insanity are attributable to the abuse of alcoholic liquors. Professor Meyer does not agree with the notion that strong drink is being replaced by beer or other comparatively harmless beverages. Statistics show that there is an increase in both, as, for instance, in Prussia, where, from 1865 to 1880, the annual average consumption of spirits per head rose from 8 to 10 litres, and that of beer from 37 to 88 litres. Yet it is not the quantity consumed so much as the vile quality that proves deleterious to the nervous system. The sale of cheap and adulterated liquors lies at the root of the whole matter; and it follows that the proper way to solve the temperance problem is to wage merciless war against adulteration. The extent of this evil in both food and drink is evidenced by the fact that a dictionary of adulterants is being at present published in Germany, the first issue of which comprises 160 pages, and does not finish the letter B.

More injurious than city life and the use of stimulants, and indeed the most potent of all causes of modern insanity, is the constant nervous excitement and worry of the present phase of civilization, when every business man aims at a million, every professional man and writer at world-wide fame, and every workingman at the comforts and luxuries of the well-to-do. A comparison with a more placid phase of civilization, such as prevails in China, strikingly confirms this view. China, with its three hundred million inhabitants, has no special asylum for the insane, and at the Shanghai hospital there are, among an average of 22,000 annual patients, only eleven cases of insanity. Professor Meyer, after quoting the experience of physicians who have lived in the East, refers to their conclusions that the absence of that restless excitement which characterizes our social life is the chief if not the only ground of the comparative infrequency of mental disorders in China. "Its population is principally agricultural, leading a sort of Arcadian life. The Chinaman is regular and methodical in his occupation, works without haste, but also without carelessness. He does not suffer from the sharp competition of our industries, since guilds and corporations regulate prices. In general, simplicity rules even among the well-to-do, and there is no inclination to live beyond one's means."

It would be too optimistic to hope that this phase of our civilization will ever disappear, yet it will no doubt be modified when we get beyond the present transition period. In very many cases the seeds of insanity are sown at a very early age: overpressure in school disables many brains for life; but there is reason to believe that this overpressure chiefly affects children whose parents did not enjoy school training, and who therefore did not inherit a capacity for brain work. In a few generations this factor will disappear; and similarly, as has frequently been suggested, the brain of modern man may adapt itself in course of time to the greater demands made upon it. In the meantime, as insanity almost invariably begins with emotional over-tension, the best way to stem its advance is to preach and practise emotional hygiene. To give only one hint in this place, it is a well-known law of the mind that a certain amount of work done when we are fatigued is twice as exhausting and injurious as when done when we are fresh. Yet nothing is more common in this country than to find business men talking "shop" and worrying all the evening instead of resting the mind by a change of topic. From this point of view the opposition to theatres and other amusements, still widely prevalent among us, is as harmful as it is provincial.

THE PRIVATE ENDOWMENT OF RESEARCH.

PRACTICE must doubtless always lag behind theory; but it is not necessary that it should lag very far behind. A new theory is frequently the work of a single mind, and it takes a certain amount of time for those who influence conduct to become convinced of its excellence; but when the new theory has become matter of common belief, it is unusual for action to remain wholly unaffected by it. No one doubts at the present time that great mental power is a rare endowment, like great qualities in a race-horse, but it has not yet been sufficiently insisted upon that its possessor deserves the same careful handling that is given to the rarely endowed among the lower animals. Society may not be prepared to interfere with the breeding of great men, but when they have once been sporadically produced there is no reason why it should not concern itself with their careful preservation. In a state of nature there is a sure process for securing the supremacy of the most perfect individuals of a race, but the qualities which make the human being great are not always qualities which fit him for taking part in the vulgar struggle for existence. It is essential that a diminished natural selection should be supplemented by an artificial selection, by means of which life and activity may be made easy to those who are capable of rendering extraordinary service to their fellow-beings.

Huxley has well said that any country would find it greatly to its profit to spend a hundred thousand dollars in first finding a Faraday, and then putting him in a position in which he could do the greatest possible amount of work. A man of genius is so valuable a product that he ought to be secured at all cost; to be kept, like a queen-bee, in a hothouse, fed upon happiness, and stimulated in every way to the greatest possible activity. To expose him to the same harsh treatment which is good for the hod-carrier and the bricklayer, is to indulge in a reckless waste of the means of a country's greatness. But instead of the rarely gifted being treated more favorably by the present highly scientific generation, they actually receive less consideration than they have done in many past ages of the world. It was once no unusual thing for a man of learning and piety to be kept in a condition of ease as regards the affairs of this world by his friends who admired his talents. We have in mind a case, four generations old, in which two brothers, one a scholar and one a cloth merchant, made a common fund of the cloth merchant's earnings, and each helped himself according to his needs; and as the scholar had ten children, while his brother had only one, his needs were much the greater of the two. At present there are all kinds of charities for the average man: education is given him for little or nothing; it is even considered worth while to supply him with novels free of cost. It is strange that it has not occurred to some one who wished to dispose of a fortune, that it would be a thousand times more useful to put some clever people in the way of working without interruption than to provide a few more easy comforts for the undistinguished masses.

Once an important part of the business of "the great" was to be patrons of literature. With us, the very rich, who take their place, are not expected to care for anything but dogs and horses; but the more moderately rich, who are concerned about the progress of the race, could not do better than to share their good things with their poor but learned brothers. The system of patronage was not altogether satisfactory: the adulation contained in old dedications of books is very unpleasant to a modern taste; but it is not an essential feature of the relation. Learning is of greater consequence than formerly, and wealth has been stripped of its titles; it is impossible for the learned man to feel that awe of the rich man which was once almost unavoidable. It needs only a slight change in public sentiment (a change for which public opinion has already paved the way) to make everybody feel that a vicarious prosecution of learning on the part of the rich is the most natural thing in the world. The socialist day-laborer pretends that the world owes even him a living. The man who is capable of throwing light upon the laws of nature ought not to feel that he is sacrificing his independence if he allows some one else to assume the material burdens of his life. No one hesitates to accept his share of the British Association's fund for the endowment of research. Why should a private endowment of research be attended with embarrassment on the part of either giver or receiver?

The waste of water power at Niagara is as nothing compared with the waste of brain power which results from compelling a man of exceptional qualifications to earn his own living. The owner of a great estate admits that the important charities of his town have a well-founded claim upon his purse; it would not require a very great change of heart for him to feel a vivid sense of shame if a few scholars are not carrying on their researches at his expense.

THE TROUBLES IN SOUTHEASTERN EUROPE.

LONDON, October 3, 1885.

WHILE England and France are on the verge of their Parliamentary elections, and the newly chosen Austrian Reichsrath is just getting to work, an event has suddenly occurred in the furthest southeast corner of Europe which has called away the attention of statesmen because it threatens to reopen the whole Eastern question—that Eastern question which is always being settled and yet never is settled, nor, indeed, can be till the natural forces at work have been allowed their full play. A revolution has been accomplished in East Rumelia, or, as it ought rather to be called, South Bulgaria.

How does this event affect the general politics of Europe, and what likelihood is there of its ending in a war? In examining the problem, one must distinguish two questions: the immediate one of the union of Bulgaria and Eastern Rumelia; the further and larger one of the re-

constitution of European Turkey as a whole. So far as relates to the first, there can be little doubt that the union will take effect and be recognized by all the Powers. In 1878 Russia desired it, Austria and Germany made no objection, France and Italy were indifferent; the opposition came from England, whose rulers conceived that it brought Russian influence too near Constantinople. But things have changed in England since 1878. The Treaty of Berlin was the expiring effort of the old pro-Turkish policy of England, a policy which received its death-blow at the general election of 1880. Bitter as are the anti-Russian sentiments of the English Tories and a section of the English Liberals, nobody hopes that any good can come out of the Turks, or believes that by supporting their rule in Europe we can really strengthen our own position. Lord Salisbury, one of the authors of the Treaty of Berlin, is Prime Minister and Foreign Secretary. It may be disagreeable to him personally to be forced to admit the failure of his own devices; but he is in a minority in the present Parliament, and will probably be in a minority in the Parliament shortly to be chosen. He could not venture, with Mr. Gladstone watching him, to take, on the eve of a general election, a course so unpopular as that of resisting the wishes of two great populations, branches of the same race, to be politically united, merely for the sake of some possible but highly problematical gain to England, when that gain would be attained by helping the Turks to reconquer a Christian people. None of the other Powers would be likely to support such an attempt. There remains the Turkish Government itself, which has energetically protested against the conduct of East Rumelia and Bulgaria, and threatens to move troops into the country. Weak as the Turks are, their army is stronger than any force the Bulgarians could oppose to it; so if a war were to break out, Turkey might hope to succeed in the long run.

The Bulgarians have, however, the advantages of situation. They occupy defensive positions, which they are strengthening, and which it might cost the Turks some time to force: and the Turkish army, though its men are brave and enduring, is badly officered, badly generalled, badly supplied with military appliances, constitutionally dilatory in all its movements. Months would therefore pass, especially as winter is now at hand, before the Turks could gain any decisive advantage, and in the meantime most of the great Powers would use their influence with the Sultan to dissuade action, and persuade him to leave the question to diplomatic settlement, while European sympathy would continue to work for the Bulgarian cause. Moreover, the clash of arms would rouse the unquiet populations of the rest of European Turkey. The Bulgarians in Macedonia would rise in insurrection; the disturbances in Albania, where Turkish troops are already in conflict with the mountaineers, would swell into open war; and the Sultan, in trying to regain his authority over Eastern Rumelia—an authority which has profited him little during the last seven years—might lose all that remains to him in Europe. For these reasons it seems unlikely that the Turks will persist with their project of invading Eastern Rumelia, and it may be safely predicted that the union of that district with Bulgaria will not be undone.

It is far less easy to forecast the result as regards the rest of European Turkey. The various forces there are in so unstable an equilibrium that the slightest disturbance may produce an explosion and a conflagration. There seems no reason to doubt the sincerity of Austria and Germany when they declare their wish to maintain the *status quo*. But will they be able? The so-called Balkan Peninsula is inhabited by a variety of mutually hostile races, and lies open to the ambition of a number of mutually jealous States. The Bulgarians occupy large parts of Thrace and Macedonia beyond the limits of the Bulgarian and East Rumelian principalities, and they desire to add these parts to the Bulgarian state. In Upper Macedonia there is a considerable Slavic (Serb) population whose affinities of race and religion draw them to Servia or Montenegro. The Albanians fill Western Macedonia and all the country west and southwest from it to the Adriatic and the Ionian Sea. They are disunited, for some are Christians, some Mohammedans, and their clans are usually at war with one another. But they agree in hating the Turks and in rejecting the control of any other race. Finally, the Greeks, who are numerous in Southern Macedonia all round Salonica and eastward from that city along the coast, are bitterly hostile to the Bulgarians, and ready to make common cause with either Turks or Albanians against that people.

Then, as to the Governments, there are four small states and two large ones each of which has claims to or plans for territorial extension. The kingdom of Servia, the principality of Montenegro, the Ruman State north of the Danube, the Greek kingdom, all demand that any extension of Bulgarian territory and power shall be deemed a ground for compensation to them. Servia and Greece are reported to have already mobilized their armies, and their populations are highly excited. Rumania has notified her claims to be considered in any rearrangement of territories. Montenegro is for the moment quiet, probably because she does not wish to act without first ascertaining the wishes of her protector, Russia; but she is always ready for action, and as her whole male population is trained to arms, and animated by the recollection of a long series of victories over the Turks, she is a factor not to be despised. More serious even than these ambitions of the small States is the permanent rivalry of Austria and Russia, neither of which will permit any advantage to be gained by the other without some corresponding gain for herself. It is only these two great Powers that can keep the small Powers quiet. Servia is, under her present king, the humble vassal of Austria; Montenegro will scarcely venture to displease Russia; Greece, though she threatens loudly, showed in the years from 1876 to 1881 that deeds lagged behind words, and that she feared to disobey the voice of the greater States. Now Austria and Russia probably do wish to keep things quiet in the meantime, and may exert their influence to that end. But the outbreak of an insurrection in Macedonia might disconcert them. It would be the signal for a triangular duel of Turks, Bulgarians, and Greeks; Albania would be in a flame, and the only means of restoring order might be found in a forward movement of Austrian troops to Salonica. Then Russia would require compensation for herself, to which in turn England might object, so that the whole Eastern Question would be upon us once more, and require a European congress if not a European war to resettle it.

In the possibility of such an issue, it is worth considering what the attitude of England is likely to be. Something will depend on whether Lord Salisbury or Mr. Gladstone obtains a majority at the next election; for till the election is over, the present Ministry can scarcely venture to adopt a decided line, nor are affairs in the East likely to have reached a point which will oblige them to do so. Lord Salisbury's policy will do ibtless be somewhat more friendly to the Turks, and also more likely to be affected by the wishes of Austria and Germany, than Mr. Gladstone's would be. But even if the Tories should be in power, it is far from likely that England will resume her attitude of 1878. Bitter experience in Egypt has given us a distaste for further interference in the Eastern imbroglio. The general feeling of the country is opposed to the Turks, and unwilling to encounter any risks for the sake of strengthening their position. There is some sympathy with the aspirations of the subject Christian races, and, in Mr. Gladstone's own mind, a dislike to see Austria quench those aspirations by becoming master of Macedonia. Still, our direct interest in the matter is but slight, and would be deemed insufficient to justify a recourse to arms. The only event which could seriously arouse us would be the establishment of Russia at Constantinople, and that seems at present not to be upon the cards. If that commanding position be left to the Sultan, or be so neutralized as to be out of Russian control, what becomes of the rest of European Turkey does not seem to concern us vitally. There are even those who hold that a partitionment of Turkey between Russia and Austria might be a positive gain to us, because it would, by concentrating Russian attention on Southeastern Europe, and giving her difficulties enough there to keep her hands full for fifty years to come, disable her from further progress in Central Asia, and relieve the apprehensions now felt as to her movement toward India. Whatever disposition be made of the Balkan territories, the secular jealousy and rivalry of Russia and Austria in that quarter will continue; nor will Russia find the management of the Bulgarians and other South Slavic peoples an easy task, whether she seeks to incorporate them with her empire or control them as dependent States. The same may be said of Austria if she attempts to occupy Macedonia and Albania. New and semi-civilized countries, inhabited by turbulent populations, will be a source rather of weakness than of strength to an empire already so loosely coherent as that of Austria is; for they require the expenditure of large funds to make roads and fortresses, and the maintenance of a strong military force.

Y.

THE REHABILITATION OF FRANCIS I.

PARIS, October 9, 1885.

THE name of M. Paulin Paris, the last editor of Tallemant des Réaux, is well known in all literary circles. The notes of this last book are almost as interesting as the book itself. M. Gaston Paris, the son of Paulin Paris, has published some manuscripts left by his father, and the 'Studies on Francis I., King of France: his Private Life and his Reign,' deserves especial notice. Paulin Paris first conceived the idea of this work as far back as 1832, after having read the drama of Victor Hugo, "Le Roi s'amuse." He was very familiar with the history of the sixteenth century, and he was shocked at the extraordinary picture which Victor Hugo gives of the court of one of the most brilliant kings of France. He felt, also, completely at variance with Michelet's 'History of France,' and he resolved to write a history which should be founded only on original documents. If he has not written a complete history of the reign of Francis I., he has at least chosen in the life of this prince very important incidents which had been wholly or partially distorted.

The work before us is a succession of studies, of pictures, which are all very interesting. Francis I. had been proclaimed in his lifetime the great King, the restorer of letters, of arts, of sciences. Foreigners had done full justice to his chivalrous character; but, half a century after, he had ceased to be the great King, the model for all the princes of his time. His mother, Louise of Savoy, who had done so much

for France—even his Ministers—had by degrees lost their good renown. M. Paulin Paris attributes this perversion of history to the agency of the Bourbon Montpensiers, the nephews and grandnephews of the famous Constable of Bourbon, who had become a rebel. They had inherited the immense domains of the Constable, and they tried in every way to explain his treason by the injustice of the King, of his mother, and of the Ministers. The rehabilitation of the traitor was made at the expense of the sovereign. On the other hand, the downfall of the Valois was followed by the triumph of the house of Bourbon, represented by the glorious Henry of Bourbon-Vendôme, King of Navarre. Under the reign of Louis XIII., of Louis XIV., of Louis XV., nobody undertook to glorify the reign of Francis I.

The first detractors of Francis I. were two followers of the house of Montpensier, François Beaucaire, the author of 'Rerum Gallicarum Commentaria,' and Antoine de Laval, Captain of the Castle of Moulins, the author of 'Desseins de professions nobles et publiques,' a work in which he introduces a "Journal du Sieur de Marillac," apparently written under the eyes of Anne de Beaujeu, the daughter of Louis XI.—a journal in which he extols the valor and the virtue of the Constable of Bourbon. The third accuser of Francis I. is Brantôme; but Brantôme is a poor authority in historical matters, and ranks only with such books as the 'Amours des Gaules,' the 'Galanteries des rois de France,' the 'Recueils de Maurepas.' His chief merit is in his witty and original style After Brantôme we find an obscure doctor, named Guyon, who speaks of Francis I. in his 'Diverses leçons de Pierre Messic et d'Antoine du Verdier.'

These four men are the witnesses brought against the memory of Francis, and their testimony was endorsed by Varillas, who wrote two heavy volumes on the French King. M. Paulin Paris undertook to examine all the accusations brought against Francis and against his mother Louise of Savoy. The documents which he uses are numerous: the excellent memoirs of the two brothers Guillaume and Martin du Bellay; the continuation of the history of Paul Émile by Arnoul le Ferron, which extends over the reigns of Charles VIII., Louis XII., and Francis I.; Guicciardini; Sleidanus; the Commentaries of Montluc; the 'Histoire de notre temps,' by Guillaume Paradin; the numerous letters of the King, of his mother, of his ministers and mistresses, preserved in the manuscripts of the National Library; the relations of the ambassadors; the correspondence of Cornelius Agrippa; the Life of Benvenuto Cellini; the writings of the poets Sainte-Marthe, Sainte-Gelais, Marot, Joachim du Belloy; the letters of the Queen of Navarre; the poems of Francis I. himself.

Louise of Savoy was born in 1476. Her father, who became Duke of Savoy, was then only Comte de Bresse. Her mother was Margaret of Bourbon, the sister of Pierre de Bourbon, sire de Beaujeu, afterward Duke of Bourbon. She was married at the age of twelve to Charles of Valois, Count of Angoulême, who died in 1496, leaving her with two children, Margaret of Angoulême and Francis of Angoulême. When Louis XII. ascended the throne young Francis became heir presumptive, and Louise of Savoy came to court with her two children. Louis XII. made Francis Count of Valois, and gave Amboise to his mother. The King had no child by his first wife; by his second wife, Anne de Bretagne, he had only a daughter, Claude. The Queen became jealous of Louis, seeing that young Francis was on the steps of the throne, and that in consequence the King paid great honors to the Countess of Angoulême. Pierre de Rohan, Marshal of Gié, was the governor of Francis, but his mother took much part in his education. In the year 1506 the States-General begged Louis XII. at Tours to choose for his son-in-law Francis of Angoulême, Duke of Valois; and the marriage was arranged. Anne of Brittany and Louise of Savoy swore on the wood of the true cross to celebrate it as soon as Claude should become of age. If the King should die, the Queen and the Countess of Angoulême were to be both regents.

M. Guizot, in his History, accuses Louise of having educated her children badly: "Francis," he says, "was a brilliant, spoiled child. Louise proud, ambitious, audacious or supple, according to circumstances, violent and corrupt, fond of pleasure, of money, of influence, gave no principles nor any moral examples to her son." M. Paulin Paris tries to combat this impression. He is obliged, however, to cite a letter of Cornelius Agrippa, who had been admitted in 1519 among the pensioners of Louise as doctor and astrologer. Agrippa had written a book 'De Sacramento Matrimonii,' in which he blamed the celibacy of the priests and monks. The book had been ill-received, and he complains of it: "While they make it a crime for me to say freely what I think, they leave in the hands of ladies and even of girls the 'Novelle' of Boccaccio, the 'Facetiæ' of Poggio, 'Tristan,' and 'Lancelot.' I wonder how these rigid censors can read, nay, even translate, such dangerous books;' witness the Bishop of Angoulême (Octavien de Saint-Gelais), who did not blush to translate the Heroïdes of Ovid."

It is quite certain that Francis I. made his favorite reading of such books, and that he was brought up on the novels of the Round Table. Sport took all the time which was not given to the *romans de chevalerie*. His great passion was hunting, from his earliest youth to his old age. He was continually on his way to the great forests of Rambouillet, Fontainebleau, Blois, Amboise, Saint-Germain, Villers-Cotterets, Compiègne, Moutiers, Châtellerault. M. Paulin Paris does not attempt to deny that Francis had always a marked preference for the fair sex. He will have it that two stories of the 'Heptameron' of the Queen of Navarre (the sister of Francis) have young Francis for their hero. The first of these stories shows us a young girl of very humble origin exciting the passion of love for the first time in the young prince, then only sixteen years old. In the second *nouvelle*, the heroine is the wife of a lawyer of Paris.

At the age of nineteen, Francis was married to Claude of France, who was then fifteen years old. He had seven children by her between 1515 and 1523. She was plain, mild, pious. She is sometimes confounded with Jeanne of France, whom Louis XII. repudiated when he wished to marry Anne of Brittany—perhaps because they were both insignificant and lame. Six months after the death of Anne of Brittany, Louis XII., who had no son, and was already fifty-three years old, asked for the hand of young Mary of England, the sister of Henry VIII., who was then only sixteen years old. It is easy to imagine the inquietude of Francis and of his mother. Mary arrived at Calais with the Duke of Longueville and a number of lords and ladies, among whom was Charles Brandon, Duke of Suffolk, who had been for a moment a suitor for the hand of the young Princess. Brantôme says that the young Queen, seeing that she could have no heir by Louis XII., turned a willing ear to the prayers of Francis, and that he was only saved by the fear of losing the crown if she had a son; that Louis XII. having died soon after his marriage, she simulated pregnancy for a while, and that her evil designs were only defeated by the efforts of Louise of Savoy.

Paulin Paris completely disbelieves this story. We cannot repeat here the words of Brantôme; but, says M. Paulin Paris, it is hardly possible to bring together so many impertinent inventions. One can admit that an indecent writer should have told them, that a novelist should have adorned them; what confounds the mind is tha serious writers should have admitted them. "The first Prince of the blood, ordered by his father-in-law to bring to him a young bride, trying to seduce her on the way, in the view of the greatest Lords of England and of France; deaf to the representations of his friends and only yielding to the energetic representations of his mother! On the other hand, the young bride listening complacently to an infamous lover, and, when her husband dies, simulating pregnancy, and finding a person ready to give her a supposititious child!" Is it not easy to see that these accusations are coarse inventions? History cannot accept them from such men as Brantôme.

Michelet, who had a little too much imagination, is very hard on Louise of Savoy. He represents her as the evil genius of her son. Though she was sixteen years older than Charles, the Duke of Bourbon, he maintains that she persecuted him with her love, and that afterwards, when he became a widower, she tried to marry him. In order to conquer his repugnance, she instituted a trial which had for its object to reduce him to the condition of a simple gentleman. Michelet says that it was in order to escape from her that Charles left France; and that he threw himself into the arms of Charles V. merely in order not to fall into her hands. In the campaign of Hainaut, in 1522, he had taken from him the command of the vanguard. She is accused, even by that grave historian, Martin du Belloy, of having kept the money destined to the payment of the troops of Lautrec in Italy, and of having thus lost Milan for France, and procured the condemnation of Samblançay. M. Paulin Paris goes over this question of the trial of Samblançay, the superintendent of the finances of France. It made as much noise as the trial of Fouquet in the first years of the reign of Louis XIV. Brantôme says that "the King sent Samblançay a little too lightly to the scaffold; for, though he had done some wrong, he might have forgiven him for his honorable old age, the services rendered to four kings, and the name which he used to give to him, always calling him *my father*."

The trial of Samblançay fills almost all the second half of the first volume of the work of Paulin Paris. We cannot go into its details; it is enough to say that our apologist of Francis I. tries to prove that the loss of Milan had not for its principal cause the defection of the Swiss in 1521 and 1522; that if Lautrec received no money, it was not the fault of Francis or of the King; that Louise of Savoy, on the contrary, had always offered to her son her own purse and her own revenue; that there is no reason to think that she had any personal aversion to Lautrec. As for Samblançay, his judges were men of great honorableness, and Louise of Savoy had no influence on their verdict. The judgment rendered against him was never reversed, but received twice a solemn confirmation of Parlement, once on his own appeal, and once at the imprudent request of his widow.

We shall see later how Paulin Paris treats the far more important question of the relations of the King and his mother with the famous Constable of Bourbon.

Correspondence.

GOVERNOR HOADLY ON OHIO NOVEMBER ELECTIONS.

To the Editor of The Nation:

Sir: Speaking of the movement, the success of which has just been achieved, to change the date

of the annual State election in Ohio to November, you say: "All the parties declared in favor of the movement, and thus insured the adoption of the amendment by an overwhelming majority." In the same number you compliment me by saying: "Governor Hoadly, it must be allowed, was better than his party."

The object of this note is to call the attention of your readers to the error of these statements, and to claim for my "party" the credit, which is its due, for the accomplishment of this reform. So far from its being true that "*all* the parties declared in favor of this reform," the facts are that the Democratic alone of the three parties pronounced in its favor in the State platform; that although one of the wisest and best of Ohio Republicans, John Little, of Xenia (General Keifer's successor in Congress), moved in the Committee on Resolutions of the Republican State Convention that a resolution be adopted in favor of this reform, his motion was voted down and not renewed in convention; that the Democratic State Executive Committee publicly in writing solicited the Republican and Prohibition State Executive Committees to join in requesting their county committees to print the tickets upon this amendment in the affirmative only, to which the Prohibition Committee immediately responded in the affirmative, while the Republican State Committee, after withholding their answer for several days, finally replied that they had already instructed their county committees how to print, the instructions really being simply directions as to the legal effect of printing, without any expression of opinion; that the Democratic candidate for Governor, who had recommended this reform in his inaugural address of January, 1884, and his annual message of January, 1885, publicly advocated it upon the stump, in speeches which his committee circulated in print as electioneering documents, while his adversary, the Governor-elect, Judge Foraker, never mentioned it; that every Democratic and Prohibition ticket in Ohio was printed and every Democrat and Prohibitionist voted in the affirmative, while in the majority of the counties (including Hamilton) the Republican tickets were printed both for and against. The importance of this fact grows out of the constitutional rule that to amend the Ohio Constitution the absolute majority of all the voters is required, and not merely the majority of those voting upon the amendment. Therefore a vote yes and no or a silent vote is in law a negative. Hence the vital consequence of printing in the affirmative only, leaving the voter who may have a negative opinion to scratch out the yes, and thus vote adversely if he choose. It is true that in a few counties, including the important county of Cuyahoga, the Republican county committees printed in the affirmative only, and that many Republicans cast their votes for the reform.

Upon this record I claim the credit of this most valuable reform for the Democratic and Prohibition parties, especially the former, by whom it was inaugurated and consummated.

It is true that when it was pending in the General Assembly, the Cincinnati *Enquirer* opposed it, but during the canvass that paper in one article at least favored its adoption, and in none opposed it. The Marietta *Register* and other Republican newspapers bitterly opposed it, and I have the very highest Republican authority for saying that the large majority of active Republican politicians in the State were against it. Certain it is that the only opposition it met with was from Republicans. GEO. HOADLY.

October 16.

[By an accident which we regret, this letter failed of insertion in our last issue.—ED. NATION.]

MR. GLADSTONE AND THE CONFEDERATE LOAN.

TO THE EDITOR OF THE NATION:

SIR: The November number of *Harper's Monthly* contains an article by Mr. John Bigelow, entitled "Some Recollections of Lord Houghton," in which there is the following passage. Speaking of some table-talk of Lord Houghton, Mr. Bigelow says:

"He made one statement after dinner of more than transient interest. One of the company having remarked that a cousin of Lord Houghton had, to his sorrow, invested in the Confederate Cotton Loan of 1863, another gentleman present remarked that Gladstone had some of that too. 'Oh, yes,' said Lord Houghton, laughing. 'What!' said our host, 'is that so?' 'Yes,' replied Lord Houghton, 'but not a great deal.' This recalled to my memory the fact that when the London press copied from the New York papers a list of the subscribers to the Confederate Cotton Loan, among whom Gladstone was down for a few thousand pounds, many prominent persons enumerated on the list published cards denying that their names had been placed there with their knowledge or by their authority. Mr. Gladstone, however, was not of the number. He made no denial, but the London press very considerately forbore any subsequent allusion to the subject."

Mr. Bigelow has done Mr. Gladstone serious injustice in repeating this careless talk of Lord Houghton. He has, moreover, fallen into error himself in stating that Mr. Gladstone made no denial of the charge that he was a subscriber to the loan in question. He did make denial in words which, for him, were the strongest that could be used. He wrote to the English paper which first made the charge:

"Sir: You have printed my name in a list of subscribers to the Confederate Cotton Loan. Please to withdraw it."

I quote, I admit, from memory, but I am confident the English journals of October, 1865, will sustain me.

I have, however, this conclusive evidence in the matter. The charge, I think, first appeared in England, and was copied in our papers as soon as it arrived here. Mr. Gladstone's denial had not then been received. The *Public Ledger* of this city published the charge and commented upon it, unfavorably to Mr. Gladstone, in its leading article. Certain correspondence which I had previously had with Mr. Gladstone made me confident that the allegation was false. I wrote to the *Ledger*, stating the reasons which I thought were conclusive in the matter. When my communication appeared I sent a copy of it to Mr. Gladstone, and received from him an immediate reply. His letter lies before me; it bears date October 17, 1865. I extract from it as follows:

"I am very much obliged by your letter of October 2d, but it concerns me to learn that the false statement of my having been a subscriber to the Confederate Loan should have been first made, and should have been, as you inform me, widely circulated, in America. The statement is not only incorrect, but is so entirely void of the slightest shadow of support in any imaginable incident of the case, that I am hardly able to ascribe it to mere error, and am painfully perplexed as to the motives which could have prompted so mischievous a forgery."

It is due to Mr. Gladstone that these words of his should be made public, now that an old charge against him has been given the great circulation of the pages of *Harper's Monthly* over the combined names of Lord Houghton and Mr. Bigelow. I will venture to hope that Mr. Bigelow will see his way to make the proper correction. ELLIS YARNALL.

PHILADELPHIA, PA., October 22, 1885.

LEASING CATTLE RANGES.

TO THE EDITOR OF THE NATION:

SIR: Will you allow space for a few words more in regard to the question of leasing ranges? It deserves full discussion, though perhaps less than we out here think.

A fact clearly established is that a great area of our country is, *under the present climatic conditions*, adapted only to grazing. Granting this, it seems equally clear that such lands should be utilized for this purpose on a basis as permanent as possible, and yet which should not prevent their employment for other and more valuable purposes. The practical question is not, Should they be leased? It is, How shall they be leased?

There are many troublesome practical questions involved. Agricultural settlers should not be shut out from these lands if they want to come in. Agricultural lands should not be embraced. A possible increased rainfall in the future should be regarded. Water fronts should not be leased in such a way as to render dry ranges back worthless. But water courses do not follow parallel lines, and some water which will last through a wet season is not really permanent. The feed value per acre of ranges varies greatly. The interest of parties already having stock on the range should be regarded. They should be allowed the first chance to lease where their ranches now stand and their stock range. It would be an economical mistake to injure them. To settle all these questions, and scores of others, in making leases, a very intelligent and impartial body of men should be employed.

If all these difficulties can be met, it seems to me that ranges could be leased without injury and with advantage to the granger-settler, stock-grower, and public, the three interested parties. Let the leases be for a period of say ten years. *But let the leased lands still remain open to settlement* under the Homestead and Preëmption Acts (or, better, abolish the latter act entirely). But let there be two provisions in case of such settlement: first, that the range lessee shall not pay rent on the lands so settled from date of such settlement; second, that the settler must protect his crops by fencing, and keep his cattle off the leased range.

How would such leasing affect the three parties interested?

I. The granger-settler.

(*a*) It would not bar him from settling in any land now open to settlement. He would only be compelled to put up somewhat more valuable improvements in the shape of fences. It would check the settler who files, builds a "shack" worth ten dollars, proves up, and sells out at a profit.

(*b*) It would better the feeling between stockman and granger, I think. Their interests would clash less. In no business is good feeling between neighbors of greater pecuniary value than in stock growing.

II. The stock-man.

His profits might be somewhat diminished, but he would have the comfortable feeling that he could look forward to a permanent range without being crowded or crowding. It would greatly help, too, the stock-man of small means.

III. The public.

(*a*) The Government would receive an increased and justly obtained revenue.

(*b*) It would rapidly improve the breed of stock. For when the stock man has to pay for his grass, he will feel strongly that a valuable animal eats no more of it than a comparatively worthless one.

(*c*) These ranges would be less liable to injury from overstocking. They would soon be fenced too, and in many localities some provision for winter feed would then have to be made. Hence, all its resources developed, the improved grazing country might at some future time be suitable for tillage if there is any truth in the increasing rainfall theory.

(*d*) It would civilize the country. The present

wild and free life, with all its fascinations' would have to go. The stock-man would put up a better ranch and live more on it. The ranges being fenced, the present system of "round-ups" would be abolished. The cow-boy would find steadier employment the year round. He would no longer live like an Arab for six months, and then be "let out," to go, if he is inclined, to the nearest town, don his "bald-faced shirt and pinto neck-tie," and "blow in" his summer's wages at "stud" and "faro." A good deal that is pleasant, and free, and fascinating would have to go too, but the public would be benefited.

It has sometimes been suggested that a tax, equivalent to a lease of the land, should be imposed on range cattle. This would be unfair. The cow would be too uncertain of getting her equivalent. Stock would fare as you probably have fared at some of our railway-station eating-houses, Mr. Editor, when you paid fifty cents to enter the dining-room, but whether you got any feed or not had to depend on your powers as a "hustler."—I am, very respectfully,

ARTHUR T. ALDIS.

SUNDANCE, CROOK CO., WYOMING, October 9, 1885.

WILD FLOWERS OF COLORADO.

TO THE EDITOR OF THE NATION:

SIR: To your critical notice of the 'Wild Flowers of Colorado' in the last *Nation* one further stricture should be added. The sub-title of that book reads, "*From Original Water-color Sketches*," but most of the flowers are modified copies—and very badly modified copies—of the work of a well-known flower painter, Miss Alice Stewart, of Colorado Springs. Her very manner and handling of flowers, so far as one can judge by the chromo-lithographs, are imitated, imperfectly for the most part, and sometimes atrociously. I think this explanation is due Miss Stewart, who, after many years of careful preliminary studies, is about to put forth a volume on the Rocky Mountain flora, with text and reproductions of her own latest drawings and water-colors; and also in justice to the holiday world of gift-givers and receivers. Miss Stewart's productions are undeniably of superior merit, both artistically and botanically. It may be accounted sufficient commendation to say that her forthcoming book was originally inspired, and, throughout the last year of her life, shaped, by the counsel and stimulated by the enthusiasm and fostering care of Helen Jackson ("H. H."), whose acquaintance with Colorado's flowers was hardly second to any botanist's, and her love for them something far deeper and finer.

L. J. S.

THE COTTONS, COLORADO SPRINGS, COL., October 19, 1885.

Notes.

LONGMANS, GREEN & Co., London, have put forth the prospectus of an *English Historical Review*, upon the general model of the *Revue Historique* and Sybel's *Historische Zeitschrift*, and to be issued quarterly. "It will deal with English, American, and Colonial history, and with such other branches of history, ancient and modern, constitutional and ecclesiastical, as are likely to interest any considerable class of English students." It will be edited by the Rev. Mandell Creighton, assisted by Reginald Lane-Poole, and a small committee, with a corresponding editor in the United States. The first number will be issued January 1. We believe it unnecessary to bespeak a welcome for this review on this side the water. No less than twenty-one American names are found on the list of scholars who have promised their support, nor do these exhaust the roll of those well known among us as students and authors of history.

E. P. Dutton & Co. have in press 'Sermons and Addresses delivered in America by Archdeacon Farrar,' to be published in the course of the winter.

Fresh announcements by Houghton, Mifflin & Co. are 'Old Lines in New Black and White,' a series of twelve large charcoal sketches suggested by lines of Whittier, Holmes, and Lowell, and designed by F. Hopkinson Smith; and a 'Life and Times of John Bunyan,' by the Rev. John Brown, a work of original research.

Flaubert's 'Salammbô,' translated by French Sheldon and furnished with an introduction by Edward King, will be published by Saxon & Co., London and New York.

Ginn & Co. will have ready in November 'Introduction to the Language and Verse of Homer,' by Prof. T. D. Seymour, of Yale College; and Scott's 'Talisman,' in the series of Classics for Children.

Miss M. G. McClelland, of Norwood, Va., whose novel 'Oblivion' is about to be published by Henry Holt & Co., transports her readers to ground already made romantic by Miss Murfree, and more recently described by Mr. Warner—the mountains of North Carolina and Tennessee.

A new monthly, the *Open Door*, will make its appearance in this city next month, being published (for the benefit of clever writers whose obscurity is a bar to their appearance in print elsewhere) by W. N. Oliver & Co.

The taste was unfortunate which determined the choice of size and shape of page and general typographical details for the new *Harvard Monthly*. The old *Harvard Magazine* could have furnished it a better model in every respect. We will not pretend to judge it by its initial number, which contains nothing that might not have appeared, or been expected to appear, in the *Harvard Advocate*. A sufficient reason for its existence may yet be given, however.

The series entitled "The Story of the Nations" (Putnam) begins auspiciously with Prof. J. A. Harrison's 'Greece.' Its name describes it. It does not profess to be a "history"—does not aim to criticise and compare, but follows the principle laid down by Professor Jowett—"We must accept ancient historians as they are"—and undertakes to tell the story of Greece as the Greeks themselves accepted it. We need not consider whether this is the true method. It is certainly desirable that our children should know these charming fables—and it is equally desirable that they should know that they are fables; a knowledge which the readers of this book will not, perhaps, always get. The story is told exceedingly well—so well that the author was in no need to seek a lively and colloquial style in such statements as that the Persians, after Marathon, had the intention of sailing for Athens before the Athenians could say "Jack Robinson." Again, parallelisms with contemporary events are very suggestive and interesting, but the habit of running these parallels is carried to excess. The volume stops with Philip of Macedon, the story of Alexander being "left as a dramatic beginning to the story of Roman and Byzantine Greece, which will fill another volume of the series." If this were a *history*, it would show a lack of proportion; being a *story*, it is all right that the great period of Grecian history is not reached until considerably more than half way through the volume.

We have already described the presentable reissue of the Waverley Novels now being undertaken by Baker & Taylor, of this city, and need only record the latest volumes—'Ivanhoe,' 'Kenilworth,' 'The Monastery,' 'The Heart of Midlothian,' 'The Abbot,' 'The Bride of Lammermoor,'

'Skipped by the Light of the Moon,' a recent anonymous "summer novel," with gaudy paper cover, published by G. W. Carleton & Co., of this city, turns out on examination to be a reissue of translations of three of Octave Feuillet's stories, which were published in one volume with the author's name on the title-page ten years ago, and then called 'Led Astray—The Sphinx—Bellah.' Afterward, in 1881, the book was issued anonymously with the title 'Led Astray.' The name under which the stories now appear has apparently been given to the book to take advantage of the popularity of the play now running with the same title.

The thirty-third volume of Hachette's "Modern Authors" has appeared, with the imprint 1886. Edgar Quinet's 'Lettres à sa Mère' (Boston: Schoenhof) is edited with explanatory and grammatical notes by M. V. Kastner. The collection is the same as that published by Mr. George Saintsbury in the Clarendon Press series, with the addition of about half-a-dozen letters. The notes are far more copious in Hachette's edition than in the little Oxford volume. They are more elementary, dwelling more upon the explanation of words, and giving translations of about all the difficult passages. They occasionally bear evidence of hasty composition, and the cross-references are not always reliable. But these are defects that may easily be made to disappear in a second edition.

We have received from the publishers, H. Wunderlich & Co., two large artist's proofs of etchings by Mr. Charles A. Platt. Their dimensions, and the fact that they both depict scenes on the Connecticut River, make them companion-prints for framing, though the subjects are alike only in the still-water effects. They seem to us altogether worthy of Mr. Platt's high rank among American etchers. One is a view of Hartford from East Hartford, below the covered bridge, which supplies the main interest in the design, and which terminates in a congeries of buildings, rising to a central tower, having the value of a single huge and foreign-looking structure. Above the middle of the bridge is faintly seen the dome of the State-house. A great sandbar below the bridge divides the river, at a low stage, into main channel and lagoon, as it were. In the second etching, whose lines are lovelier to our eyes, at some unnamed point on the Connecticut a sloop is tied to a coal wharf, whose trestlework rises high in air. The shore, behind, with trees and buildings felicitously grouped, melts away in the distance; a reach of shining water, unrippled, severing its shadows from the immediate margin of the stream.

From L. Prang & Co. comes a large chromo-lithograph after the painting by William F. Halsall of "The Finish"—namely, between *Puritan* and *Genesta*. Even the non-nautical eye detects faults of detail in this scene, and we cannot rate the artistic merit very high; but as a memento it will serve.

The leading pictorial feature in the November *Magazine of Art* (Cassell & Co.) is a series of portraits of Lady Hamilton after Romney and Reynolds. A number of illustrations accompany an article on the American pictures at the Salon of 1885.

Mr. Hamerton, in the *Portfolio* for October (Macmillan), might have gone further in pointing out the technical defects in the American ship which fills such a space in Ziem's "Grand Canal of Venice," here etched by A. Massé. Mr. W. M. Conway contributes the third paper of his series on the "Influence of the Mendicant Orders upon the Revival of Art," treating of the rise of the Dominican School.

"Assez!"—a fragment from Turgeneff's 'Posthumous Memoirs of an Artist'—translated by Michael Ashkinasy in *L'Art* for September (Mac-

millan), gives a literary interest to this issue which on the whole surpasses the artistic. The conclusion follows in the next fortnightly number.

Westermann & Co. send us Part 2 of the beautiful work on the history of German Art ('Geschichte der Deutschen Kunst') published by Grote in Berlin. It deals with German architecture, the writer being Robert Dohme, and is profusely illustrated with sections, plans, elevations, and perspective views. Two curious colored prints, besides large engravings, belonging to the several departments of the main subject of this work, are stitched in the present instalment.

From the same house we have Part 1 of the 'Allgemeine Naturkunde' of which we have already made mention. It carries along representative portions of the divisions on Geology, Botany, Anthropology, etc.; and again the illustrations are numerous and of high grade. Part 16 of 'Meyer's Konversations-Lexikon' closes vol. i. and volume ii is advanced to Part 7 (ending Bätica). The plates are, as usual, numerous and excellent, the colored anatomical ones being especially noticeable, together with that representing the American aborigines, likewise colored. Seldom do foreign artists succeed so well with our Indian types of physiognomy. Among the maps are Algeria, Morocco, and Tunis; Bavaria, etc.

The lesser 'Brockhaus' Conversations-Lexicon' (L. W. Schmidt) reaches Genoveva with the twenty-fifth Part; the larger work, Oedogonium with Part 170-171. We remark here the article on North American literature, sympathetic enough, and marred by few departures from verbal accuracy or proper perspective; a section is devoted to German-American literature.

The principal paper in the October Proceedings of the Royal Geographical Society is an account of an exploration of the Somali country in Eastern Africa, by Mr. F. L. James, the author of the 'Wild Tribes of the Sudan.' Accompanied by his brother and three other Englishmen, with sixty natives, he left Berbera, on the Gulf of Aden, last December, and, travelling due south over a sterile country, reached the river Webbe Shebeyli in lat. 5° 30′ N. This proved to be a "rapid and deep river, measuring fifty yards in the broadest place"; yet, he adds, "this immense volume of water never reaches the sea, but, after flowing to within half a degree of the equator, loses itself a few miles from the coast." The natives on the banks are "different in every way from the Somals," and "live in permanent and neatly-made villages and cultivate the ground extensively." This was the limit of their explorations, and they returned to the coast in April, having "neither lost a life nor been obliged to take one." In the large collections of mammals, birds, plants, and butterflies brought back by the expedition, several new species of each have been discovered. In the meeting at which this paper was read, it was stated that an English company was about to send out steamers to the Somali coast for the purpose of trading with the natives.

The Germans are also making a steady advance toward this same country from the south. It is now reported that the East African Company has acquired by treaty the country north of the volcano Kilimanjaro as far as the river Tana, just south of the equator. This new acquisition gives to the company a territory of more than 400 miles in extent from north to south, and about the same in breadth.

M. Henri Harrisse has reprinted in pamphlet form his account of the extraordinary thefts of rare books from the Biblioteca Colombina at Seville, which appeared originally in the *Revue Critique*. The article made a profound sensation in Spain, and, the matter being brought up in the Cortes, the President of the Council and the Minister of Justice promised that an investigation should be made.

A new *Rivista Pedagogica Italiana* has just been launched at Turin by Camilla & Bertolero, under the direction of Prof. Francesco Veniali. Every semester a prize of sixty dollars will be offered for a pedagogical essay. The magazine will appear monthly.

Apropos of some remarks in No. 1051 of the *Nation* (p. 155) on the appearance of American woodcuts in the pages of *Vom Fels zum Meer*, the editor, Prof. Joseph Kürschner, writes us that, as we intimated was likely, he uses *clichés* from the American originals, but that they are openly purchased of the proprietors of the magazines in question. What we reprobated was the taking over of the text as if original, and even assigning it a German authorship. We hardly think this too can be by arrangement with the American publishers.

—The prosperity of the magazines, and inferentially of minor literature, is indicated by the announcements which they post for the next year. The character of this allowed self-praise is one of the topics of the Easy Chair, in the current *Harper's*, and a very pleasant pardon is dealt out to them and all strenuous advertisers of their own literary wares, on the humorous ground of "If I do not praise myself, who will praise me?" As for the magazine of which the Easy Chair is so agreeable a feature, like a streak of sunshine often at the end of a chequered day, it seems to go on conquering and to conquer. The coming volumes will be of "unprecedented interest and importance," and a second paragraph assures us that "the great literary event of the year," 1886, will be an illustrated exhibition of American pleasure resorts, partly story, partly travel, humor, and character, by Mr. Warner. It appears, however, that the substance of the magazine will be much as of old. Such articles we may expect as those which make up the very solid and entertaining number before us, with its delightful ride through the southeast of Massachusetts, told with rare perceptive power and simple charm; its sweep of travel from Guatemala to the Hebrides; its touch of art from Murillo; its translation of old classics like Goldsmith into pictures; its serials by Howells and Miss Woolson; its political shriek (the nation is very deaf on the subject) in defence of our ports; its short stories, which we forbear to characterize; and last and least, its poems. Above the others an article or two will lift its head as here, either for its illustrations, its ability, or its intrinsic interest—for example, the account of the New York Stock Exchange, including its history, its internal arrangements of plan and government (as both a building and an association), its methods of business, the character of its operations, the meaning of its slang, and the horse-play of its holidays. The whole is admirably done, thorough and perspicuous, and may give many a fleeced lamb his first complete notion of the shearing place. The American character of it, as a growth from local and national business conditions, is well marked. At the extreme opposite to this Coliseum of the competitive system is the social family called the Familistère at Guise, of which a lucid account is also given. We have no space to outline even its main features, but for the benefit of those whose idea of the meaning of a fairer distribution of profits is only that of a per-capita sharing of capital itself, attention may be called to the principle adopted by M. Godin, the philanthropic founder of the works. He decided that the earning power of capital is represented by its interest, and that of labor by its wages; after the interest and the wages were paid, and certain sums withdrawn for the next year's assurance funds for education and the support of the poor, ill, and infirm, etc., the surplus profits were divided between the laborers and the capital in the proportion that the sum of the wages bore to the sum of the interest. By converting the savings fund into certificates of property, $393,800 of capital has already been transferred to the association in five years, and finally the whole plant will thus change hands from M. Godin to his workmen. The details of the scheme are very many and worth study, although too complicated for American imitation *in toto*. This institution is thus, in its way, as significant of the coöperative as is the Stock Exchange of the opposite theory of business organization; the juxtaposition of the two brings the clash of great principles home to the mind.

—The *Atlantic* is not behindhand, with its promises of fresh fiction, and two "features" in the shape of sketches by Hamerton, and United States history by John Fiske; but at the end it relies upon its very formidable staff, than which nothing better can be asked. The November issue is of unusual excellence. One turns first, if his appetite is for the new thing, to the first part of Mr. Fiske's "Idea of God." There is a hazy impression abroad that his "theism" is of a novel kind, differentiated in some way from that hitherto held. So far as it is made clear in this incomplete paper, which opens with those neat and sweeping summaries of the advance of knowledge to which he has accustomed us, it would appear that the theism in question belongs to the theories of immanence, and is content to find its historical origin in nature-worship rather than ancestor-worship, and its philosophical development in the Athanasian rather than the Augustinian theology. The religious movement which modern knowledge of the universe seems to demand, in this view, is a substitution of the earlier for the later Father's teaching respecting the conception of deity. Our criticism must be deferred; but meanwhile the article attracts attention as a sign of a theistic drift which is setting in more and more strongly in what is called advanced thought. A second paper which will draw the eyes of thoughtful readers is Professor Sill's discussion of the principles of criticism. Whatever he writes is always on a high plane, both of life and of reflection; and, in fact, many will be inclined to think that the fault of this dissertation lies in its applying a test which ordinary literature does not submit itself to. We pass the opening, which has an unfortunate accent of scholasticism in its manner, and, to be brief, come to what seems the main point: that literature, being an art of expression and the most comprehensive in its scope, is good in proportion as it gives us the most life and the best life which its author holds locked up in his unuttered experience. The more there is of the personal element and the finer its grain, the better the book. This, obviously, is the idealist who speaks. Realism, which is the science of literature, the description merely of the phenomena of life as science is that of nature, suppresses the personal element so far as possible, and thus is the literature of weak individualities. The strong man, the self-mastered genius, cannot eliminate his personality; and Professor Sill holds that this quality is the real test of the literature that stays, that influences, that works in the life itself. But in literature as in the church there are large questions on which antagonistic views may be held, individual and sect heresies, it may be, when the church has not pronounced any dogma orthodox; and the realists and idealists may fairly claim tolerance within the fold of the same great name. Instead, therefore, of asserting Professor Sill's canon, must not critics be required to consider mainly whether the

given author, if he be a man of cultivated intelligence, has succeeded under the criterion of his own aims and accepted laws? And would not the acceptance of the canon involve an unfortunate limitation of criticism to an estimate of the worth of the personal element expressed? Furthermore, does it not fail to be fruitful when applied to any literature except the dozen books which a century sometimes does not afford? Idealism is often a narrowing influence; and in the present case the canon it evolves, when applied to the broad range of modern productiveness, would prove intolerant, unduly psychological, and frequently barren. It would teach us to study Virgil and Shakspere; but how much it would allow us complacently to ignore! These considerations are not aimed at the canon, which has a supreme validity in the sphere of the spiritual life; but its limitations hedge it in on all sides. We must not omit all mention of an excellent notice of Thackeray's early art criticism.

—*Lippincott's* makes promise of more radical change, brightens its list of contributors with some established or rising names, and adds the financial enticement of a reduction in the price of its annual subscription. Its more prominent articles this month are on the new Queen Anne style of architecture, and on the Peabody Archæological Museum. The former is partly historical, partly descriptive of colonial styles, and partly critical of present taste. It concludes that the style as now practised is "the picturesque art of a hitherto unpicturesque time and people," and pleads for restraint. It emphasizes the most unfortunate influence of the fashion by quoting the significant remark of a zealous adherent, "It is a bad style for students to cut their teeth on": and it brings home the absurdities of its intemperate devotees by delightful humor from the artistic satire in 'The Ambassador Extraordinary.' Mr. Ernest Ingersoll's account of the Peabody Museum is very complete and painstaking, and, it may be hoped, will stimulate interest in the collection and preservation of relics so widely strewn along our river valleys. Naturally it is a description of objects rather than a summary of theories. The glance it affords, however, must indicate to the least dabbler in these matters the revolutionary conclusions which are possibly to come respecting the human occupancy of this country in pre-Indian times.

—The steadily increasing body of Poe literature has lately received a curious addition in the shape of a monograph on 'The Raven,' with a literary and historical commentary, by John H. Ingram (London: George Redway). It consists of the text, with its variations; selections from translations in French, German, Latin, and Hungarian; a group of the more notable parodies upon the poem; and an account, with extracts, of some of the fabrications in imitation of its style which wags, making the great hoaxer himself their prey, have tried to palm off as Poe's works. The editor's commentary is practically a reprint of his views from his biography of the poet, and is marred by those errors of detail which so seriously impair his larger work, though they are not the chief source of its untrustworthiness. He misstates, for example, the date of Poe's removal for New York by several months, and renews the exploded assertion that the poet was writing for the *New Mirror* in 1843. The latter is a capital point with him, for he partly relies upon it for the probability that Poe was indebted to Pike's "Isadore" for the suggestion of his poem. This "Isadore" is a pet discovery of the editor's; but, independently of Poe's repeated assertion that "The Raven" had been in his mind in idea for years, the influence of "Lady Geraldine's Courtship," which he ranks as secondary, is far more plainly discernible and tangible. To us the internal evidence that Pike was the inspiration of Poe seems delusive. In dealing with the whole subject of the sources and history of the poem Mr. Ingram seems somewhat lacking in that completeness which is so essential to a monograph. The Raven, the bird itself, may have come from 'Barnaby Rudge,' but the possible source of Christopher North should have been mentioned at least; and the lines in Poe's review of Dickens's novel upon the use to which Dickens's bird might have been put, may indicate earlier thought upon the matter rather than a passing reflection. The history of the composition of the poem, doubtful as it is, is really very crudely treated, and the writer seems to have no knowledge of several interesting stories about it, not altogether without evidence, of which the most important is the Saratoga tradition. If one enters on the legend of "The Raven," however, there is a long road before him. We content ourselves with commending the volume as a curious compilation, and a striking evidence of the international vogue of what was essentially a fugitive poem.

—Mr. Francis Galton, the originator of the famous composite or typical portraits and of many other ingenious contributions to experimental science, read a valuable paper on "Types and their Inheritance," as President of the Anthropological section of the British Association. It is published in full in *Nature* of September 24, and is too condensed to be summarized; but a few points of general interest may here be indicated. The common notion regarding heredity is that the child tends to resemble its parents. But in reality the child is "a mosaic of independent ancestral heritages," and one result of Mr. Galton's experiments was to emphasize the ancestral element as compared with the parental. About eight years ago he made a series of experiments with seeds of the same species but of different size. It appeared from these that the offspring did *not* tend to resemble their parent seeds in size, but to be always more mediocre than they—to be smaller than the parents if the parents were large; to be larger than the parents if the parents were very small. The mean filial regression toward mediocrity was further shown to be directly proportional to the parental deviation from it. The desire to get some anthropological data of a similar nature prompted Mr. Galton a year ago to offer his prizes for family records, though he made no allusion to this particular inquiry in his prospectus, lest a bias should be given to the returns. Stature was chosen by him as a subject to study the laws of heredity, because it is a nearly constant value which is frequently measured and recorded, and its discussion is little entangled with considerations of nurture, of the survival of the fittest, or of marriage selection. Two of the facts determined regarding stature are that that of the children depends closely on the average stature of the two parents, and may be considered as having nothing to do with their individual heights; and that the height of the children of both sexes, but especially that of the daughters, takes after the height of the father more than it does after that of the mother. The common notion that love is largely determined by admiration of opposite qualities is not supported by the conclusion drawn by Mr. Galton from data furnished by 205 cases, showing that marriage selection takes little or no account of short or tall. There are undoubtedly, he admits, sexual preferences for moderate contrasts in height, but the marriage choice appears to be guided by so many and more important considerations that questions of stature exert no perceptible influence upon it. The deduction from his data was that men and women of contrasted heights married just about as frequently as men and women of similar heights, both tall or both short.

—The law of the average regression of the offspring to a constant fraction of their respective mid-parental deviations, first observed in seeds and then confirmed by anthropological evidence, is of so simple a character that Mr. Galton has "made an arrangement with one movable pulley and two fixed ones by which the probable average height of the children of known parents can be mechanically reckoned." This law makes unlikely the full hereditary transmission of any rare and valuable gift, as only a few of many children would resemble their mid-parentage. The more exceptional the gift, the more exceptional will be the good fortune of a parent who has a son who equals, and still more if he overpasses him. But while this law thus discourages extravagant expectations, it also discountenances extravagant fears that the child will inherit all the weakness and diseases of the parents. These conclusions do not invalidate the general doctrine that the children of a gifted pair are much more likely to be gifted than the children of a mediocre pair, but only bring out the fact that the ablest child of one gifted pair is not likely to be as gifted as the ablest of all the children of very many mediocre pairs.

—The *Revue des Deux Mondes* of October 1 contains an article, by one of its regular staff, which will certainly shock and astonish many of its readers. The author, M. Brunetière, begins by reviewing with mock seriousness the various songs which are at the present time popular in Paris concert saloons, and comes to the conclusion, with which few will disagree, that they do not show any literary merit; that many are obscene, and that the rest simply contain platitudes, written in the poorest French. All this has often been said before, and remarks to that effect have generally been followed by complaint that the wittiest people of the world had sunk so low as to enjoy such productions. But the novelty of the remarks of M. Brunetière consists in the fact that he considers these songs as the legitimate offspring of that very "esprit gaulois" which is considered by many as one of the most characteristic and enjoyable features of French literature. That spirit of "superficial optimism and of scepticism without depth," as he calls it, is the parent not only of these songs but of the greater part of contemporary literature and journalism; of the greater part of the comedies of Labiche, of vaudevilles such as "Lili" and "La Femme à Papa," and even of Béranger and the ancient *fabliaux*. He even especially attacks Béranger, and, after quoting some particularly idiotic song, generally follows it up by quoting lines from Béranger which he declares are just as bad. To an impartial critic, the attack seems to be rather unjust. It may be true that Béranger has written a great many poor lines, and that the sentiments of many are rather prosaic and *terre-à-terre*. But, after all, one does not look in a *chanson* for a solution of the mysteries of human life And from his *chansons* on the political events of the day, to which he owed the greater part of his influence and reputation, though of course they are almost forgotten now, it would be easy to quote any number of happy expressions and instances of clever and delicate satire. But French critics have been so accustomed to laud their own literature to the skies, at the expense of the works of their neighbors, that it is almost refreshing to find one who falls into the opposite extreme.

—No. 2 of vol. xi of the *Journal* of the American Oriental Society is published, completing the volume, of which the first part was issued in 1882. Dr. Isaac H. Hall has four articles, on the Cypriote inscriptions of the Cesnola collec-

tion in New York; the Greek stamps on the handles of Rhodian amphoræ found in Cyprus, and now in the Metropolitan Museum; the Arabic Bible of Drs. Eli Smith and Cornelius Van Dyck; and a manuscript Syriac lectionary. Professor Hall's first article continues, corrects, or confirms his former article on the same subject, published in vol. x of this *Journal*, and also has special reference to Deecke's 'Die griechisch-kyprischen Inschriften in epichorischer Schrift' (Göttingen, 1883). Many of the inscriptions refer to the Paphian goddess: "Of the goddess, the Paphian, am I, and Onasithemis set me up." Some also have reference to Apollo. The inscriptions have mostly a votive character. One, the longest, is a close parallel to a passage in Plato's Laws. Some of the inscriptions remain too fragmentary to decipher, while others have become more legible with exposure to the air and cleaning. The amphoræ have the owner's or maker's name, or the eponym, and sometimes the name of the Doric month. A majority of the names of these months occur. Professor Hall conjectures that the jars in age or place of manufacture were neighbors. His article on the new Arabic translation of the Bible by the American missionaries, principally Dr. Van Dyck, who had been preceded by Dr. Eli Smith, is very valuable, in view of the little information as to their authors or translators which works by the missionaries are apt to give. The New Testament was translated and printed in 1860, and the whole Bible in 1865. The different forms, also, as they were struck off, had the benefit of revision by Arabic scholars associated in the work, and other missionaries, and in some special cases by Professors Rödiger and Fleischer. President Martin's article, on the northern barbarians in ancient China, is interesting, but quotes no authority for its statements, probably for the reason that a list of names of Chinese writers would be so unfamiliar as to be thought by unlearned readers to give no confirmation. The Sanskrit articles, by Professors Hopkins, Avery, and Bloomfield, show laborious research, of which the results could be stated briefly; but their conclusions are for the specialists. The Proceedings notice the essays read at the meetings from May, 1883, to October, 1884, inclusive, and touch upon a number of points of Sanskrit lore, as well as a large variety of other topics.

TYLER'S ADMINISTRATION.

The Letters and Times of the Tylers. By Lyon G. Tyler. In two volumes. Vol. II. Richmond: Whittet & Shepperson. 1885.

Considerably more than half of the present volume of this work—400 pages out of 711—is taken up with an account of President Tyler's Administration. This forms a contribution of great value to the history of the period, and even if it does not give occasion to change materially our opinion of this Administration, the numerous letters and other documents here printed assist in clearing up matters of detail, and in making character and motives more intelligible.

Two events in Mr. Tyler's Administration at once attract the attention of the student—his breach with the Whig party and the annexation of Texas. In regard to the first of these, we believe that public opinion agrees mainly with the conclusion of Von Holst, that "Tyler's view was unquestionably the correct one," and that no blame properly attaches to him in relation to the Bank question, the ostensible cause of the breach. Neither is there any question that Clay's haughty and arrogant demeanor toward the new President had much to do with alienating him from his party. But, after all, the Bank question was only one of many questions of public policy, and one, too, which had really become an obsolete one. After the ten years of controversy upon this subject, after the overthrow of the National Bank by Jackson, and in view of the unanimous agreement of the Whigs of all shades to the "Sub-Treasury," there was no reason in the nature of things why an irreconcilable schism in the party should have been created upon this issue. Especially when they came so near to an understanding upon the subject as upon the occasion of Sergeant and Berrien's famous interview, the breach must be pronounced a wanton and unjustifiable one. The President could certainly have compromised with the leaders of his party, if both he and they had heartily wished it.

The truth is, that neither did heartily wish it. Both felt in their hearts that a fatal blunder had been committed in nominating a State-rights Virginian as standard-bearer of a party which was certainly, on the whole, Federalist in its political theories. The Whig leaders were intoxicated with their recent victory, and could not dream that the President would dare to resist them, or could resist them with any hope of success. The prospect of such a contest, with Clay as their leader, was joy to their hearts. Mr. Tyler, on the other hand, was not the man, for any consideration, to desert the principles for which he had been contending all his life. He, too, welcomed the conflict, and felt no misgivings as to its result; he was, in his own eyes, master of the situation. The book before us, while confirming our belief in Mr. Tyler's honesty and consistency, shows very plainly that he expected the quarrel from the moment of assuming the Presidential office; and it shows further that "in the first weeks of his Administration" he was proposing to himself a personal policy, at variance with that of his party, in referring to "annexation as the all-important measure of his Administration" (p. 254).

The history of the annexation of Texas is narrated with great fulness and lucidity, and the motives and actions of the President are placed in (on the whole) a very favorable light. The writer of course denies the view of Von Holst that annexation to the United States had been a leading motive in securing the independence of Texas itself. As to this, the question of motives is a delicate one, on which opinions may honestly differ: we are surprised, however, that no effort is made to refute Von Holst's charge against Calhoun of falsehood and bad faith, in his letter to Mr. Pakenham of April 18, 1844 ('Life of Calhoun,' p. 232). We suppose that the biographer of Tyler is not bound to vindicate Calhoun; he was, however, one would think, bound to vindicate Tyler's Secretary of State.

The volume before us begins with the paradoxical assertion that "the Whig party had nothing to do with bank, tariff, or internal improvements. . . . The Whig party was the party of State rights as compared with the Democrats." Undoubtedly the Whig party of 1840 was an *omnium gatherum* of all the elements of opposition which the long rule of the Democratic party had called out. Undoubtedly, too, the parties had in a certain degree exchanged offices. The party of State rights had, under Jackson, swelled the exercise of national authority to its utmost dimensions, while the national party had, in resisting Jackson's usurpations, made itself the champion of decentralization. But this was nothing new. It is human nature that whoever is in possession of power is inclined to exaggerate the rights of office, while the opposition always strives to weaken the hand of the executive. So Jefferson had bought Louisiana in direct violation of his own theory of the powers of Government, and the Federalist Josiah Quincy had proclaimed the right of secession in Massachusetts. But these aberrations of party passion and interest do not affect the great fact that the Democratic party, from the beginning of the republic to the present day, has been the champion of State rights and strict construction, while its opponent—under whatever name—has maintained the national authority and a liberal interpretation of the organic law. Mr. Tyler, a consistent State-rights man, deserted Jackson because Jackson was false to this fundamental principle. It was natural enough that he should act for a season with the rest of the incongruous opposition under the name of Whig; but to maintain that the corporal's guard, Wise, Gilmer, Upshur, Cushing, etc., who followed him when in turn he seceded from his new associates—that these were the genuine and only Whigs, and all the rest base counterfeits, is really entertaining.

But our author finds it impossible to believe that any intelligent man should honestly hold the Federalist theory of the Constitution. The mention of the "National American" party of 1828 puts him in a fury, and at the bare suggestion that this nefarious faction was the legitimate predecessor of the Whig party of 1840, he turns red in the face. He talks of perfidy, treachery, "cloven foot," etc., as if a difference of opinion on Constitutional interpretation were not a perfectly natural and desirable thing. But his choicest vials of wrath are visited upon John Quincy Adams. He calls him "the furious zealot," "very nearly a political maniac," speaks of his "silly and vicious conduct," and of "his green-eyed zealots." When he compares (p. 271) "the hot-headed Adamses" with "the cool-headed Southern Presidents, Washington, Jefferson, Madison, Monroe, and Tyler," the comparison has some truth in it; but hew with Gilmer and Wise, Andrew Jackson and Andrew Johnson?

Mr. Tyler deserves the credit of having not only added a great deal of new and valuable material to American history, but of having (we think) successfully vindicated the reputation of his grandfather for honesty and statesmanship. President Tyler was certainly not a great man, and we cannot think that history vindicates the policy of his Administration. But no one can read the letters and other documents here given without being convinced that at any rate he thought he was right; and in the details of administration he often displayed great sagacity and good sense. We find, for example, on p. 310 the account of a sincere effort to correct some of the abuses of the spoils system.

With regard to slavery, the author holds the now harmless opinion, so common in the South, that while slavery "was a standing denial of the political equality of man, and in that sense could never be anything but a 'curse,'" yet that to criticise or in any way oppose it was very wrong, and merely aggravated its evils. He never loses an opportunity of assailing the North, and we do not remember that he has mentioned a single virtuous politician from that section, unless, perhaps, Caleb Cushing. Yes: on page 685 he calls James Buchanan a "great and good man." Mr. Webster also receives some commendation during the months that he remained in Mr. Tyler's Cabinet. We find the observation (p. 192): "It is not a little remarkable that all the more serious outbreaks against order in our national history up to 1861 have occurred in the North." How about the Nat Turner insurrection, significantly passed over without mention in the first volume?

Mr. Lyon Tyler's rhetoric is not always faultless. Such expressions as the following are frequent (p. 297)—that General Henderson did not arrive in Washington "until after the interregnum of Nelson, and Calhoun had taken possession of the State Department." The following

choice passage (p. 104) has reference to his old enemies the Nationals—literally his *bête noire:* "Though they returned to power under the white lambskin of strict construction, the form concealed was that of the cruel wolf—starved and disciplined in all the arts of deceit and hypocrisy. The delicate limbs of the Constitution seemed at length the repast upon which they would feed to satiety, when a bold hand intervened and saved the precious object from the ferocious fangs which were about to fasten upon it."

Louis Agassiz. His Life and Correspondence. Edited by Elizabeth Cary Agassiz. 2 vols. Boston: Houghton, Mifflin & Co. 1885.

THESE volumes are an account, not so much of a life as of a life-work, the story less of a person than of a mind; and the place of affairs, in which biography is usually immersed, is taken by facts and theories of science. This was inevitable, for Agassiz's life was his work, his correspondence was one of scientific business; and his 'Life and Correspondence,' in the literary and book-making sense, contains a very large technical element. The personal thread, however, vanishing and reappearing, runs like a golden strand through it all, though there is always a regret that it should be so slight. Especially in respect to the early chapters our characterization of the whole work as essentially of a limited scientific interest needs qualification, for they open charmingly with a glimpse of the simple, modest, pure Swiss home, delightful as the breath of the mountain air, and of the boyish naturalist playing with his fishes in the garden pool, or otherwise cultivating the eye and hand and mental perception and domestic and moral qualities of character, out of which grew his scientific genius and his personal charm in manhood. The relation of Agassiz to his own people, his parents and kinsfolk, is exhibited with a simplicity that almost enhances the fineness of it; and the years of poverty, of ambition that grew and means that straightened, the anxiety of the wise and prudent father and mother and the worldly-instructed uncle that the bright boy should have a profession, an acknowledged niche in the village, and not be ruined by his brilliancy, are set before us very vividly.

But there is no need to say that the youth who throughout his life had a perilous facility for putting himself in places where, as he remarks in one instance, his "only safety lay in success," could not help passing from happy chance to happy chance, until, by the friendly help of the great masters, Cuvier and Humboldt, by the bold venture of his little means and hard work in his first publications, and by his tireless thoroughness of investigation, which led to widely-extended social connections, he obtained his well-earned success, and, though he had yielded so far to prudential considerations as to take his degree as a physician in early life, at last was able both to refuse and to enjoy the highest prizes of a purely scientific career.

The story is one of those shining examples of plain living and high thinking which are like wells of pure water in a dry land. A high aim, a devotion to it which made sacrifice as natural as breathing, an inexhaustible energy and defiant hopefulness—it would have been a pity indeed if, with this equipment of moral power, the naturalist had been ordered by fate and circumstance to contract into the village doctor. The enthusiasm which Agassiz always kindled in others is felt throughout the work as his saving force within; and the spirit which is preserved in these pages must always be a rousing and sustaining influence for the scientific life under its trials. Such memories are among the precious possessions of mankind.

The larger portion of these volumes is tinged only indirectly with any other than a scientific interest. The letters and the story cluster about three great subjects, the early work on Fossil Fishes, the development of the theory of the glacial age, and the foundation of the Museum at Cambridge. Incidentally there is much discussion of smaller special problems, details of science; and toward the end there is a considerable amount of matter dealing with Agassiz's belief in the fixity of species conformably to a creative scheme of the Almighty, and with the voyage of the *Hassler*, on which he made his last scientific exploration on the Pacific shores. About all this, science itself has already had its say. It remains for us to notice, seeking rather the biographical interest involved, how constant and how active in these various discussions was the faculty of the imagination. It was a rare union of perceptive and constructive powers of mind which led Agassiz so quickly and boldly to such a statement as that of the coincidence between embryological and historical development, which has played so large a part in the doctrines of the evolutionists; and to such a theory as that of the glacial age. Indeed, one may hazard the conjecture that it was by its intellectual appeal to the imagination that the theory of the succession of species in direct relation to the creative mind had its strong hold upon him. The union of industry with enthusiasm to which we have referred above was hardly more effective in moulding success than was that of the observing and the imaginative faculties in making it possible.

The crown of all, however, in this compound of genius so marvellously endowed for its special successes was the personal charm of the man who carried these great qualities—a charm which was evidently felt by his associates, and even by chance companions, from his boyhood, and became an important factor in his practical effectiveness among men, as well as the delight of private life. Those who have felt it cannot forget it, any more than they forget Emerson's. But seeking for its trace in these letters, one does not find them touched by its presence in any noticeable way. It is in the letters of Humboldt here printed that there is the personal note of high attractiveness; the few there are of them are very delightful both for the manner and the spirit, and have a literary value as the expression of a nature whose cultivation was in the truest sense humane. There is always a peculiar grace in the relation of an old man, who is leaving the field of his fame, to the youth whose genius is in its turn to pass into the ascendant; and happy it is when, as in the case of Humboldt and Agassiz, this relation is so fitly expressed. It enhances the beauty of human life. From this correspondence one could cull a half-dozen golden sayings; but we leave that to our readers, for fear we should not finish. "Alas! my friend, one does not finish," writes the old man.

In Camp and Battle with the Battalion Washington Artillery of New Orleans. By William Miller Owen. Boston: Ticknor & Co. 1885.

THE Washington Artillery of New Orleans, one of the best known military organizations in the South, dates back as far as 1840, when it was one of the companies of the Washington Regiment of Louisiana, commanded by Col. Persifer F. Smith. It served with the Louisiana volunteers in the Mexican war, and, after returning home, kept up its organization until the outbreak of the civil war.

In May, 1861, it was increased to four companies, which, through their commander, Col. (then Major) J. B. Walton, offered their services to the Confederate Government for the war. These were promptly accepted and the battalion ordered to Virginia, where it arrived and completed its equipment in time to take an active and honorable part in the first battle of Manassas, July 21, 1861. From this time to the end of the struggle, at Appomattox, it remained one of the most prominent organizations in the artillery of the Army of Northern Virginia, and contributed its full share to the "moving accidents by flood and field" which make up the four-years' history of that army. Colonel Owen was the first adjutant of the Washington Artillery and afterwards its second field officer in rank. He may fittingly say of the admirable book he has given us that it is an account of

> "the battles, sieges, fortunes,
> That I have passed."

The basis of this book is an official diary which he kept during the war. The author has thus retained the vividness of a contemporary account, while he has so filled out his own memoranda from the official reports and other sources that it is by no means a simple narrative of personal experiences and adventure. On the contrary, Colonel Owen has written a book not only exceedingly readable, but which places on record many valuable official documents (some of them not to be found elsewhere), and which contains well-drawn sketches of many of the most important events in the various campaigns in which he had a share. He has also written a history of the Washington Artillery which, from its accuracy and fulness of detail, will in the future be the chief authority in all that concerns the record of that organization. The arrangement is good; the style simple, clear, and attractive; the tone that of a manly soldier of sound digestion, proud of his comrades and his cause, but without a trace of bitterness to his foes.

The following is from Colonel Owen's graphic account of the assault on Marye's Hill at the battle of Fredericksburg:

"At last the Federal line is formed, and appears above the ridge and advances. What a magnificent sight it is! We have never witnessed such a battle-array before; long lines following one another, of brigade front. It seemed like some huge blue serpent about to encompass and crush us in its folds, their musket-barrels gleaming brightly in the sunlight, their gay colors fluttering in the breeze. The lines advance at the double quick, and the alignments are beautifully kept. The board fences enclosing the gardens fall like walls of mere paper. Then the loud, full voice of Colonel Walton rings out, 'Tention! Commence fir-i-ng!' and instantly the edge of Marye's Hill is fringed with flame. The dreadful work of the Washington Artillery has begun. The boys soon warm up to their work, and aim and fire coolly and deliberately. Nearer and nearer the enemy's line advances, and now they are within range of canister and we give it to them. Now they are near enough to the infantry in the sunken road, the Georgians and the North Carolinians; and they are unseen by the enemy, for the smoke is beginning to cover the field. All at once the gray line below us rises; one moment to glance along the trusty rifle-barrels, and volley after volley is poured into the enemy's ranks. Great gaps appear; we give them canister again and again; a few leave the ranks—more follow; the lines halt for an instant, and, turning, are seen running in great disorder towards the town. The first assault has been met and repulsed. The field before us is dotted with patches of blue; they are the dead and wounded of the Federal infantry.

"It was the division of French that had charged the hill, and was shattered, with the loss of half their numbers.

"Hancock's division now advances in splendid style, and, being joined by remnants of French's command, pushes on valiantly to and beyond the point French had reached, and then, in little more than fifteen minutes, like our first assailants, are forced back. Of the 5,000 men Hancock led into action 2,000 fell in the charge. With Hancock came the Zouaves and the Irish brigade of Meagher, bearing aloft the green flag with the golden harp of Ireland. The brave fellows came within five-and-twenty paces of the stone-wall, and encountered such a fire of shot, shell, canister, and musketry as no command was ever

known to live through. The result was that two-thirds of this splendid and gallant brigade was left upon the field killed and wounded."

In the following May the attack of Sedgwick upon the same position was more successful, and the Washington Artillery on that occasion lost six pieces.

The straits to which General Lee's troops were reduced in the lines around Petersburg in the winter and spring of 1865 are well illustrated by Colonel Owen's entry in his diary for March 10, 1865:

"For some weeks we have been having a hard time in the eating line, and are now receiving rations of one-fourth pound of bacon and three-fourths pound of corn meal a day; sometimes coffee and sugar, but not often.

"It was at this time that Gen. Jo. Davis, the President's nephew, and young 'Jeff.,' the President's son, came to dine with me. They were made welcome, but, upon consulting 'Jacob' in reference to the contents of the larder, he informed me that the remains of my day's rations, three-fourths pound of corn meal, was all we could boast of. What under the sun was to be done? What a fix to be in! The nephew and the son of the President of these Confederate States to dine with me, a Major of Artillery, and three-fourths pound of meal only in the larder!

"However, I was equal to the occasion. Calling the Adjutant, I requested him to present my compliments to Captain W ——, Lieutenant L ——, and the doctor, and to say I would be happy to have the pleasure of their company at dinner at 'headquarters' to meet some distinguished gentlemen; and, I added in a low tone, tell them to bring their own rations with them, their tin cups and plates. And tell the doctor not to forget a modicum of *spiritus*. And giving 'Jacob' a few hundred dollars, he was despatched to a Georgia regiment in the outer works for a half bushel of cow-peas for soup.

"Meanwhile I entertained my guests by taking them around, and showing them how beautiful my camp was, how thin my horses were, and all the objects of interest, keeping an eye all the while upon the kitchen. At last dinner was served, and, thanks to the officers and the doctor, the *menu* wasn't bad. A large tin bucket held the soup, and we dipped in with our tin cups. We had plenty of bacon and corn bread and some excellent coffee made from 'Gouber-peas.' Our sugar *happened* to be just out; but we explained that to our guests by laying the blame on the 'commissary.'"

There are a few errors. Such, for example, is the statement on page 153 that A. P. Hill reached the field of Sharpsburg "by the road crossing the Antietam near its junction with the Potomac." Hill, who was at Harper's Ferry on the morning of September 17, marched on the south side of the Potomac to the vicinity of Shepherdstown, and, crossing that river at Boteler's Ford, near the latter place, fell upon Burnside's flank. The route by the north bank of the Potomac crossing the Antietam near its mouth would have been shorter, but it was too much exposed to the Federal army to be available. On p. 235 it is stated that Major Pelham, commander of Stuart's Horse Artillery, was killed on June 9, as Lee was moving northward to Gettysburg. Pelham was killed March 17, in one of the reconnoissances of Hooker's cavalry which preceded Chancellorsville.

The maps are useful, and the book has been admirably gotten up by the publishers.

The Story of Nuncomar and the Impeachment of Sir Elijah Impey. By Sir James Fitzjames Stephen, K.C.S.I., one of the Judges of the High Court of Justice, Queen's Bench Division. 2 vols. Macmillan & Co. 1885.

When one picks up two small volumes, bound in blue cloth and entitled 'Nuncomar and Impey,' he is likely to think that it is some romance, some 'Mosco and Zara' or the like. In fact, it is a bit of legal history belonging to the Warren Hastings period of Indian affairs. Mr. Justice Stephen has seen fit to throw his superabounding energy into this channel. The cares of an English judge seem to sit lightly upon him. Having, since his accession to the office, brought out in three volumes the 'History of the Criminal Law in England,' and having produced new editions of several other works, and having written all along articles in English magazines, and occasionally occupied five or six columns at a breath of the London *Times*, with a letter on some public question—he has now been led, he says, "to form a plan of studying, with a lawyer's eye, some of the more remarkable of the trials in which our history abounds, and of giving such accounts of them as might be recognized by lawyers as accurate, and might interest historical students." By way of taking something light, he begins first on the impeachment of Warren Hastings; and these two volumes present "an account of one branch of the subject—the story of Nuncomar." The proceedings connected with the trial of this depraved Brahmin for forgery, before the Supreme Court of Calcutta, of which Impey, a friend of Hastings, was the Chief Justice, formed the subject of one of the chief charges against Impey in an unsuccessful attempt to impeach him by the English House of Commons. Mr. Justice Stephen deals also with the other charges against Impey: "Though less interesting than the charge relating to Nuncomar, they are of greater historical importance, for they form the first chapter of the history of the introduction of English law into India, and they illustrate the difficulties by which the establishment of the Indian Empire was attended, and so form a natural introduction to an account of the impeachment of Hastings." The author tells us that he was also drawn to deal with this matter by a conviction that great injustice had been done to Impey by Macaulay, in his essay on Warren Hastings, and by James Mill and others; he charges Macaulay with the "moral ruin" and "literary murder" of Impey. He accuses all previous writers upon the subject with having failed to study the evidence faithfully, and justly claims for himself as a lawyer a special right and capacity to judge and expound such a matter. Indeed, he makes a weighty, sound, and more general intimation, quite warranted by the work before us, when he says, in the opening sentence of his book: "In writing the 'History of the Criminal Law of England,' I was much struck with the way in which nearly all the most important parts of our history connect themselves in one way or another with the administration of criminal justice, and with the importance which, in writing history, attaches to a technical knowledge of the law."

It is not worth while to enter into the details of the story here presented. In its general features it is pretty well known. In the light of the careful and full presentation of the case by Stephen, there is small room for a difference of opinion on the main points considered. It will surely be the general judgment of his readers that he has vindicated the memory of Impey. It is hardly probable that the book will find a wide circle of readers; it will have, however, a permanent place in the literature of its subject, and there are points in it of special interest to students of history and law. It is highly interesting to watch the impinging of English law upon the utterly strange and foreign usages of India, and to observe the effort, so like some things which took place on this continent, to stretch the charter of a trading corporation of Englishmen into a political constitution for the Government of a remote country peopled by the antipodes. Here and there, also, are passages or remarks that are valuable or striking for other reasons—*e. g.*, the personal comments on Macaulay (vol. ii, 270); the following observation about James Mill: "James Mill, by the almost affected dryness and severity of his style, and by the extreme harshness of his censures on others, has acquired a reputation for the accuracy and rigid justice which would be necessary to justify his judgments"; and the paradoxical remark on the law of evidence (vol. i, 121, note): "After much study of the law of evidence, my opinion is that the greater part of the present law came into definite existence (after being for an unascertainable period the practice of the courts, differing, by the way, to some extent on different circuits) just about 100 years ago."

Stephen, for so able a writer, has grievous faults. Some of them are not of a sort to be brought out very conspicuously in this book; *e.g.*, the lack of a habit of close and patient thinking and of returning upon his work, which is exhibited in some of his private codification. But the reader of these volumes will be often repelled by an offensive and too characteristic obtrusion of the writer's own personality into the current of discourse, and by trivial, forced, or whimsical observations, seemingly traceable to some lack of that invaluable literary salt, a sense of humor. "To me," he says (vol. ii, 89), after quoting a passage of cheap rhetoric—"to me, like most eloquence, it resembles nothing so much as mouldy wedding-cake." And, again, in commenting upon a remark of Impey's that certain widows "have been, by black officers attending these courts, thought proper objects of rapine and violence," Stephen says in a note (vol. ii, 176): "The expression 'black officer' has been censured as rude. I see no more rudeness in calling a man black than in calling him white, if the fact is so. Natives often speak of themselves as black," etc. What a contrast is all this, one says to himself, as he comes upon these blemishes, to the sanity and the beautiful and lucid impersonality of such a writer as Sir Henry Maine!

And yet one would not hear his enemy say this; nor shall we take leave of Stephen without acknowledging gratefully his generous aims, his professional and literary courage, his learning, and his vast and useful industry.

Europe in Storm and Calm. Twenty Years' Experiences and Reminiscences of an American Journalist. By Edward King. Over one hundred illustrations by Félix Régamey. Springfield, Mass.: C. A. Nichols & Co. 1885. Pp. 849, 8vo.

In his new work Mr. Edward King gives an account of the principal events in Europe which have come under his personal observation during the past twenty years. To the narrative he has added as much history as is necessary to enable the reader to understand their meaning. There are also numerous descriptions of scenery, of manners and institutions, as well as sketches of noted personages. The book is thoroughly interesting, the narrative in places showing a very high degree of merit in descriptive writing, though this is sometimes carried to excess.

Mr. King's experiences have been very varied. From an account of Paris in 1867, when the Empire was outwardly at the height of its splendor, but in reality was hastening to its fall, we pass to a description of the Republican insurrection in Spain in 1869, the chief incident in which was the sanguinary street fight in Valencia. By way of contrast, there immediately follows an account of Alfonso's wedding ten years later, and the festivities, including a bull-fight, which accompanied it. After this interlude, as it were, the author relates the history of the events leading to the war of 1870, and depicts the military operations of the armies at Metz and Sedan. During this period Mr. King was with the Germans, and accordingly witnessed the bombardment of Paris from Versailles. He was within the walls at the outbreak of the Commune, and

the interest of his book culminates in his vivid narrative of the defence and capture of the barricade in the Boulevard Malesherbes. The transition from the horrors of those terrible days and still more awful nights to the peaceful streets of London, where "the laughter of the children" fell upon his ear as an unaccustomed sound, is a welcome relief to the reader. While there is much that is valuable and entertaining in the account of Great Britain and its institutions, still there is little of that personal element in it which gives the work its great charm. Our somewhat flagging interest is aroused, therefore, when the insurrection in Herzegovina in 1875 summons Mr. King to the Adriatic. His good fortune in being able to reach the insurgent camp in company with its leader furnishes him with the material for a singularly picturesque chapter. From this point to the close the interest is well sustained. Although he does not appear to have been an eye-witness of any of the great battles of the Eastern war, yet his account of what he did see, while accompanying the Russian army on its march through Rumania and Bulgaria, is full of incident involving many historic scenes and men. In strong contrast to these stormy experiences is the quiet day in 1881 when Mr. King sat in the theatre of Ober-Ammergau and watched the Passion Play; and that with which the book ends, the funeral of Victor Hugo. The illustrations are most of them very good, though some have but a distant relation to the text. A few of the portraits are excellent, and a few are little better than caricatures, notably those of George Eliot and Lord Beaconsfield. The permanent value of Mr. King's work is very much injured for want of an index.

Discriminate: A Companion to 'Don't.' A manual for guidance in the use of correct words and phrases in ordinary speech. By Critic. D. Appleton & Co. 1885.

THE idea underlying 'Discriminate' is a very good one. The words and phrases are arranged alphabetically, and in most cases the suggestions given are sound. We are not among those who believe that any one ever wrote or spoke perfect English, or that disputes about correct usage at a given time can be settled absolutely by authority; but, conceding as much as this, the difference, at a given time, between correct and pure speech and bad English, is equivalent to the difference between good and bad breeding. At the present moment there are probably a greater number of people who speak and write English tolerably, and also a greater number of people who speak and write it intolerably, than at any previous period in the history of the race. It is also true that, owing to the great number of authorities in the field, it is becoming every year more and more difficult to find out the exact limits of correct usage. On minor points there is much disagreement among the authorities, and it is these minor points over which the contest rages hottest. 'Discriminate,' like any other book of its kind, illustrates the truth of these remarks. Nine-tenths of it is sound and undisputed criticism. We find many of our pet aversions in the way of bad English neatly pilloried. On the other hand, we find numerous instances in which we do not agree with, or have grave doubts about, the author's judgment. Thus, the late Mr. R. G. White is quoted as authority for the statement that the proper form of announcing a marriage is to say, "*Married*, Mary Jones to John Smith; *i. e.*, we must not say John Smith was married to Mary Jones." But is not this over-precise? and do not the stars in their courses and the equal rights of the sexes fight against such extreme conservatism? "Discriminate," says the author, "between Evidence and Testimony," and adds: "*Evidence* is that which tends to convince; *testimony* is that which is intended to convince." It may be that such a discrimination is etymologically to be desired; but surely, in common parlance, we do not discriminate between the testimony of a witness and the evidence given by a witness. Again, here and there the author deals with sins not against correct usage, but against good grammar, which we fear no amount of criticism, however sound, will reach. Thus: "Discriminate in the use of *done*. Don't say 'he *done* it'; use *did*."

It is of course impossible to learn how to speak good English from a book. The work has to be begun in childhood, and is really in great part a matter of strict breeding. This is what makes disputes and differences about the correct use of language so interesting. We feel that the reputation not only of ourselves, but of our parents, is staked upon the position which we take.

Due South: or, Cuba Past and Present. By Maturin M. Ballou. Houghton, Mifflin & Co.

MR. BALLOU'S book contains material which, if well arranged and compressed into one hundred pages, would make an interesting volume; but here we have more than three hundred pages, the perusal of which has been a considerable trial to our patience. Original observation, hearsay, gleanings from the author's readings, all mixed pell-mell—one might fancy the leaves of the manuscript scattered by a sudden gust of wind, and hastily gathered up and sent to the printer just as they happened to be put together, so abrupt and sometimes startling are the transitions from topic to topic. The author, however, evidently possesses a quick and observant eye, and some of his remarks on the social and economic condition of Cuba show that he has derived his information from persons intimately acquainted with the island. All the more it is a pity, therefore, that we are constrained to pronounce his production a very unsatisfactory specimen of bookmaking.

BOOKS OF THE WEEK.

Agassiz, Elizabeth C. Louis Agassiz: His Life and Correspondence. 2 vols. Boston: Houghton, Mifflin & Co. $4.
Alldridge, Lizzy. Florence Nightingale. Frances R. Havergal, Catherine Marsh, Mrs. Ranyard. Cassell & Co. 50 cents.
Allen, G. Babylon: A Novel. D. Appleton & Co.
Bardeen, C. W. A Shorter Course in Rhetoric. A. S. Barnes & Co. $1.25.
Ball, Dr. R. S. The Story of the Heavens. Illustrated. Cassell & Co. $5.
Banister, H. C. Music. Henry Holt & Co. $1.
Barlow, W. S. Immortality Inherent in Nature. Fowler & Wells. 60 cents.
Bacourt, Chevalier de. Souvenirs of a Diplomat. With a Memoir by the Comtesse de Mirabeau. Translated. Henry Holt & Co. $1.50.
Brooks, E. S. Historic Boys. Their Endeavors, their Achievements, and their Times. G. P. Putnam's Sons. $2.25.
Brief History of the United States. A. S. Barnes & Co. $1.25.
Byron, Lord. Childe Harold. Illustrated. Boston: Ticknor & Co. $6.
Cather, G. R. Dora's Device. Philadelphia: T. B. Peterson & Brothers. $1.25.
Christiani, A. F. The Principles of Expression in Pianoforte Playing. Harper & Bros.
Collier, R. L. English Home Life. Boston: Ticknor & Co.
Craik, Georgiana M. Mrs. Hollyer: A Novel. Harper & Bros. Paper. 20 cents.
Davies, C. Elements of Geometry and Trigonometry. Edited by J. H. Amringe. A. S. Barnes & Co. $1.85.
Bonar, J. Malthus and his Work. Harper & Bros. Paper. 25 cents.
De Witt, John. Sermons on the Christian Life. Charles Scribner's Sons. $2.50.
Dreyspring, A. The German Verb Drill; Adapted to Schools or Home Instruction. D. Appleton & Co. $1.75.
Ellicott, Bishop C. J. The Handy Commentary on the Pentateuch 5 vols. Cassell & Co. $4.50.
Farjeon, B. L. Self-Doomed: A Novel. Harper & Bros. Paper. 25 cents.
Fenn, G. M. The Dark House: A Knot Unravelled. Harper's Handy Series. 25 cents.
Fisher, J. A. A Select Bibliography of Ecclesiastical History. Boston: D. C. Heath & Co.
Finley, Martha. The Two Elsies. Dodd, Mead & Co. $1.25.
Gosse, E. From Shakespeare to Pope. Dodd, Mead & Co. $1.75.
Gerard, J. W. The Peace of Utrecht. An Historical Review. G. P. Putnam's Sons. $3.
Gowing, R. Richard Cobden. Cassell & Co. 50 cents.
Gordon: A Life of Faith and Duty. Illustrated. E. and J. B. Young & Co.
Greville, C. C. F. A Journal of the Reign of Queen Victoria from 1837 to 1852. Second Part. In 3 vols. Worthington Co. $13.50.
Gummere, F. B. A Handbook of Poetics for Students of English Verse. Boston: Ginn & Co. $1.10.
Harrison, Mrs. Burton. Bric-à-Brac Stories. Illustrated by Walter Crane. Charles Scribner's Sons. $2.
Hazen, Gen. W. B. A Narrative of Military Service. Boston: Ticknor & Co. $3.
Higginson, T. W. A Larger History of the United States to the Close of Jackson's Administration. Harper & Bros.
Holder, C. F. Marvels of Animal Life. Charles Scribner's Sons. $2.

SCHOOL PROPERTIES FOR SALE and to rent. J. RANSOM BRIDGE & Co., 110 Tremont St., Boston, Mass.

D. APPLETON & CO.

HAVE JUST PUBLISHED:

I.

A Strong-minded Woman; or, Two Years After.

A Sequel to 'Lal.' By William A. Hammond, M.D. 12mo, cloth, price, $1.50.

Although in one way a sequel to 'Lal,' 'A Strong-minded Woman' is an independent work, complete in itself. The story treats incidentally of some of the leading issues of the time; and in the character of the heroine—*Lal* filling a secondary place—the reader will find a just and admirable portrait of a "strong-minded" but eminently intellectual woman.

DR. HAMMOND'S NOVELS PREVIOUSLY PUBLISHED:

LAL. 12mo, cloth. Price, $1.50.
DOCTOR GRATTAN. 12mo, cloth. Price, $1.50.
MR. OLDMIXON. 12mo, cloth. Price, $1.50.

II.

Incidents and Anecdotes of the Civil War.

By Admiral David D. Porter. One volume. 8vo, cloth. Price, $2.

Admiral Porter's anecdotical reminiscences of the war are written in an ammated style. They are always dramatic, often amusing, and give many unfamiliar inside views of events in that trying period. They relate to Events at Pensacola, the Attack on New Orleans, Ericsson and the Monitor, Ascending the Mississippi, the Siege of Vicksburg, General Grant at Vicksburg, Admiral Farragut, the Yazoo Pass Expedition, General Sherman, the Red River Expedition, Naval Battle at Grand Gulf, General Butler in New Orleans, Visit of President Lincoln to Richmond, and various other events of the war.

*** For sale by all booksellers; or will be sent by mail, postpaid, on receipt of price.*

D. APPLETON & CO., Publishers, 1, 3, & 5 Bond Street, N. Y.

CROSBY'S VITALIZED PHOSPHITES

For fifteen years has been a standard remedy with all physicians who treat mental or nervous disorders.

It aids in the bodily and wonderfully in the mental growth of children.

It restores the energy lost by nervousness, debilty, over-exertion, refreshes weakened vital powers in old or young.

It is used by Bismarck, Gladstone, and all great brain workers.

F. CROSBY CO., 56 WEST 25TH STREET, NEW YORK.

For sale by druggists, or mail, $1.

Houghton, Mifflin & Co.'s

NEW BOOKS.

The Last Leaf.

By Oliver Wendell Holmes. A Holiday Volume. Illustrated with full-page designs by F. Hopkinson Smith and George W. Edwards. Quarto, beautifully bound, $10.00.

This is a Holiday Book quite out of the common range. It contains twenty-four full-page designs, which interpret with great felicity the picturesque fancies of the poem. These designs, and other charming decorative drawings, are admirably reproduced by phototype. Paper, printing, and binding are such as should be found in a sumptuous Holiday volume.

High-Lights.

A Novel. 16mo, $1.25.

This is a story of New England life and character, including elements of plot, incident, conversation, and description, which novel-readers, who read all the good current stories, cannot fail to appreciate.

Louie's Last Term at St. Mary's.

By the author of 'Rutledge.' New Edition. $1.00.

A new and attractive edition of a story which cannot fail to interest girls at school and women who remember their school experiences.

*** For sale by all booksellers. Sent by mail, postpaid, on receipt of price by the Publishers,*

DAVID G. FRANCIS, 17 Astor Place, New York.

Balzac's Novels.

"Criticisms of Balzac's greatest romance, 'Le Pere Goriot,' have been so often undertaken that, save for the idiosyncrasies of a critic, very little that is original could be written. It is and will remain the great piece of fiction of the present century, and one which has shaped the mind of many a man and woman for good and bad, leaving entirely out of the question its influence on literature."—*New York Times.*

Price $1.50, bound in French style of half morocco. ROBERTS BROTHERS, Publishers, Boston.

Engraving and Stationery.

A large number of people who reside at a distance from the principal cities, not understanding the facility and accuracy with which orders for Engraving and Stationery can be filled through the mails, are obliged to content themselves with a very inferior grade of Stationery and of Engraving and Printing, when, by sending their orders to headquarters, they can have the same executed at moderate prices and in a thoroughly artistic manner. In the extensive Stationery Department of Messrs. G. P. PUTNAM'S SONS, Original Designs for Monograms, Crests, and Coats of Arms are furnished for stamping on note and letter paper. Visiting Cards, Wedding and Reception invitations are engraved and printed in the correct style, while their exceptional facilities enable Messrs. PUTNAM to execute all such work at the lowest prices which are consistent with a high standard of excellence.

Their stock of Fine Writing Papers is extensive, and contains all the latest novelties, many of the same being specialties manufactured exclusively for their Retail Department. Messrs. PUTNAM are now conducting an extensive trade through the mails, and are in a position to supply the wants of their customers promptly, intelligently, and economically. They furnish estimates and samples for every description of engraving and printing.

Unmounted Photographs

OF ANCIENT AND MODERN WORKS OF ART,

Embracing reproductions of famous original paintings, sculpture, architecture, etc. Price, cabinet size, $1.50 per dozen. Send 6-cent stamp for new catalogue. 5,000 subjects.

SOULE PHOTOGRAPH CO.,

Publishers, 338 Washington Street, Boston, Mass
Please mention the *Nation*

The Portable Bookcase manufactured solely by Lockwood, Brooks & Co., 17 Franklin Street, Boston, Mass., is the most perfect thing of the kind, it being easily moved, and adjustable for books of all sizes. Send for circular or call and see it.

Engraving and Stationery.

A large number of people who reside at a distance from the principal cities, not understanding the facility and accuracy with which orders for Engraving and Stationery can be filled through the mails, are obliged to content themselves with a very inferior grade of Stationery and of Engraving and Printing, when, by sending their orders to headquarters, they can have the same executed at moderate prices and in a thoroughly artistic manner. In the extensive Stationery Department of Messrs. G. P. PUTNAM'S SONS, Original Designs for Monograms, Crests, and Coats of Arms are furnished for stamping on note and letter paper. Visiting Cards, Wedding and Reception Invitations are engraved and printed in the correct style, while their exceptional facilities enable Messrs. PUTNAM to execute all such work at the lowest prices which are consistent with a high standard of excellence.

Their stock of Fine Writing Papers is extensive, and contains all the latest novelties, many of the same being specialties manufactured exclusively for their Retail Department. Messrs. PUTNAM are now conducting an extensive trade through the mails, and are in a position to supply the wants of their customers promptly, intelligently, and economically. They furnish estimates and samples for every description of engraving and printing.

G. P. Putnam's Sons,

27 and 29 W. 23d Street, N. Y.;

King William Street, Strand, London.

The Poems of Henry Abbey.

NEW, REVISED, AND ENLARGED EDITION.

1 vol. 12mo. 260 pp. long primer type, cloth. Price $1.25.

From the Syracuse (N. Y.) Standard.

Announcement is made by the London *Academy* that a complete revised edition of Henry Abbey's poetry will appear this season, the collection comprising the poems heretofore published by D. Appleton & Co., with a considerable later verse. Mr. Abbey's verses are familiar to lovers of choice work in England and Scotland, as well as in his own country, who appreciate the imagination, simplicity, and tenderness that mark his inspiration.

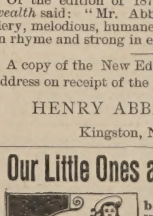
Of the edition of 1879 the Boston *Commonwealth* said: "Mr. Abbey's poems are earnest, fiery, melodious, humane, and are equally facile in rhyme and strong in expression.

A copy of the New Edition will be sent to any address on receipt of the price, $1.25.

HENRY ABBEY, Publisher,

Kingston, New York.

Our Little Ones and The Nursery.



Any little child can be made happy for a whole year by a subscription to this universal nursery favorite—artistic and original in its illustrations—charming and instructive in its stories.

Specimen copy sent free. Newsdealers sell it. Agents wanted.

One Year, $1.50. Single Copies, 15 cts.

Russell Publishing Co., 36 Bromfield St., Boston, Mass.

BEGINNING A NEW VOLUME.

The CENTURY

FOR NOVEMBER.

THE CENTURY begins its sixteenth year with a monthly circulation of considerably over 200,000. The great gain has been due to the success of the War Papers, and to the fact that the general features of the magazine have been unusually strong during the past year. In 1886 the War Papers, by prominent generals on both sides, will be continued, and there will be

SERIAL STORIES by W. D. Howells, Mary Hallock Foote, and George W. Cable.

The November number, now ready, contains:

"CHATTANOOGA," by GEN. GRANT. The third paper of Gen. Grant's personal memoirs of the war, describing, with great interest, the famous battle of Chattanooga. With it appears a full-page picture of Gen. Grant, from a photograph taken at Mt. McGregor, and the reproduction of one of his letters to Dr. Douglas.

THREE SHORT STORIES,

"The Story of Seven Devils," by Frank R. Stockton; "A Cloud on the Mountain," by Mary Hallock Foote; "The Mystery of Wilhelm Rütter," by Helen Jackson (H. H.).

TWO IMPORTANT ESSAYS,

"Danger Ahead," a remarkably able and suggestive paper on Socialism and the Labor Problem, by Lyman Abbott; and an article on "The United Churches of the United States," the latter to be followed by papers on Church Unity by representatives of various denominations.

THREE ILLUSTRATED ARTICLES,

"A Photographer's Visit to Petra," with 18 pictures; "Living English Sculptors," by Edmund Gosse, 8 pictures; "Typical Dogs—Setters," by various experts, 7 pictures.

"JOHN BODEWIN'S TESTIMONY,"

By Mary Hallock Foote.

The first chapters of a new serial story of mining life, by the author of 'The Led-Horse Claim.'

Also, a short paper on "Chautauqua," by Edward Everett Hale. In the departments, an editorial on "The Outlook for Civil-Service Reform," and open letters on various timely subjects. "Bric-à-brac" contains humorous poems, and a cartoon by E. W. Kemble.

A Special Offer to New Readers.

To enable new readers of THE CENTURY to secure the first papers in the War Series (with articles by Generals Grant, Beauregard, McClellan, Longstreet, Admiral Porter, and others), we make the following offers:

$6.00 WILL PAY FOR THE CENTURY for a year to come (beginning with Nov., 1885) and 12 back numbers, from Nov., 1884, to Oct., 1885, inclusive.

$7.50 WILL PAY FOR THE CENTURY for a year, from Nov., 1885, and the 12 back numbers of the past year, *bound in two handsome volumes.*

All dealers sell magazines and take subscriptions at regular prices and fill special offers. 35 cents a number. $4 per year.

THE CENTURY CO., NEW YORK.

27 and 29 W. 23d St., New York,

HAVE NOW READY:

I. Railroad Transportation.

ITS HISTORY AND ITS LAWS. By Arthur T. Hadley, Commissioner of Labor Statistics of the State of Connecticut, and Instructor of Political Science in Yale College. Octavo, cloth, $1.50.

"This book deals with those questions of railroad history and management which have become matter of public concern. It aims to do two things—first, to present clearly the more important facts of American railroad business, and explain the principles involved; second, to compare railroad legislation of different countries and the results achieved."—*Author's Preface.*

II. The Evolution of Contemporary Religious Thought.

Considered with special reference to the recent religious history of England, the United States, and India. By the Count Goblet d'Alviella, Professor of Comparative Theology in the University of Brussels. 8vo, cloth, $3.00.

"My readers will, I think, on completing my chapters, have made clear to them how I have been able, without impairing the unity of my thesis, to associate with this picture of religious progress in England and the United States a presentation of the development of religious thought in India, induced by the different schools of Brahminism, and will recognize the connection I have traced between Anglo-Saxon culture and the recent movements in the Ancient Hindoo philosophy."—*Extract from Author's Preface.*

III. The Blot on the Brain.

STUDIES IN HISTORY AND PSYCHOLOGY. By Wm. W. Ireland, M.D. Octavo, cloth, $3.00.

*** Putnam's new lists sent on application.

Houghton, Mifflin & Co.'s

NEW BOOKS.

THE FIRST NAPOLEON. A Sketch Political and Military. By John Codman Ropes, Member of the Massachusetts Historical Society. With Maps. 1 vol., crown, 8vo, $2.

Mr. Ropes is widely known as one of the most competent and lucid writers on military topics. The book describes the condition of the great European powers in Napoleon's time, the conditions in France which enabled him to vault so suddenly to the supremacy and to hold it, and depicts with wonderful vigor and clearness those audacious campaigns and tremendous battles which shook the thrones and changed the map of Europe, and which have an irresistible fascination for readers of history.

STEDMAN'S WRITINGS. The Prose and Poetical Works of Edmund Clarence Stedman, including his Poems, Victorian Poets, and Poets of America. 3 vols., 12mo, in box, $6.

LIFE AND TIMES OF WIL- liam Samuel Johnson, LL.D., First Senator in Congress from Connecticut, and President of Columbia College, New York. By E. E. Beardsley, D.D. New Revised Edition. 8vo, $2.50.

This is an improved edition of a book which the *Nation* pronounced "a valuable contribution to the history of the period."

*** *For sale by all booksellers. Sent by mail, postpaid, on receipt of price by the Publishers.*

HOUGHTON, MIFFLIN & CO., BOSTON. 11 East 17th St., New York.

TO YOU:

November BOOK NEWS is ready; portrait of Emerson. Price for the present: 3 cents for the number; 25 cents a year.

The leading article is a rather peculiar one to come from the bookstore that has but one price for a book. It tells you how to get bottom prices out of booksellers, haggling booksellers.

One of the most perplexing situations is to ask the price of a book and feel sure that the answer is only an "asking price." What to do next? Pity that bookselling suffers more from haggling than common merchandising, more than marketing, more than anything but low-grade trading! It is much to say for books that the haggling bookseller is held in honor in spite of the disrepute into which his way of trade has deservedly fallen.

What seems odd, though, is that a bookseller who doesn't hagg'e (that is, marks the bottom price on the fly-leaf of every book and thus refuses to haggle) should tell you how to deal with a haggler.

This November number is a fair sample of what BOOK NEWS is all the year round except at Christmas. [The Holiday number, due the first of December, will be of quite a different character. It comes too early to make it practicable to treat of the crowd of Holiday books in a critical way. Too little time to gather much real literary criticism. It takes some of them up, looks at them, gives the impression they make on the looker, prints specimen pictures out of more than a score of the notable ones—a quick and fairly careful, though not infallible guide.]

BOOK NEWS is a careful monthly guide to the books of the previous month.

There's a limit to what can be done in the way of making books generally known. But we know of no means so well adapted to popular use as BOOK NEWS.

JOHN WANAMAKER.

Philadelphia.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 5, 1885.

The Week.

WHEN the full figures of Tuesday's vote in New York are received they will make an unusually interesting study. At present it is possible to consider only pluralities for the State as a whole. These show plainly that if the vote for Davenport in the State at large had been as full as it was in this city and in Brooklyn he would have been elected. He was in fact defeated by what has always been considered the Republican stronghold of the State, the portion north of the Harlem River. Hill's total vote in this city falls over 9,000 behind Cleveland's, and Davenport's falls over 14,000 behind Blaine's. The transfer of Tammany's total vote from Blaine last year to Hill this year ought to have made a greater change than this, and the fact that it did not indicates that many Independent Democrats did not vote for Hill. Indeed, it is significant that with the aid of Tammany and the Blaine Irish vote combined, Hill was able to exceed Cleveland's plurality in the county by only 5,000 votes. This was more than balanced by the change in Brooklyn, where Hill's plurality is 6,000 less than Cleveland's. Davenport was really defeated north of the Harlem River. Blaine had outside of New York and Kings County over 98,000 plurality, while Davenport has only 59,000. Cleveland's total of pluralities in the State, outside these counties, was less than 12,000, while Hill's is nearly 13,000. Now, it was in the sections of the State above the Harlem River that the bloody-shirt oratory was used, and its failure as a rallying cry is, therefore, all the more striking. It not only repelled thousands of Democratic voters who were inclined to favor Davenport, but it failed absolutely to arouse the Republicans who voted for Blaine last year. The full figures of the vote for both candidates are likely to show more clearly even than do the pluralities the disastrous effect of this style of oratory. Where Hill has gained in total pluralities over Cleveland, his total vote is considerably less; but whether the falling off is greater than usual after a Presidential election is not yet clear. There is no doubt whatever of a heavy falling off in the Republican vote.

One result of Tuesday's voting will be hailed with rejoicing by all friends of honest politics, without distinction of party, throughout the country. Mahone was buried in Virginia beyond the possibility of resurrection, the Democrats not only defeating his candidate for Governor, by a great majority, but also carrying the Legislature, which he relied upon to reëstablish his power by again electing him to the Senate. The history of our politics records no more discreditable incident than the rise of this unprincipled demagogue to supreme control over one of the chief States in the Union by the worst appeals to ignorance and cupidity. His overthrow is matter for scarcely less congratulation outside of Virginia than within her borders, for the whole nation is humiliated when any State is debased by the dominance of such a boss. It is the worst blot upon the record of the Republican party that its managers lent their assistance to this shameless advocate of public dishonesty while he was mounting to power, and to the last did their best to saddle him permanently upon the State. With amazing effrontery, men like Sherman and Foraker, claiming to speak for a party which represented the intelligence and honesty of the nation, sought to break the "solid South" by taking the stump in behalf of a man who could succeed only through a union of dishonesty on the part of the whites and ignorance on the part of the blacks. It must be a pleasing reflection to Messrs. Sherman and Foraker that the Democrats attribute half of their majority to the appearance of these Ohio teachers of political morality upon the Virginia stump.

Senator Sherman's speeches in behalf of Mahone's cause in Virginia have been in many ways remarkable, and in one respect positively disgraceful, namely, in reference to the repudiation work of Mahone. After speaking of the Republican party as "confessedly composed of the great mass of the intelligent people of the Northern States," and "still strong and vigorous in the public confidence," he said:

> "This party now appeals to the people of Virginia without respect to the divisions of the past, with honest sincerity, burying out of sight all the animosities of the war, to join with us in a policy in the future which will confer upon you greater benefits than are proposed by the Democratic party. *We do not wish in any way to interfere with your local policy or controversies, especially as to your public debt. This seems to have been agreed upon by the acquiescence of the Democratic party in the plan proposed by Senators Mahone and Riddleberger. I dismiss this question from the canvass as one you have settled for yourselves, with which a non-resident has no part or lot.*"

What do the Virginia bondholders, so many of whom are "non-residents," think of that view of repudiation? Have they "no part or lot" in it? What do honest men think of the view of public honor and public credit, that this is so purely a local issue that when one State repudiates its obligations, the people of other States must express no opinion about it? Is the Republican party of the North, "confessedly composed of the great mass of the intelligent people of the Northern States," prepared to accept this complacent view of Mahone's work, and to justify it, as Mr. Sherman does, by saying that the "acquiescence of the Democratic party" ends all controversy? We notice that the Philadelphia *Press* evidently has doubts on this point, for it carefully cut out of Mr. Sherman's speech this passage referring to the debt question.

Senator Hawley has tried his hand at a solution of the Southern ballot question, and has succeeded only in echoing Senator Hoar's amusing prescriptions. In a speech in Boston on Saturday he endeavored to establish the existence of wholesale suppression of the negro vote in the old way. Consult the investigations of Congressional committees, he said, and "study the census and compare it with the election returns of 1884." The most conclusive argument against the Congressional investigations is the fact that, after repeated experiments with them, the Republican majority in Congress abandoned them as useless for political purposes. The census argument is absurd, and Senator Hawley ought to be above using it. It is based upon the assumption that all the negroes would vote if they had the opportunity, and would all vote the Republican ticket. This was undoubtedly true of them when they were first given the ballot. They were persistently taught then by Republican scoundrels from the North that unless they all voted the Republican ticket they would be put back into slavery. Thousands of them have found out now that this was a lie, and that their true interests are bound up with the interests of their old masters. Thousands more, now that the novelty of voting has worn off, are so indifferent to the exercise of the franchise that they do not take the trouble to go to the polls. We admit that thousands more have been frightened away, but nothing is to be gained by claiming that the whole colored vote in the South is "suppressed" by this and other means.

The letter of Mr. Charles E. Coon, tendering his resignation as Assistant Secretary of the Treasury, is a thoroughly impertinent missive, and its publication is obviously intended for political effect. Leaving out of view the fact that Mr. Coon recently caused or allowed to be printed an "interview" with himself full of offensive partisanship intended to have an influence on the pending elections, it is patent to everybody that the office of Assistant Secretary of the Treasury is one of those which any Administration, Republican or Democratic, may properly require to be filled by a person in political sympathy with itself. The principles of civil-service reform have no bearing upon Mr. Coon's case whatever, and his attempt to wear them now as a crown of martyrdom will avail him nothing. Mr. Coon has undoubtedly been an efficient, capable, and faithful public servant. We shall be the last to withhold from him the meed of praise to which he is justly entitled. We regret accordingly that his general capabilities have not been accompanied by a sense of official propriety which would have prevented him from defacing a fair record by an impertinent letter to his superior officer.

Massachusetts went a step further than New York in its Civil-Service Law, extending the operation of the system to the public laborers in the city of Boston. Applicants for employment are not asked any questions about ancient history or modern science, but they are required to establish their good character and their capacity for effective work. The names of those who pass these tests are then placed upon a roll, and when the head of a department needs any workmen, he simply makes a requisi-

tion upon the Commission for the necessary number. Since the system went into operation 338 men have been employed under these regulations, and the high average thus secured is demonstrated by the fact that only twenty-nine of the whole number have been discharged for inefficiency or bad habits. The new régime has not only sensibly raised the standard of workmanship, but it has put an end to a most disgraceful system of selling labor which existed under the rule of patronage. The members of the Common Council were formerly given tickets by the heads of departments, the holders of which were employed for a longer or shorter time, and these tickets used to be sold by the score by the agents of Councilmen, being even kept for sale in groggeries. Poor men were compelled to pay $5 or more for one of these tickets, and the principle of "rotation in office" was applied so thoroughly that a man was liable to be discharged in a fortnight, and seldom was retained six weeks. The business of selling tickets was thus rendered lively and profitable, and the professional politicians, who formerly made a good deal of money out of it, of course "view with alarm" the radical change that has come about.

The conviction and imprisonment of the two principal culprits in the firm of Grant & Ward will go far to restore confidence in the efficacy of law and of its administration. When the failure of the firm was announced in the month of May, 1884, few persons imagined that any of the guilty parties would suffer any other punishment than deprivation of their ill-gotten gains. This common opinion was not grounded upon any suspicion of the unwillingness of judges and juries to perform their duty toward criminals possessed of wealth, but upon the idea that the technicalities of the law would in some way defeat the ends of justice. Of all the swindling transactions of Ward, the one for which he was convicted was probably that which gave him the least uneasiness at the time. He drew a check upon the Marine Bank, of which his partner, Fish, was President. The check was presented for certification. His account being overdrawn, Fish went to the telephone, and, calling Ward, held a brief conversation with him which was heard also by another person standing near the instrument. The tones of Ward's voice were recognized by both listeners. Ward lied to Fish through the telephone. This was only one of a countless number of lies he had told to Fish and others in the course of his two years' career in Wall Street. But it was the fatal one. Fish certified the check, the Marine Bank lost the money; Ward had committed grand larceny by telephone, and opened for himself the road to the penitentiary. The result teaches that although the law abounds in technicalities, it is also full of pitfalls for scoundrels to fall into.

The death of General McClellan on Thursday at the early age of fifty-nine removes one more of the striking figures of the civil war. Probably no soldier who did so little fighting has ever had his qualities as a commander so minutely, and, we may add, so fiercely discussed. In command of an organized and regular force against a foreign enemy, he probably would have played a very creditable part among generals of the second order. With an improvised force, seething with political passion, he was clearly unfit to face the storms of civil strife. Some new and valuable light has been thrown on the causes of his failure, in researches made in Mrs. Lamb's *Magazine of American History* by General W. F. ("Baldy") Smith, touching the opening of the Kentucky campaign in 1862. They furnish a fresh and curious revelation of General McClellan's shrinking from positive and final decisions. But he was a man of high character and pure motives, and had in an eminent degree the art of attaching to him and securing the confidence of those who served under him. His military fame was dimmed by his allowing himself to be taken up as a political candidate by a party engaged in the commission of the worst and least forgettable of all mistakes, that of discouraging a fight for national existence.

Mr. J. C. Rodrigues has published, through Messrs. Scribner, a monograph of 250 pages on the Panama Canal, which supplies a want very keenly felt in this country, especially among the scientific and mercantile classes, and those who take an interest in high politics. According to Mr. Rodrigues, the time is not far distant when interoceanic canals will be cheap at the Isthmus, and when some government will have the opportunity to buy the Lesseps concern for a song. Rumors of impending financial trouble have been in the wind for a year or more. Indeed, the belief has been current in the United States, from the very inception of the enterprise, that the undertaking would be a failure in a pecuniary sense, even if it were practicable from the engineers' point of view. Mr. Rodrigues has ransacked every possible source of information, including all the reports and bulletins of the canal company, and he reaches the conclusion that the total cost of the work, provided the floods of the Chagres River can be controlled—that is, provided the canal can be completed at all—will be $535,000,000, in place of $214,000,000, the highest sum ever contemplated by the Lesseps Company. The amount of money already raised by the company is $110,000,000, for which obligations to the amount of $150,000,000 have been issued, bearing interest at about 4½ per cent. average. The share capital is liable to a further assessment of 50 per cent., which will yield nearly $30,000,000. The remainder of the prodigious sum required—say, $300,000,000 net—must be obtained by loans if at all. In his last report, dated July 29, 1885, M. de Lesseps stated that he had asked permission of the French Government to open a lottery loan of $120,000,000. The permission has not been granted, and probably will not be, the French Government having sufficient financial embarrassments of its own without borrowing any from M. de Lesseps.

The present state of the work is summed up thus: Estimated amount of excavation required for the canal, including rock cutting, 125,000,000 cubic metres; this is the Lesseps estimate, and is believed to be much too low. Actual amount of excavation done 13,000,000 cubic metres, or 11 per cent. of the whole. This is principally in soft earth. The canal was to be finished, according to M. de Lesseps, in 1888. Time is of the essence of his undertaking since he has to pay interest on the capital employed in construction, including the share capital. One-half of the time has passed, and only one-tenth of the work is done, and this the least difficult part. The highest monthly achievement has been 775,000 cubic metres; the average was only 617,000 per month in 1884. The nature of the work is such that a more rapid rate of excavation can hardly be expected. If an average of 700,000 cubic metres can be maintained, and if the Lesseps estimate of the total amount required to be done is not too low, and if the dreadful Chagres can be controlled, and if the money is forthcoming, the canal may be completed in nine years from the present time; but Lieutenant Winslow, of the United States navy, in a recent report, expresses the opinion that it cannot be finished under any circumstances before the year 1897. It is by far the greatest undertaking ever set on foot by a private corporation, and its probable bankruptcy will be the most terrible and wide-reaching private disaster that ever visited any nation—"the most terrible of the nineteenth century," says the *Économiste Français*, the first French journal which has had the courage to cast any doubt upon the glowing promises of M. de Lesseps. The crisis may be looked for within eighteen months. The American people have distrusted the De Lesseps enterprise from the beginning, not because they had any feeling of hostility or of rivalry toward it, but because they have been instructed by their own engineers and naval authorities that the line of Panama was, if not wholly impracticable, certainly much inferior to that of Nicaragua. They cannot, however, withhold their pity from the poor French peasants and workingmen and women who have put their savings into this ill-starred undertaking.

The Pennsylvania Railroad, which has established its reputation as the best managed line in the country, has taken another forward step by elevating the standard of qualifications for the place of brakeman on a passenger train. The applicant must stand the test of a rigid examination as to his knowledge of automatic brakes, the block signal system, and other features of the road's equipment, must establish his entire freedom from color blindness, and must be at least twenty-one years of age. This last requirement is one of the highest importance. Nothing sooner arrests the attention and arouses the apprehension of the traveller nowadays than the large proportion of brakemen whom he encounters that are only boys. There are many roads where even on passenger trains more of these employees appear to be in their teens than full-grown men. It is not uncommon to find them indulging in boyish pranks, and we have seen a brakeman on the rear car of a Boston express train into this city disturbing the quiet of passengers by "horse-play" with the water-boy, even when the frequent stops of the train showed that it might be necessary at any moment for him to

be called upon for active service. The use of air-brakes has materially changed the position of the brakeman, but he is always liable to have some responsible duty devolve upon him, like that of flagging a following train. Nobody is fit for such duty who has not reached "years of discretion," and it is a scandal that mere boys should be so generally employed simply because they can be hired more cheaply than men. Not a few so-called accidents have been directly traced to lack of judgment on the part of some youthful brakeman, and there is reason to believe that many others have really been due to the same cause. The new rule of the Pennsylvania regarding a brakeman's age ought to be made obligatory upon all railroads in the country.

The periodical discussion as to how the expense of a college course nowadays compares with the cost a generation ago, has been started afresh by some talk on the subject at a recent reunion of Yale alumni in Springfield, Mass. The great difficulty about reaching a just conclusion is the lack of sufficient trustworthy data. Startling stories are told as to the extravagant sums which are spent by rich youths at New Haven or Cambridge, and listeners at once jump to the conclusion that only millionaires can foot the bills of a student at Harvard or Yale. Even the average expenditure as sometimes figured out is deceptive and misleading, since heavy outlays by only a few will outweigh the light purses of the many. Thus the average expenditure of five students may be $1,000 a year, and yet four of them may spend only $500 apiece; the $3,000 flung about by the fifth swelling the total so that the average for all is double the amount spent by each of four of them. While it is undoubtedly true that the proportion of rich youth to the whole number is larger than it used to be, and that they spend money more profusely than rich youth did a quarter of a century ago, the necessary expenses of a college course have certainly not increased in any such ratio. Indeed, of late years the cost of board at New Haven and Cambridge has been reduced, and the coöperative principle has been applied in other ways to the great advantage of slender purses. At the Springfield meeting was cited the case of a father who sent one son to Yale and the other to Amherst, and found the latter's bills the larger. Of course no generalization could be ventured upon one such individual case, but we suspect that a careful comparison would show that, however much the average expenditures of a class in the larger college may exceed the average in the smaller, the sum required by a self-respecting young man is not a great deal more in the one case than in the other.

The popular vote at the late elections in France was divided as follows: Republicans of all shades, 3,180,000; Conservatives of all shades, 3,140,000; Radicals, 900,000. This is a very striking division because it runs so completely counter to the impression not only of foreign observers, but of a large number of native politicians, about the condition of French opinion. The general notion of foreigners of late years has been that the Conservative element among French voters was almost extinct, or was only to be found in some of the more ignorant and pious districts like Bretagne, and that the marquises, and viscounts, and barons had been once more and finally consigned to private life. It now appears, however, that there are almost as many Conservatives as Republicans, and they are found all over the country. Another current foreign notion was that the Republican party had been almost completely absorbed by the Radicals led by Clémenceau, and that the Moderate Republicans were nearly as extinct as the Monarchists. It now appears, however, that the Radicals are only able to muster at the polls one-third of the strength of the Moderate Republicans, and only one-seventh of the whole body of the voters, and that their pretensions as the coming power in French politics had no basis in fact. The changes they demanded, not only in the Government, but in the very structure of French society, were, in fact, in view of their real power, very ludicrous.

The electioneering amenities in England are passing far beyond anything known at least in this part of the country. A Tory candidate, a Colonel Brookfield, recently said on the stump, that "if he could bring Mr. Chamberlain to the gallows he would do it." Somebody else asked Mr. Chamberlain what he thought of this, and he answered that he "had ceased to be surprised at any brutality of language on the part of Conservative candidates," meaning that this kind of talk is not uncommon. No speakers, however, on the Conservative side use more violent language, or display more bitterness of feeling, than the Anglican clergy, who are much excited by the Radical talk of disestablishment. In districts in which they have the control of the school-houses, often the only large rooms in the place, they frequently refuse to lend them for Liberal meetings, while giving them freely to the Conservatives, and put their refusals into insulting letters. The bishops have more than once had to interpose to moderate this most injudicious and dangerous zeal, which is so likely to embitter the new voters against the Church.

Although Mr. Chamberlain and other Liberals, as well as Mr. Gladstone, have expressed their confident belief that the disestablishment question will not come up in the Parliament which will this month be elected, the question is being just as vigorously discussed as if it were to be finally disposed of during the coming winter. The discussion is bringing out a good many expressions of friendly feeling to the Church from unexpected sources, but the answer made by one Dissenter to the Bishop of Peterborough's question "why Dissenters wish to inflict this deep wound on the heart of the Church," probably contains at least two-thirds of the secret of the growing hostility to the establishment. He says:

"We reply, because of the arrogance of the Church. We resent its kindly patronage, its assumption of superiority, which causes a cleavage between the sympathies of the Christian communities, brought about by a sense of injustice suffered by the one and inflicted by the other. Until the Church is disestablished the clergy will cherish the delusion that they represent a religious and social caste superior to that of their dissenting brethren, but when the nation has decided the controversy by dismissing the claim to superiority, the good sense of churchmen will acquiesce in the decision; the assumption, at least on its social side, will no longer be present, the sore will be healed, and a frank and hearty *entente cordiale* will be the result. The Nonconformist bodies are on friendly and brotherly terms among themselves. Why? Because no one of them can either patronize or be patronized by any other. They are morally and socially equal. When the Church is one of the many equal bodies of Christians, fraternal intercourse and frank sympathy will at once be possible, such as was lately seen in Ireland, where the disestablished Primate presided over a frank and brotherly conference of representative Christian communities all socially and civilly equal."

The temperance people in Great Britain are as little pleased with the attitude of the two great parties toward their cause as their brethren in this country. The National Temperance Federation, which comprises fifteen of the principal temperance organizations of the United Kingdom, held its autumnal meeting in Manchester a few weeks ago, and adopted a long manifesto with reference to the approaching election. The position of the two party leaders was pronounced entirely unsatisfactory, Mr. Gladstone's manifesto being criticised for its "scant and vague reference to the drink question," while Lord Salisbury's proposal to simply refer Sunday closing to bodies elected on other issues, and to transfer licensing powers to them unchecked by the popular vote, is condemned as quite inadequate. The practical feature of the address is a recommendation to electors that they demand from party leaders assurances of support for a direct popular vote on the issue of license. This is the same plan as the local-option system, which has been so generally and successfully adopted of late years in the Southern States of this country.

There could hardly be a better illustration of the dangerous effects of great preoccupation with a certain class of social questions, than the figure which Mrs. Josephine Butler cut on Monday in the Stead trial in London. She is one of the best and purest of her sex, who has devoted her life to the rescue of fallen women, but has now, like some of the Prohibitionists about intemperance, reached such a state of mental exaltation about sexual immorality that she evidently thinks anything which is likely to stop it or expose it is allowable. She testified in court that she had actually joined Stead in employing the wretched creature Mrs. Jarrett to "put up jobs," as our police say—that is, get up sham cases of abduction in order to show the world what the wicked rich men were doing to the children of the poor. They accordingly took an unfortunate girl of thirteen away from her home, which they now say was a vicious one, but not for the purpose of placing her at a school or with a good family. They carried her to a house of ill-fame, chloroformed her, and subjected her to the most shameful indignities, so that she has become the heroine of one of the most disgusting criminal cases on record. Stead vouched for the genuineness of the case in his paper, published pictures of it, and has made much money out of it, his total investment being $2,000 only. But think of a woman like Mrs. Butler being the confederate of such a wretched humbug. And she is not alone in her present position. Plenty of other good women and clergymen are hallooing Stead on what he calls his "new crusade."

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, October 28, to TUESDAY, November 3, 1885, inclusive.]

DOMESTIC.

ELECTIONS were held in many States on Tuesday, the chief interest centring in New York. The weather in the rural districts of this State was unfavorable for a large vote. Returns so far received indicate the election of David B. Hill for Governor, by a plurality of 12,000, with the whole Democratic State ticket. Jones (Dem.) for Lieutenant-Governor runs behind his ticket. Mr. Hill's largest gain over Cleveland is in this city. Last year New York went Democratic by 43,000. Hill carries it by 48,268. In Kings County his plurality is 9,343, or 6,000 less than Cleveland's majority. Mr. Hill makes a notable gain in Albany. Cleveland carried it by 665; Hill carries it by over 2,000. He also makes a large gain in his home county, Chemung. Schenectady County, which gave Blaine a small plurality, now goes Democratic. On the other hand, Oneida, which gave Cleveland a plurality of 30, gives Davenport a plurality of 700. It is asserted that the Prohibition vote of the State has increased from 25,000 in 1884 to almost 40,000.

The Legislature is strongly Republican in both branches. The Senate stands 21 Republicans to 11 Democrats; the Assembly 75 Republicans to 53 Democrats, giving a Republican majority on joint ballot of 32. The large Republican majority in the Senate practically insures the election of a Republican United States Senator in 1887. The most gratifying feature of the State Senatorial contest in this city is the defeat of Senator Gibbs (Rep.), a peculiarly objectionable candidate, by Thomas C. Dunham (Dem.). Merritt (Ind. Rep.) polled about 6,000 votes in this district. The election of Walter Howe (Rep.) in the Tenth District is in doubt. This city returns 18 Democratic Assemblymen and 6 Republicans.

For New York city offices the fight between the tickets of Tammany Hall, the County Democracy, and the Republicans, was especially severe. It is probable that Hugh J. Grant (Tammany) has been elected Sheriff. For County Clerk Patrick Keenan, the present incumbent, who is a County Democrat, was chosen. The Republican Judiciary ticket led strongly. The best returns indicate the election of the following: Supreme Court, George C. Barrett; Superior Court, John Sedgwick; Common Pleas, Theron G. Strong; City Court, David McAdam and Granville P. Hawes. Timothy J. Campbell (Tam.) was elected to Congress in the Eighth District over John Galvin (County Dem.).

In Brooklyn the Democratic city and county ticket was elected by a large majority, Woodward, the Independent candidate for Mayor, running far below what was anticipated, his vote not exceeding 13,000. The Republican candidate, Catlin, ran very poorly, receiving about 37,000 votes; Whitney (Dem.), the successful candidate for Mayor, received about 48,000.

The results in other States can only be briefly indicated as follows: In Virginia Fitzhugh Lee (Dem.) defeated John A. Wise (Mahone Rep.) for Governor by 6,000 majority. The Legislature is Democratic in both branches, securing the defeat of Mahone for Senator. In Pennsylvania, Quay (Rep.), for State Treasurer, is elected by about 20,000. (Blaine carried Pennsylvania by 80,000.) In Massachusetts Governor Robinson and the whole Republican ticket was elected by 20,000 majority. Iowa is probably Republican by a small majority. In Connecticut the Democrats have gained handsomely in the legislative elections. Returns from 163 of the 167 towns show 129 Republicans and 112 Democrats elected to the Legislature, against 160 Republicans and 84 Democrats from the same towns last year. The Republican majority in the House will be reduced from 71 to less than 20. The Senate will be close. The Republican Supreme Court Judge was elected in Colorado. There was practically no opposition to the Democratic ticket in Mississippi. Maryland has been carried by Senator Gorman's Democratic ring. The Republican ticket carried Nebraska by 16,000. In New Jersey the Senate will be 13 Republicans and 8 Democrats, the Assembly 33 Republicans and 27 Democrats.

President Cleveland, on Monday, left Washington for Buffalo in order to cast his vote.

The President has issued a proclamation setting apart Thursday, November 26, as a day of thanksgiving and prayer.

The President on Thursday appointed Frederick H. Winston, of Illinois, to be Minister-Resident and Consul-General to Persia.

Mr. William E. Smith, of New York, has been appointed Assistant Secretary of the Treasury in the place of Charles E. Coon. Mr. Smith is a lawyer, about thirty-five years of age, and lives in Plattsburg, N. Y., with an office in this city, where he is one of the attorneys for the Delaware and Hudson Canal Company. He has been a leader of the Young Democracy in the State. In 1884 he was a prominent member of the Assembly, and was one of the most influential champions of Governor Cleveland's reform measures.

Assistant Secretary Fairchild, of the Treasury Department, in commenting upon the resignation of Mr. Coon, is reported to have said that, while he had the highest appreciation of Mr. Coon as a gentleman and an officer, he did not see why any proper objection could be made to his retirement from the Treasury service. The position of Assistant Secretary of the Treasury is, in Mr. Fairchild's opinion, a confidential place, and it is quite natural that the Secretary should desire to have that office held by a person in sympathy with the dominant party.

Mr. E. O. Graves, Superintendent of the Bureau of Engraving and Printing, says that it has never been officially suggested to him that he would be invited to become a member of the Civil-Service Commission, and that the subject is not one which he can discuss.

The decrease in the public debt during October was $13,276,774 18.

General Hazen, in his annual report on the Government Weather Service, says that of the 946 cold-wave signals displayed during the year, 815, or 86.2 per cent., were justified.

Ex-Gov. Charles W. Foster, of Ohio, announces that he has not been and is not a candidate for the United States Senate.

James Hodges was on Wednesday elected Mayor of Baltimore on the regular Democratic ticket, defeating Judge George W. Brown, the Fusionist nominee (anti-Gorman), by a majority of about 2,000. The vote was one of the heaviest ever cast, footing up over 60,000. The result is a victory for the Gorman ring. The Independents will contest the election on the ground of fraud.

President Porter, of Yale College, has sent to the corporation his resignation of the Presidency of the College, to take effect at commencement in June. He will, however, retain his position as Clark Professor of Moral Philosophy. He has been connected with Yale since 1833, and has been President since 1871. He is seventy-four years of age. At the meeting of the corporation on Thursday Francis A. Gooch, Ph.D., a graduate from Harvard in the class of '72, was elected Professor of Chemistry in the Academical Department. Dr. Gooch was trained in Professor Cooke's laboratory at Harvard.

The Trustees of Williams College have voted President Carter an indefinite vacation on account of his poor health.

Senator Stanford, of California, has given orders to deed in trust his three immense ranches for endowment of a university and schools about to be erected at Palo Alto. The ranches comprise 85,000 acres, and together represent a value of $3,500,000.

The Georgia Presbytery has refused to sustain the action of Professor Woodrow in teaching evolution. The question was taken on the adoption of the majority report of the Committee on the Theological Seminary, to wit: "That the action of the Board of Directors in removing Professor James Woodrow from his professorship is approved." The report was adopted—yeas, 45; nays, 23. A motion was passed to give the Professor another chance. The two Presbyteries which have previously acted control seven of the thirteen trustees, so that the Professor has the advantage. The refusal of the Georgia Presbytery to add its approval to those already obtained makes the matter close and exciting. The Alabama Presbytery will soon act.

Mr. Carl Schurz has made an offer for the Boston *Post*, and thinks that the offer will be accepted.

A very severe gale prevailed along the New England coast on Monday, doing great damage to shipping, especially in Boston harbor.

Robert J. Cook, the famous Yale oarsman of 1876, was struck on the head by a negro with a hatchet, on Wednesday, in Philadelphia, and seriously injured. It is believed that he will recover.

A verdict in the case of Ferdinand Ward was reached at about a quarter of 1 o'clock on Thursday morning. The jury, after being out more than five hours, found him guilty of grand larceny, as charged in the indictment. On Saturday he was sentenced to ten years' imprisonment, and was immediately taken to Sing Sing.

In reply to an inquiry on behalf of the Grant Monument Association, Mrs. Julia D. Grant, the widow of General Grant, has written a letter, in which she says: "Riverside was selected by myself and my family as the burial-place of my husband, General Grant, first, because I believed New York was his preference; second, it is near the residence that I hope to occupy as long as I live, and where I will be able to visit his resting place often; third, I have believed, and am now convinced, that the tomb will be visited by as many of his countrymen here as it would be at any other place; and fourth, the offer of a park in New York was the first which observed and unreservedly assented to the only condition imposed by General Grant himself—namely, that I should have a place by his side."

General George B. McClellan died suddenly at three o'clock on Thursday morning at his country residence, St. Cloud, Orange Mountain, N. J., of neuralgia of the heart. He was born in Philadelphia, December 3, 1826, his father being Dr. McClellan, a celebrated member of the faculty of the University of Pennsylvania Medical College. He was appointed to the West Point Military Academy, from which he was graduated in 1846, ranking second in a class of fifty-nine members. He was then assigned to the Corps of Engineers as a brevet second lieutenant. In the Mexican war he served with much credit. He continued in the army until 1857, rising to the rank of captain. He resigned to accept the position of Chief Engineer of the Illinois Central Railroad, of which he was made Vice-President in the year following. In 1860 he became President of the St. Louis and Cincinnati Railroad, and he was holding this office at the outbreak of the rebellion in 1861. On April 23, 1861, he was commissioned Major-General of Ohio Volunteers, and he was soon placed in command of the Department of the Ohio. Upon the retirement of General Scott, on November 1, 1861, General McClellan was appointed General in-Chief of the Armies of the United States. This appointment was received with great satisfaction throughout the loyal States. It was followed by the campaign against Richmond, his change of base to the James River, the battles of Fair Oaks and Malvern Hill, and the retirement of his whole army, by Halleck's orders (he having been made Commander-in-Chief), to Fortress

Monroe and Yorktown. In the Maryland campaign from September 7 to November 10, 1862, he was in command of the Army of the Potomac, being engaged in the battles of South Mountain and Antietam. His victory over Lee at Antietam ended the Confederate invasion of Maryland. The slowness of McClellan's subsequent movements caused much dissatisfaction at the North, and on November 7 he was superseded by General Burnside, and placed on waiting orders. General McClellan was not afterward engaged in the war. On August 31, 1864, the Democratic National Convention nominated him for the Presidency, and at the ensuing election he was defeated by President Lincoln. He resigned his commission in the army on the day of the election, and took up his residence in this city. He has since engaged in business and prospered, and was elected Governor of New Jersey in 1877. Funeral services were held in the Madison Square Presbyterian Church, in this city, on Monday, and the body was then taken to Trenton and interred.

FOREIGN.

Mr. Gladstone has written a highly important letter on Church disestablishment. He taunts the Tories with thrusting the question forward as a political dodge. He repeats that the project belongs to the dim, distant future; that the public mind is not prepared for the scheme. In conclusion he says: "The subject is for others and not for me to deal with."

The Rev. Mr. Spurgeon has written a letter in favor of disestaolishment.

The Marquis of Hartington has issued an electoral address, in which he says it is imperative that the union of Great Britain and Ireland be maintained at any price. He says, however, that he is prepared to support measures looking to the extension of local self-government, and shall still vote with the Liberal party. He favors an inquiry into the subjects of taxation and education. He also says explicitly that he is prepared to grant local self-government to Ireland. He favors a revision of the order of Parliamentary procedure. The *Daily News* says Lord Hartington's address conveys in a few words what Mr. Chamberlain expressed with more amplitude. The difference existing is one of method and degree, not of principle. There is no hindrance to both being in a Cabinet.

Sir Michael Hicks-Beach, Chancellor of the Exchequer, has issued a manifesto to his constituents. It mainly follows the lines of Lord Randolph Churchill's manifesto. The Chancellor upholds the Established Church, but makes no reference to the free-education question.

The defence in the Stead case was opened on Wednesday at the Central Criminal Court, London. Mr. Stead addressed the jury in behalf of himself and the other defendants. His argument was on the basis that the end justified the means. On Tuesday he declined giving the names of the persons alleged to be guilty of the infamy charged in the *Gazette's* statement, on the ground that he had promised his informants to observe secrecy in that respect. Justice Lopes declined the evidence of the Archbishop of Canterbury. Mr. Howard Vincent, the newspaper correspondent, and late Director of Criminal Investigations, and Lord Dalhousie testified to the magnitude of the infamous traffic in young girls for immoral purposes on the Continent. The defence was closed on Tuesday. Justice Lopes directed the jury to return a verdict of "Not guilty" as to one of the defendants, Madame Elizabeth Coombe, of the Salvation Army, who testified that she had acted entirely under the directions of Bramwell Booth.

The Yorkshire colliers have decided to strike if their demand for an advance of 15 per cent. in wages is not granted. It is probable that the conference of miners to be held at Manchester will result in a general strike in the midland counties, which will affect between 174,000 and 200,000 colliers

It is believed that 70 vessels were wrecked, and more than 50 lives lost, by the Labrador hurricane.

The *Great Eastern* was sold at public auction in London on Wednesday, for £26,200.

The British yacht *Genesta*, which was defeated in the recent international yacht races for the *America's* cup, arrived at Portsmouth, England, at nine o'clock on Wednesday morning after her voyage across the Atlantic. She came into port flying three first-prize flags won in her contests with American yachts. Her time was twenty days and ten hours, which is believed to be the best yacht record.

The Duke of Abercorn died on Saturday in England, at the age of seventy-five. He was Lord-Lieutenant of Ireland in 1866-68, and again from 1874 to 1876. His estates in Ireland were very large.

Queen Victoria has fully delegated the pardoning power in Riel's case to the Marquis of Lansdowne, Governor-General of Canada.

Advices from Mandalay, capital of Burmah, state that the Queen of Burmah, who exercises great influence over her husband, is enceinte, and her Majesty declares that fighting and the smell of gunpowder will be injurious to her health. She advises King Theebaw to temporarily submit to the demands of the British Government and fight after her confinement, as it is very important that there shall be an heir to the Burmese throne. The Indian Government's ultimatum has arrived at Mandalay. It is expected that the reply of the Burmese Government will reach Rangoon by November 8. All communications with Upper Burmah have ceased.

The Prussian elections on Thursday passed off quietly. As far as is known, no great changes have been made. It appears that the Conservatives have failed to obtain the necessary increase in order to secure a majority in the Diet. The Tories triumphed in Pomerania, Brandenburg, and Eastern Prussia, except in the principal towns, which were carried by the German Liberals. Hanover remains National Liberal. The Clericals retain their former strength in Westphalia and the Rhine provinces. The German Liberals have so far carried twenty five seats.

Count Herbert Bismarck has been appointed Secretary of State, vice Count von Hatzfeldt, who has been appointed Ambassador at London.

At the Latin Monetary Conference in Paris on Wednesday the representatives of France, Italy, Greece, and Switzerland came to an agreement regarding the legal-currency question, and were almost unanimous in respect to the liquidation clause. They also resolved to maintain the Monetary Union, even if Belgium, the fifth member of the Union, should decide to withdraw from it

Considerable excitement was created in Paris on Thursday by an attempt to assassinate M. de Freycinet, the French Minister of Foreign Affairs. While driving to the building occupied by the Ministry of Foreign Affairs, a man stepped out into the roadway and fired a pistol directly at the carriage in which he was seated. Fortunately the shot was harmless, and before the culprit could fire again he was arrested. He desired to draw attention to a wrong done his daughter by Panama Canal workmen, whom the authorities never punished, and asserts that he fired wide of the mark.

M. de Lesseps, in a letter to a stockholder of the Panama Canal Company, justifying a further call of 125 francs per share, says that he is going to Panama in January to inaugurate the final period of the work on the canal. He refers to his application to the French Government for permission to issue new bonds, and repeats his prophecy that the Panama Canal, although it will cost double what the Suez Canal cost, will earn three times the earnings of the latter.

A Turkish official report published on Wednesday shows that 180,000 Turkish troops are now mustered at available points on the frontier for active service in the Balkan Peninsula, and reinforcements are continually arriving. The Landsturm and the Bashi-bazuks have been summoned for military duty. The levy of the Landsturm is only resorted to as a war measure, and will add over 120,000 men to the service. Circassia has tendered 25,000 cavalry, and Albania has promised to assist the Porte. In view of this the Turkish troops in Albania have been withdrawn and massed on the Greek, Bulgarian, and Servian frontiers.

It was officially announced at Nissa, Servia, on Friday that the Bulgarian forces have blockaded the frontier, and that the officers have issued orders to the men to shoot any one they find crossing from Servia into Bulgaria. The Servian troops have been ordered to reply in force in such an event, without awaiting special orders from the commanding general. It is stated that bands of Bulgarians have begun harassing Servian frontier towns.

A despatch from Sofia to the London *Standard* says that neither the Bulgarians nor the Rumelians will submit to a renewal of the *status quo ante* without fighting, even if the Balkan Conference so decides. A Turkish offer of 5,000 irregular troops to combat the Servians is being considered by the Bulgarians.

The opinion prevails in Bulgaria that the Balkan Conference will prove a failure. The country longs for peace, but it has enough money to maintain an army during the winter without contracting loans. One-third of the population of Servia is composed of Bulgarians, and the best soldiers in King Milan's army are Bulgarians.

It is reported that Russia secretly encourages Servia in the latter's bellicose attitude, by hinting at possible Servian administration over Bosnia. The Balkan Conference met at Constantinople on Tuesday.

Despatches from Dorpat, Russia, state that the students in the University there made a demonstration against the Government, and for a time wild confusion reigned throughout the town. Order was finally restored, the military coming to the aid of the authorities. A renewal of the demonstration is feared. The University is one of the principal seats of learning in Russia, but is essentially German in its methods and spirit.

Bloody fighting is reported at Baku on the Caspian Sea, between Moslems and Russians. The military had to be called out to restore order.

King Leopold, of Belgium, it is reported, has already found the Congo Free State a more expensive enterprise than he can carry on unaided. His recent visit to Wiesbaden was made, it is said, for the purpose of inducing some one of the German princes to assume the sovereignty of the Congo country in his stead.

It is reported that the Sudanese rebels massacred the Mudir and garrison of Senaar after the latter had surrendered. Thirty thousand Arabs are massed at Abu Hamed, and are about to advance toward Korosko.

An agreement for a triple alliance between Brazil, Uruguay, and Paraguay has been signed.

The internal troubles in Hayti have caused the British and French representatives in that country to telegraph their respective Governments to send men-of-war there at once to protect foreign residents.

R. T. Stupart, the Hudson's Bay observer, who with three assistants abandoned his station at Stupart Bay the day before the steamer *Alert* reached there, arrived in Halifax on Saturday evening on the steamer *Miranda* from St. John's, Newfoundland. Mr. Stupart gives an interesting account of the experience he and his three companions met with after leaving their post. Their voyage in an open boat was exceedingly perilous. On the thirteenth day they reached Fort Chimo safely, and took a steamer for Rigolet.

MR. WARNER'S NOTIONS CONCERNING SILVER.

At the monthly meeting of the Chicago Commercial Club on Saturday last, a paper on the silver question, written by Congressman Warner, of Ohio, was read by one of the members, Mr. Warner being prevented from attending the meeting in person. The paper supplies authoritative information regarding the so-called principles of the so-called Warner compromise. It leaves no doubt that the true intent and meaning of the proposed compromise is, that the Government shall guarantee the price of all silver mined in all parts of the world, or existing in the world except such as may exist in the shape of foreign coins, or of bullion produced by melting the same, and that this guarantee is not merely from month to month, but continuous. It contemplates that any holder of silver bullion may deposit the same with the Treasurer of the United States, and receive therefor certificates for as many dollars as the silver is worth in gold at the time of deposit; that these certificates shall be receivable for all Government dues and payable for all Government debts except such as are specifically payable in coin; and that they shall be redeemable at the Treasury in dollars or in dollars' worth of silver bullion, at the option of the Secretary, whenever presented. If the Secretary elects to pay in bullion, he is to pay not the same number of ounces as he received, but as many as will be equal, at the then market value, to the face of the certificate. This is, of course, a permanent insurance of the price of silver. It puts upon the United States Government all the risks of the silver-mining industry of the world—a shifting of business responsibilities which will, no doubt, be acceptable to the owners of the newly discovered silver lodes in Australia. "As to the objection," says Mr. Warner, "that the certificates would vary in value, it may be said that the price of silver bullion might vary, but, once issued, there could be no variation between the certificates and other money, including gold. When issued, every dollar in certificates would be based on a gold dollar's worth of silver. A close examination of the writer's bill would show that this objection had been provided against."

That objection has indeed been provided against, at the expense of the Government. Mr. Warner's argument is based upon the idea that the possible decline of silver is such an evil that the Government of the United States is bound to prevent it at all hazards, even at the risk of taking at a fixed price all the silver that exists or may be hereafter produced, except foreign coins and the bullion produced therefrom; because, he says, if the present coinage law is repealed, England will close the mints of India against silver, and then the price will fall so low that bi-metallism will become forever impossible, "thus destroying all equitable relations between man and man, labor and capital, property and debts." This is certainly a new conception of the probable course of England in the event of the repeal of the Bland Act. The orthodox bi-metallic opinion has been that when England "feels the pressure" she will be forced into an international agreement for the double standard, *nolens volens*. This is the notion of M. Cernuschi, Mr. Dana Horton, and all the professors of bi-metallism in both hemispheres. But Mr. Warner has never been identified with the professors. He belongs to the school who believe in the "dollar of the fathers," which is a creed distinct from that of bi-metallism, although having some points in common with it. We think that Mr. Warner's prevision of the probable course of England in the event contemplated is quite as faulty as that held by the professors. England cannot close the Indian mints against silver without inviting a mighty revolution in her Eastern empire. Such an act would be an arbitrary change of the money in which the land rent is computed—a change which, Sir Louis Mallet said, at the Paris Conference of 1881, it would be impossible to explain to the cultivators of the soil, and, therefore, full of danger. The policy of England in any possible decline of silver will be to adhere to the gold standard at home, and let silver find its own level in India and in every other country.

There is nothing in Mr. Warner's proposed compromise which the opponents of the Bland Act can accept. The Government of the United States cannot go into a silver speculation against all creation, or even against all the producers of silver in our own country. There are many branches of industry more depressed than that of silver mining, and if the principle is established that Government aid is to be extended to one, the demand will be made that it be extended to others. Copper has fallen more than silver, and wheat has fallen quite as much. Why should not the Government issue certificates for copper at eleven cents per pound, and agree to maintain the price at that figure as long as the certificates are out? Is there anything in copper mining less sacred, less worthy of Government recognition and support, than in silver mining? It may be said that copper is already protected by the tariff. Quite true, but the protection has ceased to be worth anything. There are many other depressed industries for which no protection is possible except a Government guarantee of the price. The hop industry is in a bad way, the cheese manufacturers are complaining, the paper trade is in a chronic state of depression. Are the producers of these articles less entitled to the benefit of a fixed price for their commodities than the silver miners?

The only compromise which should be considered by the opponents of the Bland Act is that embodied in the Senate bill of the last Congress. Give the world due notice that on a day certain the compulsory coinage of silver by the United States will cease. Let the opportunity for an international agreement be held open during the interval—this by way of satisfying the scruples of doubters. At the end of the time, if no such agreement is reached, stop.

THE "AMERICAN" SCHOOL OF HISTORY.

The writing of history has always ranked as the most exacting branch of composition. The aspirant for fame in this field must be gifted with native ability of a high order, and be thoroughly grounded in all the essentials of a liberal education. He must possess a judicial temperament, a broad mental horizon, and a keen sense of literary perspective. Thus qualified for entering upon his task, he must have a boundless capacity for hard work and a vast stock of patience. He must be content for years to burrow in old records, to explore archives, to accumulate data with painstaking accuracy from every available source. After consuming years in thus collecting his material, he must be ready to spend other years in digesting it, in tracing the relations of cause to effect, and in making an orderly presentation of the facts in a perspicuous style.

It is thus that history has always been written by the great masters of the art under "the effete despotisms of Europe." By such slow and tedious processes did the Gibbons, the Humes, the Guizots, the Von Rankes produce the works which made them famous. Laborious research, careful study, prolonged reflection, deliberate composition have always been considered absolutely essential to the equipment of the historian in the Old World. So strong, too, was the force of tradition that these slow-going and prosaic methods of the Old World were at first adopted without question in the New. When Bancroft conceived the idea of writing a history of the United States, he deemed it necessary to spend nearly a dozen years in toilsome study of archives, and in conscientious gathering of material, before producing the first volume of his series. Prescott thought ten uninterrupted years of preparatory work none too many for his 'History of Ferdinand and Isabella.' Irving, Parkman, indeed all of our pioneers in this department of literature, followed the same beaten path. A century after the Declaration of Independence our historians were still held in abject servitude to European rules, and there could be discerned no sign of promise that they would ever be emancipated.

But the humiliation of national pride was not to last long into our second century. Even when the lack of a purely "American" historian was most painfully brought home to us by our inability to present such an exhibit at the Philadelphia display of 1876, the men who were soon to found a school were "in our midst," unsuspected by their neighbors of their potential gifts, unsuspecting their own powers themselves. So startling a revolution as was impending waited only for a sufficiently startling cause. Guiteau's pistol shot marked its origin. The assassination of Mr. Garfield left Mr. Blaine out of occupation for the brief period before active intriguing for the next Presidential nomination would begin. As he was speculating how best to employ his leisure, the idea suddenly occurred to him that he might turn historian, and dash off a work upon the most critical period in the life of the nation. A wondering public was soon informed by awestruck admirers of the facility with which he composed. Presently samples of his style were served a gaping populace in newspaper organs. Ere long an army of book agents were shouting the merits of the

completed volume (in different styles of binding) at every house in the land. Dazzling stories of the wealth which was piling in upon the author were circulated.

The natural result followed. A spirit of emulation was aroused. No properly constituted politician was going to admit that another politician could beat him in a little matter like writing history. Indeed, he was bound to show that he could do a similar job in shorter order—"with one hand tied behind his back," so to speak. If the founder of the new school had taken a year for his task, six months must amply suffice for others. If he had insisted upon a certain degree of leisure for composition, they must show themselves able to write as much as he, and at the same time do a regular day's work at cracking jokes in the House or uttering rant in the Senate. If Mr. Blaine sought seclusion in his library, General Logan must vindicate his superiority by turning off page after page of manuscript for a great treatise upon the causes which led up to the Rebellion, at a hotel, in the intervals between conferences with wire-pullers in a protracted contest over his reëlection to the Senate.

The "American" school appears at the present moment to the casual observer firmly established. Whatever doubt may have remained after Mr. Blaine's successful experiment as to the possibility of anybody's producing a history, has been entirely dispelled by the more rapid achievements of "Sunset" Cox and General Logan. It has been conclusively demonstrated that the historian not only need not be a scholar, but that an inability to write correct English is not the slightest obstacle to his success; that the wire-puller or the stump-speaker has every qualification for the task; in short, that any American citizen may in the spring announce his purpose to write a history and have his canvassers distributing a bulky volume, full of pictures and bound in gorgeous covers, before snow flies in the fall. Yet even at the moment when the success of the school appears at first glance thus assured, the careful observer may detect the signs of its early downfall. Its very watchword, "Every man a historian," must prove its obituary. Once establish the proposition that anybody can write a history, and there will be nobody to buy the histories when they are written. The American citizen is not long going to pay somebody else for doing what he finds he can do just as well himself.

TELEPATHIC NEWS OF BATTLES.

It is surprising that the many historical records of public telepathy—of telepathing when telegraphing was unknown—have not lately been brought into prominence. They are numerous and of all times; especially those relating to the communication of news of battles. The first that comes to the mind is the famous occasion when Castor and Pollux were the telepath boys, and brought the verbal message:

> "This day, by Lake Regillus,
> Under the Porcian height,
> All in the land of Tusculum
> Was fought a glorious fight."

We all know how

> "Then, like a blast, away they passed,
> And no man saw them more."

Evidently "a telepathic impression" of unusual "sympathetic" extent.

The next is the record by Plutarch of the tradition that a battle fought in Italy, near the River Sagra, was known in the Peloponnesus on the same day. Then comes the assertion that the battle of Mycale—when the Grecian marines defeated the Persians near Samos, at the very moment, some think, when their countrymen were likewise triumphing in the battle of Platææ—was made known to the conquerors at Platææ as they fought.

Next we have the telepathing at the time when Emilius Paulus vanquished Perseus, King of Macedonia, at Pydna, in B. C. 168, and rendered Macedonia a dependency of Rome. On the fourth day after the event, while the people at Rome were seeing the horse-races, a report suddenly arose at the entrance of the theatre that Emilius had been victorious in a great battle, and all Macedonia was in his power. It spread among the people, and for all that day there was general joy through the city, with shoutings and acclamations. But when no certain author of the news was found, and it was perceived that every one in turn had taken it at random, it was thought no more of till, twenty days after the action, the son of Emilius reached Rome, sent express by his father with the intelligence. Then the first report was looked upon as no less than a miracle, since it was real and true. But it ought to have come quicker than in four days!

But now we pass to what is told by Plutarch on his own authority—a thing which happened in his own time, and which he declares "will make all these [the previous ones] credible." The incident is precisely similar to the one just related. During a certain rebellion in the German provinces Rome was in great consternation, but, all on a sudden, "the people spontaneously gave out a rumor of victory"; and the belief was so strong and positive that many magistrates offered up sacrifice. But again, no author being discoverable, the belief vanished by degrees, "lost in the numberless crowd as in a vast ocean," and in a short time was thought no more of. But when the Emperor marched out to the war he met messengers and letters with the news of the victory, and the rumor, it was found, had come the very day the rebellious army was destroyed, though the distance between the places was more than 2,500 miles. "The truth of this," says Plutarch, "no man of our time is ignorant of."

From the time of Plutarch we will take a long stride to the time of Froissart. We can but refer here to his delightfully detailed account of the private telepath messenger of Raymon, lord of Corasse, who, "euery weke, twyse or thrise, wolde come and vysite the lorde of Corasse [quite invisible, but speaking "good gascon"], and wolde shewe hym tidynges of anythyng that was fallen fro whens he came"—England, Hungary, or elsewhere where "yesterday" he had been. The "Erle of Foiz," who "was the lorde of the worlde that moost desyred to here newes out of straunge places," was joyful when he heard of this, "and sayd, Sir, of Corasse, kepe hym well in your loue; I wolde I hadde suche a messangere; he cosseth you nothynge, and ye knowe by hym euery thynge that is done in the worlde." But all this is only an introduction to the thing which Froissart says "was shewed me in therle of Foiz house at Ortaise; . . . a thyng that I haue oftentymes thought on sithe, and shall do as longe as I lyue." He was there told by the squire who gave him information concerning the battle at "Juberothe" (Aljubarrota), in 1385, when John of Portugal defeated John of Castile, that the next day after this battle was fought the Earl of Foiz knew of it:

"The sayd sonday, monday and tuesday, therle was very pensyfe, and so sadde of chere that no man coulde here a word of hym; and all the same thre dayes he wolde nat issue out of his chambre, nor speke to any man, . . . and on the Tuesday at night he called to hym his brother Arnault Guyllyam, and sayde to hym with a softe voyce, Our men hath had to do, wherof I am sorie. . . . Arnault Guyllyam, who was a sage knight, and knew right well his brother's condicions, stode styll and gaue none answere; and than therle, who thought to declare his mynde more plainlye (for long he had borne the trouble thereof in his herte) spake agayne more hygher than[e] he dyd before, and sayd, By god, sir Arnault, it is as I saye, and shortely ye shall here tidynges therof; but the countrey of Bierne this hundred yere neuer loste suche a losse at no iourney as they haue done nowe in Portugale. Dyuers knyghtes and squyers that were there present, and herde hym say so, stode styll and durst nat speke, but remembred his wordes; and within a ten dayes after they knewe the trouthe therof by suche as had ben at the busynesse."

Froissart asked the squire whether he thought the Earl of Foiz was served by such a messenger as the Lord of Corasse had: "Surely, quod the squier, it is the ymaginacion of many that he hath suche messãgers; for ther is nothynge done in any place, but and he sette his mynde therto [observe the phrase] he wyll knowe it, and whan men thynke leest therof. . . . Some saythe, the knowledge of suche thynges hath done hym moche profyte [yet there was no Stock Exchange in those days]: for and there be but the value of a Spone loste in his house, anone he wyll knowe wher it is." Evidently an excellent telepathist.

Another stride of 350 years—as long, it seems, as the previous 1500—brings us to Saint-Simon, and to his personal narrative of the manner in which he himself heard the news of the battle of Turin—the battle in which Prince Eugene defeated Marshal Marsin and the Duke of Orleans (afterward Regent), with whom Saint-Simon held relations of the closest political intimacy and personal regard. He says:

"I had gone to pass a month at La Ferté [his own estate], and continued to receive there news from Italy, which M. le duc d'Orléans sent me carefully, and in letters from his own hand when he did not choose that what he communicated to me should pass through others. I was therefore fully instructed concerning the misfortunes which were to be anticipated, and very uneasy, when a gentleman coming from the house of his brother at Rouen, very near my home, presented himself to us—Madame de Saint-Simon and me—as we were walking in the park with some friends, and told us the disaster of Turin, with exact details about M. le duc d'Orléans, the Maréchal de Marsin, and all else, just as the King, not till three days later, learned them by the courier who brought the news, and I four days later, by my letters from the court and from Paris; without our ever having been able to understand how it was possible that this sad news could have been brought with such extreme, not to say incredible, swiftness, without this gentleman being willing to say anything about it, except in the way of insisting strongly on the certainty of the intelligence, and without our ever having seen him again, for he died very soon after."

Evidently a case of "ante-mortem" telepathy.

DALMATIA.

ZARA, DALMATIA, September 30.

Few parts of Europe lying so near its main thoroughfares are so little visited by English or American, or even by German, tourists as that long and narrow strip of territory which runs along the northeast coast of the Adriatic from Trieste almost to Corfu. Yet it is not difficult of access, for the steamers of the Austrian Lloyd Company ply regularly and frequently between its ports and islands, and it contains a good deal that is pleasing in scenery and interesting in architecture.

Dalmatia is a remarkable instance of a district which, though it has had a long political life, has never once been either politically independent or ethnographically and linguistically distinct from its neighbors. Originally inhabited by the great Illyrian race, the remnant of which we suppose ourselves to find in the modern Albanians or Skipetars, it was occupied in the seventh and eighth centuries by Slavic immigrants from the east

and has ever since remained a thoroughly Slavic land. Even the islands, though many of them lie far out in the sea, have lost all trace of their original Illyrian population, and of the Latin tongue which they probably spoke at the time of the Slav conquest. They are now just as much Slavic as is the mainland. But the cities along the coast either retained or soon reacquired their old Romance tongue and their intercourse with Italy. Some of them continued to hang on to the Eastern Empire long after the surrounding country had fallen under the dominion of Slavic princes; and soon after the power of the Eastern Empire both in Italy and in this remote corner had ended, the power of Venice began, and lasted, with some occasional interruptions, until the whole of Dalmatia passed, first in 1796 and then on the fall of Napoleon, into the hands of Austria.

We see, therefore, in Dalmatia—and this is one of the points which make the country interesting—the results of Italian influence and culture brought to bear on a Slavic population, just as in Poland one can observe the parallel results of Teutonic influence; in Servia and in Russia (or rather perhaps in the Russia of the middle ages, before the contact of Russians and Germans began) the results of Byzantine influence. In all three cases these results are disappointing, and display the Slavic peoples in an unpromising aspect. The Slavs have developed comparatively little power of appropriating and making their own what they learned from the more cultivated nations. They are a quick race, in some respects a gifted people, but they have not made much of the arts they acquired, have shown no great originality, even in the arts; have proved deficient in organizing capacity. Here in Dalmatia the Italian impulse did little more for them than the Teutonic impulse did for Poland, or the Byzantine for Servians and Bulgarians. The architecture of the Dalmatian cities (and it is mainly by the architecture that we must go) is Venetian architecture, with scarcely anything to show that it was domiciled among a new people, who might have been expected to give it a fresh local character such as Roman architecture took in France or Germany. Some few painters arose, though none of first-rate merit; while in literature the roll is almost bare of names. Dalmatia is, indeed, even poorer in this respect than Servia, which at one period of her mediæval history, before she was crushed by the Ottoman invasion, gave a promise which neither she nor the other southwestern Slavic races have ever yet fulfilled. In Dalmatia, Venetian culture seems to have spread scarcely beyond the walls of the seaports in which Venetian galleys rode; just as even now it is only in these seaports that one finds the Italian tongue spoken.

The cities, however, though they are few and small—the greatest has a population of only 16,000 people—are well worth a visit. Most of them have Roman remains, several of them have a history, all of them have preserved mediæval or Renaissance buildings of no small beauty. Zara, long the chief seat of Venetian dominion, and now the capital of the Austrian province, has a striking round-arched cathedral and several other churches of high antiquarian interest. Its site, on a long peninsula washed on three sides by the bright blue Adriatic; its narrow and winding streets, interrupted by tiny piazzas; and, above all, the charming little bits of domestic architecture which one finds in it, all recall Venice, although Venice is a younger city than Zara, which was a place of note before even the Roman conqueror set foot in Dalmatia.

Spalato, however, surpasses Zara in interest, as it has now outrun Zara in trade and population. It has only one building of importance, but that one is the famous palace of Diocletian, a palace which was originally a fortress also, and has now grown into a city. Although part has perished, and part remains covered by the modern buildings which have grown up inside it and around it, enough of the great Emperor's work is left to show the plan of the structure, the solid beauty of the execution, the importance of the place it holds in the history of architecture. It was here first, according to Mr. Freeman and other eminent authorities, that the Greek column and the Roman arch were brought together in that constructive style which became the Romanesque of the earlier Middle Ages, and in which nearly all of the noblest churches of those centuries are built. Various parts of the palace have been turned to new uses. The mausoleum of Diocletian, the persecutor, has become the cathedral church; small and dark, as a mausoleum has a right to be, but grand in its proportions and full of beauty in its inner ornament. The temple of Jupiter, Diocletian's special patron, was made the baptistery, while between the two a superb campanile, one of the finest that Europe has to show, has been reared to a commanding height.

Three miles from Spalato, on a deep inlet of its bay, are the ruins of the great Roman city of Salona, once the capital of Dalmatia, and among the chief cities of the ancient world. It was so thoroughly destroyed by the savage Avars in the seventh century that little more than the foundations of the walls, the lines of the streets, the ground plans of temples and churches, can now be made out; yet even these are rich with instruction, while a vast mass of inscriptions, fragments of statues and bas-reliefs, not to speak of gems and coins, have been found in the excavations which are being slowly prosecuted. There are few places within the ancient limits of the Roman Empire that better repay the visit of an archæologist.

Still further south than Spalato, with its houses squeezed together on a ledge between the mountains and the sea, is the little city of Ragusa, a place newer than Zara or Spalato, but with a more remarkable history. From the eighth till the nineteenth century it was a free republic, sometimes professing allegiance to the Empire, sometimes to Venice, sometimes to the Sultan, but often legally and almost always practically independent. It is far more distinctively Slavic than its sister cities before named, and is, indeed, one of the very few instances in Slavic lands of the long maintenance of republican institutions. Though its whole area is little bigger than that of one of the larger squares in New York city, and smaller than Boston Common, it ruled a strip of territory along the coast some thirty-five miles in length, and sent its vessels to every corner of the mediæval world. Many of the finest buildings were destroyed by an earthquake two centuries ago, but those which remain, although small, are singularly graceful. They show a longer persistence in early forms of arch and window and column than one would find in Italy; yet even in this Slavic city the style and manner are thoroughly Venetian.

The other cities worth visiting, such as Trau, Sebenico, Cattaro, are few, and the buildings they contain are rather curious than admirable. One can see from the small size of the churches, and the length of time they took in building, that even the commercial towns were comparatively poor; yet here and there, as in the church of Trau, there is a profusion of beautiful ornament. More remarkable than anything they contain are the splendid remains of the Roman amphitheatre at Pola, in Istria, the seaport which has now become the great naval arsenal of Austria and home of her fleet. Its interior is less perfect than are the interiors of the amphitheatres of Verona and Arles, but the outer walls have suffered less, and the general effect is fully as impressive. One feels, in looking at it, how true it is that, of all the building nations, the Romans were by far the greatest—masters at once of symmetry, strength, and practical convenience.

Under the Romans, Dalmatia was one of the most prosperous regions of the ancient world. From it sprang several of the most famous emperors, and, among others, Diocletian himself. Never since then has it enjoyed the like tranquillity, or been filled by so large and industrious a population. Venice did something for the coast cities, but the other parts were the scene of constant struggles between her and the Magyar or Slavonic princes, and the people made little progress. From the middle of the fifteenth century till 1878 the coast strip which constitutes Southern Dalmatia was cut off from the inland regions by the establishment in the latter of the Turkish power. Now that Bosnia and Herzegovina have passed under the control and administration of Austria, although the Sultan remains nominally sovereign, it might have been expected that a great impulse would be given to the trade of Dalmatia, whose ports are the natural outlet of the fertile country within. But Austria is curiously stagnant. Compared with the Turks, she may appear a progressive Power, for under them everything goes from bad to worse. Compared with Prussia, France, Italy, she is drearily dull and slow and stupid. Everything seems to be sacrificed to the army and the court; and in these remote corners of the empire, where there is little local enterprise and hardly any capital, it is from the Government that the first impulses toward material and educational development must come. The Government, however, is intensely bureaucratic, jealous of individual action, and accustomed to impose so many restrictions on any new undertaking that an active, enterprising man seldom strives long against it. I met a native Dalmatian who, having lived for some years in America, had returned to his old home, meaning to push himself in business there. He told me that he was abandoning the idea in despair, and instanced other cases like his own. Even in political matters the old Austrian spirit of tyranny and interference, held in check in the German and Hungarian parts of the empire by the power of public opinion, is here still rampant. Elections are constantly interfered with, and any one who shows a touch of independent spirit, or allows himself to speak freely of dignities, is made to feel the heavy hand of authority.

The country is not wholly unprosperous, for the destruction of the French vineyards by the phylloxera has given the vine-growers of the islands that fringe the coast, and of some of the fertile spots on the mainland, a good market for their wine. But it advances very slowly, if it advances at all, and lags far behind the greater part even of Italy. Needless to say that the peasantry know little and care less about political questions. There are three parties in the country—those who would keep it as a separate province, and would also maintain the Italian language along with the Slavic in the schools; those who would unite it with Croatia, and Slavicise it in every way; those who cherish dreams of a sort of federal union among the South Slavic peoples, in which Dalmatians should take their place with Servians, Bulgarians, and Montenegrins. The Government is said to smile on the second of these parties, which is of course the Roman Catholic party, while the few adherents of the third are mostly to be found among the members of the Orthodox, or, as we commonly call it, the Greek Church. But political life in Dalmatia is still so feeble that her people would at present count for little in any struggle which the Panslavist party may provoke. Y.

Correspondence.

CAUSE AND EFFECT AT YALE.

To the Editor of The Nation:

Sir: The graduates of Yale in western Massachusetts endeavored, at their recent meeting, to account for the fact that the class which entered the College this year is so small. May I venture to make public in your pages a theory—not original with me—which certainly seems plausible?

The opinion is gaining ground that prominent positions at Yale are held by unbelievers. Now unbelief is either a sin, or else (like faith in perpetual motion, for instance) the sign of mental obliquity, of an intellect not in perfect working order. Even if an unbelieving teacher never reveals to his class by so much as a hint his disbelief, he is nevertheless all the while doing the College harm. No institution will find favor with the public whose standard-bearers are wrong-doers, or men whose mental processes have led them on such a vital point to false conclusions.

Although the opinions here expressed differ widely, it may be, from your own, may I trust that you will not refuse them admission?

An Old Graduate.

CAUSE AND EFFECT AT HARVARD.

To the Editor of The Nation:

Sir: President Eliot is reported to have said in his talk to the Freshman Class recently:

"The proper attitude for young men towards religion is one of respect. If you cannot sympathize, at least be respectful. Be sure you have something better to put in its place when you wish to do away with any religious observance."

Such a feeling toward religion is greatly to be desired, and especially at Harvard. But what is there at Harvard in any way to foster such respect? There is very little in the many courses of study which tends in any way to give the student any respectful feeling toward religion. In fact, a great deal that is taught, especially in the physical sciences, tends strongly to bring a young man to a materialistic turn of mind. For instance, the study of geology and of the doctrines of evolution discloses much that contradicts the old Bible stories of creation, and may easily and quickly lead the student, especially if he has not thought much before on the subject, to the conclusion that, because some of the fables of the Bible have been disproved in their literalness, all religion is a sham, to be treated not with respect, but with contempt—well enough for our ancestors, and for old women now, but, in the light of modern "science," a mere delusion.

Such a state of mind is common, not only among students at Harvard, but everywhere. It is a state of mind to be lamented; but it is a sad fact that while Harvard thus fosters it, she does nothing, or almost nothing, to dispel it or to give the student any insight into what true religion is. But what seems more than anything else to bring religion into contempt is the system of compulsory prayers. There are many influences at work that might lead the student to look upon religion at least with calm indifference, but here is something that all the time inspires him with opposition and dislike, finding vent in ridicule. There is no feature of religious observance which gives rise to so many expressions of disrespect and irreverence as this system of morning prayers. Prayers are looked upon by the average student as a nuisance, and any compulsory religious observance can hardly create other feelings. Prayers are avoided as much as possible, and lying to get rid of them is hardly thought wrong by many, and considered entirely justifiable by some. Petitions by the score for fictitious reasons are handed in, every week in the year, and doctors are sought to give certificates for severe illnesses which do not exist. It is generally understood that the statements in the petitions are taken to be true unless the authorities happen to know to the contrary. So, as there is little danger of detection, and as lying in this cause is not considered very wrong, this performance goes on year after year.

With such a *mockery* of religion held continually before their eyes, is it to be wondered at if many students come to lose their respect for *all* religion? Compulsory prayers are a positive injury to the religious sentiment of the college. Voluntary prayers might be made to do much good. Why, when everything else has been so treated, cannot the one thing that must be made the subject of choice for each man's conscience be also added to the list of electives?

Alumnus.

LICENSE AND PROHIBITION.

To the Editor of The Nation:

Sir: The objections to prohibition stated in the *Nation* of October 22 are recognized by all, though, as a matter of course, there is a wide difference of opinion as to whether they should be considered decisive. Your remarks, however, suggest another phase of the question, which we think is worthy of consideration.

Our license laws—without exception, we believe—couple the grant of a license with various restrictions, such as the prohibition of the sale of liquor to minors, to habitual drunkards, to be drunk on the premises where sold, etc. Now, it is a fact known to all that these restrictions are universally disregarded by the saloon-keepers. Indeed, it has well been said by opponents of prohibition that if the Prohibitionists would enforce the laws already in existence, the sale of liquor as a beverage would be stopped without any further legislation of any kind. Must we not conclude, then, that these "restrictive" features of the present systems of license are open to the very same objections which you state so forcibly in the closing sentence of your article on prohibition? Would the *Nation* be willing to carry the logic of its position far enough to condemn all restrictions of the traffic which are generally disregarded?

Many of us who have recognized the fact that prohibition, either partial or complete, is disregarded in large cities, have thought it worth while to have such laws as a convenient weapon to be used wherever and whenever a good opportunity presents itself. Are we wrong in this? If so, will not the *Nation* pursue the subject further, and help its readers to find some satisfactory solution to this ever-recurring and ever-annoying question? W.

OVERPRESSURE IN SCHOOLS.

To the Editor of The Nation:

Sir: The *Nation* of October 22 has an article on this subject which mixes up truth and fancy in a somewhat exasperating manner. The number of October 29, treating of "Insanity and Civilization," incidentally states that "overpressure in schools disables *many* brains for life." The same idea substantially is advanced in other issues of this paper, and very often in the daily journals. In fact, it seems to be the fashion now to preach recreation and rest and the danger of overwork; and fond mothers are enjoined to coddle their children, and to beware lest the delicate little things be injured by pressure and competition at school.

I have no hesitation in affirming that, so far as this country at least is concerned, much of this is the veriest trash. Statisticians, anxious to attract the public eye by some novelty, compile a lot of data about the health of school-children, and then draw conclusions therefrom in the loosest manner. A child who goes to school is sick: *ergo*, he is overworked at school. All this might be passed by without comment as farcical were it not that, through constant iteration, it is becoming dangerous to the rising generation.

Work is about the most wholesome thing in life. Most of us never met a person whom we know to have been injured by it. I personally have never found a doctor who could affirm positively that more than an exceedingly small number (if any) of his child-patients had suffered from study as the primary cause of illness. It is often, perhaps generally, a most difficult thing to ascertain such primary cause in any case. Patients conceal obstinately their careless or depraved habits. But students know how ridiculously false are many of the conclusions concerning the origin of sickness among their intimates; and it is a matter of common experience that idleness is more conducive to mental, moral, and physical weakness than is hard work.

I am of the opinion that too much in quantity is sought to be taught in (many of) the public schools; the result of this being not that the children study too much, but that they don't study anything. What the average public school boy and girl need is *more* genuine mental exercise, an earlier and judiciously trained development, and *not* "more frequent holidays and vacations" than now given. But the parents must not throw everything on the teachers; at the risk of "nervous exhaustion," they must do something themselves towards keeping the children properly at work. They must also see that their offspring have regular habits of life, for here is undoubtedly where most of the trouble lies. It is not mental work at school which hurts: it is irregular, perhaps vicious, habits of living, and improper or excessive pleasure-seeking, which do the damage, and concerning which the statisticians are silent. H.

Boston, Mass., October 29.

SOUTH CAROLINA AND MASSACHUSETTS.

To the Editor of The Nation:

Sir: In your editorial endorsement in the *Nation* (No. 1058) of an extract from a Massachusetts paper upon the Southern problem, you assume, what every fair-minded man will agree to be a fact, that a certain element in the voting population of South Carolina is practically disfranchised. But you further assume as unquestionable what seems to me to need proof, viz., that this element is disfranchised because it is ignorant and illiterate. You say:

"Massachusetts would never permit a mass of illiterate people, sufficient to outvote the minority who represent the intelligence and property of the State, to rule the commonwealth, and South Carolina cannot be expected to permit it. Massachusetts, fortunately, has a law requiring every voter to be able to read, which would protect her if enough negroes [what if they were not illiterate?] to outnumber the whites should suddenly be deposited in that State. South Carolina has no such beneficent law, and she protects herself by other means, as Massachusetts would do if she were in the same box. Statute or no statute, ignorance cannot rule intelligence."

You thus admit that it is the negro who is disfranchised in South Carolina, *and would be in Massachusetts*, but claim that he is thus disfranchised because he is ignorant. It may be possible to prove that you are right; I sincerely hope it is, for to my mind the problem is simplified the moment that fact is established. But so far as I have been able to learn, the ballot of the negro in South Carolina who is able to read and write stands no better chance of being freely cast

and honestly counted than that of the most densely ignorant black man in the State. No facts have been brought to general notice to indicate that those who control such matters in South Carolina are in the habit of discriminating between the vote of the educated and of the uneducated negro. Further, by the census of 1880, there were not far from 14,000 illiterate *white* male adults in South Carolina. Strangely enough, it does not appear that any of these 14,000 have been disfranchised on account of their illiteracy, and yet we are told that ignorance is the ground on which disfranchisement is based.

If "certain prerequisites of knowledge" ought to be required "before the privilege of the franchise is conferred," and to that I heartily agree, and if the lack of those "prerequisites of knowledge" is the real ground for the present disfranchisement in the South, why do not South Carolina and the other States similarly placed give clear evidence of the fact, by attempting to establish an educational qualification for the franchise, and by affording all possible facilities for the education and enlightenment of their citizens? If the government of South Carolina is in the hands of those "who represent the intelligence and property of the State," why might not both of these things be undertaken with a fair chance of success? Would it disfranchise large numbers of voters? They are already illegally disfranchised, and at the least the change would have the appearance of semi-legality, while a proper provision for schools would afford the ignorant citizen an opportunity, almost a certainty, of gaining the ballot, whereas now, so far as I have been able to see, if he be black, he has little chance to obtain an education, and less assurance that his vote will count if he does emerge from his ignorance.

Until South Carolina, for example, gives some such unmistakable evidence of her real sentiments, is there sufficient ground for assuming that the present state of affairs results less from a prejudice against race and color, than from an aversion to ignorance and the results it is likely to entail? If the prejudice is against the race, then no progress is made toward a solution of the "problem" by disguising the truth. If, on the other hand, you are right in asserting that ignorance is the sole or chief cause of the troubles, that fact ought to be established beyond a doubt, that the united energies of the country may be directed speedily and energetically to its removal. K.

COLUMBUS, O., October 10, 1885.

[The reason why those "who represent the property and intelligence of the State" in South Carolina are not as much troubled about the ignorant white vote as about the ignorant black vote, is simple enough. The ignorant whites vote with the intelligent whites on vital questions. There is not and never has been any danger thus far of the ignorant whites setting up an ignorant white government, administered by illiterate white thieves. We are not defending this inconsistency; we simply explain it, but it ought not to need explanation.—ED. NATION.]

THE LANGUAGE OF FINLAND.

TO THE EDITOR OF THE NATION:

SIR: I have just come across a curious divergence of statement in two eminently respectable books of reference. I was looking for information as to the status of the Swedish language in Finland. Turning to the article *Finland* in the new 'Encyclopædia Britannica,' I found the following: "The use of the Finnish tongue is everywhere encouraged, though the upper classes mostly use Swedish"; also, in another column, this: "The official language is Swedish." Thus Mr. J. S. Keltie. I then looked at the corresponding article by Clemens Petersen in Johnson's 'Cyclopædia,' and found him saying: "Today the Finnish language is the official language of the country. It is heard in the church, the court, the school, the theatre, and the educated circles of society." It would seem as if one or the other of these gentlemen must be wholly or in part mistaken.—Yours respectfully,

CALVIN THOMAS.

ANN ARBOR, MICH., October 26, 1885.

Notes.

JAMES ANGLIM & CO., Washington, will shortly have ready for delivery 'A Descriptive Catalogue of All U. S. Government Publications,' from July 4, 1776, to March 4, 1881, prepared by order of Congress under the direction of Ben. Perley Poore. This important work will, as the first date shows, include the publications of the Confederation. It has, of course, an index, comprising a vast number of proper names.

Townsend MacCoun has in press a complete Aruch or lexicon of the Targum, Talmud, and Midrash. One thousand copies only will be printed, from type, 500 for sale in Europe, and 500 in this country. It will consist of eight quarto volumes, the first to be issued in December and the remainder at intervals of three months each, and the work will be sold only by subscription. Its author is Dr. Alexander Kohut, of the Lexington Avenue Synagogue.

'What We Really Know about Shakespeare' is the title of a work, now in the press of Roberts Bros., from the pen of Mrs. Caroline Healey Dall. Her preface tells that she was prompted to it by listening to some ignorant lectures on Shakspere, full of vilification or of Baconian speculation; and that her special audience is the young. The nucleus of the book is an address delivered by the author before the Shakspere Club in Washington in April last.

Under the sensational title 'Tried by Fire,' a text-book on China painting, by S. S. Frackelton, will be published by D. Appleton & Co.

'The Letters of Frances Ridley Havergal,' edited by her sister, are announced by A. D. F. Randolph & Co.

R. Worthington will publish immediately 'Conspiracy: a Cuban Romance,' with a slant at Washington society and politics, by Gen. Adam Badeau.

Frederick Warne & Co., 20 Lafayette Place, have made arrangements with the holders of the English copyright for an entirely new edition of Marryat's 'Masterman Ready,' illustrated with upwards of sixty illustrations, specially engraved by E. J. Wheeler.

We learn that Doctor Martineau is correcting and revising his book, 'Types of Ethical Theory,' expressly for the American edition, and that the Clarendon Press is proceeding with it as rapidly as possible.

A book of Rumanian Fairy Tales, collected by Mite Kremnitz, and translated by J. M. Percival; and 'Wishmaker's Town,' a collection of poems by Mr. William Young, author of the Arthurian tragedy, "Pendiageri," produced by Mr. Lawrence Barrett, a few years ago, are in the press of Henry Holt & Co.

We ought to have mentioned last week that Ingram's monograph on Poe's 'Raven' is published in this country by A. C. Armstrong & Son.

Prang & Co. have in mind to publish a series of war pictures by Mr. T. de Thulstrup, whose work in this vein has often been seen in the *Century*.

We are glad to learn that Mr. C. N. Caspar's 'Directory of Antiquarian Booksellers' has paid for its mere cost in money outlay.

The papers on the Salon of Madame Mohl, contributed to the *Atlantic* by Miss Kathleen O'Meara, will be published in London by Richard Bentley and in Boston by Roberts Brothers.

After Mr. Lawrence Hutton's thorough book about the 'Literary Landmarks of London,' it is not a little surprising to see in Mr. Bentley's recent list of announcements a volume on 'Literary London; the Haunts of Her Men of Letters,' by C. A. Ward. Another of Mr. Bentley's announcements is more welcome. It is a quarto volume called 'Old *Miscellany* Days,' and containing thirty-three stories selected from the *Bentley's Miscellany* of half a century ago. It is to be illustrated by Cruikshank's plates, which have not been printed from since their first use for the magazine.

The series of papers on 'Windsor' which Mr. W. J. Loftie, the learned historian of London, has been contributing to the *Fortfolio*, will shortly be published by Seeley & Co. in a quarto volume, with all the etchings and illustrations in the text. It will be a pleasant companion to Mr. A. Lang's 'Oxford' and Mr. R. L. Stevenson's 'Edinburgh.' The same publishers will also issue soon Mr. W. M. Conway's 'Reynolds and Gainsborough,' with sixteen illustrations.

A shilling edition of Thackeray's 'Paris Sketch Book,' with more than fifty illustrations, has recently been issued in London by his publishers, who have been moved thereto, probably, by the early expiration of the copyright.

An English student of the stage, Mr. Robert W. Lowe, has been for a long while collecting material for a 'Bibliography of Theatrical Literature,' to contain the titles of all books and pamphlets relating to the English stage (exclusive of plays). Mr. Lowe has now printed a specimen page of his work. It is alphabetically arranged under persons and leading subjects. A full and exact bibliographical description of each work is given, with an explanatory note by the compiler and an indication of the present price. If the whole book is as careful and as full as this specimen page, it will be of the greatest use to all who are interested in histrionic biography and dramatic criticism. Mr. Lowe has printed this page in the hope that he may receive sufficient offers of subscriptions to warrant his undertaking its publication. His address is Halden Villa, Park Villas, Lower Norwood, S. E., London.

We have recently noted the forthcoming American series of "Books for the Bibliophile," and the French series of "Causeries d'un Ami des Livres." To these we now add an English series, the "Book-Lover's Library," which is to be edited by Mr. H. B. Wheatley, and to cover the whole field of bibliophily and bibliography. Mr. Wheatley will write the volumes telling how to form, how to arrange, and how to catalogue a library, and how to make an index. Mr. Blades will provide "Chapters on the History of Printing," and there will be others on a "History of Playing Cards," on "Old Cookery Books," and the "Literature of Local Institutions," this last by Mr. G. L. Gomme.

What is meant by Decoration, and what by Illustration? are questions suggested by the costly quarto edition of Holmes's 'Last Leaf,' just published by Houghton, Mifflin & Co. Mr. George Wharton Edwards and Mr. F. Hopkinson Smith divide the designs—the latter avoiding all the figure pieces; the former inventing these and all the "decoration." In the end does the poem mean more to us than it did before? Has the eye been pleased, the imagination aided, the poet complimented, more than would have been the case if the familiar verses had been printed

on a single page in the simple elegance of the best typography? We cannot, for ourselves, answer these questions in the affirmative, while ready to praise Mr. Smith's charcoal landscape compositions (excepting the graveyard scene, where the tree forms are ugly) for real artistic beauty and feeling—not always suggestive of the verse illustrated more than of anything else in particular. Mr. Edwards's lettering, and fantastic ornament, and cheap and meagre symbolism are not atoned for by beauty of line or any true sense of the decorative in art. His landscapes are vague, and his employment of the moon at unseasonable hours highly reprehensible. The poet's mingled pathos and humor are but feebly reflected in Mr. Edwards's figures. Dr. Holmes furnishes on his part a fresh autograph of the poem for facsimile, and a little history of the production, in which there is a curious revelation of Poe's approval of it that never got beyond the MS. now in Dr. Holmes's possession. Poe's worshippers must accordingly be added to the other classes of purchasers who will be attracted to this holiday volume by its external and internal sumptuousness.

The incongruity of the two sets of designs just discussed is striking at a glance. There is a little of this in the adornment of E. De Amicis's 'Spain and the Spaniards' as now issued from the Knickerbocker Press (G. P. Putnam's Sons), in a "Guadalquivir Edition." The letter-press is handsome indeed, the paper a so-called vellum, the margins spacious, and the binding elegant. As decoration, however, the note struck by the title-page is a false one: the free-hand lettering and general composition are unlovely. The resources of the Knickerbocker Press in plain type would, we are sure, have produced a far better result. The illustrations proper are of three sorts—vignettes printed separately on Japan paper and affixed to the heads of chapters; full-page etchings; and full-page photogravures. They represent landscapes, buildings, inhabitants, manners and customs, and well-known pictures by Murillo and Velasquez. The vignettes are out of key with the rest of the manufacture, having the appearance of "processed" pen-and-ink drawings. The honor of a separate impression and attachment to the page seems beyond their worth. The etchings (by Platt, R. S. Gifford, S. Colman, and others) and photogravures alike have fared badly in the printing: there are hardly half-a-dozen that are not muddy; and here again we feel that the standard of the printing-office and the press-room has not been maintained by the art department. Still, it must be said that all these illustrations are pertinent and legitimate, and do *en masse* contribute to the effect sought after in making this luxurious edition. Of the work itself there is no need to speak at this late day. It is delightful reading.

Mr. A. B. Frost was a proper choice for illustrator of Mr. Stockton's mirth-provoking 'Rudder Grange,' just issued afresh, with a profusion of designs, by Charles Scribner's Sons. Here the "process" reproduction is quite in place, and Mr. Frost's pencil fairly divides the honors with Mr. Stockton's pen.

Estes & Lauriat send us 'Sartor Resartus' as one of "Carlyle's Choice Works"—a series concerning which no other information is contained between these covers. The form is neat.

A hint to the unemployed rich is contained in the opening paper of *Le Livre* for October, on the printing establishment founded in the Château de Dampierre, by the Duchesse de Luynes, who issued (till private offices were suppressed by Napoleon in 1810) seventeen works, beginning with 'Robinson Crusoe' in a French interlinear translation, and a metrical version of Gray's 'Elegy,' in 1797. How much the amateur millionaire might do in this direction without injuriously competing with unendowed printing-offices! The most curious news item in this number is the discovery that Rachel's much admired and high-priced autograph epistles to her friends were bold transcripts of those written for her on demand by Adolphe Crémieux, the well-known statesman of 1848 and 1870. The chief illustrations are a copy or an impression of Cruikshank's plate combining in one design the characters of the 'Ingoldsby Legends,' and a folding plate representing the *chambre du cœur de Voltaire*, drawn from the room itself in the Château de Ferney in 1781. The walls in this bed-chamber are hung with some forty portraits, whose characteristic traits are here passably preserved, as we may see in Franklin's case. Condorcet, St. Lambert, Helvetius, Marmontel, D'Alembert, Turgot, Diderot, La Harpe, Frederick II., Stanislas, Mme. Dudeffand, Ninon de l'Enclos, with many dukes, princes, statesmen, and other celebrities, both male and female, can be made out by the names inscribed below each.

Professor G. W. Hough, some time Director of the Dudley Observatory at Albany, and now Director of the Dearborn Observatory, Chicago, in his last annual report on this latter institution describes minutely a new apparatus of his own devising and construction for recording the exact time of any required astronomical observation. All these records, if made mechanically, are ordinarily obtained by means of the chronograph, which gives a broken line, traced spirally about a revolving cylinder. The breaks, accordingly, must be measured to give the time—a very considerable labor when large numbers of meridian observations have been recorded automatically. Professor Hough's device, known as the "printing chronograph," obviates all this labor by making at once a printed record of the time of each observation; an end accomplished by systems of clock-work carrying engraved brass type-wheels at suitable velocities. These wheels are readily set to indicate the time of the standard clock, and the motion of the train of wheels is controlled by the pendulum of the same time-piece. The printing is effected through an electro-magnet, the armature of which carries three flexible arms to which the printing hammers are attached. The recorded observations appear upon a fillet of paper about two inches wide, and are thus ready for immediate numerical reduction. Professor Hough's instrument is the only printing chronograph in use, and its superior accuracy and great saving of labor may be hoped to bring it into very general service.

By a decree published September 14 the governors and principal magistrates of the three Baltic provinces were directed henceforth to conduct their business and correspondence in the Russian language. The local magistrates are still allowed to use the German, Lithuanian, and Esthonian, except in business relating to the other provinces or to the Imperial Government, in which case they must use the Russian. A radical change also is being carried out in the Russian schools and universities. The rector, instead of being elected by the professors, as heretofore, is appointed by the minister from three designated professors; while the professors themselves will no longer be chosen by their colleagues, but will be nominated by the Government. Almost all the powers of the rector have passed to the Government inspector. The students, too, are now required to wear a uniform, and the whole tendency is to give education in Russia a military character. General Novikoff, for instance, the husband of the well-known authoress, has been put at the head of the St. Petersburg school system. While by these and other measures education is being restricted more and more to the wealthy and aristocratic classes, M. Prugavin has been showing in the *Pensée Russe* the fatal power of superstition among the peasantry. Within comparatively recent times there have been more than 10,000 authenticated cases of suicide in obedience to a belief that in a voluntary death was the only escape from eternal punishment. In some instances whole villages have devoted themselves to self-destruction by starvation or by fire.

The latest acquisition of the Germans in East Africa is the district of Usarama, lying on the coast to the south of Zanzibar, and including the port Dar-Es-Salam. This territory joins that which had been previously purchased and gives, therefore, a direct route from the interior to the sea. It is intimated that roads for developing trade will be immediately built. A monument to Dr. Nachtigal is about to be erected by the principal geographical societies of Germany on Cape Palmas, where he is buried.

A special map of Africa on a scale of 1: 4,000,000, in ten sheets, is to be published by Justus Perthes in Gotha, by way of celebrating the hundredth anniversary of this world-famous house.

—Sundry works on health, long in hand, must be despatched summarily. 'The Child's Health Primer' (A. S. Barnes & Co.) is a good book for young readers. Some time ago we noticed 'Practical Work in the School Room.' That was specially designed for instructors of physiology and hygiene in primary schools. Now we have a pupils' edition (A. Lovell & Co.), which is the complement of the former, and is a commendable, if not an ideal, text-book for small children. 'Healthy Foundations' (D. Van Nostrand), a reprint from the *Sanitary Engineer*, is a collection of plain information that should be useful and interesting to all who inhabit or build houses. It is gratifying that there is movement, which can hardly be other than progress, in themes of such practical importance as the studies of sanitary engineers; but it is discouraging to find methods and apparatus which a few years ago seemed trustworthy to be now quite abandoned under the advanced ideas upon drainage, sewerage, and ventilation that are constantly outpouring. What is taught now, our children may come to look upon as illustrations of the dark hygienic ages, even as we refer with trembling to the evils that we seem to have escaped by the skin of our teeth in the insanitary homes of our childhood. With the proviso that the next book may be better, we advise those who think they are living in sanitary houses, and those who know they are not, to read Colonel Waring's latest little book, 'How to Drain a House' (Henry Holt & Co.). Mental ventilation of such subjects is a necessary preliminary of the physical drainage that he advocates. In his preface from the Naples Zoölogical Station, Doctor Dolley hopes that the pages of his 'Technology of Bacteria Investigation' (S. E. Cassino & Co.) will stimulate American investigators to the careful study of Schizomycetes. The theme is one of direct control in the pathology of the future, and there is much practical information in the book. The table of contents is full, but there is no index.

—The anticipation of cholera has properly directed general attention to its presumed cause and its prevention, and has renewed professional interest in its treatment. Dr. Alfred Stillé's 'Cholera' (Lea Bros.) and Dr. E. C. Wendt's 'Asiatic Cholera' (Wm. Wood & Co.) are excellent representatives of the better class of this literature. Doctor Koch's doctrine, that the so-called comma bacillus is always present in true cholera and is probably its cause, has given an apparent simplicity to the etiology of the disease, and challenges in a new field the resources of the materia medica. But it is not indisputably settled that this bacillus is found in cholera alone,

or that it is always present in that disease, nor that it is present only as a cause. Nor, whatever additions must be made, are the older studies rendered useless. Neither of these authors accepts the Koch theory as proved, although Doctor Wendt admits that it has much in its favor. Doctor Stillé's monograph may be commended as an admirable review of the subject, excellent in style and trustworthy as to fact, and quite sufficient for the general reader and the active physician. A layman can understand nearly all of it; few physicians can improve its advice. Doctor Wendt's more voluminous work, four associates assisting, is an encyclopædia of nearly all that is known or believed upon the subject, and is especially adapted to the wants of the scientific student, who is as much interested in the post-mortem revelations as in the therapeutic relations of the disease. It is quite certain that the investigations of the past have shown, in a general way, that food contamination is a predominant cause, and that cleanliness and temperance are aids to avoidance. The blind dread of the pestilence no longer strikes the intelligent classes with panic when the disease is announced. There is much cause to hope that, as now we can keep its march under a limited control, so in the future we may be better able to rescue those actually stricken. But thus far cholera is a conspicuous illustration of the truth of the medical maxim, that those diseases for which the greatest number of remedies are advised are the ones that are least susceptible to any. Prevention has outrun cure. But the sick need healing as much as the well need protection, and the outlook thus far is dark. There is one minor error into which both books fall. What is known as the *non-emetic* use of ipecac has been advocated of late years on plausible theoretical grounds. This, as noticed, is misunderstood as the ordinary emetic and elimination method, and is condemned as such. It is really before the profession for trial. Until some positive discovery is made, the American physician need hardly go beyond these two books for an intelligent comprehension of cholera and cholera methods.

—The publication of the "dictata" or abstracts of Lotze's lecture courses—the translation of the one on psychology by C. L. Herrick (Minneapolis, Minn.: S. M. Williams), and of the one on practical philosophy or ethics by Prof. G. T. Ladd, of Yale (Boston: Ginn & Co.)—and especially the publication by Scribner & Welford of the long-promised, long-delayed translation of the 'Microcosmus,' in two large volumes, make the best of Lotze now about as accessible in English as in German. No German philosopher, not even Schopenhauer, can be put into easy-going English so readily and completely as Lotze, and no one, perhaps, is so well fitted to bridge the chasm between Anglo-American and German philosophical thought, between the literary and the philosophical standpoint, or between materialism and idealism, as this great apologist of the *Gemüth*, the noblest of modern mystics, the most sentimental of all psychologists. Emerson's transcendentalism is of a somewhat different type, but not more pronounced, and Herbert Spencer's altruism and insistance on pleasure and pain as ultimate ethical motives have a different setting, and are urged with less psychological insight and less emotional glow, but are no more fundamental. The 'Microcosmus,' meaning Man, will always remain the author's chief work. It was written when his powers were at their best, and he has said little before or since which is not summarized or implied in it. It is emphatically a product of its time, the work of an æsthetic soul torn with opposite inclination to the mechanical and the spiritual views of the universe; and it represents a form of self-indulgence to which more than one vigorous mind has turned which nature or training has brought up squarely to face the long, tedious, and more self-sacrificing task of testing the elements and activities of the soul by the sterner, more impersonal methods of scientific research. Some of his problems are already losing their interest, others are being solved, and others still are in the focus of discussion; but it is not too much to say that even the latter are now of chiefest interest to students, and have a value only as propædeutic to the more masculine philosophy now postulated by both life and science.

—For beginners, Lotzeanism is the best of all German systems yet at all current in English, but its value is almost purely pedagogical. So personal is its character that it can satisfy the mental and moral exigencies of no other human being but its somewhat fantastic author. Much of Lotze's merit is formal. This appears not only in the equal length of his paragraphs, the five chapters into which each of the nine books is divided, etc., but also in the roundness and finish of his periods, and the studied elegance of many paragraphs which make condensation (so easy with many writers in philosophy) so mutilating for Lotze. He appears at his worst if we seriously use the well-made index to help ourselves by learning all his thought in the exigencies of special study or research upon any of the many topics he treats. Here, where the writings of the friends of his youth, Brücke, Ludwig, Helmholtz, etc., are of such value, Lotze is almost worthless. His dualism arises from the fact that he never felt the poetic inspiration of science, nor the scientific value of mythology, and that thus his intellect and heart were trained in different schools, and the sadness with which this schism seemed to him to have invested the world was all his own. Hartmann once seriously discussed the question whose philosophy was best adapted to the needs of cultivated women, and concluded that it was his own. We believe it is Lotze's, and might instance, as one slight indication that this is so, the extraordinary degree in which the two ladies to whom we owe Lotze's English dress, have reflected the spirit and sentiment of the author in their version. Despite the long list of errata and several confused sentences we have hit upon, many of his best passages have inspired his translators to an idiomatic perfection which almost makes us feel that the author's mind would have moved more freely and fitly in English than in German. That his thoughts grew more systematic and concentrated in his later dictata was to have been expected, but even here it is literature far more than dogma—more, in fact, than true philosophy.

—The fourth volume of Mr. Leslie Stephen's imposing 'Dictionary of National Biography' (Macmillan) ends with Biber, and includes a large proportion of very eminent names. Bede, the explorer Beke, Sir Charles Bell, Belzoni, Jeremy Bentham, Richard Bentley, Bishop Berkeley, and Thomas Bewick are representative types. More space is deservedly allotted to Bentham than to any of these, though part of its extension is due to repetitions, the writer seeming to have caught some of his subject's disorderliness. It is to Bentham, we are told, that we owe the coining of the indispensable words international, codify, and minimise. Scarcely less interesting is the account of his distinguished brother Sir Samuel Bentham, whose inventiveness took another turn from the philanthropist's, except when they worked together on the Panopticon—a prison which has seemingly just been imitated in one of our Western towns. Mr. Austin Dobson, of course, writes on Bewick, and indeed none of the engraver's family is omitted, unless Isabella's subordination to her sister Jane be called omission. Belzoni is presented in a very attractive manner. Afra Behn is called the George Sand of the Restoration, and is treated tenderly. She was "the first female writer who had lived by her pen in England," and she was also the first to introduce milk punch into that country. So Gen. W. Belford (1709–1780) first introduced the fife; John Bell (1745–1831) was the first printer to discard the long *s* from his fonts; Henry Bell (this surname is very numerous, as are also Bennet, Berkeley, and Bernard) built the first steamship (the *Comet*) that plied regularly on any European river; and as he is alleged to have given the hint to Fulton, so Patrick Bell is held up as a rival of McCormick in the invention of the reaper. The American department, so to speak, is well peopled, not only with Englishmen who are associated with this continent as explorers, like Beechey, Belcher, and Best; or colonial governors, like Bernard and Bellingham; or sojourners, like Berkeley; but also with men whose lives were so largely American as were Anthony Benezet's, Judah P. Benjamin's, and James Gordon Bennett's. Benjamin's remarkable career is sketched with admiration, not wholly blind, however, to cis-Atlantic defects. Bennett is handled very gingerly, and one gets no hint of the "satanic" character of the press which he founded and conducted, nor of its malign influence upon the destiny of this country.

—Joseph Foster, well known to our readers as the editor of a new British Peerage and of works on the County Families of Yorkshire and Lancashire, has issued the prospectus of two new undertakings in which Americans should feel a strong interest. Having bought the MS. "Collection of Oxford Matriculations from 1581 to 1869," and the similar "Collection of Marriage Licenses for Canterbury," made by the late Col. Joseph L. Chester, Mr. Foster proposes to print them if subscribers can be obtained. No more important collections have ever been prepared in the field of English genealogy, and the undertaking so successfully carried out by an American was a source of national pride to us. After Colonel Chester's decease, the disposition of his valuable manuscripts was a matter of lively curiosity, and it is well that these have fallen into so good hands. Mr. Foster proposes to print the Oxford records in two volumes, at ten guineas the set. Two subscriptions together will be at nine guineas apiece, and three at eight guineas apiece. The Marriage Licenses (Bishop of London's Office 1521 to 1828, Dean of Westminster 1599 to 1699, Faculty Office, Canterbury, 1543 to 1869, and Vicar-General's Office, Canterbury, 1660 to 1679) will be issued in a series of five volumes, at ten guineas per set, the edition to consist of 250 copies. These books will be of great value to genealogists, and should not be wanting in all large libraries which attempt to secure standard works of reference. It is to be hoped that the response from American buyers will be hearty and prompt.

—Contemporary movements in American literature, or what at least may be called contemporary movements, pass not unnoticed in Italy. In a recent number of that solid fortnightly, the *Nuova Antologia*, E. Nencioni devotes an article to "I Poeti Americani," tracing the first beginnings of the *poesia Americana* to the 'Natchez,' the 'René,' and the 'Atala' of Chateaubriand. The romances of Cooper announced the earliest genuine inspiration drawn from soil characteristically American. In Longfellow the Anglo-Germanic imitator is all that the Italian critic can see—an imitator who represents rather the feudal literature of Germany and Spain as it thrills in the lines and veins of Uhland, Novalis, Rückert, Heine, the *romancero*, and the *cancionero*, than the bold, novel, democratic tendencies

of new America. Poetry really American is pronounced to be something rude, primitive, full of natural magnetic music, resonant of lakes, llanos, tropic wildernesses, and vast cataracts. It possesses a note of originality, individuality, democracy—strange to say, mysticism, and mysticism of a new kind, poetic and positive at once, precise, mathematical, and yet fantastic—the diagrams of Legendre swimming in the visions of Swedenborg. Such are the characteristics of Poe and his long stream of tales grotesque and arabesque. But who are the American poets? The author answers laconically: Emerson, Poe, Lowell, Bret Harte, Joaquin Miller, and Walt Whitman. Bryant is said to luxuriate in a pompous diction, and is only occasionally "American." Whittier, with all his trembling enthusiasm, passion, and sensibility, is too *inglese*. As yet, indeed, there has been no American genius of the first rank, though poets and publicists, romancers and critics, humorists and historians abound. No transatlantic poet has shown the power and profundity of Browning, the artistic perfection of Tennyson, the marvellous musical effects of Swinburne; no thinker has equalled Carlyle; no critic there is comparable to Ruskin. To stir laughter and tears is still the supreme gift of Charles Dickens; satire is the peculiar atmosphere of Thackeray; psychological romance is the unrivalled sphere of George Eliot. But America is not absolutely destitute, after all: there is Poe; there is—Walt Whitman! These, *me judice*, are true representatives of America: the one admirable for the plastic perfection, the crystalline transparency, the curious felicity of his style, which, in the critic's estimation, recalls at once Foscolo, Keats, and Shelley; the other "savagely" American, recalling all in a breath Job, the prophets, and Shakspere. Mr. Whitman particularly, Nencioni finds, realizes the European ideal of what an American poet should be—the old conventional hero of "primeval forests," sounding waterfalls, and limitless "tall talk." Only the author of "Hamlet" is said to have equalled Poe in his knowledge of the great mystery of death. The "phosphorescence of impurity" that glimmers over the work of Baudelaire is not found in the work of the master. Lowell is delightfully American, though even the 'Biglow Papers,' written in *Jankee* dialect, recall European models.

GENERAL HAZEN'S MILITARY MEMOIRS.

A Narrative of Military Service. By General W. B. Hazen. Boston: Ticknor & Co. 8vo, pp. 450.

Few officers of the army are more generally known than the author of this volume. His position as Chief of the Signal Service has kept him prominently before the country for several years, and his controversy with Secretary Lincoln in regard to the Greely rescue expedition put him in a focus of criticism and discussion for some time. The court-martial and court of inquiry which were the result of his charges against General Stanley, and the recriminations which grew out of it, also excited lively interest, in military circles at least, a little earlier. It has also been understood that his relations with General Sheridan have been, in diplomatic language, "strained," and the present volume would seem to date the ill feeling as far back as the battle of Missionary Ridge. A bit of a quarrel with Gen. Gordon Granger comes to the surface in his narrative, and it would be only an affectation of ignorance of current military opinion to avoid saying that these things have quite widely been attributed to an aptitude for getting into hot water.

Yet General Hazen did solid and honorable service in the war, the narrative of which, from his standpoint, has real value. He is the author of a useful book upon the organization and instruction of armies, based upon his observations in Europe since the close of our civil war. He has evidently considerable talent for organization, and went earnestly into the task of drilling and instructing the young volunteers under him, from the day that he was transferred, in 1861, from a lieutenancy in the Eighth Regular Infantry to the colonelcy of the Forty-first Ohio. An unprejudiced reader of the official record of his military career will say that it abundantly implies courage, zeal, and intelligence; yet the personal quarrels and animosities in which he has had part have had the unhappy effect of making officers of equal rank or higher grade than his own ready to deny him every soldierly quality.

Under such circumstances as these, a book from him upon his military service will be curiously scanned by readers of very different predilections. It is evident at a glance that the volume is primarily designed for the officers and men of Hazen's brigade in the Army of the Cumberland. His later service as division commander in the Army of the Tennessee is subordinated in handling. The numerous portraits (it is a pity that the woodcuts are so coarse) are mostly of the under officers in his original command. The narrative sticks very closely, too, to the operations, the internal discipline, and the instruction of his own command, and although the author does not hesitate to express opinions upon larger events in passing, these are nevertheless offhand judgments which are seldom reasoned out, and do not profess to be supported by any marshalling of evidence. Indeed, in several instances they have been made without refreshing the memory by easily accessible reports and documents, and contain errors in fact.

General Hazen does not ignore the controversies to which we have alluded, for while he shows a disposition to avoid personal acrimony, he distinctly tells us in his preface that the narrative "touches on and may set at rest a few disputed questions of fact, and crosses the lines of certain personal controversies about which the public are supposed to know little." The book must therefore be looked at from two points of view: first, as a narrative of facts, and second, as a contribution to the controversial history of the late war. Under the latter head it may fairly be examined to see whether it reveals any traits in the author's character which would provoke controversy, and help to explain the antagonisms of which he himself makes no secret. From this side it becomes a curious psychological study, and might be the subject of a chapter entitled "The Personal Equation in Military Matters."

The story of the honorable service of the author and of his troops is straightforward and interesting. The instruction and drill of new troops is really the theme which the book makes most of, and to this end the regimental and brigade orders are copied with a minuteness and repetition of topic which would be excessive if this purpose were not kept in mind. The lesson inculcated is, that a regiment of American volunteers may be transformed into model soldiers in a surprisingly short time, if the colonel understands his work and can unite firm and steady discipline with intelligent and unflagging instruction and drill. The method of doing this is shown in detail and with commendable clearness. On this subject the book may rightly become an authority.

The controversies to which General Hazen gives some attention include an accusation of misconduct at Shiloh, a charge of appropriating at Missionary Ridge cannon captured by Sheridan's division, and an arrest at Dandridge, East Tennessee, by order of Gen. Gordon Granger. The last of these was a matter of trifling importance, quickly set right, and involving no disgrace. It was hardly worth recalling. In telling it, however, General Hazen falls into historical errors. First, in saying that General Sherman took command in East Tennessee in November, 1863, and subsequently turned the command over to Burnside. Burnside was in command of the department and was not superseded by Sherman: the latter carefully avoided any interference with Burnside's department. Next, in saving that Burnside "sent out his whole army with the Fourth corps in pursuit of Longstreet, with his Chief-of-staff Park (*sic*) in command." Burnside, on being relieved at his own request, left Major-General Parke, formerly his chief of staff, in command of the Ninth Corps. The movement to Dandridge was six weeks after Burnside left the department, and, in the absence of General Foster, who commanded the department, General Parke commanded the expedition by seniority. General Hazen is further in error in saying that Parke turned over the command to Granger and remained at Strawberry Plains, Parke was in person at Dandridge, and it was only as commandant of the Fourth Corps and not of the whole force that Granger had his quarrel with Hazen. A casual reference to official records would have prevented these mistakes of memory.

The controversy over the cannon captured at Missionary Ridge involves the question whether Sheridan's division or that of Wood (to which Hazen belonged) first reached the top of the hill in the memorable assault upon Bragg's army. Sheridan alleged in his report that Hazen's brigade "gleaned" the abandoned cannon in rear of his (Sheridan's) advance. The charge was made upon information from Sheridan's subordinates, and would seem to have been ill-founded. Hazen certainly makes a very strong array of evidence supporting his assertion that his brigade reached the summit some minutes in advance of Sheridan's coming up on his right. This does not touch the question whether the resistance was equally brave and determined at both points, which would still be fairly open.

The remaining topic on which General Hazen seeks to set himself right is his conduct at Shiloh, in regard to which he charged General Stanley with slandering him. His account, in brief, is, that his brigade charged in advance of the rest of the army, lost its formation in passing through tangled woods and thickets, was then sharply attacked in flank, and retreated in confusion; that he himself, after failing to rally them, lost his direction in the forest and became wholly separated from them, only succeeding in finding them again after several hours, and by means of first finding his way to Pittsburgh Landing, and thence out to the front again. In this there is nothing necessarily impeaching his courage. He evidently committed the mistake of allowing his men to make a long and rapid charge through a dense wood, without halting occasionally to reform. They therefore came unexpectedly, in a disordered condition, upon fresh troops and were easily routed. His own wandering from them was an awkward accident, and nothing more. We have to look for other reasons why this should have been the occasion of violent recrimination, and we must think they are found in the personal equation to which we have alluded. The importance of the lesson to be drawn from it justifies a frank treatment, and it affords us a valuable indication of the task which is before historians of the civil war in reaching the truth by elimination of the warping effect of personal feeling and of exaggeration, even in official reports.

General Hazen does not hesitate to claim for his command and for himself the full measure of

credit for what they have done. The naïveté with which this is done must often seem a little strange to the experienced reader. But he hesitates no more in depreciating judgments of others, and makes freest use of the innuendo which is hardest to meet. In a book published as this is, long after the war, he is entitled to a large freedom in the discussion of old events; but the criticism relates to his official reports at the time, which are now reproduced. In this battle of Shiloh he asserts that his brigade, being in the left of the three divisions of Buell's army, which in its turn was on the left of Grant's, made a diagonal charge to the right, across the front, reaching nearly to Shiloh Church, where Sherman, on the extreme right of the whole army, halted in the evening after the Confederates had been driven off. On this field, as at Stone's River, a monument was erected to the dead of "Hazen's brigade," and this unusual course was regarded by other portions of the army as an arrogation of the honors of the battle. These things would sufficiently account for a certain degree of irritation. Both the positions chosen for the monuments and the claims to special distinction were severely criticised. We have not space for a full examination of the counter-allegations on these points, and will only remark that the tone and substance of General Hazen's official reports and correspondence are undoubtedly the cause of much of the ill-feeling.

A military report is supposed to be a methodical and clear description of the performance of duty by the army unit for which the report is made. To introduce into it criticisms of other commands, unless such are absolutely necessary to account for something done by the one reporting, is unmilitary. To do this by innuendo or sneer is yet worse. The officer making the report does not know what orders other troops may have received, and is bound to use an honorable courtesy toward others, and a decent modesty in regard to himself. Besides, his reports are not known to his coördinate associates, and may imbed in the official records injuries which can never become the subject of fair investigation, and may never become public in the lifetime of the officer aspersed. Still again, he is not the judge of others who are not placed under his command. If he is witness to breaches of duty, he may openly and boldly prefer charges which he assumes an honest responsibility for, and may thus bring the accused person before a court-martial; and it is a good canon of military conduct that if matters are not worthy of this treatment, it is unsoldierly to put the open or covert accusation in the body of documents which go into the public records, but which may never come to the knowledge of the accused. The same principle demands of a subordinate a cheerful loyalty to his commanders, immediate and remote; to recognize that they are responsible for all that is done in their presence and with their consent, and that they are entitled to the acknowledgment that it is done by their orders, though they may have used language of suggestion and not of actual command. These things are essential to the harmony and efficiency of any army, and are quite as important as the drill of the troops or the "policing" of the camp. We fear that General Hazen must be held, on his own narrative, to have failed in observing these simple rules, and that therein lies the secret of much of his military unhappiness. An instance or two will illustrate this in small matters as well as in more important ones.

In December, 1862, near Nashville, Tenn., he was ordered to take his brigade out foraging. In his official report he says: "On inquiring where forage could be found, I was informed that the command which went out that day under Colonel Stanley Matthews, consisting of two brigades, had skirmished all day and returned with half their wagons empty, and that the chances for procuring forage were very poor, but very good for a fight" ('Narrative,' p. 67). He then reports that he went out with a hundred and seventy wagons, filled them all, saw no enemy, "and if any such were in our vicinity, the position of the troops was always such that nothing less than an open fight with superior forces could have availed them anything."

The collocation of these things in the report is equivalent to an innuendo that the foraging party under Colonel Matthews had not been so handled as to quench the enterprise of the enemy and fill the wagons without opposition. But the statement is based upon an "I was informed," without saying by whom; and a slur upon the officer who had preceded him is embodied in a report which Mr. Justice Matthews probably never heard of till this volume was published. If the information were to be referred to at all, it was only as information that precautions might be needed, and the introduction of names was unnecessary. The enhancement, at the expense of another, of the value of a minor service rendered, is the motive for the form of the report which will most naturally occur to the reader. The case only called for a simple report that he was ordered out, went, and came back with his wagons filled.

In his more important report of his part in the battle of Chickamauga, General Hazen illustrates nearly all of the rules above mentioned by their conspicuous violation. On page 122, he says: "At this moment I met General Van Cleve, whose division the enemy had engaged still further to the right. *He told me that his men had given way, and that he could no longer control them.*" The General named was neither his commander nor his subordinate, and the bit of information thus preserved has no apparent connection with General Hazen's duties. It was certainly an ill service to General Van Cleve to put it into the records without his knowledge. Again, on page 123, he says: "Major-General Reynolds, *whose division had been driven back*, came to this position soon afterward and made further dispositions of troops." The clause we have italicised is no part of a proper report of Hazen's brigade; he was not reporting for General Reynolds. On the same page he reports that a breastwork of logs and rails was begun by his brigade, "which was taken up and carried through our entire division and that of Reynolds on our right and Johnson and Baird on our left." Here a brigade commander is reporting for four divisions, and it must necessarily be on mere hearsay, too. In the text of the narrative he tells us that the suggestion came from the colonel of the Ninth Indiana. The canons we have referred to would have been better followed by giving credit to this subordinate, in the official report, and omitting the assertion of what took place in other commands. The value of the breastwork is enlarged upon, and the natural effect on the minds of the authorities before whom it would go, would be to enhance the credit of the writer of the report. On page 125 he again reports for all that part of the army, saying no new dispositions of troops were made or attempted, "except that General Reynolds's right was somewhat withdrawn," etc. He then reports where the divisions of Wood, Brannan, and one division of the reserve were placed, thus including again four or five divisions. It is difficult to imagine that this is written by a brigade commander in an official report to his immediate chief. He adds that about four o'clock "several general officers at our position expressed the opinion that it was necessary for a brigade to move over, and, as they said, strike the deciding blow. No one appeared to have any ammunition. I found upon examination that, thanks to my care in controlling the fire of my men, I still had about forty rounds per man, and, with the approval of my division commander, I immediately moved," etc. Who the "several general officers" were, is not told, nor whether his own division commander, to whom this report was addressed, was one of them. The initiative of the "deciding blow," and the superior "care in controlling the fire of my men," with the apparently immaterial fact of the "approval of my division commander," do not suffer for lack of explicit assertion. The statement, a few lines further on, that "at dusk I received orders from General Thomas to retire on Rossville" completes the annihilation of the "division commander." Simple justice to Gen. John M. Palmer, who commanded the division, requires it to be noted that he reported that he ordered Hazen to make the movement described, and that it separated the latter from the rest of the division for the remainder of the day. The case is plainly one in which, even if the facts are told with literal exactness by General Hazen, the "approval" of his commander was a military order, for it made him responsible for results if they had been disastrous, whatever the phrase under which the approval was couched; and a loyal subordinate should so treat it.

These two examples, one taken from a trifling event and the other from a great one, stamp the character of the relations of the writer of the 'Narrative' to his associates, and we believe that just in proportion as readers of it have had military experience or imbibed its spirit, they will find here a key to the irritation and chafing which has been so common in the army and official circles in which General Hazen has been active. Whoever may be misled or influenced by the undue appropriation of glory or the improper depreciation of another which may be found in an official report, it will not be the competent historian. The vast pile of official literature concerning the war which the Government is publishing will, in the very study of it, be an education to those who may mould it into history; and one of the first, as well as most important, lessons which they will learn will be to acquaint themselves with the characters of the actors in the great scenes, not by an isolated report, but by the character which reveals itself in a whole series from the same hand. If vain-glory, jealousy, envy, and detraction are detected, the deduction for this "personal equation" will reduce the historical credit of the report by a very large factor. Modesty, loyalty, generosity, on the other hand, will, as they should, multiply the value of the documents which they are seen to characterize. It is in this way that historical justice is attained, and let no one doubt that competent hands will do the work.

But the more recently written portions of General Hazen's book also demand a brief notice. In writings which are in the nature of autobiography much is fairly allowable which would not be tolerated in an official report. Free criticism of others, whether superiors or inferiors, may be indulged in without offence, if the discussion of great affairs seems to demand it. We should be far from complaining, therefore, that in this part of his narrative General Hazen enters into details of incidents, both as to himself and others, which official intercourse would not permit. For many such we are thankful, as they give life, spirit, and reality to the events of which he writes. He is also fully at liberty to give the results of his observation and reasoning in the form of opinion, without going at length into his reasons. He has a right to assume that his rank and experience will give them a certain weight with his readers. Still, he owes it to himself and to us not to omit a reasonable industry in comparing his memory with the prominent authorities and

writers whose books and reports are at his elbow. This he has frequently omitted to do, and the omission generally accompanies an indirect condemnation or innuendo against another officer. On this point, as before, we can only give examples.

The first relates to the engagement at Jonesboro, Ga., when Hazen commanded a division in Logan's corps. Sherman was swinging his army south of Atlanta, and his right wing struck the Confederate corps of Hardee and Lee at Jonesboro. A vigorous attack was made upon Hazen's division, as he says, by the whole of Lee's corps, and was repulsed. Hazen adds: "This repulse decided Hood to evacuate Atlanta." To this appropriation of the results of an operation in which Sherman's whole army was engaged he adds, that "the failure to capture or completely destroy Hardee on this occasion was the finest opportunity lost by the Union forces, under my observation, during the war." He explains further by saying that the Confederates were already enveloped on two sides, and

> "to close the other two was perfectly feasible and could have been done before night. Seeing this grand opportunity—such a one as is seldom seen in war, as it seemed to me—slipping away, on two occasions I was on the point of imploring to be sent (although a division commander, with troops then confronting the enemy, with my pickets sharply engaged) with positive instructions for the troops beyond Davis, the Fourth and Twenty-third Corps, to close in and complete the investment; but on hearing the general in command say, 'Commanders there already have their orders,' I did not do it. But there are times when orders are not enough—when one should see them executed. The failure to do so here was most unfortunate; and it requires but a glance at the map to recognize the gravity of our failure" (p. 298).

That this was intended to be a sufficiently severe criticism of General Sherman, who is not directly named, is apparent. There is no room for a general analysis of it, but the characteristic point is that General Hazen, though his own men were engaged, boiled to be sent away to bring up Stanley's and Schofield's corps, though they had their orders; and this he thinks (by a mental process which we do not altogether follow) would have been "seeing them executed" on the part of Sherman himself. General Sherman's 'Memoirs' have been published some ten years, and General Hazen runs the risk of appearing ridiculous as well as inaccurate by failing to refer to them. As to the orders for concentrating the corps named, Sherman says: "I sent Captain Audenreid, aide-de-camp, then Colonel Poe, of the Engineers, and lastly General Thomas himself, and that is the only time during the campaign I can recall seeing General Thomas urge his horse into a gallop."

In a similar vein is General Hazen's passing remark in regard to the capture of Savannah—"why an army corps was not thrown to the east of the Savannah River, which seemed practicable, and Hardee captured with the city, I never knew" (p. 328). But Sherman, in his 'Memoirs' and reports, has taken some pains to inform the world on this exact point. To criticise his reasons intelligently is quite within the province of any one who may write upon the subject; but to fail to read them, or to affect to ignore them and then clinch the condemnation with "I never knew," is neither writing history nor criticism. Most intelligent readers will say it is simply "giving a little dig."

An incident relating to the burning of Columbia, S. C., will close our examples of General Hazen's tone and methods. After narrating some incidents of the occupation of the city and of the firing of cotton in the streets by the retreating Confederates, he adds: "It was a windy day, and a great deal of loose cotton had been blown about and caught on the fences and in the branches of the shade trees along the streets. *It has been said* that this had something to do with spreading the fire which afterward took place. *I think this very doubtful*" (p. 350). On the same page he tells of taking supper with General Sherman, and then going out of doors with him, when Sherman "remarked regretfully, '*They have brought it on themselves!*'" We have italicized some of these phrases for the purpose of noting the natural effect and ostensible purpose of them. Into the historic facts we cannot enter. By whom had it "been said" that the burning cotton and the scattered flakes of unburnt cotton on a windy day had "something to do with spreading the fire"? By probably every officer of the army who made a report of what occurred that day, from General Sherman and General Howard downward; and Sherman, in his 'Memoirs,' has warmly repelled the imputation of either ordering or winking at the destruction of the city. All this is treated by General Hazen as some careless or casual statement, to be dismissed with "I think it very doubtful." But the second quotation attributes to Sherman a distinct recognition that the destruction was not accidental but retributive. This, in the face of Sherman's public statements, is quite other and more than a harmless comparison of recollections: it is an injurious innuendo. To plead ignorance of what "has been said" and by whom, would be too much in the vein ascribed to Joe Bagstock. It is quite within a writer's province to be silent or to dispute frankly and boldly the truth of any historical assertions by another, but what habit can be more vicious than to prepare statements which imply what they do not distinctly state, and which cannot be directly challenged because the probable meaning cannot be made demonstrative?

General Hazen's book will have a very considerable value among the contributions to a final history of the war; but we are forced to conclude that that value will be somewhat different from that he had reckoned upon. The parts which relate to the organization and internal discipline of his own command will rank high. We suspect that the rest will be regarded as a curiously unconscious disclosure of his subjective traits of character, more than a strictly objective presentation of historical events.

The History of the Hampton Court Palace in Tudor Times. Illustrated with One Hundred and Thirty Autotypes, Etchings, Engravings, Maps, and Plans. By Ernest Law, B.A., Barrister at Law. London: George Bell & Sons; New York: Scribner & Welford. 1885.

WITHOUT having any very salient characteristics Mr. Law's book is interesting. The reader who is curious of historical minutiæ will find in it many points of antiquarian interest; the general reader will be attracted by the important personages who are brought into it, and the zest that is given by judicious use of original authorities. It is rather a chronicle of what went on at Hampton Court than a history of the Palace. Wolsey, Henry VIII. and his wives, Edward VI., Mary, Philip, and Elizabeth all figure in it, and many lesser celebrities; but there is no connected story of the building. Mr. Law comes with the court, and turns his back on the palace when the court leaves. He laments in his preface that architectural writers have neglected the palace (it seems not to occur to him that the dryness of the architecture has anything to do with this), yet he does not himself make any thorough study of its architecture or plan. It would not be easy work to do so, and Mr. Law is more interested in men and events than in palaces and arts. But there is a good deal of description of parts of the palace; many curious details of structure and cost are interspersed, with some conscientious cataloguing of hangings and other furnishings—indeed, one could not describe a home of such lovers of bric-à-brac as Wolsey, Henry, and Elizabeth without having something to say for these things.

It is a curious coincidence that the two great Cardinal ministers, the English and the French, should have built each his palace, near the end of his career, with such splendor as to provoke the envy of the king his master; so that Wolsey was hardly warm in Hampton Court before he found it prudent to transfer its title to Henry, and the *Palais Cardinal* became the *Palais Royal* almost as soon as it was finished. It is noteworthy also, and significant of the decadent age in which the palaces were built, that neither has to-day any architectural standing, or holds any place in architectural history.

Mr. Law is a searcher of old records, more antiquary than story-teller, but compiles with judgment, gives well-outlined sketches of his principal personages, and has a hearty admiration for Wolsey and for Henry in his better days. The chief attraction of his book, however, is in the pictures it gives of the life of the time, and the color that is added by the use of contemporary testimony. The severity of history is softened here by many touches of gossip, of which contemporary literature furnishes abundance, and for which the vivacious days of the Tudor gave ample occasion. Anglophiles may not recognize the ancestry of the English gentleman of to-day in the people of whom a contemporary Frenchman writes that "they are reprobates and thorough enemies of good manners and letters; . . . their manners are very unpolite"; or, again, that "the English are great drunkards, and if an Englishman would treat you he will say in his language, 'Will you drink a quart of Gascoyne, of Spanish, of Malmsey wine?' Their conversation is continually interspersed with phrases such as these: 'Drind iou,' 'I plaigiou,' 'Bigod sol drind iou a good oin' (meaning thereby, I drink to you, I pledge you, By God, I shall drink you a good wine)." No love was lost between England and Spain in the days of Mary and Elizabeth, and we need not be surprised to find one of Philip's attendants declaring in like strain that "the English have no other idea of a feast than in eating and drinking: they understand no other way of enjoying themselves"; nor that the gallantry of the Spanish king was matched by the courtier's saying that the English ladies' dresses were "of coarse material and ill-made"; that they "wore black stockings and showed their legs even as far as the knee"; that they "were ugly and very ungraceful, especially when dancing." The reader will not look for great delicacy in this sort of gossip, but perhaps he will think that such detail as is here lavishly set forth of Mary's disappointed maternal hope might be left to the author of 'Peregrine Pickle.'

This book is the first volume of a promised two: the second is to contain the chronicle of the palace from Elizabeth's time to ours. It is handsomely printed in a small quarto, whose fat squareness is queerly reminiscent, as it were, of the well-known portraits of Henry. It is generously illustrated with autotypes from original portraits, reproductions of old prints, typographic etchings, and new drawings reproduced by "process." Their quality is not as good as the quantity and the choice. The borrowed cuts are as the author found them, some good, some poor; some of the typographic etchings are good and effective; but the reproductions are mostly dry and dull, and the new drawings for the most part unworthy of the book.

Michigan. A History of Governments. By Thomas McIntyre Cooley. [American Commonwealths.] Boston: Houghton, Mifflin & Co. 1885.

THE history of Michigan falls naturally into three periods—those of its colonization, its settlement, and its expansion. At the outset the author is hampered by the fact that, during the first period, there really was no Michigan, but only the trading and military post of Detroit; and he is thus forced to concern himself with the more general ground of the history of the French power on the St. Lawrence and of the Northwest Territory, but with a usually close restriction of his narrative to such events as directly concerned the little outpost from whose founding he starts. That fort in the heart of the Indian country, at the point of confluence of the tribes, derived its importance from the fur-trade and the national jealousy of the conflicting French and English; and both these were unfavorable to the opening of the interior, since, in the first place, the French ineptitude for colonization—the absence of the self-governing instinct in their pioneering communities and the impossibility of its development under the bureaucratic system—was never more strikingly displayed than on our lakes; and, secondly, the fixed policy of the fur monopoly was to make the forests a vast preserve for the trade. These points Judge Cooley brings out, and with them he joins the old story of the Indians' wrongs and their very ample contemporary vengeance, and arrives somewhat leisurely at the time when Detroit passed from France to England, and under our Government, until, after being lost by Hull in 1813 and retaken, the modern commonwealth really began.

Up to this point the volume follows in the lines of well-established histories. But with the administration of General Cass, the real founder of the State, the author enters upon that special field in which the utility of this series must lie—the settlement and expansion of the great States under the Union. When the account of this is well done, history will contain for the thinker no more impressive page. The race-character that built so many law-abiding and self-governing communities, so populous, prosperous, and stable that they now make the main of the nation, and the methods of their evolution, have a profound interest for society. But it is a history of peace, and histories of peace are hard to write. Judge Cooley has given but little more than half his volume to this matter, and has treated it in a very limited way. The bent of his work is indicated by his sub-title—"A History of Governments"; and in the end this comes to mean a history of constitutions. If one would know how and when the successive industries of the State were built up, or in what order and under what influences the streams of emigration were distributed, or would obtain a view of the actual *modus operandi* of the conversion of the pine forest into the ninth State of the Union, he will get little enlightenment from these pages. Some results, it is true, are stated; some few towns besides Detroit are mentioned; and there is a capital chapter on the aspect of social life in the log huts, in the course of which it is pleasant to notice the author, who by tradition should be "with good capon lined," quietly remarking that "all had wheat or corn bread and potatoes, and a hearty appetite need crave nothing better." But, generally speaking, the history concerns itself with the administration of law, and such political action by the inhabitants as resulted in formulating law; and so far as the national Government and measures of national concern, like the anti-slavery movement, are involved, the discussion consistently hangs about the law of the matter.

In dealing with the changes of Michigan opinion and the growth of its Constitution and political convictions, the treatment is most admirable in breadth, grasp, and terseness. The utility of this history for public enlightenment now, and for other and particularly younger States, is clearly a leading consideration with the author, and he frequently rises to the dignity, to which his position and attainments fully entitle him, of giving what may be called Federal advice. The passages on the wild-cat banking, with their lucid exposition of an irresponsible paper currency; on the State loans for internal improvements, and the considerations which make the policy dangerous and led to its negation in the Constitution; on the municipal loans for railroad aid, and the wisdom of their being overruled by the Supreme Court; and those on the constitutional questions at issue in the war, on the extraordinary powers assumed by the nation, the banking act, the tariff legislation, the influence of pensions and river and harbor appropriations, and the army of the civil service—all these, some of them despatched in a chapter and some in a few paragraphs, are as full of sound and clean political sense, to use a homely illustration, as a nut is of meat. The bearing of the latter topics on the growth of public opinion and the present status of Michigan in the Republican party is the sufficient excuse for their consideration, and the whole brief survey forms a rare illustration of the interaction of State and nation at present. Incidentally Judge Cooley suggests a novel reason in disfavor of protection to the lumber interest—that the supply is being rapidly depleted, and it may be more profitable in the end to allow Canadian lumber to share the market for the sake of the higher price which years are sure to bring. And in the case of so eminent an observer it is worth notice that the only bit of distinct political prophecy runs that "the question of the nation's assuming the regulation of railways is certain to receive at some time in the near future an affirmative solution." We ought not to omit to say that the development of the educational system which the State is so proud of, and which has been the parent of the education of the West, is dwelt on at length. Thus, while we cannot help wishing that a briefer treatment of the Detroit period had left space for a fuller and more varied account of the growth of the State, it will be seen that the book is a very valuable and practical contribution to contemporary literature.

Kansas: The Prelude to the War for the Union. By Leverett W. Spring. [American Commonwealths.] Boston: Houghton, Mifflin & Co. 1885.

THE subject of this volume is indicated by its sub-title more accurately than by the name of the State. With the exception of the briefest survey of the exploration of Kansas, and a slight, half-statistical summary of its development since the war, there is nothing between these covers but the warfare of the two factions in the Territory. This episode in the history of the great struggle was of national importance, and in its full treatment would fall under two parts—one in which the standpoint would be that of a fair-minded observer at Washington, and the other in which it would be that of a clear-eyed observer on the field. The writer touches the former branch only occasionally and in a distant way, and has confined his work practically to a narrative of the events and a sketch of the persons engaged in them on Territorial soil. The book itself has a taste of the Border in it, an accent and spirit which would be infallible marks of a Western origin were it anonymous. Its pages are sown with poetic quotations, with rhetorical locutions that have hitherto been confined to newspapers in search for bald headlines, and with a plenitude of adjectival power almost Elizabethan in its sweep; and perhaps it was necessary to include in the text the sort of Border anecdote and dialect which has been chosen, if one was to give a vigorous impression of the actual coarseness of the conditions of life along the Missouri line. But the whole of these peculiarities taken together imparts a distinct character to the volume, and marks it off, in style, method, and taste, from the other members of this series, which have observed severer canons of composition. The author's being a professor of literature only makes the wonder more.

The effect, however, of this "bowie-knife and revolver treatment," of these "verbal caustics," to adopt some of the writer's phrases, is very stirring; and if he had "fanged the heart" of things a little less often, we should have passed over his "breeziness." The story itself is of the most absorbing interest. There is hardly an element of brutality, of horror, of sickening circumstance lacking; and were it not possessed of the deadly power of realism, one would refuse to read or to believe. It is a bloody page of history, but as told here it seems to have a preëminence in fiendishness and grossness even in the catalogue of historic excesses. It must be confessed, too, that Professor Spring's impartial and thorough examination of the period does not allow us to comfort ourselves with the belief that there was a martyred virtue on one side and an inhuman barbarity upon the other. It was not a struggle of light with darkness. On both sides there were actions which could take place only where justice and mercy were unknown. The chaos of government and the detailing of the successive riots, murders, and massacres, which read more awfully than savage tomahawking, are set down with an unflinching pen. One does not have to wait for an echo to the oral remark of Governor Shannon in after years—"Govern the Kansas of 1855 and '56? You might as well have attempted to govern the devil in hell!"

There does not appear to be any notable new material in these chapters, the fruit of any original research. The more important incidents of the struggle were widely known at the time. Then the nearness of the facts obscured the lines of the contest and its bearing and course; and now we cannot think that Professor Spring has done much to deprive his subject of the illusions of contemporaneous history. The spirit of the struggle has been caught by him, the picturesqueness of it, and its confusion and brutality. He has rewritten "the times"; but such a narrative, which holds closely to the color of the facts, however entertaining and faithful it may be, is incomplete. Back of all this turmoil and blood lay a moral loyalty—a body of men which, however weakly or wrongly guided, however allied with baser elements of mere adventure, lawlessness, and self-seeking in some of its members, was in the main right, since they stood not merely for a free soil, but for self-government against the dictatorial usurpation of Missouri borderers. And it seems to us that Professor Spring does not bring out the force of their position, does not keep it present in the mind of his readers as the ground and basis of the struggle. We turn page after page, and find ourselves asking, What were they murdering each other for all this time? And one has then a feeling of wantonness in the whole affair. There is this error of perspective in the history, and a serious one it is; for the struggle of the settlers of Kansas for the rights of free men seems to sink often into an insane border brawl. Professor Spring is more successful in the vigor with which he catches the characteristics of the individuals who grew up in the conflict, and he deals out generously the

mercy which is their due, owing to the difficulty and uncertainty and laxity of affairs. Lane, particularly, stands out well-relieved, though at the end his personality is not felt to be understood by the author; and Robinson, too, is well drawn. One is glad when the story is at last over; and the last few pages, slight as they are, leave us with the pleasing thought that after this episode of anarchy was closed, the State had a nobler history of peace, rich in blessings, under that liberty for which the soil was conquered by the free-State emigrants.

Souvenirs of Some Continents. By Archibald Forbes, LL.D. Macmillan & Co. Also, Harper & Bros.

THE grisly remark of the Frenchman in the Khyber Pass, "How you English leave your dead about the world," comes home with telling effect in its chance position near the last page of this volume. No wonder it jarred upon "us Britons" looking down from the ramparts of Jelalabad upon the cast pack-saddles and broken crockery beneath which slept General Elphinstone and the gallant soldiers of that old famous defence, whose burial-place had thus to be disguised from their grave-violating enemies. The total impression of the book, however, is more cheerful, for it is not the outpour of English blood which makes the chief sanguinary feature of the war-correspondent's reminiscences; and, moreover, Mr. Forbes's career as a continental lecturer, which furnishes much of his material, was through scenes of peace. It is rather the omnipresence of the Englishman, alive and kicking, that is forced upon the mind, from Wolseley, fighting from the passes of the Rockies to the gates of India, down to the nameless colonists digging in the black gold-bearing sands of the southernmost beaches of Australasian islands. The Americans are a roaming people, and the aspects of frontier life are familiar to us, but we think of it as our own, and are apt to forget, in the knowledge of our broad Western advance, the vast pioneering of the mother-country in the face of many savage foes and lands. Perhaps no part of the modern world is really less known to us, in general, than Australia, unless Canada may possibly put in a claim to a rivalry in our ignorance; and the environment of "Tennessee's Partner," when come upon in the South Pacific, has a pleasant surprise in it, and the miners' payment of the lecturer in the scrip of the "Doughtown United Gold Mining Company, limited," with an unmentioned liability of fifteen shillings on each of the two hundred shares, reads like a stolen bit of real American humor. The chapters of Australian travel are among the pleasantest here, and the narrative of the author's tracking of his "more brilliant" brother, the lost poetic waif—it is always the more brilliant brother who goes to the dogs—has a quite rare and simple pathos, which is the pathos of our border, oftentimes, as well.

What counts most in this book is Mr. Forbes's personality. When he tells "How I became a War-Correspondent" he writes the least part of the story. He was born for it, in the only sense in which that phrase can be used of any career. He had the eye and the hand, and, moreover, the planning power and the speed to get the wires, and then he had the "luck"; but reading now in cold blood and with no haste for the news, one sees that his power lies rather in catching the spirit of the thing and letting it absorb him than in anything else—not only the spirit of the fighting, but of his office, too. In regard to this latter, no poet ever reverenced his calling more; but a duty which continually involves the readiness for difficult and dangerous sacrifice, and frequently the act itself, is worth exalting. The "Ohio boy," MacGahan, is the Roland whose praise this Oliver is always sounding, and his place higher even than Skobeleff's, whose name Mr. Forbes seems to idolize as fondly as any of his Cossacks. The sketches of both these men are of heroic interest; and from their individuality the whole volume gains no small part of its color—its dash, its sweep, its impression of restless energy, of international life, and of a sense of overpowering duty which can never afford to let its servant postpone the present for any future, though he should die at once.

Mr. Forbes's eye for moral quality, as shown by his brief portraits of men, is perhaps keener than for the picturesque circumstance, and his faculty of admiration for those parts of character which tell in the special event then in hand is so large that it passes into a hero-worship, and, when certain personal traits are added, into blunt professions of a man's love. He is continually apologizing for any mention of himself, but he cannot keep himself out; and no portions of his narratives are more delightful than those which involve his personal relations, whether with MacGahan and Skobeleff, or with Villiers the artist.

Properties of Matter. By P. G. Tait. Edinburgh: Adam & Charles Black; New York: Macmillan

THIS work is not described by its title. It is intended for a general college text-book, and its subject is that miscellany of physics which is usually in text-books prefixed to the main theories of Sound, Light, Heat, and Electricity. This preliminary matter consists of four distinct parts. The first relates to the general laws of motion, which every educated man must study in a separate treatise; and therefore it is of no use to the student to find the same subject treated over again, with a brevity that renders it practically incomprehensible, in the beginning of his text-book of physics, where the space had better be economized for something else. The second part relates to gravitation, which really needs to be treated in a work on pure physics, on account of the Cavendish experiment. The third relates to molecular physics—such matters as elasticity, capillarity, viscosity, diffusion, crystallization, divisibility; and all this, joined to the theory of heat, should form a division of physics by itself. The fourth part, relating to the mode of existence of matter and its "essential properties," belongs to metaphysics: a physicist, as such, has no special competency to treat of it, and had better let it alone.

The book, nevertheless, is one which will interest the student, and will supply him with a number of clear and useful physical conceptions. It is to elucidating the fundamental conceptions and rendering them mathematically clear that the author has devoted his best efforts, wisely passing over all details about apparatus. He has paid such exclusive attention to the main ideas that the thoroughness of his treatment of the different subjects has somewhat suffered. For instance, he considers the elasticity of no solid bodies except such as are completely isotropic (amorphous), excusing himself on the ground of the difficulty of the rest of the subject. But even supposing that the general theory of elasticity were too difficult to be sketched (it is not, in fact, inherently so), some of the results, at least, might be stated. A text-book may be so written that it will not confound the general student with too much detail, and yet will be valuable for him to preserve as a repertory of facts after he has gone through with it in the class.

Professor Tait's singularities manifest themselves in everything that he writes. He pronounces a sort of malediction on the theory of action at a distance, and brings against it the authority of Newton, whom he has always seemed to regard in the light of an inspired and infallible prophet, to this effect: "That gravity should be innate, inherent, and essential to matter so that one body may act upon another at a distance through a vacuum, without the mediation of anything else by and through which their action and force may be conveyed from one to another, is to me so great an absurdity that I believe no man who has in philosophical matters a competent faculty of thinking, can ever fall into it." This passage affords the best proof of Newton's want of sagacity and of appreciation of the strength of the arguments in favor of action at a distance, because that which he pronounces impossible has come to pass: whole generations of natural philosophers have accepted the hypothesis; though whether the attraction is something "innate, inherent, and essential," they have not much considered.

Professor Tait also airs his hobby that energy is a "thing." The reason he gives is, that the quantity of energy is neither increased nor diminished, and permanence he considers as the defining character of the "thing." But the statement that the energy of each particle is neither increased nor diminished is precisely equivalent to saying that the accelerations of bodies depend upon their relative positions; and since this is all the truth there is in saying that energy is a thing, will not Professor Tait kindly permit us to express this truth in this way, so as to escape all danger of being understood to mean that the parts of energy have an individual identity, as those of matter have? Even in chemical changes, the different parts of matter preserve their perfect identity; but it would be senseless to ask which part of the kinetic energy of a body is due to one cause and which part to another.

An Old English Grammar. By Eduard Sievers, Ph.D., Professor of Germanic Philology in the University of Tübingen. Translated and edited by Albert S. Cook, Ph.D. (Jena), Professor of the English Language and Literature in the University of California. Boston: Ginn, Heath & Co. 1885.

SIEVERS'S 'Angelsächsische Grammatik,' in the "Sammlung kurzer Grammatiken germanischer Dialekte," has now been before the public for three years, and at length found a translator in the person of Professor Cook, a former pupil of Sievers. When the grammar first appeared, it was at once welcomed as the best Anglo-Saxon grammar, especially in the treatment of the phonology, which fills more than one-half of the book. Some defects of form it owed to the fact that it was a revision of a set of lectures, and to the effort to include every phonetic variation, not only in the West-Saxon but in the other dialects, although the West-Saxon of the older prose writings has been made the basis of the work, and so greater consistency has been attained. The treatment is also historical, but Sievers has well recognized the difficulty here of fixing the absolute chronology of the Anglo-Saxon sounds and forms. Still, he has given a more complete treatment of Anglo-Saxon phonology than has ever been attempted before, and has included so much comparative phonology as shows the relation of the Anglo-Saxon vowels to those of the cognate Teutonic languages, particularly to the West-Germanic vowels. The declensions, as is usual in German grammars, are classified by stem-endings, which is far preferable to Sweet's classification by plurals; and a later, and now more usual, arrangement is presented than that of Professor March, who follows Grimm. The verbs, too, exhibit a better classification than that of Sweet, and regard is had ot

the natural divisions in the other Teutonic languages, but the order of numbering the ablaut series is Sievers's own. This is a small matter, but it would be better if a uniform system could be agreed upon by scholars, and not so many different ones be presented as we find in Grimm, Koch, Sweet, Sievers, and yet another in Zupitza's 'Elene.' The great worth of Sievers's grammar, however, is in its treatment of the phonology; and for those students of English who do not read German—if any such there be—Professor Cook's translation is indispensable.

The translator has not changed the original plan of the Grammar. Acknowledging its apparently "labyrinthine" character, he regarded the complexity as due "to the multiplicity of phenomena presented by the three Old English dialects," and consoles us with the reflection that "if the work is more difficult it is also more scientific and comprehensive." This is very true, but the beginning student might propound the query, Could it not have been made somewhat less difficult by being made less comprehensive with no sacrifice of its scientific character? However, as Professor Cook suggests, "The dialectal variations may be entirely disregarded," and the student must stick to the main phenomena until he feels himself thoroughly familiar with them. As to the substitution of "Old English" for Sievers's 'Angelsächsische,' we have no fault to find, provided scholars generally will adopt it, and it is certainly becoming more current. Professor Cook justifies it on the usual grounds, but some conservative may agree with Sievers's remark, that confusion is avoided by retaining the term Anglo-Saxon, since Old English has been applied to the period next following the Anglo-Saxon; for which Professor Cook substitutes, "*Cf.* the proposed nomenclature in the various periods of English and the able defence of the term *Old English* in Sweet's History of English Sounds (pp. 157, 161)."

The translator, as just shown, has not confined himself to a mere verbatim translation. He states in the preface that "important supplementary matter has been furnished by articles in various philological journals," and this is evident throughout the work. It belongs more properly to a philological journal to go into technical details, but in a cursory comparison of the German text with the translation, we have noticed many additions made by Professor Cook, from the first section of the Phonology on, which materially increase the value of the work. For examples, see note after 35 (p. 13), 41, 64, 101, 141, 202, with notes on pages 94, 95, 96, and others. We have noticed few omissions, chiefly references made by Sievers to philological journals and other works, which it would have been better to retain for the information of the student; and very few errata. On the whole, Professor Cook may be congratulated on the result of his labor.

Memorial Biographies of the New England Historic Genealogical Society. Towne Memorial Fund. Vol. IV.—1860-1862. Boston: Published by the Society. 1885. 8vo, pp. 559.

THROUGH the generosity of the late Mr. Wm. B. Towne, the New England Historic Genealogical Society is publishing a series of memorial volumes of its deceased members, as fast as the memoirs can be prepared and the income of the fund accumulates sufficiently to meet the cost. In the very handsome volume before us we find thirty-five memoirs, which, with the three preceding volumes, complete the necrology of the Society to the spring of 1862. Of these thirty-five memoirs, many are very full and elaborate, and were contributed by writers manifestly possessed of ample materials for an authoritative narrative in each case. The Committee of Publication aim, as they state, to make these memoirs perfectly reliable in all respects, so that no one shall need hereafter to go behind them to verify names, dates, or statements. To this end, the respective writers and the editors exercise the greatest care, and exhaust every means of research.

The sketches vary in length and importance, but have often a far more than local interest. Besides non-New-England men like Bishop Meade, Judge McLean, and President Tyler, or foreigners like Joseph Hunter, the English antiquary, we may instance the Rev. Charles Lowell, if only as father of the poet; Lemuel Shaw, one of the greatest judges ever produced in this country; President Felton, of Harvard; Nathan Appleton, a member of Congress in the days when the distinction meant something, and one of the industrial founders of the city of Lowell; and Jonathan Phillips, the friend and counsellor of Channing. All these, with yet others who might be named, appeal to the curiosity or sympathy of large classes of the community. The memoir of Judge Shaw is by two hands, one filial and the other professional, and is the weightiest and certainly the most instructive of the present series. That of Lowell, by his daughter, Mrs. Mary Lowell Putnam, has the literary quality which belongs both to this writer and to her distinguished family. Mr. T. C. Amory's portrait of his uncle, Richard Sullivan, involves many social glimpses of a Boston not remote in years, yet almost as extinct as Pompeii. A famous Massachusetts Governor, George N. Briggs, fills a large space here, as he did in the annals of his office.

We need not particularize further. The merit of these voluntary tributes is inferrible from the fact that among the writers are to be found Messrs. John Ward Dean, Henry M. Dexter, P. Emory Aldrich, Hamilton A. Hill, Henry W. Foote, Andrew P. Peabody, William B. Trask, Samuel F. Haven, and Thomas S. Perry. Kinship and friendship have naturally sometimes led to overestimate and overpraise, but every reader will make his own allowances. We hope the public will show its appreciation of an enterprise which thus supplements the best biographical dictionaries, and embalms a large measure of private worth and public spirit and service. An excellent index makes the contents of this volume readily accessible. The blank page at the end might well have been utilized for a list of all the biographies thus far published.

On Some of Shakespeare's Female Characters. By Helena Faucit, Lady Martin. Edinburgh: William Blackwood & Sons; New York: Scribner & Welford. 1885. 4to, pp. ix-443.

FROM time to time during the past two or three years the fine and strong actress who was once Miss Helen Faucit, and who is now Lady Martin, has been publishing in *Blackwood's Magazine* letters on such of Shakspere's heroines as she was wont to act; and these she has now gathered into a sumptuous volume, beautifully printed on a broad and fair page, clad in creamy vellum, and adorned with three portraits (on steel) of the authoress, from drawings by Francis Holl and Sir F. Burton. Although wholly different in purpose and in execution, Lady Martin's book recalls Mrs. Kemble's delightful 'Records of a Girlhood.' But Mrs. Kemble was frankly autobiographic, and only incidentally critical, while Lady Martin is professedly critical, and only runs into reminiscence and anecdote by accident, as it were. Perhaps Lady Martin's book would have been more valuable had it been more like Mrs. Kemble's; but as it is, it is extremely interesting and suggestive. The best pages of the book are those containing professional retrospections and recollections of the younger years of Lady Martin's life, when she was Macready's *Portia* and *Ophelia*, and when she created the "Lady of Lyons." The French call the actor of an original part its creator, and not inexactly, for he is always making over the character in his own image. What an actor sees in a character is a part—that is to say, he sees and seizes just so much of the character as may fall within his own physical means of expression and as may accord with his own mental powers of appreciation. And while he omits, or at least slurs over hastily, whatever he cannot feel or cannot express, he is inclined also to supplement the outline of the dramatist, and to see in the character much to which the dramatist never gave heed. Lady Martin, for instance, lends to *Ophelia* a shrinking sensitiveness and a delicacy of feeling for which not only is there no warrant whatever in the text of Shakspere, but which is quite contrary to the spirit of either Shakspere's day or *Hamlet's*. To her, also, *Portia* is not merely a creature of the poet's, she is an actual historical character. "I have always classed her with Vittoria Colonna, Cassandra Fedele, and women of that stamp" (p. 29). Yet, as she herself says, practice in the art of acting "to the artist is the greatest help towards developing the poet's meaning," and "throws lights upon it that no study, however close, can give. In certain moods of mind, the poet's intention may be read in this way as plainly as in an open book. The inspiration of the scene makes clear what before had not been even dreamed of, but which, once shown, is never to be forgotten or neglected" (p. 134).

Among the pleasant pages in the book are those describing Miss Faucit's meeting with Edmund Kean, her relations with Charles Kemble and with Macready, and her performances in the plays of Bulwer and Browning. In an appendix are given the verses which these dramatists wrote to her, and also criticisms of her acting by M. Édouard Thierry and by the late M. Régnier. The volume is respectfully dedicated, by permission, to her most gracious Majesty, the Queen, of whose husband Lady Martin's husband has been the official biographer.

Œuvres Complètes de Gustave Flaubert. Tome viii. Théâtre. Paris: A Quantin. 8vo, pp. 351.

"POUR me retremper dans quelque chose de fort, j'ai relu l'immense, le sacro-saint, l'incomparable Aristophane! Voilà un homme, celui-là! Quel monde que celui où de pareilles œuvres se produisaient!" This is a passage of one of Flaubert's letters written just before the representation of "Le Candidat," the only play of his that was ever acted. The morning after the first performance, he writes: "For a failure it was a complete one! (*Pour être un four c'en est un!*) People who want to flatter me declare that the piece will yet rise with the true public; but I don't at all believe it! I know the faults of my piece better than any one. . . . In short, I have gone to the bottom (*je suis enfoncé*)." He knew better than any one that he was not an Aristophanes.

In reading the play, one wonders that any manager should have accepted it—not so much, perhaps, that a man of genius should have written it, for it is full of admirable political irony, and an irony of *situation*, not of *speech*, which could only be presented dramatically. But George Sand, with the tenderness which all Flaubert's friends felt for him, uttered the criticism which is fatal to this work, even as literature: "I am grieved for my big Flaubert: he has not understood the demands of the stage."

But he perfectly understood the demands of the moment on himself; if his play was a failure,

he did not fail; and this generation, at least, should not read "Le Candidat" except with his own unintentional commentary on it—not merely the page of excellent (stage) criticism which "I add to your criticisms," he writes to Mme. Sand, but his own deeper impressions: "I think, in spite of what you say" (still to Mme. Sand), "that the *subject* was good, but I have not succeeded with it (*je l'ai raté*). Not one of my critics has shown me why and how; but I know, and that consoles me." It is, however, his personal serenity, his magnanimity—the word is not too strong—at the moment of failure that throws an idealizing light on the very "*four*" itself. He had a warm regard for his actors. "Delannoy and Saint-Germain have got themselves up absurdly well (*ont des binettes excellentes*), and play like angels. I think it will go well," he wrote just a few days before their disaster in common. And it was chiefly for their sakes that, when he heard "les risées de la populace" in the distance, he withdrew his play. "I could not have them hiss my actors! The evening of the second performance, when I saw Delannoy come off the stage with tears in his eyes, I felt like a criminal, and I said to myself, 'Enough!' (Three persons have touched me: Delannoy, Tourguéneff, and my man-servant!) In short, it is all over."

He continues, always to Mme. Sand: "My stoicism (or pride) astonishes myself, and when I search for its source I ask myself whether you, dear master [so he always called her], you yourself are not one of its sources. I recall the first performance of 'Villemer,' which was a triumph, and the first performance of the 'Don Juan de Village,' which was a defeat. You do not know how I admired you on both those occasions! The loftiness of your character—a thing much more rare than genius—edified me, and I uttered inwardly this prayer: 'Oh! that I might be like her at such a moment.' Who knows? Your example has perhaps sustained me. Pardon the comparison! The fact is I snap my fingers at the thing heartily (*je m'en bats l'œil profondément*). This is really the truth." But he confesses that he regrets the money he might have made: "My little milk-pail is upset. I wanted to renew the furniture at Croisset [his home]; moonshine (*bernique*)!"

The name of this play, "Le Candidat," tells its plot. The scene is of our own day, *en province*, and the hero is a would-be deputy, who allows his wife to do as she will, and commands his daughter to do as she won't, while he pursues his successful career. The other play in this beautiful great volume (there are but two) is, except for the inevitable *fond* of irony, as much of a contrast as possible. It is a *féerie*, which Flaubert wrote first in concert with two friends and afterward rewrote. It was never acted. "Le Château des Cœurs" is its title, and it is a series of so-called tableaux which are composed of an elaborate enwreathment of fairies, gnomes (the spirits of Good and Evil), peasants, bankers, philanthropists, aristocrats, artists, physicians, women of the world, bourgeois and bourgeoises, queens and prime ministers, enchanted forests, magic castles, and Parisian salons. All the characters save one—a woman, a peasant girl—have, by the spirits of evil, been robbed of their hearts, unconscious of their loss. It ends—was there ever so utter a fairy tale?—with a heart being given to each one: that heart here proclaimed to be "the peace of conscience, the power of doing good, the comprehension of all that is noble, the means of relation at once with humanity, nature, and God."

Report of Thomas B. Akins, Commissioner of Public Records. Halifax, N. S. 1885.

THE present condition of the archives of Nova Scotia is due mainly to the efforts of Doctor Akins, the Commissioner of Public Records, whose last report gives the additions made to the collections since 1883. An indefatigable student and very successful collector of books and manuscripts relating to the history of the province, he has devoted a large part of his time for many years to his official duties. In 1857 he succeeded in securing the adoption of a resolution by the House of Assembly requesting the Governor "to cause the ancient records and documents illustrative of the history and progress of society in this province to be examined, preserved, and arranged either for reference or publication." From that time to the present he has been unwearied in doing the work contemplated in this resolution, and in the scarcely less onerous task of persuading the Legislature to grant the means necessary for the prosecution of it. In addition to the classifying and preparing great numbers of papers for binding, he has supplied important deficiencies in the documents by copies of papers preserved especially in the English and Canadian archives To-day the collection consists of nearly five hundred bound volumes, and about sixty boxes of papers, classified but unbound. The volumes, with a few exceptions, are placed in a room in the Province Building, where they can be easily consulted by the student. His labors are considerably lightened by a catalogue, printed in 1877, which gives a brief account of the contents of the different volumes and boxes, with their dates under their appropriate headings.

The most important part of the archives is, of course, that relating to the early history, from the fall of Port Royal in 1710 to the removal of the Acadians in 1755. It is contained in about fifty volumes of letter-books, minutes of Council, miscellaneous papers, and despatches to and from the home Government. Of these, the latter are chiefly copies from documents in the State-Paper Office in London. Many of the others are the original manuscripts. There are also copies of some of the more important papers in the Brown collection in the British Museum. The history of this collection is curious. Dr. Andrew Brown was the minister of St. Matthew's Church, Halifax, from 1787 to 1795. From there he went to Edinburgh, where he succeeded Doctor Blair as professor of rhetoric and belles-lettres. While in this country, he collected materials for the history of Nova Scotia. This, however, was never written, and after his death in 1834 his manuscripts were apparently sold for old paper. A part of them were fortunately rescued by Mr. Grosart, of the British Museum, from "a small shop in Scotland, where they were used in wrapping up cheese and butter." Among them was a copy of the "three hymns which the Acadians sung on the last days of their stay in Nova Scotia," the first of which begins with the lines:

> "Faux plaisirs, vous sonneurs, bien frivoles,
> Écoutez aujourd'hui nos adieux."

The numerous letters of the governors to the missionary priests and the French deputies are of the greatest interest, and although, unfortunately, only this one side of the correspondence has been preserved, they present a vivid and truthful picture of life among the Acadians, and show very clearly the causes of the tragedy of 1755. This is no place to discuss this transaction, but we may be permitted to say that no one should presume to pass judgment upon it before he has carefully examined these documents. The late Mr. Murdock had access to a large part of them, and has given many extracts in his elaborate 'History of Nova Scotia.' The Provincial Government in 1869 published 'Selections from the Public Documents,' a volume of 755 pages now rather hard to get. It was compiled by Dr. Akins chiefly to "throw light on the history and conduct of the French inhabitants of Nova Scotia, from their first coming under British rule until their final removal from the country." A similar work is being done by the Historical Society, founded in 1878. Among the more important papers printed in the four volumes of Collections which it has issued are the "Journal of Colonel Nicholson's Expedition against Port Royal in 1710," the "Journal of Colonel John Winslow," who commanded the troops employed in removing the inhabitants of Grand Pré, and selections from the Brown Collection.

The documents belonging to the history of the province from the founding of Halifax in 1749 to the present time seem to be very complete. They consist of the Letters and Despatches, Minutes of Council, Journal of Assembly, Land Grants, papers relating to Cape Breton, Sable Island, etc., besides a vast number of miscellaneous papers which are only roughly arranged and classified. Among the volumes recently added, as shown by Dr. Akins's report, are several of interest to us. These are selections from the Dorchester Collection in the Royal Institution, being the papers of Lord Dorchester, better known to the readers of Revolutionary history as Sir Guy Carleton, relating to the Loyalist settlers, and also "Memoranda relating to the negroes who left New York for Nova Scotia in 1783 and 1784"; "a volume of transcripts from Military correspondence during the American revolt"; a copy of the letter-book of Col. Samuel Vetch; and two volumes of papers "relating to the affairs of Nova Scotia, and its connection with the Government of Massachusetts Bay from 1725 to 1748." The oldest original volume in the Archives is a "French Register of Baptisms, Marriages, and Burials at Annapolis, from 1702" to about 1725.

BOOKS OF THE WEEK.

Adams, W. T. Our Little Ones and the Nursery. Boston: Estes & Lauriat. $1.75.
Adams, W. T. Stem to Stern; or, Building the Boat. Boston: Lee & Shepard. $1.25.
Adams, Sarah Flower. Nearer, My God, to Thee. Illustrated. T. Nelson & Sons. 75 cents.
A Wayward Life: A Novel. G. W. Carleton & Co.
A Woman's Triumph. Chicago: A. H. Andrews & Co. 25 cents.
Bagehot, W. The Postulates of English Political Economy. G. P. Putnam's Sons. $1.
Baker, S. S. Marmondale, and Other Poems. Hurst & Co.
Bancroft, H. H. Works. Vol. XX. History of California. Vol. III. 1825-1840. San Francisco: A. L. Bancroft & Co.
Barnard, C. Talks about the Weather, in its Relation to Plants and Animals. Boston: Chautauqua Press.
Barrows, S. J. A Baptist Meeting-house. Boston: American Unitarian Association. $1.25.
Bernard, St., of Cluny. The Celestial Country. A. D. F. Randolph & Co. $2.25.
Beecher, Rev. H. W. Evolution and Religion. Part I. Eight sermons. Fords, Howard & Hulbert. 50 cents.
Beads for the Children to String From. St. Nicholas.
Black, W. White Heather: A Novel. Harper's Franklin Square Library. 20 cents.
Bowen, Prof. F. A Layman's Study of the English Bible, Considered in its Literary and Secular Aspect. Charles Scribner's Sons. $1
Bradbourne, Lord. Friends and Foes from Fairy Land. Illustrated. Boston: Little, Brown & Co.
Bradley, Mary. Hidden Sweetness. Illustrated. Boston: Roberts Brothers. $1.50.
Bray, S. Alice. The Baby's Journal. A. D. F. Randolph & Co. $2.
Burr, F. A. An Original and Authentic Record of the Life and Deeds of Gen. Ulysses S. Grant. Philadelphia: National Publishing Company.
Campbell, H. Mrs. Herndon's Income: A Novel. Boston: Roberts Bros. $1.50.
Carlyle, T. Sartor Resartus. Boston: Estes & Lauriat. $1.
Carryl, C. E. Davy and the Goblin. Illustrated. Boston: Ticknor & Co. $1.50.
Champney, Lizzie W. Three Vassar Girls in Italy. Boston: Estes & Lauriat. $1.50.

Messrs. HENRY HOLT & CO.,

NEW YORK,

Publish To-day:

An American Novel by a Promising New Writer.

OBLIVION. An Episode.

(In the Tennessee Mountains.)

BY M. G. McCLELLAND. 16mo. Leisure Hour Series, $1.

RECENTLY PUBLISHED:

SUMNER'S PROTECTIONISM.

PROTECTIONISM, THE ISM WHICH DECLARES THAT WASTE MAKES WEALTH. By WILLIAM GRAHAM SUMNER, Professor in Yale College. 16mo. $1.

BACOURT'S LETTERS.

SOUVENIRS OF A DIPLOMAT. Private Letters from America during the Administrations of Presidents Van Buren, Harrison, and Tyler. By the CHEVALIER DE BACOURT, Minister from France. 12mo. $1.50.

"One cannot help being greatly entertained by this book. It is much to see this country, even through unfavorable foreign spectacles, as it was in 1840. If not flattering, this book is certainly funny."—*The Churchman.*

"A charming volume; . . . well worth translating as a winsome, amusing, and sometimes instructive contribution. . . . We commend this entertaining diary."—*The Critic.*

"The grumbling, gossipy old Frenchman's letters are quite pleasant reading at this distance from him."—*Hartford Courant.*

"It is seldom the the reviewer's pleasure to deal with a book that tempts him so hard to quote from. . . . Surely the French have been chosen by nature for writing memoirs! Not that Monsieur de Bacourt's book is a volume of memoirs. But they have the same elusive grace, the same inborn ease of style, the gossipy confidence, the shrewd observation, the delicate and caustic humor, and all those airy nothings that give to the most trivial French memoir its perennial fascination."—*N. Y. Star.*

THE LEISURE HOUR SHAKESPEARE.

The text and glossary of Dyce, with a life and an account of each play by A. C. MACFARLANE. 7 Vols., $7; $1 per Vol.

LEISURE HOUR AND LEISURE MOMENT SERIES.

'An Ill-Regulated Mind' by Katharine Wilde, $1 or 25c.; 'Slings and Arrows' by Hugh Conway, $1 or 30c.; 'The Red Route' by William Sime, $1 or 25c.; 'Healey' by Jessie Fothergill, $1 or 35c., 'At Bay' by Mrs. Alexander, $1 or 30c.; 'A Family Affair' by Hugh Conway, $1 or 30c.; 'Madame De Presnel' by E. F. Poynter, $1 or 30c.; 'Carriston's Gift, etc.,' by Hugh Conway, $1 or 30c.; 'A Millionaire's Cousin' by Emily Lawless, $1 or 25c.

THE LONDON DAILY NEWS says of "The Life of William Lloyd Garrison," just issued by the Century Co.: "It is among the most important, if not itself the most important, biography ever issued in America. . . . Its contents combine the value of a study of American social and political problems of the period they cover with the movement and interest of a work of fiction."

The Beacon, Boston, says: "Here we have for the first time a diplomatically accurate history of the great reform movements that found their personification in the immortal Garrison. . . . Whoever wishes to read the greatest American publication of the year will not make a mistake in sending for this." The literary editor of *The American* (Phila.) writes the publishers: "It is the unanimous verdict of this office that Mr. De Vinne has thrown into the shade all previous attempts at fine typography by the execution of this work."

Two volumes, 1,000 pages, 20 portraits; cloth bound, gilt top, $5, for the two. All booksellers or THE CENTURY CO., N. Y.

The Shakespeare Library.

Collected by the Eminent Shakespearean,

JOSEPH CROSBY, Esq.,

of Zanesville, Ohio, is now offered for sale *en bloc*. It contains upwards of 500 titles, embracing more than 1,500 volumes, about equally divided between text and *and*. Almost all the principal editions from Rowe's (1709) to the Riverside (1883) are present, and most of the standard Shakespearean criticism and illustrative literature in the English language. Mr Crosby's studies lay principally in the field of textual criticism, and many of his books are enriched by numerous marginal notes and emendations neatly written by him in pencil. These, of course, render the Library unique, and, it is believed, materially increase its worth. The present owners dislike to disperse this valuable collection without giving some gentleman or institution the opportunity to possess it entire. Inquiries should be addressed to

JOHN J. INGALLS, Zanesville, Ohio.

CRITICAL AND SOCIAL ESSAYS.—Reprinted from the *Nation*, and in some measure supplying the place of the first two volumes of the paper, now very scarce. Cloth, 12mo, price $1.50. Sent, postpaid, on receipt of price.

Three Dollars per year, in advance, postpaid to any part of the United States or Canada; to foreign countries comprised in Postal Union, Four Dollars.

The date when the subscription expires is on the Address-Label of each paper, the change of which to a subsequent date becomes a receipt for remittance. No other receipt is sent unless requested.

The paper is stopped at expiration of the subscription, unless previously renewed.

Remittances at the risk of the subscriber, unless made by registered letter or by check or postal order payable to Publisher of the NATION.

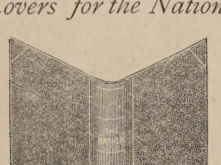
When a change of address is desired, both the old and new addresses should be given.

Address THE NATION, Box 794, New York.
Publication Office, 210 Broadway.

*** Copies of THE NATION may be procured in London of B. F. Stevens, 4 Trafalgar Square; George Street, 30 Cornhill, E. C.; H. F. Gillig & Co., 449 Strand; and American News Reading Room, 8 Haymarket.

For convenience of subscribers wishing to permanently and uniformly bind their volumes, we can now furnish

Covers for the Nation,



in regular book form, ready for use by any bookbinder, who will put in the numbers for a small charge. These have black cloth sides, roan back and corners, and are stamped in gold on back *The Nation* and the number of the volume. Price 60 cents each, postpaid.

These covers will fit all volumes from XXXIII. to XL., *i. e.*, since the increase in size to 24 pages each issue. (For the earlier volumes we cannot furnish covers.) In ordering state the volume-number wanted.

Address Publisher of the *Nation*, Box 794, New York.

A General Index to the Nation.

From July, 1865, to September, 1880.

Net price (no trade discount), $2 50. Purchasers will please remit with order. Address Publisher of the *Nation*, Box 794, New York, or J. F. INDEX, Bangor, Maine.

Schools.

Alphabetized, first, by States: second, by Towns.

CALIFORNIA (Southern), San Diego.

CIVIL AND MILITARY COLLEGE.—Full Collegiate Course for both sexes: Commercial, Scientific, Classical, and Military. Finest climate in the world; no heated terms; no cold spells.
General STUART STANLEY, Principal.

CONNECTICUT, Lyme.

BLACK HALL SCHOOL.—A family and Preparatory School for a few boys. Thorough instruction and careful training. Best of references given. CHARLES G. BARTLETT, Principal.

CONNECTICUT, Middletown.

WILSON GRAMMAR SCHOOL GIVES a superior preparation for College. The Principal has served a term of three years as tutor in Yale College. Send for circular. E. H. WILSON.

DISTRICT OF COLUMBIA, Washington, 1916 35th St. N.W.

"THE CEDARS," GEORGETOWN Heights.—A Home and Day School for Young Ladies. Extensive grounds; superior scholastic advantages. Miss EARLE.

MARYLAND, Annapolis.

ANNAPOLIS FEMALE INSTITUTE. —Boarding and Day School for Young Ladies and Little Girls. MRS. RICHARD WELSH, Principal.

MASSACHUSETTS, Boston.

BOSTON UNIVERSITY Law School. Address the Dean,
EDMUND H. BENNETT, LL.D.

MASSACHUSETTS, Boston, 259 Boylston Street.

CHAUNCY-HALL SCHOOL (58th Year). Preparation for the Mass. Institute of Technology is a specialty. Reference is made to the Institute Faculty. The location is the most elegant in Boston.

MASSACHUSETTS, Boston, 129 West Chester Park.

E. R. HUMPHREYS, LL.D., TUTOR for Harvard, Oxford, Cambridge, and other Universities and Colleges, has now completed his plans and staff of teachers, so as to meet the *modern changes* of studies recently made at HARVARD and at the English Universities, and is now ready to receive into his family three well-brought-up *boys* on *inclusive* terms, as moderate as the very liberal arrangements made will allow. As to the success of his pupils in Harvard at the last Examination (October, 1885) and in former years, he refers, with permission, to President C. W. Eliot, LL.D. Other references are in the prospectus. *Pupils entering before Nov. 20 will have considerable advantages.* Young women or men requiring advanced instruction only, can obtain First-Class board and rooms a few doors off. For prospectus, address E. R. HUMPHREYS, as above.

MASSACHUSETTS, Boston, No. 68 Marlborough St.

THE OLDEST SCHOOL ON THE BACK Bay. Miss Putnam will begin the twentieth year of her Family and Day School for Young Ladies, Misses, and *Little Girls* on the 24th of September, 1885. Every requisite provided for the most thorough and practical English education: the Languages, both ancient and modern; the Sciences, History, and Literature. Special students received in Music, Art, Preparation for Foreign Travel, and other departments. House made cheerful and healthful by *Wood Fires on the Hearth.* Refers by permission to the Right Rev. Henry C. Potter, Bishop of New York; Rev. A. P. Peabody, D.D., Cambridge, Mass., and many other eminent scholars. Please send for circular.

MASSACHUSETTS, Boston, No. 68 Marlborough St.

INSTRUCTION IN THE ART OF Housekeeping.—Miss Putnam proposes to add a new department to her school, the object of which will be to teach young ladies how to conduct a household, select and manage servants, make necessary purchases—in short, to impart a thorough and practical training in all that pertains to housekeeping and the science of domestic economy. A limited number of parlor boarders will be received. Application must be made at once.

MASSACHUSETTS, Boston.

INSTITUTE OF TECHNOLOGY. Courses in Civil, Mechanical, Mining, and Electrical Engineering, Chemistry, Architecture, etc. JAMES P. MUNROE, Sec'y. FRANCIS A. WALKER, Pres.

More Money Needed.

The Committee in charge of the construction of the pedestal and the erection of the Statue, **in order to raise funds for its completion,** have prepared, from model furnished by the artist, a *perfect fac-simile* Miniature Statuette, which they are delivering to subscribers throughout the United States at the following prices:

No. 1 Statuette, *six inches in height*,—the Statue bronzed; Pedestal, nickel-silvered,—at **One Dollar each,** delivered.

No. 2 Statuette, in same metal, *twelve inches high*, beautifully bronzed and nickeled, at **Five Dollars each,** delivered.

No. 3 Statuette, *twelve inches high*, finely chased, Statue bronzed, Pedestal, **Heavily Silver-Plated,** WITH PLUSH STAND, at **Ten Dollars each,** delivered.

Much time and money have been spent in perfecting the Statuettes, and they are much improved over the first sent out. The Committee have received from subscribers many letters of commendation.

The *New York World* Fund of $100,000 completes the Pedestal, but it is estimated that $40,000 is yet needed to pay for the iron fastenings and the erection of the Statue.

Liberal subscriptions for the Miniature Statuettes will produce the desired amount.

Address, with remittance,

RICHARD BUTLER, Secretary,
American Committee of the Statue of Liberty,
33 Mercer Street, New York.

GOLD MEDAL, PARIS, 1878.

BAKER'S

Breakfast Cocoa.

Warranted ***absolutely pure Cocoa,*** from which the excess of Oil has been removed. It has *three times the strength* of Cocoa mixed with Starch, Arrowroot or Sugar, and is therefore far more economical, *costing less than one cent a cup.* It is delicious, nourishing, strengthening, easily digested, and admirably adapted for invalids as well as for persons in health.

Sold by Grocers everywhere.

W. BAKER & CO., Dorchester, Mass.

NATION—FULL SET.—*For sale cheap* by A. S. CLARK, 34 Park Row New York.

MERCANTILE LIBRARY,

ASTOR PLACE, NEAR BROADWAY.

BRANCH LIBRARY AND READING ROOMS, 431 FIFTH AVE., BETWEEN 38TH AND 39TH STREETS.

206,000 Volumes, over 400 Periodicals. New Publications (English, French, and German) purchased as soon as issued.

TERMS: $5 PER YEAR; $3 PER SIX MONTHS.

The following list contains some of the principal books just added to the Library:

Clarise—Amateur Art.
Greville—Memoirs, Part II.
Stedman—Poets of America.
Hamerton—Paris in Old and Present Times.

Brabourne—Friends and Foes from Fairyland.
Watt—Economic Aspects of Recent Legislation.
Here and There in Our Own Country.
Harrison—Introductory Studies in Greek Art.

THE GREVILLE MEMOIRS.

SECOND PART.

A Journal of the Reign of Queen Victoria,

FROM 1837 TO 1852.

BY THE LATE CHARLES GREVILLE, Clerk of the Council. Uniform with Part First:

"A Journal of the Reigns of King George IV. and King William IV."

"Mr. Greville's Diary is one of the most important contributions which have ever been made to the political history of the middle of the nineteenth century. He is a graphic and powerful writer; and his usual habit of making the record while the impression of the events was fresh upon his mind gives his sketches of persons and places, and his accounts of conversations, great vividness. The volumes will be read with as much interest for their sketches of social life as for their political value."—*London Daily News.*

Two vols., large 12mo, cloth. Price, $4 00.

*** For sale by all booksellers; or will be sent by mail, postpaid, on receipt of price.*

D. APPLETON & CO., Publishers, 1, 3, & 5 Bond Street, N. Y.

CROSBY'S VITALIZED PHOSPHITES

For fifteen years has been a standard remedy with all physicians who treat mental or nervous disorders.

It aids in the bodily and wonderfully in the mental growth of children.

It restores the energy lost by nervousness, debility, over-exertion, refreshes weakened vital powers in old or young.

It is used by Bismarck, Gladstone, and all great brain workers.

F. CROSBY CO., 56 WEST 25TH STREET, NEW YORK.

For sale by druggists, or mail, $1.

The Portable Bookcase manufactured solely by Lockwood, Brooks & Co., 17 Franklin Street, Boston, Mass., is the most perfect thing of the kind, it being easily moved, and adjustable for books of all sizes. Send for circular or call and see it

Wants.

A YOUNG LADY WOULD LIKE THE position of governess to young children. Country preferred. Best references. Address "G." Lima, Penn.

LITERARY WORK WANTED (REviewing, special articles, correspondence, reading for publishers, etc.) by a well-known author and journalist. Address "CENTURY," 241 Broadway, Room 9.

NATIONS WANTED—*Will Pay Liberally* for Nos. 2 to 15, 17 to 26, 152, 293, and 437 of the *Nation*. C. L. CLAPP, Carrollton, Ill.

Dr. Sauveur's Educational Works.

A copy of any of Dr. Sauveur's Works will be sent post-paid to teachers by the author, on receipt of half the retail price.

Descriptive circulars, giving the retail price and the *introduction price* of each volume, will be sent to applicants.

Address, DR. L. SAUVEUR, GERMANTOWN, Pa.

"The magazine has developed rapidly and strongly of late, and is now one of the most interesting of its class."—*Boston Post.*

"Contains a surprisingly good supply of attractions for the money."—*Boston Daily Advertiser.*

"Really a charming magazine, and easily holds the first rank among English magazines."—*Churchman.*

"Its illustrations have particularly gained in merit—in every way admirable, and fine specimens of art work by artist and engraver."—*Boston Transcript.*

"The magazine has achieved a pronounced success, and has become a fixture in the current literature of the day."—*Sacramento Record-Union.*

Lectures Introductory to the Study of the Law

of the Constitution. By A. V. Dicey, B.C.L. of the Inner Temple, Barrister-at-Law, Vinerian Professor of English Law. 8vo, $3.50.

In dealing with certain guiding principles which pervade the modern Constitution of England, the aim of the author has been to provide students with a manual which may impress these leading principles on their minds. In furtherance of this design, the doctrines which are the foundation of the existing Constitution are not only emphasized, but English constitutionalism is constantly illustrated by comparisons between it and the constitutionalism on the one hand of the United States and on the other of the French Republic.

A New Novel by the Author of 'The Heir of Redclyffe.'

Nuttie's Father.

By Charlotte M. Yonge, author of 'The Heir of Redclyffe,' etc., etc. 12mo, $1.50.

"Distinguished, as are all her works, for its high tone. It might be put into the hands of any child, and yet there is sufficient in it to interest children of a larger growth."—*Academy.*

"Nothing issuing from the pen of Miss Yonge could fail to find a welcome from American readers."—*Church Record.*

"Some of the safest and wisest stories ever written to divert, amuse, and interest. Her admirers, both young and old, number up among the thousands in this country and in England."—*Churchman.*

A New Story by the Author of 'Carrots.'

"US": An Old-Fashioned Story.

By Mrs. Molesworth, author of 'Carrots,' 'Cuckoo Clock,' etc., etc. 16mo, $1 25.

"We are glad to find that Mrs. Molesworth has returned to an English nursery, while she has contrived to introduce a new charm by calling back to life the days when Pamela was not an impossible name."—*Churchman.*

"Since the days of George Eliot there is none left whose touch is so exquisite and masterly, whose love is so thoroughly according to knowledge, whose bright and sweet invention is so fruitful, so truthful, or so delightful as Mrs. Molesworth's."—*A. C. Swinburne.*

A Reasonable Faith.

By Three "Friends." Revised Edition. 12mo, paper, 40 cents.

"I have read this little book with interest and full sympathy. Its views on the Bible are the only ones which seem to me at all compatible with a reasonable faith."—*Archdeacon Farrar.*

"I think the book was needed and that it will do much good."—*J. G. Whittier.*

"The main points in theology are handled clearly and concisely, so as to present in bright miniature the harmony established between Christianity and Reason by the best thinkers of the age."—*Literary World.*

"It is impossible to speak too highly of these nine essays. To all searchers after truth we can cordially commend them. To peruse them is a religious education in itself, for while dominated by a commendable moderation of tone they are brimful of thought and suggestiveness."—*Glasgow Herald.*

The English Citizen Series.—New Volume.

The Punishment and Prevention of Crime.

By Colonel Sir Edmund DuCane, K.C.B., Surveyor-General, etc., of Prisons. 12mo, $1.

"Full of interesting and useful information."—*St. James's Gazette.*

Steele. Selections from the *Tatler*, *Spectator*, and *Guardian*.

Edited, with Introduction and Notes, by Austin Dobson. (Clarendon Press Series.) 16mo, $1.25.

"This unassuming little volume possesses considerable value. The selections from Steele's essays include the best of his literary work, and they are arranged by subjects in a manner which the reader will find convenient. The notes are excellent. . . . A work which is exceedingly well done and which must have cost the author much labor and research."—*Athenæum.*

"The volume deserves the hearty support of those associated with the interests of the higher literary education."—*Academy.*

MACMILLAN & CO., 112 Fourth Avenue, New York.

The Badminton Library

OF

SPORTS AND PASTIMES

A New and Very Attractive Series of Volumes devoted to Field Sports and Games. Edited by His Grace the Duke of Beaufort, assisted by Mr. Alfred E. T. Watson. Dedicated by permission to H.R.H. the Prince of Wales.

Just Ready, the First Volume of the Series.

Hunting.

By His Grace the Duke of Beaufort and Mowbray Morris. With contributions from the Earl of Suffolk and Berkshire, Rev. E. W. L. Davies, Digby Collins, and Alfred E. T. Watson. Crown 8vo, cloth extra. 385 pages, price $3 50, with a colored frontispiece and 53 beautiful wood engravings from designs by J. Sturgess, J. Charlton, and Agnes M. Biddulph.

CONTENTS:

Chapter.

I. The History and Literature of Hunting.

II. Beasts of the Chase.

The Stag. The Fox and his Habits. Harriers and the Hare. Beagles Hunted on Foot.

III. The Stable. IV. The Kennel.

V. Hunt Servants.

The Duties of a Huntsman in the Field. The Duties of a Whipper-In. The Duties of a Kennel Huntsman. The Duties of an Earth-Stopper. Compensation for Damages done by Horsemen and by Foxes. Artificial Fox Earths.

VI. The Horse. IX. The Provinces.

VII. The Rider. X. Hunting from London.

VIII. The Shires. XI. The Otter and his Ways.

Appendices. A. List of Masters of Hounds and Servants. B. Names of Hounds. C. Hunting Terms. D. Bibliography. Index.

The object and scope of "The Badminton Library" are to supply to lovers of field sports and games a series of volumes devoted to these popular and attractive pursuits. There is no modern encyclopædia to which the inexperienced man, who seeks guidance in the practice of the various sports and pastimes, can turn for information. Some books there are on Hunting, some on Racing, some on Lawn Tennis, some on Fishing, and so on; but one library, or succession of volumes, which treats of these subjects is wanting. The Badminton Library is offered to supply this want. In its volumes those who are seeking for knowledge on any of the subjects dealt with will find the result of many years' experience written by men who are in every case adepts at the sport or pastime of which they write. The publishers have placed the several volumes in the hands of writers possessing special qualifications in their respective departments, and the entire series is under the general supervision and editorship of His Grace the Duke of Beaufort, whose warm interest in field sports is well known, and who has been fortunate enough to secure in his editorial duties the valuable services and assistance of Mr. A. E. T. Watson.

The volumes will consist of about 400 pages, published at about $3 50, and illustrated where necessary by colored illustrations or engravings by competent artists. The volumes may be had separately, but subscriptions will be received for the entire series, which is intended to form a complete library of rural amusements. The information, it is desired, should be, before all things, *thoroughly practical*, but the subjects will be diversified with anecdotes and incidents of sporting life.

Nearly Ready:

FISHING. By H. Cholmondeley Pennell, etc. Vol. I.—Salmon, Trout, and Grayling. Vol. II.—Pike and Other Coarse Fish. [Ready in November.]

☞Volumes on Racing, Riding, and Driving, Shooting, Boating, Cycling, Yachting, etc., are in preparation.

A New Fairy Book by Knatchbull Hugessen.

FRIENDS AND FOES FROM Fairy Land. By the Right Hon. Lord Brabourne (Knatchbull-Hugessen), author of 'Crackers for Christmas,' 'Tales at Tea-Time,' 'Higgledy, Piggledy,' etc. 12mo, cloth, 360 pages, $1.50. With 24 illustrations by Linley Sambourne.

London: Longmans, Green & Co.

BOSTON:

Little, Brown & Co.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 12, 1885.

The Week.

THERE are certain features of the late canvass which must not be forgotten by friends of reform, no matter what they may think of Governor Hill and his methods. One is that for the first time in the last fifty years we have had a canvass in which office-holders took no part. In the country districts, there are still a very large number of Republican postmasters who used to be very active working politicians, and used to do a great deal for the party. This year they have been quiet as mice. They of course did not wish to serve the Democrats, and the Republicans, with the penalties of "offensive partisanship" hanging over their heads, they dared not serve. The Democratic postmasters, too, have been equally tranquil. They have not been called on for service by their superiors, and have been too doubtful about the consequences of political activity to volunteer it. In no place has the change been so marked as in this city. The Post-office and Custom-house used both to be great centres of political activity. Everybody in both, down to the scrubbing women, used to be "assessed" for election expenses. The Postmaster and his leading subordinates used to be occupied all day during the canvass with "conferences" with politicians, or in making stumping tours round the State. In the Custom-house the state of things was still worse. The Collector's office used to be crowded with "workers" from morning till night, making reports or receiving instructions. Often enough so many inspectors were sent off with a fortnight's leave of absence, to stump or "organize," that it was with difficulty the business of the port was carried on. Clerks who could not be spared, or were less skilled in management, were mulcted mercilessly by assessments, and their "loyalty" was insured by the perpetual dread of peremptory dismissal, though neither loyalty nor assessments made any man sure of his place.

This year none of these things have been witnessed. The "Sterling incident" is the only sign of "politics" about the Custom-house during the late canvass. There were no assessments, no leaves of absence, no partisan activity of any kind. The divorce of the Post-office from politics was even more complete. In both the business of the Government was carried on, like the business of private bankers and merchants, without regard to the canvass or the election, and Government clerks, like private clerks, did or did not make contributions to political funds, as their means allowed or their sympathies dictated. To crown all, there is probably not a man in New York to-day who can, in consequence of what he did or said during the late canvass, count on a place under the National Administration. According to the predictions of the spoilsmen during the last two or three years this ought to have resulted in a general public indifference to the election. Not only ought office-holders to have abstained from political activity, but the bulk of the voters ought, on hearing that there were no Federal offices to be divided, to have lost all interest in the result, and stayed away from the polls. So far from this, however, it appears that about 484,000 Republicans and about 495,000 Democrats actually voted, with no other motive except interest in the affairs of the State and a desire to strengthen their own party in the political field. So that it is not yet true that Americans look on elections as simply a gambling operation, in which the stakes are places in the public service.

One of the best things about the election in Virginia is the fact that the white Democrats are indebted in part to the negroes for the dimensions of their majority. Nothing has been more discouraging for the future of the blacks than the political slavery in which they were held until the election of Cleveland. How abject this slavery was cannot be better illustrated than by the fact that even a man like General Hawley, who fought to make them freemen, has seriously proposed to take the census figures of the number of adult black males in any State as the number of votes which ought to be returned for the Republican ticket at every election, and to consider any falling off as prima-facie evidence of Democratic fraud! The worst indictment of the negro capacity for self-government ever framed by Southern Democrats was not so severe as this assumption of the Republican party that every black man was its lifelong political vassal, and that any rascal like Mahone who captured a Republican nomination might count with entire confidence upon the solid negro vote. The colored man, in his dense ignorance, was not to blame for believing the unprincipled white leaders who told him that he would be put back into physical slavery if the Democrats came into power; but this political slavery was only less fatal to his development than his ancient servitude. It is one of the greatest benefits of Cleveland's election that it has not only freed Northern whites from their fears of "Southern domination," but that it has also emancipated Southern blacks, so that they are beginning to divide their votes between the parties like real freemen.

Mahone's newspaper organ, the Richmond *Whig*, has been put in the hands of a receiver, and its bad influence as a reckless corrupter of public opinion is at an end, as its future, if it has any, will be under other auspices. It has been, since it came into Mahone's control, a most shameless advocate of repudiation and of dishonest political methods, representing in the press precisely what he represented in politics. Like him it was dependent upon Federal aid for its support, and, the supply having been withdrawn, it falls to the ground with him. There is a report that he will leave Virginia forever to live in Europe, but we should think that either Ohio, or some part of Massachusetts, where he could be in close fellowship with Sherman, or Foraker, or Hoar, or Long, or Lodge, would be more congenial for him. As these statesmen were so closely united to him in political life, they ought not to be separated from him in political death. His cause ought not to be less worthy of support because it has failed. All these statesmen were, at last accounts, prepared to stand by it forever, even if they had to "stand alone," and they ought to be glad to have Mahone come North and stand with them.

"The Senate Safe" is the title of a curiously but characteristically illogical article in the *Tribune* of Friday morning, intended to show that the Republicans are sure of controlling the upper branch of Congress during the last half of President Cleveland's Administration. Proof of this proposition is supposed to be found in the fact that the Democrats failed last week to carry the Legislatures in New York, New Jersey, and Connecticut, no one of which States elects a United States Senator until after another Legislature is chosen. It is true that the State Senators chosen in New York and New Jersey last week will participate in the election of United States Senators early in 1887, but the fact that the Republicans have the advantage in holding-over members by no means decides the result. When the *Tribune* says that "the election of a Republican Senate in New Jersey insures the election of a Republican when Senator Sewell's term expires," it only displays that preternatural ignorance of political statistics which nowadays distinguishes the paper founded by Horace Greeley. In 1881 the New Jersey Republicans also carried the State Senate, and thus secured a long enough lead to retain control of that branch in 1882, but when the lower branch was chosen in the latter year, the Democrats elected enough representatives to give them a majority on joint ballot, and thus elect a Democrat to the United States Senate. The chances certainly are at least even that they will have as good luck in the election of 1886. The *Tribune* shows equal ignorance of facts recorded in sundry *Tribune Almanacs* when it consoles itself for the very narrow Republican majority in the Connecticut Legislature just chosen, by the claim that "the preponderance of the Republican vote in the small towns is always felt when an election of United States Senator is directly at stake." The fact is that, despite the great advantage which the Connecticut Republicans enjoy in a contest for the Legislature by reason of the unfair system of town representation, the Democrats carried the Legislature in 1874, when a Senatorship was "directly at stake," and thus sent W. W. Eaton to Washington. As for New York, although the Republicans carried the upper branch of the Legislature in 1873, a year before a Senator was to be elected, as they have done this year, and thus insured their control of the upper branch in 1874, the Democrats got so large a majority in the lower branch in the latter year that they sent Mr. Kernan to the capital.

The truth is, that the contest for control of the United States Senate from 1887 to 1889 is going to be close and doubtful until after the November elections of 1886. Twenty-six Republicans and twenty-five Democrats will hold over from the Forty-ninth Congress. The Republicans have already secured the Legislature in Ohio which elects the next Senator, and the Democrats in Maryland, Virginia, and Mississippi, which makes twenty-eight Democrats and twenty-seven Republicans sure of seats after March 4, 1887. The Democrats are morally certain to carry next year's Legislatures, and thus secure the Senatorships, in Delaware, Florida, Missouri, Tennessee, Texas, and West Virginia, and the Republicans in Massachusetts, Minnesota, Nebraska, Pennsylvania, Rhode Island, and Vermont. This will carry the totals up to thirty-four Democrats and thirty-three Republicans, and leaves the nine States of California, Connecticut, Indiana, Maine, Michigan, Nevada, New Jersey, New York, and Wisconsin to be fought for. If the Democrats can add four of these nine to their previous thirty-four, they will have a majority with Vice-President Hendricks's casting vote, while the Republicans must carry six of them to make their previous thirty-three a majority of the seventy-six members. The Republicans are pretty confident of carrying Maine and Wisconsin, while the Democrats are almost certain to secure Indiana. The Nevada seat will be again put up at auction, and a Democrat is as likely to "bid it in" as a Republican. California elected a Democratic Senator half-a-dozen years ago, and may do the same thing again. The Republicans came within a few votes of losing the Michigan Legislature last fall, and the State has become a doubtful one, while last week's election in Connecticut shows that neither party can count upon that State next year. The Democrats seem to-day as likely as not to get the New Jersey Legislature in 1886, and may elect enough members of the lower branch in the New York Legislature next year to give them a majority on joint ballot even with a Republican Senate—although the present apportionment system gives the Republicans a great advantage. In short, to secure a majority in the Senate of the Fiftieth Congress the Democrats will only need to elect their men next year from four States like California, Connecticut, Indiana, Nevada, New York, and New Jersey, in which they have elected Senators when a Republican Administration was in power. They may not succeed in doing this, but it is the height of folly to maintain that they are certain to fail.

President Cleveland has given no more convincing proof of his devotion to the cause of reform than by the course which he has pursued in the matter of reorganizing the Civil-Service Commission. He dismissed from consideration the professional office-seekers, who would have jumped at the chance of drawing a $3,500 salary and at the same time doing all they could to make the system a farce, and made diligent search for men of character who were thoroughly committed to its principles. The fact that such a man as Mr. Charles R. Codman, of Massachusetts, was Mr. Cleveland's original choice for one of the three places, spoke volumes as to his sincerity. Unfortunately Mr. Codman, and more than one other man of equal fitness whom the President sought to secure, could not serve, but he did not lower his standard. He has at last filled two of the vacancies with Mr. William L. Trenholm, of South Carolina, and Mr. Alfred P. Edgerton, of Indiana. Mr. Trenholm's selection can be commended without the slightest reserve, since he has gained a national reputation by his earnest advocacy of sound doctrine on the silver question, and is a pronounced believer in civil-service reform. Mr. Edgerton is unknown to the general public, and the fact that he is an old gentleman of sixty-eight is certainly against him; but he is vouched for as being in full sympathy with the reform. Both of these gentlemen are Democrats, and it is a distinct gain to the movement that a majority of the Commission should be members of that party.

The examination for the Weighership at the Custom-house has terminated in a manner most painful for the Lifelong Democrats. It has produced at the top of the list one of the assistant weighers, who has had long experience of the place, and would in any well-organized service be entitled to the promotion, even if there were no examination. This is bad enough, but it is not all. He is a disabled soldier, and, worse still, served in the Sixty-ninth Regiment. Moreover, his name is O'Brien, and he was educated at St. Francis Xavier's College. The number of classes of the community who will be afflicted by this result is very large. The Lifelong Democrats will be pained at his getting the place as the result of a positive proof of fitness. The Irish Democratic blatherskites of the Bourke Cockran school will be afflicted at seeing an Irishman named O'Brien serving as an illustration of the virtue of the competitive system. The Irish Republican blatherskites will be pained at seeing a Democratic President getting the credit of this mode of filling a weighership. The liquor-dealers will be enraged at seeing a good Government place snatched from the hands of one of the best barkeepers in the country, who marched as chief mourner at the funeral of the lamented Jimmy Elliott, the pugilist and gambler, slain by Jerry Dunn in a saloon battle. In fact, nobody of the spoils school will get any comfort out of it except those who maintain that college graduates get all the places under the competitive system. But even their mouths will be closed by the fact that it was at St. Francis Xavier's College he graduated, for they are always forced to confess that the degree of a Catholic college does not hurt an office-seeker.

The new anti-Chinese crusade on the Pacific Coast is approaching a crisis. The Federal authorities in Washington Territory have taken vigorous measures to enforce the laws which expressly guarantee protection to all Chinese in the country, and the national Administration has thrown all the weight of its influence on the same side. Indictments have been found in the United States Court at Vancouver against no less than thirty-two citizens of Tacoma, including the Mayor and Police Judge and the editors of two newspapers, for inciting the recent outrages. There is abundant evidence that Chinese were dragged from their houses, cuffed, kicked, and beaten, and driven from the city in a cold storm, while their homes were burned by the mob. The District-Attorney is confident of his ability to secure the conviction of the offenders, and the trials will be watched with interest throughout the country, and indeed throughout the world. The honor of the Government is really at stake in this matter, for its faith has been pledged to the protection of these Chinamen.

President Cleveland's proclamation, warning evil-disposed persons in Washington Territory to desist from their designs against the Chinese, coupled with the above proceedings, is notable as the first attempt of the Government to fulfil its legal and moral obligations towards the Chinese. It furnishes, too, a fresh proof of President Cleveland's stern and inflexible determination to enforce the law of the land against men of every race and condition, without regard to local feeling, and gives him a new claim on the respect and confidence of humane and patriotic men. In truth, in enforcing the law against the cattle-men, and now against the "leading citizens" of Washington Territory, he turns over a new leaf in American politics, and shows us the difference between an upright magistrate, who does not bear the sword in vain, and a tricky demagogue or weak and timid trimmer, who is always seeking for an excuse for not offending powerful criminals.

The instructions given to Mr. Marble in his late mission to Europe on behalf of the Government have been published. He was to ascertain, by "personal conference with the expert advisers and statesmen of the principal governments of Europe," the "present opinions and purposes" of those governments with regard to the establishment of an international ratio of value between gold and silver, and the international use of both metals as unlimited legal tender. The main object of this mission was doubtless to have positive information of recent date as to the condition of the European mind about silver, to lay before Congress when it meets. Mr. Marble's report has not been published. When it is published, we suspect it will be found that the expert advisers and statesmen of Europe stand on this question about where they stood four years ago, when we sent Mr. Evarts over to convert them.

Indiana furnishes a fresh illustration of the fact that nothing stimulates fraud better than liberal appropriations for pensions. The Legislature a few months ago made a grant of money to pay the services during the war of the State Legion, a sort of home guard organization. Claims immediately began to pour in upon the State Treasury in appalling numbers. One county professed to have had about two thousand men in the Legion, at which rate this comparatively small force would have nearly equalled in number the State's contributions of volunteer soldiers during the whole war. Men sent in affidavits declaring that they had served from five to eight months, when investigation showed that they had never handled a gun. The evidence of wholesale lying was so con-

clusive that the State officers had to call a halt and stop payment altogether. There is nothing novel or surprising about such developments. Quite as disgraceful a showing was made early in the the century, when Congress voted pensions to all who had served in the Revolutionary army and were in need of assistance, only to find more applicants than the largest number of soldiers in Washington's army at any period of the war for independence. The ordinary rules of conduct somehow appear to lose their influence over people when there is a pension to be got, and men who are generally considered good citizens lie in the most shameless fashion.

A noteworthy feature of agriculture in the West this year is the great increase in the production of flax. The receipts of flaxseed in Chicago during October aggregated 1,875,000 bushels of fifty-six pounds each, and in one week of the month the receipts of the seed exceeded those of wheat. For the first three months of the current crop year the receipts were nearly 1,600,000 bushels larger than in the same months of 1884, and the shipments were nearly as much in excess of those for the corresponding time last year. A quarter of a million bushels have already been exported, and as much more has been ordered for Europe, where the American seed is supplanting the crop of British India. The immediate cause of the great increase in production is the low price of wheat last fall and winter, which discouraged many farmers as to the future of that grain, and induced them to try the raising of flax. The seed brings good prices, and the great danger is that the success of the experiment will tempt too many farmers to go into the business next year. Flax exhausts the soil very rapidly, and a few crops of it will leave a farmer with his land badly worn out. It will not be strange if the Western farmers who try it find themselves in the end as badly off as their New England brethren, who twenty years ago were induced to go into tobacco-raising by the high prices which the crop commanded, and before long discovered that their land would not produce a crop without such a quantity of fertilizers as made it hard to raise anything profitably.

The failure of the natural gas wells in Champaign, Ill., is a forcible reminder of the fact that we know next to nothing about the condition of things below the earth's surface. There is not the slightest assurance that the people who are working up great schemes for the use of similar gas in Pennsylvania may not find the supply some day suddenly giving out. As to petroleum, there is accumulating evidence that the amount available is limited, and that before many years the home supply will be seriously trenched upon. The geologist in charge of the Pennsylvania survey, who for a decade has carefully studied the oil region in that State and across the New York border, points out that the production for each well is steadily diminishing with the increase in their number; and as the area of possible operations is limited, he inclines to the opinion that more than half of the supply is already exhausted. As the market for oil has been widening of late years, the end will come all the sooner; and while the question is not yet a pressing one, everything indicates that before many years a substitute for petroleum will be demanded. The wonderful development of invention, however, is calculated to keep people from worrying over the prospect, since we are fast coming to believe that man is capable of supplying any deficiencies on the part of nature.

The motion made in the Common Pleas on Monday to have the Court adjourn out of respect for the memory of the late Judge Cardozo, was a curious illustration of the degree to which the friends of wrong-doers in this city count on public forgetfulness. Cardozo was once Judge of the Common Pleas, and was translated to the Supreme Court. While there he became a member of the Tweed Ring, and, like Barnard, made merchandise of his office. It was proved against him, among other things, that he gave references to a young lawyer named Gratz Nathan, a connection of his, on condition of sharing in the fees, and did share them, and, to escape impeachment and certain conviction, he resigned his office, and implored the Committee of the Bar Association to forego further pursuit of him on condition that he would leave the State. They agreed to this, but, the danger over, he broke his pledge, and impudently resumed practice at the bar in this city, where he remained till his death—a standing discredit to his profession. One would expect that under these circumstances all his friends would ask at his death would be silence and oblivion on the part of the courts and the press. But one of them had the audacity on Monday to ask the Court of Common Pleas, which he had disgraced, to adjourn out of respect to his memory. Comically enough, too, the motion was seconded by that very droll ex-Judge Richard Busteed, formerly known in New York politics as "galorious Dick Busteed." The Court denied the motion, and adjourned at the usual hour. It ought to have sat two hours later than usual, with the bench draped in sackcloth.

The conviction of Stead, the editor of the *Pall Mall Gazette*, for abduction, has been followed by his conviction for an indecent assault, and sentence to three months' imprisonment. The Judge evidently shares the opinions of the London press about his goings on. The London morning papers are very savage in their comments on him, and no wonder, for his "revelations" seem to have been entirely based on stories told him over champagne by brothel keepers. His one piece of practical demonstration he had to manufacture, and took for the purpose an innocent child. Two months' imprisonment would be an absurdly light sentence for such an offence. He is, however, hardly as much to blame after all—because he was making a good stroke of "journalism"—as the "Social Purity" people who have been encouraging him. No profligates, or venders of obscene literature, or procuresses have done as much to spread impurity through the English-speaking world in the last hundred years as Stead has done in the last six months. The London *Times* accuses him of "stooping to some of the arts of fourth-rate transatlantic journalism." What can this mean?

A curious phase of the Sunday-closing question in England is presented in a recent letter in the London *Times*. The correspondent writes that, in company with two friends, he attended afternoon service in the newly restored nave of St. Alban's a fortnight ago last Sunday, "proposing afterward to see the rest of one of the most interesting of English cathedrals." Service over, however, the party were informed that it was impossible for them to carry out their plan, and that it was forbidden even to walk round the nave after service except by special permission from the Archdeacon. This permission was obtained by the correspondent, but upon returning to the Abbey, he found that his companions had meanwhile been turned out of the building "with but scant courtesy," that the doors were locked, and the vergers gone. Having failed in their endeavor to inspect the interior, the visitors attempted to see the exterior, "in itself of extreme interest," but they were promptly ordered out of the churchyard by a surly official, who told them that if they did not clear out at once they would have to climb over the spikes of an eight-foot railing. Similar rules are enforced at the interesting church of St. Michael in the same town, with its Bacon monument and shrine of Duke Humphrey. And we may add that Americans know by experience that Shakspere's bust and grave in the Stratford church cannot be viewed on Sunday except during service. The *Times's* correspondent is indignant at such regulations, and we doubt not that many rigid Sabbatarians will share his sentiments. Yet the truth is, that the clergy of St. Albans have only been consistent in carrying out to its logical conclusion the theory upon which is based the whole opposition to the Sunday opening of libraries, museums, art galleries, and all such places. It is just as bad to visit St. Albans of a Sunday "to admire at leisure the grand old Abbey" as it is to go to a picture gallery and enjoy the work of a great painter. The St. Albans clergy stand on the same platform with the people who oppose the Sunday opening of the Metropolitan Museum in Central Park.

The Conference of the Powers on the Balkan affairs has met at Constantinople, and is now in session. It does not follow because there is a conference that there will be peace, because the war of 1877 was preceded by a conference. But Turkey is a great deal wiser now than she was then, and is really anxious to avoid war. A compromise has been proposed by Austria, which proposes that instead of a complete union between Bulgaria and Rumelia, there should be a personal union—that is, that they should remain separate principalities, but should each have Alexander of Bulgaria for its Prince. The difference between this and the complete union would probably be found in the course of a year to be no greater than between tweedledum and tweedledee, but it would save Turkish pride and furnish some sort of answer to those who pretend to respect the Treaty of Berlin.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, November 4, to TUESDAY, November 10, 1885, inclusive.]

DOMESTIC.

THE President on Wednesday appointed Mr. Alfred P. Edgerton, of Indiana, to succeed Mr. Dorman B Eaton, and Mr. William L. Trenholm, of South Carolina, to succeed Mr. John M. Gregory, as members of the United States Civil Service Commission. Both are Democrats. Mr. Edgerton was in early life a clerk in a mercantile house in New York city, but while still a young man removed to Northern Ohio as the agent of the Northern Land Company. He then served four years in Congress as a Democrat, and was the financial agent of the State of Ohio, with an office in New York city. In 1858 he moved to Indiana, and ten years later was the Democratic candidate for Lieutenant-Governor, Vice-President Hendricks being the candidate for Governor. They were both defeated. As a Democrat, Mr. Edgerton refused to support Greeley in 1872, and came within six votes of being nominated for Vice-President on the O'Conor ticket over John Quincy Adams, jr. He was then nominated as the straightout Democratic candidate for Governor of Indiana, but declined in a letter which urged all Democrats to support Mr. Hendricks, and the latter was elected. For fifteen years Mr. Edgerton has been unanimously elected by the Common Council of Fort Wayne as the President of the Board of Education of that city. He is a friend of civil-service reform. Mr. Trenholm is a commission merchant, about fifty years of age, and was warmly endorsed for the appointment by leading friends of the civil-service reform movement North and South. He is the son of the late Secretary of the Treasury of the Southern Confederacy, and has been brought into prominence lately by his addresses before numerous bankers' conventions on the silver question, and his writings on the same subject, which have attracted wide attention. He also is a civil-service reformer.

On Thursday afternoon the President appointed Dorman B. Eaton as the Republican member of the Commission. It is believed that he will only hold the position temporarily.

The Democratic spoilsmen in Washington, who are endeavoring to make it appear that the fall elections have resulted in a defeat and not in an endorsement of the President's policy, insist now that the President must hereafter more rapidly make removals from office and appoint politicians, and they assume that the changes in the Civil-Service Commission mean that the Administration will relax its vigilance in the execution of the Civil Service Law. In this there are the best of reasons for stating that the spoils hunters will be quite as much disappointed as they were before the election. President Cleveland has a definite policy, and it is his purpose to execute it. The fact that the fall elections have gone one way or another will not cause him to deviate from the course which he has marked out. The new Civil-Service Commissioners will be held to a strict responsibility, and while it is undoubtedly true that there will be some important changes in the rules, these changes will be intended to render the execution of the law more efficient, and not the contrary.

President Cleveland has appointed Leverett Saltonstall Collector of Customs at Boston, in the place of Roland Worthington, removed. Mr. Saltonstall is a graduate of Harvard University, and a lawyer, but for some years has not been engaged in active practice. He has been a Democrat since the disruption of the Whig party, and for many years has been an active and influential member of the party in his State, repeatedly representing it in the Democratic National Conventions. In 1876 he was one of Mr. Tilden's trusted advisers.

On Saturday the President issued a proclamation commanding all persons at Seattle and other places in Washington Territory who have assembled for unlawful purposes to desist therefrom, and to disperse and retire peaceably to their homes on or before 12 o'clock, November 8. This referred to the proposed uprising of the people to drive the Chinese from that Territory.

Indictments have been found against thirty-two persons for participation in the outrages against the Chinese at Tacoma, Washington Territory. It is understood that among the persons indicted are Mayor Weisback, of Tacoma, the Police Judge of the city, the editors of two newspapers, and other persons prominent in inciting outrage. The President's proclamation and the advent of troops have had the effect of breaking the backbone of the riot at Seattle, and no further trouble is feared.

The President has recently held conferences with leading Democrats with special reference to the silver question. At one of these conferences he was very earnestly urged to take in his message the most radical ground in opposition to the silver dollar, and to declare for a single standard. The impression, however, among those who have talked with the President is, that he will recommend in his message the repeal of the law which authorizes the coinage of the present standard dollar, and the enactment of a new law which will provide for the coinage of a silver dollar so increased in weight as to be the present equivalent of gold. This is practically the John Sherman plan. These statements are not authoritative, and it may be that the President has not yet himself finally decided as to his recommendations; but this is the inference of those who have very carefully discussed this question with him.

The final action of the Congress of the States comprising the Latin Union on bimetallism is announced by Minister McLane by cable to the State Department as follows: "France, Greece, Italy, and Switzerland have renewed the monetary convention for five years; silver coins redeemable in gold; no additional silver coinage permitted; convention open to Belgium."

President Cleveland returned to Washington on Wednesday morning and immediately sent the following telegram to Governor Hill: "I have just returned from Buffalo and learned the result when nearly home. I heartily congratulate you on your election."

The hearing in the matter of the various petitions against the Bell Telephone Company was begun at the Interior Department in Washington on Monday morning. The Board consisted of Secretary Lamar, Assistant Secretaries Jenks and Muldrow, and the Commissioner of Patents.

The Creek Indians have decided not to sell Oklahoma at any price.

A receiver was on Monday appointed for Mahone's organ, the Richmond (Va.) *Whig*. This is accepted as the surest possible indication that Mahone has bid farewell to politics in Virginia. He has controlled the *Whig* for twelve years.

Full returns show that the election of local officers in this city resulted in the choice of the following: Sheriff—Hugh J. Grant, Tammany. County Clerk—James A. Flack, Tammany. President of the Board of Aldermen—Robert B. Nooney, Irving Hall and Tammany. Supreme Court Judge—George C. Barrett, united Democratic and Republican. Superior Court—John Sedgwick, Republican and County Democracy. Common Pleas Court—Henry W. Bookstaver, Tammany. City Court—David McAdam, Tammany, and Simon M. Ehrlich, Tammany.

The Republican majority in Iowa is about 6,000.

The official census of Wisconsin just completed shows: Total population, 1,563,423; white males, 806,342; white females, 748,810; negroes of both sexes, 5,576; Indians, 2,695.

Roach's shipyard at Chester, Pa., started work on Monday morning. 150 men were put to work on the cruisers.

The boycotting of the Knights of Labor against the Mallory Steamship Company and on the Gulf, Colorado and Santa Fé Railway at Galveston, Tex., continued unchanged until Sunday. The commerce of Galveston was practically suspended, no freight entering that city. The white longshoremen of the Mallory Line struck about the middle of October. Negro laborers are doing their work. On Sunday an agreement was reached to arbitrate the dispute, and the men went to work on Monday morning, breaking the freight blockade.

Ex-President Franklin B. Gowen, of the Reading Railroad Company, has issued a manifesto to the stockholders, announcing himself as a candidate for the Presidency of the company at the coming election.

A storm accompanied by a cyclone passed over the region north of Selma, Alabama, on Friday night, causing great destruction. Thirteen dead bodies have been found in the track of the storm.

The iron steamer *Algoma*, of the Canadian Pacific Railway Company, was wrecked on Friday on Lake Superior. Forty-eight lives were lost, and only fourteen were saved. The steamer struck a reef in a great gale while trying to make a port of refuge.

Ex-Judge Albert Cardozo died in this city on Sunday, at the age of fifty-seven. In 1866 he was chosen a Judge of the Supreme Court. In this position he soon attracted the attention of Tweed and his associates, and he was involved in the downfall of the Tammany Ring in 1871. Early in 1872 he was formally charged by a committee of the New York Bar Association with corrupt conduct in having illegally received for his own use a part of the fees of referees appointed by him. An Assembly committee of investigation made a majority report in favor of Cardozo's impeachment, and on the very day upon which a vote would have been reached in the Assembly upon the question of impeachment, the Judge resigned from the bench. He was a prominent Tammany Sachem.

John McCullough died at his home in Philadelphia at 1 o'clock on Sunday afternoon. He was born on November 22, 1837, near Londonderry, in the North of Ireland. His father was a poor farmer. The boy came to America when fifteen years of age, and for a time worked at chair-making. A fellow-workman persuaded him to join an amateur dramatic company. He was seen by a Philadelphia manager and engaged to play at $4 per week in 1857. E. L. Davenport encouraged the young actor. In 1860 he won the favor of Edwin Forrest, and under his tutelage advanced rapidly to be his leading support. When Forrest died, McCullough came to be acknowledged as in some respects his successor. He managed a theatre in San Francisco for ten years and prospered. Returning East, he met with general favor. For several years his financial success has been very great. His most successful rôles were *Virginius*, Payne's *Brutus*, and *Othello*. He began to fail in health in 1884, and on September 30, while acting *Virginius* at Chicago, he completely broke down. He never appeared upon the stage again. His faculties were gradually eclipsed. He was one of the most popular men in the dramatic profession.

FOREIGN.

The first meeting of the Balkan Conference took place in Constantinople on Thursday. Business was limited to the exchanging of credentials and the appointment of officials. The Conference opened with accord among the Powers on the following bases: That the treaty of Berlin be nominally maintained; that Rumelia and Bulgaria be kept separate, but be permitted a personal union under Prince Alexander; that an international commission fix a common code of laws for the two States; that their military budgets be kept separate; that the Rumelian militia be maintained, and that the Bulgarian troops be forbidden to cross their own frontier. Queen Victoria's influence

is used to keep Prince Alexander in power. On the other hand, it is rumored in Berlin that England and Russia have arranged for the Duke of Edinburgh to succeed Prince Alexander.

The Balkan Conference has accepted the proposal of Said Pasha approving the principle of a return to the *status quo ante*. At the next sitting of the Conference, France will propose to sanction the wishes of the people of Rumelia by conceding common organic statutes with Bulgaria, under one ruler, leaving open the question as to Prince Alexander. It is stated that a proposal has been made at the Conference to appoint a temporary Governor of Rumelia, and to request Prince Alexander to withdraw pending the settlement of the question.

Lord Salisbury, in a speech at the Lord Mayor's banquet in London on Monday night, predicted that the Balkan Conference would be a failure, and that its decision would be adverse to English views. He thought that if the *status quo ante* were restored, the Bulgarians would take Greece and Servia into their confidence, and Turkey would then have to combat three Powers instead of one. The Balkan movement was purely popular and not prompted by foreign influence. England earnestly desired a settlement that would satisfy the Balkan States and preserve the integrity of Turkey, which was necessary for European peace.

The London *Standard* on Tuesday asserted that Russia consented to the union of Bulgaria and Southern Rumelia on condition that Prince Alexander resigned.

Russia has dismissed Prince Alexander from the honorary command which he held in the Russian army. Such action is highly significant. It shows, first, that Russia has given up hope of Alexander's ever being anything but hostile to her and the ruler of an independent principality, and, second, it foreshadows the probability of the Conference breaking up in dissension.

The St. Petersburg *Novoe Vremya* on Friday said: "It has been learned that Prince Alexander intended to dismiss the Russian officers in his service, but that Russia recalled them, and thus forestalled him. Russian interests are closely united with those of Bulgaria. Russia, however, is not hostile to Prince Alexander."

A conspiracy among the followers of Prince Karageorgevitch was discovered in Belgrade, Servia, on Thursday. Many influential men were involved. It was the intention of the conspirators to take the life of King Milan. A number of arrests were made, and intense excitement prevailed throughout Servia.

There is reason to believe that the Servian conspiracy was the outcome of the revolutionary programme recently planned by the Pan-Slavist Committee in Rumelia, which embraced a union of Bulgaria, Eastern Rumelia, Old Servia, and Macedonia under one sceptre.

Parliament will be summoned to meet in January, and will then adjourn. During the interim, if there is a large Liberal majority, the present Ministry will resign and a new Ministry will be formed. If the Conservatives should have a majority in the new Parliament, they will prepare a programme for the session. If the parties are equally divided, the Conservatives will retain office.

Lord Salisbury delivered a speech in Victoria Hall, London, on Wednesday evening. He denied that the Tories wished to tax cereals, but said that free trade should not prevent an arrangement of duties in order to place England on a footing with other nations. To take a hypothetical case, if Spain refused to admit English manufactures, but admitted those of other countries, the raising of the duties on Spanish wines by England would not be an infringement of free-trade principles, but would be a justifiable retaliation. Nor should England be prevented from altering her tariffs in order to benefit her colonies. The speech is considered a bold bid for the protectionist vote.

Mr. Gladstone left Hawarden for Edinburgh on Monday, in good health and spirits. Unprecedented enthusiasm was shown all along the route. Mr. Gladstone made a number of short speeches by the way, arriving at Edinburgh at 4:40 P. M.

Mr. Gladstone, in a short speech at Edinburgh on Monday, said: "The Irish question is about to assume a new position because it is not now a question of cruel grievances. Thanks to the patience, zeal, energy, and good sense of Parliament, the grievances have one by one been removed. But I know very well that my fellow-countrymen in Ireland still feel and believe that one grievance remains concerning the management of their own country as opposed to imperial concerns. Formerly, the electorate of Ireland was so limited that it was almost impossible to recognize its utterances as the voice of the nation. The members were split into three parties—Parnellites, Tories, and Liberals. Now Ireland's electorate is as broad, as extended, as well qualified to speak of the wants and wishes of the people as are the electorates of Scotland and England. I am confident that England will never repent giving perfect equality to Ireland. We must look a step further forward, and expect the party which is probably in a vast majority in Ireland to demand large powers of self-government. Such will be a grave contingency. But let it not fill us with alarm, because as long as we give liberally, equitably, and prudently it will be needless to fear the results, assuming always that nothing will be demanded that will jeopardize or compromise the unity of the empire. If such a demand be made, we shall know how to deal with it. It is unjust for the people of Ireland to suppose that any other basis is contemplated. To stint Ireland in powers necessary or desirable for the management of purely Irish matters is a great error."

Mr. John Tyndall, the scientist, has written a letter in which he declines to stand as a candidate for a member of Parliament for Renfrew. He says that the permanent atmosphere of the House would not suit him. He proceeds to denounce the Gladstone Cabinet, which, he says, headed by an unstable ruler, caused five years of humiliation abroad and confusion at home. Recalling the events in the Transvaal and in the Sudan, Mr. Tyndall says: "If there be a day of retribution for the misdeeds of men, I would not willingly accompany to the judgment seat the unpurged spirits of those who were responsible for the bloodshed in the Sudan. It was a damning and damnable business from beginning to end. Yet the man who is answerable beyond all others for this waste of blood, who sent Gordon to the wilds and there abandoned him to death and mutilation, now dares to talk to the people of Midlothian as if no fleck rested upon his workmanship." Archdeacon George A. Denison, of Taunton, in an election speech recently said: "I have known Mr. Gladstone forty-five years, and I would not trust him with a brass farthing."

The trial of Mr. Stead, editor of the *Pall Mall Gazette;* Mr. Bramwell Booth, of the Salvation Army; Mr. Sampson Jacques, of the staff of the *Pall Mall Gazette*; and Mrs. Jarrett, defendants in the Armstrong abduction case, was concluded in London on Saturday at the Central Criminal Court before Justice Lopes. The Judge in his charge to the jury urged that they bring in a verdict according to the law, and not allow their personal sympathies to influence their decision. The only material question for the jury to decide was "whether the child Eliza Armstrong was taken away from her home against her father's will." They were also to determine whether the mother sold her child to the prisoners as alleged by the defence. The jury brought in a verdict of guilty against Stead and Rebecca Jarrett, and acquitted Booth and Jacques. They agreed that Stead and Mrs. Jarrett took Eliza Armstrong from her home against her father's will, but could not agree as to whether Mrs. Jarrett obtained the child by false pretences. They also agreed that the mother did not see her child, as alleged by the defence, and that Mr. Booth and Mr. Jacques were not parties to the abduction. The Judge deferred passing sentence on the convicted prisoners until after the trial of the indictment for indecent assault against Stead, Jacques, Mrs. Jarrett, and Louise Mourey on Tuesday, when he passed sentence on the prisoners as follows: Mr. Stead, three months; Rebecca Jarrett, six months, and Sampson Jacques, one month, all without hard labor; and Madame Louise Mourey, six months with hard labor.

Mr. Stead, in conversation on Monday, said: "I strongly deprecate any attempt to make a row on my behalf or to say that I have been treated unjustly, because that is not true. I made a blunder and am now paying the penalty for it. But still I am upheld by the knowledge that my blunder was better than the wisdom of the others."

The British Government has decided to send Mr. Matthew Arnold to France and Germany to inquire into the system of free schools in those countries.

The reply of King Theebaw, of Burmah, to the British ultimatum was hostile and inadequate. It was reported on Tuesday that the Indian Government had declared war against Burmah. The British expeditionary force will move immediately.

William Benjamin Carpenter, LL. D., the eminent English physiologist, is dead. He was the author of an important work entitled 'Principles of General and Comparative Physiology.' His reputation was widely extended by his 'Principles of Human Physiology.'

Robert Thorburn, the eminent Scotch miniature painter, is dead at the age of sixty-seven. He was elected to the Royal Academy in 1848.

As a result of the elections for members of the Prussian Diet the strength of the parties in the lower house is as follows: Conservatives 140, Free Conservatives 60, Clericals 99, National Liberals 70, New German Liberals 44, Poles 14, Danes 2, Guelphs 3.

A semi-official notice published in Berlin states that Count von Hatzfeldt will retain his post in the Foreign Office, as there is no candidate at present available for the place. This disposes of the rumor of the appointment of Count Herbert Bismarck.

The Paris *Matin* asserts that President Grévy's recent accident was due to a slight attack of apoplexy, and that this renders impossible his reëlection to the Presidency.

Marriotti, the would-be assassin of M. de Freycinet, has been pronounced a monomaniac.

The Pope has issued an encyclical letter quoting the syllabus of Pius IX. against modern civilization and approving it. It denounces popular government, and insists upon the obedience of subjects to their sovereigns, and upon sovereigns' obedience to the Pope. Religion, the Pope says, ought to enter into daily life. He urges Catholics to take part in all municipal political elections.

King Alfonso of Spain is seriously ill.

The Russian harvest of 1885 is above the average for winter wheat, but below the average for spring wheat. The deficiency in spring wheat is due to drought. Rye is slightly above the average. The oat crop is bad. Other cereals are below the average. The beet and tobacco crops are good. Hay and fruit are inferior. The total wheat production is 36,000,000 quarters, which is 20 per cent. under the average.

Osman Digna is not dead, as has been several times reported.

Six thousand Egyptian rebels are advancing toward Wady Halfa.

The last spike in the Canadian Pacific Railway was driven near Eagle Pass, B. C., on Saturday. Through trains will not be run until May 1st, 1886.

THE REPUBLICAN LESSON.

THE most important fact of American politics for political managers, during the last twenty-five years, has been that New York is an uncertain State, with a large, loose, shifting, and independent vote. Other large States—Ohio, Illinois, Pennsylvania, Massachusetts, even Indiana with the aid of the post-office—could at any time since 1860 have been counted on with tolerable certainty. New York never could be. It went Democratic in 1862, the second year of the war, again in 1868, in 1870, in 1874, in 1876, in 1882, and 1884. It gave Cleveland a majority of 192,000 for the Governorship in 1882. It gave him only a majority of 1,000 for the Presidency last year. And this fact must be taken in connection with the other most important fact, that the size of its vote in the electoral college gives it almost invariably, in the present division of parties, the power of awarding the Presidency every four years. Consequently, the Republican party, whatever else it may have, if it have not New York, is nothing but a sounding brass or a tinkling cymbal. In order to do any of the great things it sets before itself in its platforms, or elect any of its great and good men to the Presidency, it must have a majority in this State.

The application of this now well-settled rule to the late election seemed easy enough. The only possible hope of electing Davenport lay in catching the loose, shifting vote, which is not strongly attached to either party, and which, in spite of the defection of the Irish from the Democrats last year, put Cleveland in the Presidential chair. We care not of what kind of people this vote is made up. Call them Independent Democrats, or Independent Republicans, or Mugwumps, just as you please. What is important for the purposes of our argument is that they exist, that they hold the balance of power, and that any party which means to carry New York must somehow placate them, and that no party can count on their support in virtue of its past performances. Now, if there be anything certain in politics, there are two things certain in the politics of this State: one is, that this class of voters is sick of what is called "the bloody shirt"—sick, that is, of that queer claim of the Republicans that, although, according to their own story, they failed during their twenty years of power to secure to the negro the free exercise of the franchise, nevertheless the fact that he is still deprived of it is a capital reason why they should be kept in power indefinitely. Another is, that the Independents are not afraid of the Democrats, and do not believe Republican stories about their wickedness, and about the ruin which is sure to follow their coming into power.

Now, with these two facts before them, it seems as if ordinary business sense ought to have made the task of the Republican managers in the late canvass easy. They ought to have nominated a highly respectable candidate, who, as needing no apologies or whitewashing, would form a marked contrast to the grotesque personage whom they tried to force on the voters last year. This they did in Mr. Davenport. They ought then to have concocted a moderate platform, devoted to State affairs, avoiding or dwelling lightly on the topics on which public sentiment in this State is most divided, speaking strongly for reform, and proving the sincerity of their speech, and at the same time conciliating Democratic friends of civil-service reform by frank and generous recognition of the very remarkable contributions to the cause of reform which the Democratic President had made. The high-tariff idea, too, as the Governor and Legislature of New York have but little more to do with the United States tariff than the Prussian Landtag, might very well have been passed over lightly or dropped out of sight, that also being a topic on which the Independent voters are divided or uncertain.

We do not need to say what kind of platform was drawn up. The Convention gave the drafting of it to a hack politician of the most mercenary and convictionless type, as impervious to new ideas as a janitor in a Dominican monastery; and something was produced which seemed in every line intended to repel and disgust the voters on whom, at every election, victory in this State depends. It insulted the President, and in such an ingenious way as to insult also the majority which voted for him last year. It misrepresented and belittled what he had done for reform, in such a way as to convince people that Republicans cared nothing for any reform by which they did not profit. To crown all, it again thrust in our faces the affairs of South Carolina, and Georgia, and Mississippi.

We felt, as our readers know, from the moment that this extraordinary document appeared, that the result of any opposition to the Democratic spoilsmen in this State must be very doubtful, and that the grossly insulting references to the President would probably, as a matter of self-respect and personal pride, remove any lukewarmness he may have felt about the Hill candidacy. We did our best to minimize the influence of the platform, nevertheless, and to fix the thoughts of the voters on the efforts made to minimize it by others, and on the good quality of the nominations, though the letters we received from Independents from both sides showed us it was very uphill work. If any success whatever attended these efforts, it was neutralized as soon as the Republicans began to produce their orators. General Carr no sooner appeared in public than he denounced the President and his Cabinet, in language worthy of an insane person, as "traitors and rebels." Soon afterwards Foraker and Logan were actually brought here to bellow about the "bloody shirt," on their way to support in Virginia the candidacy of one of the most worthless and dishonest adventurers ever seen in American politics—and this in spite of the acknowledged fact that a voter converted or confirmed in the Republican faith by bloody-shirt oratory could not be found in the whole State, and in spite of the fact that thousands have been alienated or offended by the connivance of the late Administration and of the Republican Senators at Mahone's rascalities. Then, too, in this city the Republican organ devoted itself day by day to sneering at the reformers, and warning them away from the Republican ticket, and finally illustrated Republican principles by supporting the attack on Judge Sedgwick because he did not vote for Blaine, and trying to whitewash such local candidates as Gibbs.

To all these things must be added the fact that the Democrats are now in power and the country is still prosperous and happy, and the Republicans are thus deprived of one of their most effective electioneering weapons—the prediction of the ruin and disorder which would follow Democratic accession to power. The Democrats thus carry into every election some of the momentum of success. They will never be again overthrown in this State by opposition conducted as the Republican opposition now is. The Republican party, if it means to regain New York, must get rid of its Blisses and O'Briens and Biglins, and discard "the bloody shirt" finally and forever. Its orators must be tied down to things which New York voters can influence, and above all it must prove its sincerity in the cause of reform by praising reform wherever it sees it, instead of ridiculing and lying about all good things which it has not itself brought about. It may refuse to do these things in Ohio or Illinois, or Massachusetts, or may run a notorious rascal for high office in Pennsylvania, without exposing itself to defeat; but in New York it must do them or die out.

THE NEW OPPOSITION IN MEXICO.

IT has been common to point to Mexico as the standing proof that a liberal and enlightened form of government, so far as Constitution and statutes can secure it, may be easily perverted into a centralized and despotic oligarchy. This might be admitted without at all necessitating the conclusion that the temper and education and civilization of a people are of so much more importance than their form of government as to make the latter a matter of indifference. For, all other questions aside, it makes a great difference whether an agitation to better the condition of a country and to secure popular rights has to take the form of outright revolution, or that of an appeal to guaranteed but suspended liberties. It is the difference between revolution and restoration, between anarchy and patriotism. President Diaz, as was the case with his predecessors, has found it easy to evade many a provision of the Mexican Constitution, as long as no great popular suspicion or feeling was excited. But now that he finds his Government confronted by a group of determined deputies who are vehemently appealing to undoubted constitutional rights, and evoking a growing sentiment among the people that their chartered liberties are in danger, he is realizing how different are the fasces of the Republic from the sceptre of the monarchy.

It is in this light, in our opinion, that we are to look at the recent stormy sessions of the Mexican Congress, of which the telegraph has given fragmentary accounts. A new phase of Parliamentary Government has been entered upon. A new Opposition has arisen. It is new in not being, as far as yet appears, personal—that is, allied to the fortunes of some political chief. It is new in its method, that of resolutely and incessantly demanding a return to the Constitution. A mere handful of men, bold to reck-

lessness, ready to sacrifice their political future, and, apparently, in a fair way to do it, eloquent, thoroughly versed in legal and parliamentary procedure—this Opposition in the Mexican Congress is a new and notable phenomenon in Mexican politics. The Opposition press are not guilty of great exaggeration in calling it a resurrection of Constitutional Government.

The details of the attack which this Opposition is making upon the Administration, while interesting and even exciting in themselves, are not, after all, of so much significance as the larger fact of the new spirit and method of attack. It is not one chief, nor even one party pitted against another, but the Constitution against its perversion. The new movement first took form in the last session of the Mexican Congress, over the question of approving the accounts of the Gonzalez Administration, resulting, as will be remembered, in presenting the ex-Treasurer of the Republic to the Grand Jury, and in bringing grave charges against Gonzalez himself. Many were quick to say, at that time, that this was but a new move in the game of personal politics, being only a shrewd manœuvre on the part of Diaz to break with his old friend Gonzalez, and to cast discredit upon the latter's Administration. But that view is no longer tenable. In the present session of Congress the Opposition is as fiercely fighting Diaz as it before fought Gonzalez. The President no longer conceals his enmity to those men who are neither Gonzalists nor Porfirists, but Constitutionalists. He evidently laid his plans betimes to crush out this Opposition, in numbers so contemptible, in methods and in the popular sentiment back of it so formidable. The first part of his programme was the muzzling of the Opposition press, undertaken and measurably accomplished last July. The gain effected in this way was slight, however, as it was offset by the intense popular indignation caused by the arbitrary measure. Having thus, as he thought, deprived the Opposition of the powerful aid of the press, General Diaz went on to detach from his enemy the other ally, which had before lent such important assistance, the spectators in the galleries of Congress. Overwhelmingly outnumbered on the floor, the Opposition had been able to carry the galleries with them invariably. Now this has all been changed. Admission to the galleries is allowed only on tickets, which few but friends of the Government manage to obtain. The secret police swarm in all parts of the old theatre where Congress sits. No sooner does an Opposition deputy rise to speak than he is assailed with cries and epithets from the claque in the gallery.

Nevertheless the fight has been kept up bravely. Bills are introduced, interpellations are urged, speeches are made, which have no influence upon legislation, it is true, for the Opposition is always voted down fifteen to one, yet which are producing a tremendous effect upon public sentiment. The fearless deputies, Duret, Miron, Viñas, are hailed on all sides, as they walk the streets, as the only true patriots in Congress. Always outvoted, they are never suppressed. For this Congress, at least, they will remain a thorn in the flesh of the Administration.

The points of their attack may be stated briefly. The first was the scandals and abuses connected with the sales of public lands. In the present financial straits of the Administration no source of revenue has been overlooked. It is charged, and apparently with some truth, that the recent enormous increase in the sales of land belonging to the nation has been due to the fact that the Government is in sore need of money, and that it has been disposing of these lands at ruinous rates, often on worthless security, to unprincipled speculators. Certain it is that in some of the States, for example Chihuahua and Zacatecas, a practical injustice on a large scale has been attempted in an order for the resurvey of all private holdings, and the lapsing to the nation of all estates to which the occupants cannot show a flawless title. Recalling the fact that the first titles were acquired by conquest; that the frequent civil upheavals have been attended with confiscation and grants, renewed and reversed again and again until the legal status of vast tracts is involved in inextricable confusion; also, that the measures of area in common use among the farming population are exceedingly vague, and it will be understood with what indignation and alarm the order for a general resurvey with proof of title is looked upon by those interested.

The Opposition brought in two measures on this subject. The first was a bill enacting that the President should hereafter make no contracts for the sale of public lands without submitting them to the approval of Congress. This was overwhelmingly defeated. The second was an interpellation, addressed to the Secretary of the Interior, demanding a list of all the contracts hitherto made. Such a list was read to Congress, but all debate upon it was cut off by a forced adjournment. The attack was renewed in a demand upon the Secretary of the Treasury for the authority of law under which the President had enacted the funding measures of June 22. This interpellation precipitated a furious debate, which resulted, however, in no definite issue. Then came the revival of the old fight over the Gonzalez accounts, October 30, in the shape of specific articles of impeachment against the ex-President for misuse of public funds.

What may be the motives of these Opposition deputies, or what will be the outcome of their efforts, we do not undertake to say. The noteworthy thing is that they are working along a line and in a spirit which give hope of better methods in the Mexican experiment of representative government. They present a phenomenon which cannot fail to be of interest to the student of Mexican politics.

THE DISESTABLISHMENT PANIC IN ENGLAND.

None of the probable results of the extension of the suffrage in England seemed less probable last spring than that the question of disestablishing the Church would be the leading question in the present canvass. None of the Liberal leaders have pushed it into the foreground. In fact, most of them have done something to keep it in the background. What little was known of the mind of the new county voters (and it was very little) led to the belief that they would be more attracted by some of the baits thrown out by Mr. Chamberlain—such as free education, a graduated taxation, the appropriation of land for resale to laborers in small lots, or some measure for the breaking up of large landed estates—than by anything in the nature of an attack on the Church.

As is so often the case in politics, however, it is the unexpected which has come to pass. The canvass only began in good earnest in August, and it would now appear to have been ascertained by the Radical politicians, to their own satisfaction at all events, that what the new voters most of all desire is the severance of the connection between Church and State. This is the question which is to-day uppermost in England, and it is infusing a bitterness into the canvass such as has not been witnessed since 1832; for it has brought the clergy high and low into the arena, and, as we all know, when the clergy become polemical in politics, they handle their opponents, as the saying is, without gloves. Their violence of language has in fact already reached such a pitch that it has led one of their best Church organs, the London *Spectator*, to address a remonstrance to them, entitled the "Righteousness of Moderation," which is, under the circumstances, somewhat amusing reading. It is neither more nor less than admonition addressed to bishops, priests, and deacons against the use of bad language on the political stump. The Bishop of Peterborough, perhaps the foremost orator of the English Church, is remonstrated with for charging the supporters of disestablishment with "impudence," and "malignant ingenuity," with "rancorous hate," and with concealed desire "to break up the Church into indefinite groups," and "to produce a crop of future schisms." The Bishop of Winchester is taken to task for denouncing disestablishment as "a great national sin." Worse still, the Bishop of Durham, better known as Canon Lightfoot, one of the foremost scholars in England, has to be expostulated with for talking of disestablishment as not "only a national disaster, but also a national crime," and, as "a wholesale alienation of property, a disregard of personal and corporate rights, and such a violation of all the most sacred associations and feelings as would leave England a 'lacerated and bleeding mass.'" In fact, much of the talk on the Church side is as passionate and worldly, as extravagant, as little burdened with qualifications or reserve, as an "arraignment" plank in one of our own political platforms.

On the side of the extreme Radical politicians undoubtedly there is a good deal said and done to try the souls of the clergymen. Nothing could well be more so than the heaping up of proofs that the peasants of the counties who are now to have the vote, and whose protectors and guides the clergy have been in a special degree for so many centuries, have no attachment to the Church, and as a general rule no liking for the parson, who is, in their eyes, simply a sort of partner of the squire, or, in other words, a member of a caste, who preaches down to laboring men, without any share in their joys or sorrows. This appears to be true of that portion of the laboring class who do not care enough for religion to care where they worship. Those who do care have almost universally, especially in the

manufacturing districts, gone over to Dissent, where they are ministered to by a man nearer to themselves in sympathies and ideals.

The case of the moderate supporters of disestablishment has recently been stated in the London *Times* by Mr. Miall, the son, we believe, of the former editor of the *Nonconformist*, for nearly fifty years perhaps the foremost Dissenting layman in England. Dr. Parker, too, the minister of the great Congregational Church in London known as the City Temple, appears in the same number to argue against the Bishop of Peterborough, on the deadening effect of the connection with the State on the Church's spiritual life. Mr. Miall says that the very strong hold Protestantism and Evangelicalism still have on the people of England is due to the Nonconformists; that the national Church is every year becoming more and more "sacerdotal" in its constitution and tendencies; that a recent episcopal consecration in St. Paul's, at which Canon Liddon preached the sermon, recalled "the days of Laud"; that these doctrines and tendencies, from the Nonconformist point of view, offer a barrier to Christian union and coöperation, and make the Church of England more and more "an exclusive sect." He says that what has created the panic in the episcopal bench is, the discovery that 400 Liberal candidates are pledged to disestablishment. But, he asks—

"Why should this great fact excite surprise? Have not the clergy, especially in the rural districts, always been an effective corps of election agents for the Tory party, and have they not, for the most part, down to the time when the Primate and a few Bishops voted for the Franchise Bill, steadfastly opposed every measure of civil and religious freedom which is now inscribed on the statute book? If they had had their way, the Test and Corporation Acts would never have been repealed, Church rates abolished, or the universities thrown open. The most persistent efforts on the part of Dissenters were required to get these measures passed, owing to Church obstruction. It is barely seven years since the vehement protest of 13,000 of the clergy prevented Mr. Disraeli from throwing open the parochial churchyards to Nonconformist services, which two years later Mr. Gladstone carried. Dissenters and Liberals also cannot forget these things, and naturally trace them to the supremacy conferred by law on one particular religious body.

"Then we are told by the Bishop of Rochester that if the Church is disestablished our villages will become paganized. And this is said by a prelate of the richest Church in the world. Of course it is assumed that Nonconformists are of no account in these country districts. Is that so? Dr. Thorold can hardly fail to know that in rural England there is a perfect army of Free Church ministers and lay preachers, who, without help from the State, are zealously engaged in evangelizing the population. Their teachings may not be of a very refined nature; but, looked at from the social point of view, they are analogous to, and as efficacious as, those of the Welsh pastors maintained out of the poverty of their flocks, which enable judges and chairmen of quarter sessions frequently to receive pairs of white gloves in recognition of the absence of crime in the Principality. Would rural Wales be paganized by disestablishment? If not, why should rural England be?

"Another point in relation to our agricultural population must have been recently suggested to many of your readers. For generations they have been legally committed to the oversight of the country parsons—the 'educated gentlemen' of the district. The peasantry are now enfranchised, and what is the apparent result? From nearly every county comes the news that they are not only going to support the Liberal party, but that disestablishment is the first article of their creed. This remarkable phenomenon admits of various explanations. One can be given in the words of the Rev. C. W. Stubbs, vicar of Grandborough, Bucks. 'That, as a body,' he says in his 'Village Politics,' 'the country clergy have been benevolent, kindly, and charitable, goes, of course, without saying. Their philanthropic intentions have been for the most part admirable. Coal clubs, blankets, tracts, soup, castor oil, doles of all kinds—these have been given with a free hand. But what has been the net result? I confess myself to some embarrassment when I am asked by Joseph Arch this question: 'You clergy of the Established Church have had the agricultural laborers in hand at any rate for 300 years, to do pretty much what you liked with, and what have you made of them?' Until quite lately could the answer be anything but this—'A class of men the stolid helplessness of whose ignorance has become proverbial'?"

The worst of this terrible indictment is that it is every word true. The connection of the Church with the State in England has produced a body of clergy who have never been equalled in any country, taken as a whole, for culture, learning, and social gifts and graces. But as the agents for the diffusion of religion and morality among the poor, or for the reconciliation of religion with social and political progress, they have succeeded no better than, if so well as, the Catholic clergy of the Continent.

That the Church will be disestablished by the coming Parliament is, however, very unlikely. It has a powerful hold on the affections of the aristocracy and of the upper middle class. It is, in the minds, too, of a very large body of by no means religious Englishmen, identified, in a manner which most of them would have some difficulty in explaining, with the story of English greatness and glory. And though last not least, the Church is one of the richest corporations in the world, and will have on its side, against any attempt to divert its revenues from their present uses, all that deep-rooted respect for vested interests which has been so great a power in English politics, and will probably outlive a good many years of the most Radical legislation.

HUNTERS AND TROTTERS.

The horse show which deservedly attracted so much attention last week in this city, has furnished a sort of battle-ground between what we may call two somewhat opposing horse-ideals, the English and the American. The show was got up and is managed in the main by gentlemen who have acquired English tastes about the horse and his uses, and there have consequently been numerous and often somewhat bitter complaints about the greater encouragement given by the distribution of the prizes to the English than the American type of horse—or, to put it concisely, by the preference shown for "the hunter" over "the trotter." It is said, and with a certain show of reason, that the trotter is the true American horse; that he is one of the glories of the country, and the object of intense popular admiration everywhere; that the amount of money invested in him is enormous, and that he is not only American but *sui generis*. The horses of no other nation can compete with him at all in his own peculiar work. In fact, he may, not inaccurately, be called altogether a new type of horse, and, in any horse show held on American soil, ought to be the first object of attention.

The hunter, on the other hand, it is said, is an animal which in this country numbers about 1 to every 1,000 of the trotter, and displays his excellence only in a sport indulged in by a few dozen persons of foreign tastes, which the mass of the community look on as ridiculous, while the trotter is seen on every road, and is the pride and delight of every village, and may be and is owned and enjoyed by tens of thousands who could no more "ride to hounds" than perform on the tight-rope.

The truth of the matter, however, as is so often the case, lies between these two views. The trotter, dear as he is to the American heart, and much pleasure as he gives, and enormous as are the sums expended on him, is really a less useful animal than the hunter. The enormous rewards which the national taste has offered during the last fifty years for breeding him, have really done a great deal to leave us worse provided with light-draught animals than any country in the world. The effect of the cultivation of the trotter on the American working horse has been very like what the effect of racing two year-olds would have been in England had it not been neutralized by the demand for hunters. Our pleasure carriages all over the country, when we leave the light wagon, are horsed by animals not up to their weight, either in size or bone—an evil which is aggravated by the heaviness of the roads. In some parts of the country, New England, for instance, where double teams are rare, nothing is often more painful than the smallness and lightness of "the family horse," compared to the size of the "carryall," filled with the family, which he has to draw. Until a very recent period nearly every American horse, sold for light draught at a moderate price, was simply a horse which had failed to develop trotting speed; and as trotting speed was often found in very unpromising frames, and sometimes without any pedigree, breeding for points was very little attended to by the farmers who raise most of our horses. Then, too, it must be remembered that capacity to trot one or two miles as fast as an express train, curious and interesting as it is, is really no more useful to the public which does not own trotting horses, or go to see trotting matches, than the capacity to gallop a mile in a minute and a half in a flat race—that is, it is only useful so far as it keeps up the popular interest in horses, and causes breeders to produce horses which will have some of the qualities of great trotters. A trotting race, viewed from the utilitarian point of view, is not one whit more respectable than a fox hunt. One is, like the other, an amusement, and, as an amusement, has no advantage over the other, except in amusing greater numbers.

Indeed, those who wish to see the breed of American horses improved for the ordinary uses of life, and especially for light draught, ought rather to encourage hunters than depreciate them. The American horse world is, in other words, far more in need of the hunter type to-day than the trotting type. The English are much more indebted to hunting for their good carriage horses than they are to racing. The excellence of a hunter consists in his ability to "jump, gallop, and stay," or, in other words, in great power of limb and great endurance and courage. To breed good hunters is to develop these qualities, and they are the qualities that make the best horse for harness as well as for the saddle. That they are

used by a small set of pleasure-loving young people in this country to enable them to engage in an amusement which the public considers ridiculous, does not lessen their value. If it in any degree fosters breeding for bone, and muscle, and short backs, and short legs, it does good service, considering the enormous encouragement which the trotting course gives to the "rangy," long-legged small horse which one sees in the light wagons of the sporting men. The hunter type of horse is in fact the most useful in the world for general purposes. It has been developed and is maintained in England by the hunting. On the Continent it receives most of its encouragement from the demand for cavalry horses for the huge armies. In this country it has literally until very recently had no encouragement whatever. We ran entirely to trotters until the importation of the Percherons began. This, however, is the other extreme. It may be said with confidence, either to the American family man who wants a single horse for his rockaway, or the expressman who wants one for his wagon, or the dyspeptic who wants one to shake his liver up in the Park or on the country roads, or the tourist who wants to drive forty miles a day with his wagon among the hills, that a good hunter, which can carry 175 or 200 pounds across country, is the best kind of horse he can buy, and he must not be deterred by hearing that he is "quite English, you know." A good horse is of no country or clime, and is not identified with any form of government.

ENGLAND: STATESMEN ON THE STUMP.

LONDON, October 27, 1885.

GREAT battles now usually begin with what newspaper correspondents call an "artillery duel." Shots are interchanged at long range by the batteries of cannon, before the masses of infantry are moved up toward one another and the shock of encounter arrives. Similarly, our electoral contest here has opened with discharges of heavy shot from leading men on both sides, each answering the other, until the decisive days of polling are at hand. Those days will come about or soon after the 25th of November, lasting on till perhaps the 5th of December. Before the end of November the issue will have been virtually decided, and the curiosity now so intense have received its satisfaction.

The chief speakers on the part of the Ministry have been Lord Salisbury—who is for this purpose much their best man—Sir Michael Hicks-Beach, Sir Richard Cross, and Lord Randolph Churchill. The ex-Ministry, now in opposition, have been represented by Lords Hartington, Derby, and Rosebery, Mr. Childers, Sir William Harcourt, Sir Charles Dilke, Mr. Trevelyan, and, above all, Mr. Chamberlain. For the last three weeks, few days have passed on which the newspapers have not contained at least one or two speeches by these chieftains, while the number of minor combatants is infinite. At present, in every one of our English and Scottish constituencies, over five hundred in number, there are meetings held almost nightly, at which the candidates and their friends harangue the people, whose appetite for speeches does not seem to grow satiate with the abundance provided.

Although the average intelligence and political knowledge of British are still below those of American voters, there is less rhetoric and more reasoning in the election speeches here than seems usual in one of your Presidential or Congressional campaigns. The reasoning may not be good—very often it is not; but the speaker professes to reason, and seldom appeals, except when some religious question is involved, to the imagination or emotions of his audience. To the reader of the public press, nearly all these harangues are drearily dull; but the masses, enjoying the excitement of an election and the sense of power it brings home to them, flock to the meetings and gladly listen to the same platitudes night after night. There are no brass bands, no banners, no processions; for the two former of these things are forbidden by our election law, and the latter has never come into fashion in England. Hence a meeting is the only means of creating enthusiasm; and in the agricultural districts particularly, where the laborers have never before enjoyed the franchise, we are told that a candidate makes way in pretty exact proportion to the number of small local meetings which he holds. The amount of political education thus given is not to be despised, and patriotic aspirants find therein some consolation for the fatigues they have now to undergo in talking themselves hoarse in small, hot, ill-ventilated rooms, for weeks together. On the other hand, while the number of meetings is three or four times as great as it was thirty years ago, the practice of visiting and soliciting the vote of individual electors is dying out. The constituencies are now so large that it is scarcely possible to canvass personally any large proportion of them, and the candidate's time is deemed to be better spent in helping to organize ward or district committees and in holding evening meetings.

In the main debate between the present Ministry and the Opposition leaders the latter have the advantage of a larger number of well-known names and able orators. The minor members of the Tory Government, persons such as Mr. Chaplin, or even Mr. Stanhope and Sir R. Cross, have no hold at all upon the country, are scantily reported, and produce little impression. They have, however, the advantage of harmony among themselves. Taking their cue from Lord Salisbury, they have all held much the same language. The defence of the Established Church and of religion which depends upon that Church is their first theme; their second, the faults and follies, more often described as crimes, of the Gladstone Cabinet in its Egyptian policy; their third, the denunciation of the revolutionary schemes and methods of the Radicals. Cautious and temperate reforms they do not object to, and you may read many election addresses or speeches of Tory candidates whose language scarcely differs, so far as positive promises go, from that of the moderate Liberals. Indeed, Lord Salisbury's programme, set forth in his first great speech, included most of Mr. Gladstone's proposals, although somewhat reduced in scope. On Ireland Conservative speakers are usually silent, or confine themselves to such safe generalities as that the unity of the British Empire must not be destroyed. Sometimes they take credit for having dropped the Crimes Act, and reproach the Liberals with their coercive legislation. This is the line taken by a few bolder spirits, following the lead of Lord Randolph Churchill. To the great majority it is distasteful. They are secretly ashamed of Lord Randolph's behavior toward the Parnellite party, and would gladly give forth the fervid invectives against sedition and spoliation which sprang formerly to their lips whenever Irish subjects came up. However, the word has gone forth not to quarrel with the Irish Nationalists: it is right in itself, whether or not it is consistent; and it is pretty generally obeyed by Tory speakers great and small. Hence, as the Liberals have also no motive for saying any more about Ireland than they are forced to, and really do not quite know what to say, the whole topic of Ireland figures very little in the oratory of either side. That the most serious and pressing of all our problems, and the one which foreign nations watch with most curiosity, should be the one least discussed at this great crisis, may seem strange, indeed. But it is true. Every one fears the subject and hates the subject: it is put away by common though tacit consent.

While harmony, at least external harmony, reigns among the Tories, the Liberal ranks are divided by a serious schism. There have always been two wings in that party—an advanced or Radical group, and a moderate (now often called Whig) group. During Mr. Gladstone's late Government the tendencies to disunion were restrained by his authority and popularity, and by the disposition of all sections of the party to fall into line for the sake of supporting its leaders against the attacks of an angry Opposition. Now, however, that the Liberals are out of power the centrifugal forces operate with less restraint. Mr. Chamberlain was the first eminent politician to take the field in this campaign. He has become an extremely telling speaker. Without an imagination or gift of touching the emotions comparable to those of Mr. Gladstone and Mr. Bright, he is not inferior to them in the skill of putting a point clearly and forcibly and popularly, so that it shall come right home to the minds of those who listen or read. In a series of highly finished orations delivered in the south, middle, and north of England, as well as in Scotland, he has unfolded a programme of comprehensive changes which has fascinated the masses, alarmed the timid holders of property, and made himself extremely popular with the more advanced, which is also by far the more numerous section of the Liberal party. He is now the most conspicuous figure in the party after Mr. Gladstone, and in some quarters fully as influential, because he is still in middle life, while the career of the nominal leader cannot be a very long one. Already many of the new candidates are professing their allegiance to him, and commending themselves by the zeal with which they advocate his platform. It goes beyond that set forth by Mr. Gladstone chiefly in two points, viz.: gratuitous education in elementary schools, and the suggestion that local boards should have the power of taking land from its proprietors (possibly at a less price than such land would fetch in open market) for the purpose of letting it out in small allotments to the rural laborers—a class whose condition certainly calls for remedial measures. He has also advocated a graduated income tax and the payment of members of Parliament, but the latter of these proposals has not been pressed, and a graduated succession duty will probably be accepted as a substitute for the former.

The most prominent representative of the other Liberal wing is Lord Hartington, who, as leader of the Liberals in opposition from 1875 till 1880, has been long regarded as Mr. Gladstone's heir apparent in the leadership of the party. He has intimated his dissent from several of Mr. Chamberlain's views, and is indeed so far from being a Radical that many Tories profess to hope he will some day move toward their ranks. Nothing is less likely, for he is a Whig by strong family as well as personal associations, with a hearty dislike of the new Toryism invented by Disraeli, which Lord R. Churchill has been occupied in rehabilitating. A position generally similar to Lord Hartington's is taken up by Lord Derby and Mr. Childers; it is that which most of the upper-class Liberals would like to hold, were they not afraid of being denounced as "weak-kneed." But the most powerful exponent of this more cautious policy is Mr. Goschen. Although his dislike of the extension of the household suffrage to counties prevented him from being in Mr. Gladstone's Cabinet, he has remained a member of the party, usually voting with it,

but exercising an independent and sometimes severe criticism. The powerful election speeches he has been lately delivering have been directed chiefly against Mr. Chamberlain's propositions, which he attacks from the point of view of a cautious economist, not always disapproving the ends which the latter seeks, but doubting the efficacy or condemning the dangers involved in the means toward those ends. Mr. Chamberlain and Sir C. Dilke reply by complaining of such criticism as cold and barren, and intimate that its author can hardly be deemed a Liberal. Thus we see a sort of triangular duel in progress: Lord Salisbury and his friends are firing into Mr. Chamberlain; the latter, while returning their fire, is maintaining a not less warm combat of his own with Mr. Goschen. The great, though dissimilar, powers of these two men, and the probability that if Mr. Gladstone returns to office he will invite both of them to join his Ministry, make their strife, which has been conducted so far without personal acrimony, very interesting. It is the most noticeable feature of the present campaign, and may possibly foreshadow struggles in the next Liberal Cabinet, perhaps to be followed by an open breach in the Liberal party. Impartial observers, while they regret that the Radical leaders should seem unwilling to accept as ally a man so capable as Mr. Goschen and so earnest a reformer in certain directions, declare that the latter would consult his own reputation and strengthen his future if he would put forward positive solutions for the social and moral evils that surround our poorer classes, instead of mainly occupying himself with destructive criticisms of the schemes of others.

It might be concluded from the contents of our newspapers and the multitude of meetings and speeches all over the country, that the nation was in a state of high tension. So far as I can judge this is not the case. The temperature will rise when the day of polling approaches, but I doubt whether even then it will reach that of 1880. In the general election of that year both the people and the candidates were thoroughly excited. The enthusiasm for Mr. Gladstone on the one side, for Lord Beaconsfield on the other, was intense. Great principles were deemed to be at stake. Great and splendid results were anticipated by either side from their victory. Now, although the people flock to meetings and cheer lustily for their chiefs, one can perceive that they are not carried away by any tide of feeling. Many candidates have confessed to me that they found it hard to work themselves up to the point necessary to deliver a passionate declamation, and those particularly who stood in 1880 wish they could recover the *élan* which carried them along in that year. I do not mean that there is apathy, like that which caused the Liberal defeat in 1874. The elections are being well fought on both sides, with organizations more perfect than ever before, with more speaking and less expenditure of money (for our new law against bribery and treating is very stringent), with an interest in the issue on the part of the new voters in the counties, particularly the agricultural laborers, exceeding what had been hoped for. But secret misgivings as to their strength and as to the wisdom of their Irish policy blunt the zeal of the Tories; while the Liberals, remembering the lamentable errors of their Government in Egypt and Sudan, and contrasting the end of this dying Parliament with its beginning, cannot recover the joyous hopefulness of 1880. The appearance in the field of Mr. Gladstone, promised about the 11th of November, may perhaps warm the feelings of friends and foes.

Y.

PRINCE WALDEMAR'S MARRIAGE.

PARIS, October 23, 1885.

WE always feel a little shy about speaking of people whom we are fond of, and whose life has been to a certain extent interwoven with our own; we feel this embarrassment even when we have nothing to say but what is pleasant and agreeable. I am, therefore, obliged to make a certain effort to speak of the marriage of the oldest daughter of the Duc de Chartres with Prince Waldemar of Denmark. I feel, however, a little encouraged by the thought that the Duc de Chartres bears an historic name, that all the papers will be full of the details of this marriage, and that I cannot commit anything approaching an indiscretion in saying a few words on an event which belongs to newspaper notoriety. I feel also encouraged by the remembrance that the Duc de Chartres has only friends in America. He undertook the defence of the American Union, with his brother, the Comte de Paris, and his uncle, the Prince of Joinville, at a time when the cause of the Union was almost despaired of in Europe. He obeyed the chivalrous instincts of his nature in the United States as he did in Italy, when he fought by the side of the French army on the staff of King Victor Emmanuel; as he did afterward, in the unhappy war of 1870, when he rushed first to Paris on the 7th of September, and, not being allowed to remain there by the Government which called itself the Government of the National Defence, he concealed himself, assumed the name of Robert le Fort, made the campaign of France, and deserved to receive the cross of the Legion of Honor from the hands of Gambetta. I hope I shall not be deemed a flatterer if I say that the Duc de Chartres is essentially a chivalrous character. It seems as if all the chivalrous traits of his family had, by a sort of selection, concentrated in him; he is ardent in patriotism, in friendship, generous, open-hearted. When Marseilles was in terror, during the last visitation of the cholera, he left Paris, went to Marseilles, entered every hospital, comforted the dying and the living.

His character belongs to the public, and I only repeat here what everybody knows. I will only say a few words of his wife, the Duchess, who is the daughter of the Prince de Joinville. She is a devoted wife, a devoted mother, a devoted friend; she never allowed her personal sentiments to stand between her husband and his natural or even self-imposed duties. She has been well rewarded in her children. The eldest daughter, who was married yesterday to Prince Waldemar of Denmark, has all the animation and spirit of her father, softened by the grace and dignity of her mother.

This marriage was interesting in many respects. The Orleans family had not for a long time formed new ties with the royal families of Europe. It stood a little isolated, having none of the advantages of a reigning dynasty, and preserving its high position among the royal families by the mere force of tradition, as well as by the excellence of its members. As Prince Waldemar is only a cadet, he had to find his bride in her own country, and therefore the marriage had to take place in republican France. The reception given some time ago to the King of Spain in Paris has not been yet forgotten, and, though it is certain to me that on an occasion like this the French Radicals would have remained quiet, and would not have tried to make any scandalous demonstration, the diplomatic world became uneasy, and some of those who would have liked to assist at the ceremony at Eu were prevented, and followed the old proverb: "In doubt, abstain." The young Prince of Denmark is connected with the greatest houses of Europe—with England, with Russia. One of his sisters is the Princess of Wales, another is the Empress of Russia; one of his brothers is on the throne of Greece; one of his sisters is married to the Duke of Cumberland. It was expected that the Empress of Russia would come to Eu, but at the last moment she could not make the journey. Russia was represented by the Grand Duke Alexis, a brother of the Emperor; the King of the Belgians, an uncle of the young Princess, did not come in person, and sent his brother, the Comte de Flandres. The father of Prince Waldemar, the King of Denmark, did not come in person, as there is at the present moment a Parliamentary crisis in his kingdom; but the Queen of Denmark came. She wanted to attend her son's marriage, and she was, in fact, the only crowned head present at the ceremony. The Prince and Princess of Wales also went to Eu with their children. The Prince is very popular in France and often comes to Paris, though not as often as in old times.

The marriage was interesting in another respect: it was a marriage between a Catholic Princess and a Protestant Prince. These mixed marriages, as they are called in France, have never been favored by the Catholic Church. When Louis Philippe was on the throne, his son, the Duke of Orleans, married a Protestant Princess, Helen of Mecklenburg; but Louis Philippe was a liberal: his régime represented the principles of complete political and civil liberty. The Catholic Church regarded the marriage of the Duke of Orleans with great repugnance; it has always tried to establish the principle that the marriage ceremony could not be celebrated in the Catholic rite if there was not a written promise, signed by the husband and the wife, that the children born of the union should be brought up in the Catholic faith. This obligation has, to my knowledge, hindered many mixed marriages, as many people are unwilling to make such a solemn promise, and to take an engagement concerning unborn children. The rule is at variance with the tradition of the beginning of the century: from 1800 to 1848 there was no promise made in writing concerning the future children, and it was generally accepted by all parties that the sons should have the religion of the father, the daughters the religion of the mother. To give an example: the Duc de Broglie married the daughter of Mme. de Staël; his sons, the present Duc de Broglie and the Abbé de Broglie, are Catholics; his daughter, who died a few years ago, Mme. d'Haussonville, was a Protestant, and remained a Protestant to the end of her life. She was married to M. d'Haussonville, who was Catholic; his son, the present Comte d'Haussonville, is Catholic; his daughter was educated in the Protestant religion, and was even for some time among the Protestant *diaconesses* (the name assumed by certain Protestant ladies who do not marry, and who devote themselves to good works).

It is rather singular that the Catholic Church became much more exacting, in this question of the mixed marriages, after the Revolution of 1848. The Second Empire, though it did much indirectly against the temporal power of the Papacy, favored all the enterprises of the Church inside of France; and among these, the abandonment of a tradition which gave to the sons the religion of the fathers, to the daughters the religion of the mothers. It allowed the establishment of the custom which now prevails, and which exacts a promise from both parents to have the children educated in the Catholic religion. A prince of Denmark, belonging to the Lutheran Church, could not, by the laws of the kingdom, educate his sons in any other but the Lutheran Church, without cutting himself and his sons off from the line of the succession. Prince Waldemar could make no promises contrary to the Constitution of the country which

is under the sceptre of his father. A negotiation was opened with the Vatican on the occasion of the marriage of Princess Mary of Orleans with Prince Waldemar, through the natural channel of the Archbishop of Paris, Monseigneur Guibert, who entered upon it in a large and liberal spirit. The Pope, who has shown, since his accession to the throne of Saint Peter, great moderation of character, and who has done so much in various countries to make the relations of Church and State easier, responded readily to this spirit; and the negotiation ended with a tacit convention, in virtue of which, though the sons of Prince Waldemar would be Protestants, the Catholic Church would celebrate the marriage ceremony.

There were, in consequence, two marriage ceremonies celebrated yesterday at the Château d'Eu: the Catholic ceremony in the private chapel of the castle, the Lutheran ceremony in a drawing-room prepared for the occasion. I am sorry not to understand Danish, for the Danish parson must have been very eloquent, judging from the tears which were shed by the Queen of Denmark, and even by the young bridegroom. The Catholic ceremony was performed by Monseigneur d'Hulst, a friend of the Orleans family, the son of one of the ladies-in-waiting of Queen Marie Amélie. I leave it to the newspapers to describe the procession of the princes, who went first to the chapel, then to the Lutheran oratorio; the brilliant array of uniforms and of dresses in the long gallery which stretches between these two places. After the religious ceremonies, all the company went to three banqueting halls. There was a large table for the princes and princesses, who were, I believe, 37 in number: there were in all 150 people seated at table. The young bride made afterward what is called the *cercle:* she joined all the guests in the long gallery. She was very charming in her wedding gown, trembling with a natural emotion at the idea of leaving her family. She had a kind word for every one; she kissed all the ladies, and allowed all the gentlemen to kiss her hand. And then she disappeared, followed by the warmest wishes of all those who were present.

ART NOTES FROM PARIS.

PARIS, October 22.

THE dead season for the public is here the producing season in art, and hundreds of uneasy ambitions are now straining their efforts for great effects to be admired and judged in the coming displays. This work-a-day term is not without its minor exhibitions, which have their interest for those who want to be beforehand with the verdict of the morrow, and study the promise of youthful talents in the bud. Last week the landscapists of the future, lads of great expectation from some forty French departments, competed for the Troyon prize. Constant Troyon, an unhappy, grudging, and miserable spirit, left his savings ostensibly for the rescue of worthy young animal-painters from misery, but really to secure the resonance of his own name through the time to come, and avenge the neglect of the first half of his artistic career. The style he invented—that is to say, animal art considered not anatomically, but in combination with the most advanced ideas of *plein-air* and landscape environment—is understood to be the guiding influence in the works to be judged, and the young man most hopeful of the Troyon purse is he who can most successfully subdue his love of animals and consider them as atmospheric "effects" or "envelopments." Accordingly there was but little menagerie-study or comparative osteology in the forty-four fables we have just been contemplating in the pavilion Decaen of the Institut. The subject was the Wolf and the Lamb. The art of young men, even their sincerest nature-study, is generally frank reminiscence, and thus in the two-score canvases, each four feet high, which composed the exhibition, we could fairly judge what proportion of the rising young painters adhere to Corot, how many of them emulate the more difficult Rembrandtism of Rousseau, how many affect the emblematic elegance of Français, and how many can carry their beliefs away over to the transcendental flatness and stained-glass dissected work of Harpignies and Puvis de Chavannes.

As for the animals, they were either abstract and heraldic, or toylike and stuffy; it was a sign that not one of the essays showed the slightest imitation of Troyon himself. Has his full-bodied Decamps manner of painting ceased to please? We had Egyptian sand ravines, closed in with a threatening monumental Anubis-like wolf, dominating a pale Ammon-like lamb, and very grandiose and fatal-looking, hardly fit to remind Æsop of his native Phrygia; then there was the favorite chalk scenery of the environs of Paris, with lambs drinking fortuitously at gutters in the gypsum quarries; twilight "impressions" among French poplars; rivulets spinning exaggeratedly over concrete rocks, effects of landscape gardening stolen bodily from the Buttes-Chaumont or the cascade in the Bois. On the whole, the American visitor went away with the notion that forty chance students in the United States would have collected an exhibition having fewer affectations and rather deeper perceptions of nature. The No. 42, which obtained the prize, and enabled its author to study for certain years at the expense of the late Troyon, was a tall bower of gray Corot-like saplings, designed from birch trees and colored (to be more fashionable) from water-willows, amid which the real incidents of the subject, the animals and the streamlet, were made as inconspicuous as possible. In no one of the efforts was there the slightest idea of carrying the animal expression out to an amusing and piquant suggestiveness, as Desportes or Oudry would have done in designing a set of La Fontaine tapestries. The picture that got the prize was a landscape showing the side of nature just now in the mode. But the very necessity of the case, in illustrating this class of animal fables, would seem to be to make animals that look as if they could talk and deliver shrewd and concentrated apologue. Is it quite the thing to award prizes to essays which most carefully overlook their own subject?

The system of competition with purses, forming a vast hot-bed apparatus, is an interesting study for strangers in France, because here it is more thoroughly and authoritatively applied than in any other country. The care of the Government is extended to every form of art, and the smallest *rat* of the dancing school feels herself sustained and consecrated by State approval as she kicks up to the high bar or sketches out on her meagre face a convulsive smile under torture. In the fine arts proper the machinery of encouragement and selection is so complete that it applies to the most distant French province, and the remotest corner is fairly constrained to yield up its speck of golden talent to the test, like the sweepings of a goldsmith's floor. M. Kaempfen, Director of the Beaux-Arts, obediently travelled down to Lyons the other day, to confer the prize on young M. Appian, securing to that youth a career in Paris, and afterward perhaps in Rome. Under this form of conscription—"nay, for he saith, compel them to come in"—Paris has become the university city of art that it is, and acquired all the importance of a chief arbiter of taste, besides providing for its opulent commerce in art, its annual export to the tune of millions, and its large home consumption. It is so much forcing and nursery-planting on the part of the nation, rather than any invincible destiny. Most of the other nations—Italy, Spain, Germany, and the Low Countries—have a greater natural aptitude for art than France. The intellect of this race has never been especially creative: it has always excelled rather in the critical, in refining on the ideas of others, in taste, in elegance in the literal sense of the word. That it has come to be so famous a producer is a kind of forcing of fate, a most frugal and minute improvement of every germ of creative principle produced by the soil. The nineteenth century will maybe never know what it has lost by the mere hap, the mere arbitrary maintenance of the centre of gravity of art in this emphatically temperate zone; whereas, if the preponderance of power had been destined to fall among the warmer and fruitier populations of Italy and Spain, our age might have been designated to future time by art-works of fire and flame. Such as it is, the French nation as an artist shows what can be done by strength of will, as distinct from attribute and genius.

The forcing apparatus is so complete that an inspection turns one giddy. Not to speak just now of picture and sculpture galleries, of weapons at the Artillery and armor at the Invalides, of engravings and coins at the National Library, of furniture and domestic history at Cluny—matters of which there are equivalents in most European capitals—it is well to note the strictly school-room furniture provided for the artist, a kind of assistance which is of no cost, which needs nothing to bring it together but intelligence and appreciation, and which can be cheaply duplicated in newer countries. The collection of plasters at the Beaux-Arts School certainly numbers thousands, and ranges in size from the giant horseman of the Monte Cavallo, and a copy of a corner of the Parthenon, with columns, metopes, triglyphs, and frieze complete—and so tall that a floor of the courtyard has been excavated to receive the base—down to the smallest casts from antique bronzes; and the same institution shelters in its library every authority, every print, every photograph a student can want, with clay models of the extant Roman theatres, circuses, and other important structures. The branch establishment at Rome, the beautiful Medici Villa on the Pincian, also contains a most liberal and judicious selection of casts, ample for all ordinary purposes of study, and really bringing back ancient civilization in quite a freshly convincing manner when seen against the exquisite garden views which fill the windows. For Gothic and Renaissance sculpture, the collection of casts at the Trocadéro is a revelation and almost a satiety; and these, taken with the moulding-room of the Louvre, where an artist can buy any antique for a trifle, form a wealth which simply makes the student a millionaire of ideas, since all that the world knows of is here, and for him it is only to ask and have. What educational duty can be so obvious to the American philanthropist—though this is quite by-the-by to the purpose of the present letter—as the formation of a society for the reduplication of these sets in half-a-dozen centres of the United States, with the understanding that the collections shall be complete, since the lesson lies in the completeness? The opportunity is so pat and so easy—corresponding to what it would be, in literature, if the curiosities of every famous library, Vatican uncials and British Museum illuminations and all, could be cheaply and adequately acquired in facsimile, so as to leave librarians of the New World with nothing to sigh for. Really, there is nothing else to be had for money wherein money goes so far: antique civilization presented entire, in its most easily comprehended form, for a few thousand dollars.

With such prepared food and knowledge made digestible is the student here stuffed, the inten-

tion being that he shall take an invincible bent toward the academic form of art; and the test and outcome is the competition for the Prize of Rome. One would say that the Government had sworn the pupil should never hear of Velasquez, but should be cajoled into thinking the Madonnas of Giddo and the Romans of Hannibal Scratchey to be life's chief boon. The plaster-cast education, admirable and indispensable as a detail, is perhaps made rather too much of a panacea, and finally affects the learner as eel pasty affected the appetite of a certain historic squire. The modern mind, at all events, is pulling away from the prescribed regimen with all the strength of its growth. The ambitious young artist of nowadays is constantly thinking over his beloved puzzles—landscape environment, how to make your figure proclaim the conditions of the open-air light which plays upon it, the values of objects in half-lights and cross-lights, and other effects demanded by the more subtle curiosity of our time. He accepts the education of the Beaux-Arts School because it is gratuitous, but he is a rebel and a Rousseaulater at heart. In the porch of the School, Ingres, with his Institut uniform and his screed of "Good drawing, the probity of art," affects him with nausea, and, in the lecture-room, Delaroche's hemicycle chills his marrow, while Ingres's "Triumph of Romulus" curdles his blood with disgust. Going thither to hear a lecture of Taine's, I met one of the brightest of the pupils on the bridge, and on being asked if he was not bound to the course on the Philosophy of Æsthetics, he made a *nique* with his fingers and nose for all reply. While pursuing the studies, while being winnowed through a series of tests and moral sieves for admission to the course for the Prize of Rome, and when actually competing in his prison for that prize, and afterward when kicking his heels in the joy of living in Italy at somebody else's expense, the industrious apprentice is a hypocrite and a time-server, angrily cursing the whole bundle of influences that has lashed him into obedience. The end of it is, that he probably does take on more or less of the fashion he deprecates, and becomes for life a mere "Italian"—some kind of a Bouguereau or Cabanel. One of the standard figures of French ridicule is the Prize Student, with all his bubbles pricked, settling down at Nice to give lessons in water-color to English misses.

The late exhibition of works competing for the Prize of Rome betrayed in distinct tints the anomaly just pointed out. The Government in these affairs resembles the English tutor in "Lakmé": "When I undertook to form these children I was told to be apprehensive; I am paid to be apprehensive; I am apprehensive." The young French pupil, rejoicing in all his colossal ignorance of ancient history, is made to paint antique Romans, extracted from the historian whom he calls, as De Quincey instructs us, Teet Leeve; these Romans, by the way, are to be made to look as much like Greeks as possible, and if the composition bears some general resemblance to an Egyptian relief it is the more likely to get the prize. Every sentiment of out-of-doors, the trembling of outlines in the mist, the tossing of the breeze, the trembling of the light, is to be excluded—these dangerous realities might lead to Corot and Millet, if not to Manet. It is a great day, the prime event of the dead season, when the ten pupils are delivered from their prisons, and the fruit of their seventy days' seclusion comes to judgment.

I had lately the curiosity to inspect these cells, where the competitors prepare their themes in seclusion; a set of cloisters completely unknown to the public, and quite inaccessible except to pupils of the school. They form a row in the southern wing of the Beaux-Arts Palace, remote from the river-side and from the school-rooms. A guardian, sitting on the steps, was peaceably feeding a nest of young sparrows, his cares being over in the completion of the course for the year. When in function it is his duty to search the pupils as they enter or leave, to see that they carry in no privately-prepared life-studies, and to prevent all possibility of their spying on each other's work. The rooms, resembling the dormitories of a convent, are bleak in the extreme: mere closets, stone-paved, with a chair and an easel for all furniture, and each provided with a common window which affords none of the convenience of an ordinary studio light. The walls of the corridor are scrawled with painted or charcoal sketches, contributed by successive dynasties of pupils in the leisure of luncheon-time; there is at present noticeable a clever sketch by Courtois, and several dashes by appreciative friends at the tempting Aztec profile of Rochegrosse, whose "Andromache" and "Jacquerie" have now raised him to the first rank of modern promise. The competition brings together youths from every section of the country, and it is strange if there are not found among the pupils types of the best kinds of picturesqueness now left in Europe, from woolly Gascons and Auvergnats to yellow-haired Normans whose ancestors were Vikings. These specimens of the elect, each the hope of his village, have been tried out by many a fierce struggle before being admitted to endeavor for the Prize of Rome. Academic drawings in the evening classes, academic paintings under the day-professor, groups sketched from dictated historical subjects; and the readiness of the pupil at historical grouping must be proved by the very conditions of the great trial, which demand an impromptu sketch, thrown off on a paper without assistance from models, to be the basis of the painting put into competition. These sketches were each exhibited under the proper painting, on the exposure of the prize-themes. They are more summary than one would expect them to be, being the merest diagrams; but they fix the arrangement of the composition, no change being allowed in the cast of the figures or their relative position, though the action of a leg or an arm may be altered without blame.

This year's exhibition of subjects for the Prize of Rome was more conspicuous than usual for the desperate endeavor of some of the students to protest against academic art as such, and to bring in impressional painting by the head and shoulders. The real sympathy of the artist, if his knitted jacket could be unbuttoned and his heart laid bare, would be found to be for lmes of art quite inadmissible in the illustration of Teet Leeve or Plutarch. What he really would enjoy competing for would be something like the humble prize of Troyon, above described, or like the D'Attainville prize for classical landscape, for which M. Buffet has just (October 21) successfully tried, with its benefit of 2,100 francs. But the Roman prize overshadows all others, with its governmental sanction, its fame and publicity, and its four years' privilege of liberty and travel. The subject this year was Themistocles taking refuge with Admetus, a composition requiring four figures; the last I saw competed for, Œdipus at Colonos, also required four persouages, and the pay of that many models out of the poor students' allowance. What was curious was the determined manifestation by several of the pupils of principles outside of academic art. M. Thomas, for instance, was evidently in love with Japanese art; he arranged a sunny out-of-window kind of vista, for which he could have got no warrant in the narrow casement of his prison, and into this he painted a fancy of Japanese plum-blossoms and the like, arranging his figures as a frame around this decoration, wherever they would go in easiest and not make any noise. He got a second prize for his pains, which included a purse of a thousand francs, derived from the Cambacérès foundation. M. Tollet, enamored of the cave-light affected by the painter Henner, a heresy very distasteful to the Academicians, used this trick as nearly as he could remember it for two of his figures, but at that point his recollections failed him, and he painted the other two persons in ordinary daylight. He was indulged, after all, with a third prize. The lucky man of the year, M. Axetelle, pupil of Gérôme, was the most entirely devoid of originality, and the most completely bathed in sophomoric erudition, of all of them; in addition to his official first prize and purse, he benefits by an annual gift of three thousand francs, a fourth of the foundation created by Mme. Leprince. The remaining seven canvases were very much alike—groups that would have been praised by David and Benjamin West, feebly accentuated with bric-à-brac out of the museums of antique bronzes. Such were the features of a competition at which every art-student in France laughs in the irritation of an uneasy scepticism, and to which in due time he presents himself with a beating heart. It ought at least to be granted that the prize founded by Colbert and Louis XIV., if it fails to create genius and sometimes throttles it, is useful in keeping down insanities, and holding art to its grammar and its eternal intelligibility and reasonableness. Where would painting go to if it quite forgot its classical derivation, and if its Olympic races were governed by the Manets and the Courbets?

In nothing, by the way, is the classical direction of art more justified than by ceiling decorations and other kinds of mural painting, in which France seems at present to hold the lead incontestably. The ceiling of the public crush-room of the French Theatre, just painted by young Guillaume Dubufe, is an illustration. Nothing has yet been found to combine so well with architecture as the classically treated form of allegorical art. I have seen in California a splendid dining-room of which the panels were decorated with thunderstorms and mountain landscapes; but, though they were executed by an artist of talent, Thomas Hill, they only succeeded in giving everybody colds and suggesting draughts. The ease and grace of French wall-decorators, even when they are second-class men, are incontestable in the specialty. The most perfect piece of daring in this line is the ceiling of the Eden Theatre, where clowns, circus-queens, and ballet-dancers are careering with an audacity mixed with elegance that has certainly not been surpassed since the plays of Aristophanes. Only a century where frivolity is raised to an art and analyzed into a science could produce a masterly cobweb of this description, wherein nonsense is sternly divested of its impertinences and reduced to its eternal and delicious laws. Dubufe's ceiling shows a cloud of shadowy spirits supporting the night-world, over which rises the naked form of Truth; Comedy and Tragedy, as little mischievous spirits, are pulling back her veil, Tragedy being armed with a stage dagger and Comedy bearing a ball-room mask. Two modern ladies lean on a railing and look up at the vision. The composition, without any deep merits, is completely decorative and satisfactory. And it is the direct outcome, to specify one of its qualities, of the system of plaster casts and antique documents and themes of Greek art which is here dinned into everybody's head with all the emphasis of governmental authority. The artist was steeped in official classicism long before he was born, being the outcome of a dynasty of painters of the elegant and the ornamental; his father, Édouard, was the painter of the "Prodigal Son," owned by Mr. A. T. Stewart and burned in America; his grandfather, Claude

painted nymphs and odalisques. This ceiling is the last present made to his audiences by the painter director of the Français, the late M. Perrin; in 1879 he conferred on them the painting of the theatre ceiling proper, by Mazerolle, representing the principal groups and situations of the old French drama. E. S.

Correspondence.

PROTECTION OF THE YOSEMITE VALLEY.

To the Editor of The Nation:

Sir: A recent visit to the Yosemite Valley enables me to corroborate the testimony of Mr. Edwards, in the *Nation* of October 8, concerning the condition of the country surrounding the valley. If more authoritative testimony were needed, it is presented, in an official manner, by the Yosemite Valley Commissioners in their report for 1883-84, which gives a detailed description of the devastation now going on in that region, and illustrates, in a forcible manner, how much more promptly members of Congress will respond to a personal appeal in favor of a private interest than they will to the request of a State or community to be protected against the encroachments of lawless invaders.

Permit me to make a single extract from the report of Mr. W. H. Hall, State Engineer, of May 20, 1882:

"If it be asked, What is necessary to *preserve* the Yosemite Valley property from deterioration? we have these answers:

"First. The control of the mountain watershed tributary to the valley streams, to prevent the destruction of timber and vegetation generally thereon.

"Second. The regulation of the use of the floor of the valley and its immediate surroundings, in order that the verdure be not altogether trampled out of existence, or useful vegetation supplanted by that less desirable but more able to resist the influences of civilized occupancy.

"Third. The counteracting of natural deteriorative action to be found in the movement of its waters: the 'improvement' of its streams.

"The Yosemite Grant does not cover nearly all the watershed of the valley, but, on the contrary, while according to the terms of the grant it extends to a line drawn around the valley at an average distance of one mile from its edge, the real mountain basins from which drain the waters that constitute to most people the great charm of the place, are altogether outside of the grant, and the rim of high land contained within it is composed, for the most part, of rocky slopes that incline directly into the valley, or to its walls, and not to the cañons and higher valleys from which issue the waters of the falls.

"According to the best information available at this time, the entire watershed area of the Merced River, inclusive of the grant with the valley, east of a line drawn from ridge to ridge, across the gorge, at a point on the spur just below the Cascade Falls, is about 358 square miles; or, in round numbers, 229,000 acres. Only about 30,500 acres of this territory are included in the grant as it now exists, leaving 198,500 acres which drain into the valley.

"This watershed line should form the limits of the grant."

That the area covered by the existing Yosemite Park is too small, is further emphasized by the fact that the sheep men are devastating considerable portions of country which one is obliged to traverse in order to get from one point to another within the park itself. In order to reach Cloud's Rest from the Nevada Fall our party had to force its way through an immense herd of sheep.

The remedy for the state of affairs here described is very simple. If Congress will devote a few minutes to the favorable consideration of the question at its next session, there is evidence that the California authorities will complete the work by a forcible ejectment of the invaders.

Very respectfully yours, I. S.

Berkeley, Cal., October 29, 1885.

FREE TRADE IN SOUTH CAROLINA.

To the Editor of The Nation:

Sir: As you will doubtless have observed in the *News and Courier* of yesterday, the friends of "free trade" and "tariff reform" met in Columbia on Saturday to form a State organization. This meeting was called by Col. John J. Dargan, the brother of one of our most intelligent and independent Congressmen. The immediate object of the call, besides organizing a club, was to choose representatives to attend the Tariff Reform Convention, to meet in Chicago next week. The notice of the meeting was brief, and but few of the papers had given it any attention, and as a consequence it was not so numerously attended as could have been desired; but still, a considerable number of prominent gentlemen were present, and many others, including Governor Thompson, Senator Hampton, and Colonel Trenholm, sent in their adhesion to it.

This meeting is the first organization of the kind formed in this State since the war. South Carolina will be remembered as always among the strongest free-trade States prior to the war, and if the attention of the people can be detached from the eternal race question, and led to take an interest in the question of the tariff, I have little doubt she will at no distant day resume her old position, for the interests of a very large majority of her people are still clearly on the side of free trade. It is not to be denied, however, that certain interests in the State are in favor of protection. A few hundred rice-growers in the lower part of the State insist on taxing the millions of rice consumers in the country to the extent of two and a quarter cents per pound for all the rice they eat; and some—though not all—of those engaged in our important "infant industry," cotton manufacturing, are so ignorant as to think they still need protection at home, instead of having the markets of the world thrown open to them. But the question of the tariff not having been an issue before the people, and not having been discussed for so long a time, there is a vast amount of ignorance on the subject. Very few of the people or of our public men have given any attention to it, and consequently their views, even where they have any, are very crude.

The principal discussion in the meeting at Columbia was as to whether the club should be organized as a "Free Trade" or as a "Tariff Reform" Club. Col. Dargan strongly advocated the former, and carried his point. As a matter of policy I am inclined to think this was a mistake, for no doubt many would accept "tariff reform" who either do not believe in absolute free trade, or who do not regard this as a practical question, as we must doubtless continue to levy duties on imports for the sake of Government revenue. I should have been content as a beginning with an organization similar to that recently organized at New Haven by those eminent Connecticut economists, David A. Wells, Prof. Sumner, and others, declaring "in favor of a reform and reduction of our existing tariff, a repeal of our antiquated and absurd navigation laws, and the adoption on the part of the Federal Government of a more liberal commercial policy in its intercourse with foreign nations."

After effecting an organization the meeting selected six delegates to represent this State in the Chicago Convention—among them Colonel Dargan, Colonel Trenholm, Captain Dawson, of the *News and Courier*, etc. The State press, like our people, is generally very poorly informed on the question, and but few of the county papers gave any notice of the meeting in Columbia at all. Of the three daily papers published in the State, the Charleston *News and Courier*, the Columbia *Register*, and the Greenville *News*, the two former heartily and strongly advocate the movement, and were both represented in the meeting at Columbia. The Greenville *News*, too, pretends to favor the movement, but at the same time advocates Mr. Blaine's silly idea of dividing the revenue obtained from liquors and tobacco among the States according to population. So its support or opposition will not amount to much.

Newberry, S. C., November 3, 1885.

THE CANON OF CRITICISM FOR "BOOKS" AND FOR "LITERATURE."

To the Editor of The Nation:

Sir: In an appreciative review of an *Atlantic* essay on "Principles of Criticism," in the *Nation* for October 29, the doubt is suggested whether "ordinary literature" submits itself to the test proposed, namely, the amount of permanent contribution made by a given work to the reader's intellectual life from the intellectual life of the writer. And the fear is expressed that "the acceptance of the canon would involve an unfortunate limitation of criticism to an estimate of the worth of the personal element involved." This shrewd suggestion might be made the basis for a very pretty quarrel between the essayist and his friendly reviewer; the more obstinate and sanguinary, because they are both right. It is really only a question of what we mean—exactly—by the terms we use.

To begin with, what is "realism" in writing? If this term signifies the description of things as they are, without the intrusion of self, are not all books of mere fact—the text-book in mathematics, the manual of any natural science, the collection of statistics—products of pure realism? No one would pretend to call these "literature," however; they are "books." The canon of criticism for them covers merely accuracy and clearness in representing the bare fact. The test for literature proper, suggested by the essay referred to, does not fail concerning this field of writing, nor would it tend to let us ignore any corner of it; it simply does not touch it or apply to it at all. When, however, we come to realistic history, or fiction, or poetry (for there is such a thing; Shakspere's, for instance, who "held the mirror up to nature"), does not this test—of the amount of contribution to the inner life—apply, and all the better the more the given work belongs to literature proper, rather than to the region of books in general? What is the difference between a colored photograph of a scene, and a painting of it, if not something that the artist gives us in addition to the bare fact—something that constitutes it a work of "art"? If any given page from the leader of French realistic fiction differs from a perfectly non-literary and very disagreeable police report (and we would by no means affirm that they all do), is it not by virtue of what the novelist gives us of his self, *plus* his fact?

But this something is not by any means necessarily the "personal element" as ordinarily understood. It need not be in the least an egotistic intrusion of self. Shakspere was always realistic, never personal. Yet it was always realistic *art*, never mere colored photography. That which the writer contributes to us may be only his better eyesight and his better judgment of *what* to see. Just so far as Shakspere *saw* more in the mad old King Lear, and the fool, and the tempest than we should have seen, just so far he imparts to us himself in addition to his picture. Who does not prefer a fine portrait of a friend to a photograph? Yet, one may ask, does not the latter give the fact more exactly as it is? Not so; the "fact" is what our friend really *is* to us, and this the portrait may give with infinitely more truth than the skewed and staring photograph. His

sight and insight into this is what the artist contributes of himself. Things-in-themselves we do not know, and cannot know, least of all can a camera get at them, or a police report. Things-as-they-seem, superficially, the extremist non-literary realism may give us; but when we require to know things-as-they-are—as they are to *us*, in all their relations, ordinarily seen, or ordinarily unseen—we go to art, that is (in the case of written products) to literature, either realistic or otherwise. Compare the statistical history of a country in a Government report with the narrative of one of our best and most impersonal historians. In both cases we have the realistic facts, but the historian adds his power and habit of reading between the lines of events, of comprehending what he apprehends, of divining causes and explaining results; and these, or some measure of these, he gives as permanent contributions to our intellectual life.

It is unfortunate that the term "idealism" is set over against "realism," in characterizing literary products. For the word "idealism," being derived from "ideal," carries a certain implication of what is *un*-real. Whereas, the other school in literature, whatever we may call it—the school that is not commonly called realistic—does not depict what is less real, but rather what is more real, than the scenes of the extreme realist. Which novelist, for example, would give to some visitor from another planet the most real and true understanding of our terrestrial life—Zola or George Eliot?

But the terms of criticism are used so confusedly that one needs to devote every other sentence to definition, in order to discuss these matters. Mr. Howells's style, for instance, is by a recent British critic denominated "unvarnished realism." It is certainly "unvarnished," for textures of so fine a grain need no varnish; but is it realism, in any literal sense? If he were to depict a dinner party, a drawing-room scene, a *tête-à-tête* conversation, just as we have them in "real" life—just as *we* have them ourselves—why go to the expense of buying the book or the magazine? Depend upon it, it is Mr. Howells's dinner-party, or scene, or conversation, that we buy, and not the "real" one of our own. Such writers are realistic only as Shakspere was so. Selective realists, we might call them; and that is to say, "idealists"? For we use this contrasted term as if it came from "idea," instead of "ideal." The extreme realist gives the bare fact; the idealist gives the fact *plus* ideas. Nay more, he *selects* his fact from the mass, under the guidance of ideas—ideas of what is significant and what is wholesome. And this delicate instinct of selection is one of the very most valuable contributions carried over from his intellectual endowment to our own. To take an example in another field of art, are not Mr. Du Maurier's drawings in *Punch* "realistic"? Yet is not he also a selective realist—that is to say, an idea-ist? Contrast his work with a statistical "Jenkins" portrayal of social life, or with a photograph. Yet it is the very *reality* of the *Punch* sketches that gives them their charm.

The truth is, all the best fiction, and the best art of any sort, is realistic; that is to say, it represents to us what is real. It gives us what is universally and always true, and not merely what is locally and temporarily true; and so it furnishes what is more real than the reality—than the reality, that is to say, as our less perfect vision would have seen it. And to such realism the canon certainly applies very well. It furnishes a familiar practical test of the greatness of literary works that is none the worse for being applied more or less unconsciously by all of us. By a wise instinct we rate any book very high when its characters become a permanent addition to our circle of acquaintance, or when the range, depth, and force of the author's intellect have made permanent accessions to our own. And, on the other hand, those novels, poems, histories, or what not, that strain through the mental tissue and leave no residuum, except perhaps a slight muddy stain, are recognized by that token as being weak and worthless. They may be "idealistic," in the sense of being what our reviewer very righteously resents—the egoistic intrusions of self into matter where it had no business, by some weak person who should have "burned his own smoke"; or they may be "realistic," in the popular sense of being mere unselected fact-photography—some unrelieved jargon of "dialect," perhaps, which seems to be the fashionable mode of "realism" just at present, but which has value (if at all) as philology rather than as literature.

We should be badly off without the books of pure realism, the works that make no pretence of belonging to literature proper. It is of immense importance that when we want a bare fact we should know just where to lay our hands on it. But it is pretty important, too, that when we want a symphony, a poem, a novel, or a philosophical history, we should be able to have *that* lay its hands on *us*. And one value of the canon of criticism lies in its protecting us against wasting our time on people who have no superiority to us in any single endowment—not even eyesight—and who can, therefore, contribute nothing of lasting value from their intellectual life to ours.

E. R. SILL.

CUYAHOGA FALLS, OHIO, November 4, 1885.

UNBELIEF AT YALE.

TO THE EDITOR OF THE NATION:

SIR: In your issue of November 5, "An Old Graduate" advances as his theory of the cause of the small Freshman Class at Yale the (alleged) growing belief that unbelievers hold prominent positions on the Faculty. It seems to me that both his theory and his argument are radically wrong, and tend to injure the College. Nothing will cause such a belief as he mentions to grow so rapidly as his public assertion in your columns of the general existence of such a belief.

It is difficult to understand how any such impression could have originated or gained currency, since, as a matter of fact, there are not three professed unbelievers on the entire Faculty. But if there were, does "An Old Graduate" make good his assertion that, although their convictions were never so much as hinted to their classes, they would constantly be doing harm to the College? Does any fair-minded person believe the startling assertion—made as if it were an axiom, without need of proof—that unbelief is either a sin or the sign of mental obliquity? Can any one doubt that the day Yale College, or any college, refuses to admit men of genius and learning, reverent men, to her Faculty because their secret convictions are not in accord with those of the majority, that day will ring her death-knell as an instrument of the highest, broadest culture of her students in mind and nature?

It is just such unwise, narrow criticism as that of "An Old Graduate" which is in great part responsible for whatever cloud Yale may at present rest under.

H. R. G.

NEW HAVEN, November 5, 1885.

RELIGIOUS INSTRUCTION AT HARVARD.

TO THE EDITOR OF THE NATION:

SIR: The implied, if not directly stated, idea, contained in "Alumnus's" letter on "Cause and Effect at Harvard" (*Nation*, Nov. 5th), that little instruction was given in that institution in religion and allied subjects, has caused the present writer to examine the correctness of this statement. Further, he has been led to see how far similar subjects are taught in the other three leading universities in the country, so far as that can be told by their catalogues.

The announced courses of instruction at Harvard for 1885-86, open to undergraduates, offer eight hours a week throughout the year on the history of religion; twenty-seven hours a week in Metaphysics, of which eleven or more are given to distinctive religious and ethical topics; also seventeen hours a week in the study of the "Semitic" languages, eight at least being devoted to Biblical interpretation and religious history. At least four of the professors giving instruction in the above subjects are clergymen, equally divided between the Baptist and Unitarian denominations. Harvard, then, gives not less than twenty-seven hours a week instruction in exclusively religious and ethical subjects.

The latest catalogue of Yale at my hand is that for 1883-84. At that time there were offered to the undergraduates two terms in the Senior year, devoted to Porter's 'Human Intellect,' Butler's 'Sermons,' Hopkins's 'Law of Love,' Schwegler's 'History of Philosophy,' Natural Theology and Evidences of Christianity. Time not stated; probably from four to six hours a week. Besides this, two optional exercises a week are announced in Mental and Moral Philosophy during the second term of the Senior year. It is also remarked that instruction is given by President Porter and Professor Ladd in Intellectual Philosophy and Ethics to graduates, but neither courses nor times are specified. Johns Hopkins offers to the undergraduates four hours a week throughout the year in Ethics and Psychology, and to her graduates ten hours a week in the "Semitic" languages, six at least of which are devoted to Biblical interpretation. Two other courses are announced in Akkadian and Sumerian, but no times are given.

The University of Michigan gives two hours a week to New Testament Greek during the first semester; with seven hours during that semester and fourteen hours during the second semester devoted to Metaphysics, four of these hours being apparently given to ethical and religious subjects, but for the second semester only.

After this statement of facts any comment on "Alumnus's" letter would seem unnecessary.

Yours, for truth's sake because it is the truth,

M. E. WADSWORTH.

WATERVILLE, MAINE, November 7, 1885.

MORE TELEPATHY.

TO THE EDITOR OF THE NATION:

SIR: Your editorial on "Telepathic News of Battles" has interested me very much because of a personal experience which happened when I was ten years of age. My father left home one morning with a team and wagon to be gone the whole day. During the afternoon I saw very plainly the horses backing over the bank into a creek, and the escape of my father from danger. The sight was terrible and filled me with foreboding. Late at night father returned and narrated the accident, which had befallen him just as the scene appeared to me. If it were only boyish imagination on my part there are some inquiries which seem pertinent that do not admit of a ready satisfactory answer.

A. H. HARSHAW.

428 W. 58TH STREET, NEW YORK CITY.

Notes.

CUPPLES, UPHAM & Co. publish immediately 'Literature,' a series of essays on Emerson, Voltaire, Frederick the Great, Albert Dürer, etc., etc., by Herman Grimm, translated by Miss Sarah H. Adams.

'Under the Mendips,' a story by Mrs. Emma Marshall, is announced by E. P. Dutton & Co.

Estes & Lauriat put forth a long list of limited editions of holiday books and standard works elaborately attired: Moore's 'Lalla Rookh,' with 140 photo-etchings, mostly by American designers; Poe's 'Lenore,' in large paper, illustrated by H. Sandham; Keats's 'Eve of St. Agnes,' also in large paper, and illustrated by Edmund H. Garrett; 'American Etchings,' a series of twenty; Duruy's 'History of Rome and the Roman People,' in sixteen sections; Carlyle's works in twenty volumes; Richardson's works in twelve volumes; and George Eliot's works.

One of the same series we can name as already published: 'The Modern Cupid (*En Chemin de fer*),' verses by M. Mounet-Sully, of the Comédie-Française, and illustrations (in varying tints) by Charles Daux. Neither the comedian's stanzas nor their pictorial settings strike a high level of poesy or art, but they accord very well, and these cupids and flower-stalks and birds have a certain Gallic daintiness without profundity. Each photogravure has a sheet and an ocean of margin to itself, and the sixteen or seventeen of them are loosely thrown together in a portfolio. Love, like death, has all seasons for its own, but as a gift 'The Modern Cupid' suggests rather St. Valentine's Day than Christmas. We cannot help contrasting the superficial quality of the verse with Clough's treatment of the same subject in his "Natura Naturans."

Mr. Andrew Lang is preparing the selections from the poems of Scott and Burns for the Parchment Library, for which he has already edited a volume of Poe's poems.

As if to leave nothing of *Lippincott's Magazine* but the name, the January number will show an abandonment of the double column, a large and bold-faced special type, and a changed design for the cover. In this last respect the room for improvement has always been great.

Longman's Magazine, almost the youngest of the popular English monthlies, has been especially hospitable to American authors. The November number contains a paper by Mr. Grant Allen, who is a Canadian by birth; and an admirable short story, "The Stone Dog," one of the best of the recent attempts to reproduce Poe's uncanny effects, by Mr. Charles G. D. Roberts, editor of the Toronto *Week*.

It was a curious coincidence, due to the absurd and mischievous condition of our law of copyright, that an English story, 'The Dark House,' by Mr. George Manville Fenn, was published on the same day in New York by two leading houses. Its chief "effect," by the way, is to be found in Mark Twain's 'Adventures of Huckleberry Finn.'

Some months ago we reviewed the revised edition of Labberton's Historical Atlas, published by Townsend MacCoun. We have now a new revision, or rather an edition with very considerable and very valuable additions. In the first place, each map has a page of commentary opposite to it, so that the Atlas can be used by itself as a complete text-book of territorial history. In the next place, there have been added eight historical maps of England (one of which supersedes one in the older edition), mostly founded of course upon Green and Freeman. Thirdly, the table of contents, always excellent, has been improved by the addition of a carefully prepared bibliography to each map, giving review and magazine articles, as well as books. The mistakes that we pointed out in our former notice have been corrected. We regret that the map of the Roman Empire in the century before Christ (No. xv) does not give the precise organization of provinces as they existed, say, at the accession of Augustus, when there were, for example, two provinces of Spain, while Mauretania and Cappadocia, although "vassal states," were not yet incorporated in the Empire. We are sorry, too, that map lii will help to keep up the delusion that the Louisiana purchase extended to the Pacific.

A reprint of several essays in English reviews appears under the title of 'The New Godiva' (Scribner & Welford). One of the essays sets forth the purpose of the "Social Purity Alliance," another urges the importance of the "Association for the Care of Friendless Girls," and the remainder are devoted to kindred subjects. The writer is extremely earnest, and no convictions could be more intense than hers, but her arguments will hardly do more than encourage those already like-minded. To overcome doubt, to win opponents, a great deal more is necessary than mere repetition of moral commonplaces, however emphatic the repetition or however true the assertions. An earnestness that constantly runs into extravagance overreaches itself. The writer's own estimate of the importance of the subjects with which she deals should have been enough to put her on her guard. The widest and wisest experience, the deepest study of the history of morals, ought to be the preparation for arguments like these. It is the lack of even the beginnings of these things that makes so much of honest and well-meant effort futile.

Babyhood completes its first volume with the current number. The course which its editors marked out in the beginning has proved entirely successful in producing a highly useful periodical for mothers, in which the practical, as it should, predominates over the theoretical. The literary interest of the magazine has been fully maintained.

Science for November 6 takes up the Burman dispute, and furnishes its public with a map of the possible seat of war.

Book News (Philadelphia: John Wanamaker), an eclectic review of current literature, is publishing portraits of eminent American writers, that for November being Emerson's—a rather favorable specimen of "process" work, and a not unpleasing likeness of the poet in his latter years.

"The Cruise of the *Panda*," by J. S. Bacon, in the *Overland Monthly* for November, recalls a famous trial for piracy in Boston, in 1834, in which the late David Lee Child's sympathies and professional services were enlisted on behalf of the Spaniards implicated.

The block calendars, whose name is now legion, are beginning to appear in force for 1886. Houghton, Mifflin & Co. renew their Emerson calendar, with fresh selections or arrangement, and add a Whitney Calendar in honor of Mrs. A. D. T. Whitney, the cardboard back being filled with a colored design in reminiscence of Miss Greenaway—four damsels with garlands; but without the customary portrait of the author.

More sober is the decoration of the Louisa M. Alcott Calendar issued by Roberts Bros., Miss Alcott's kindly face being set between a picture of her residence and one of the Concord one-arch bridge.

Another auctioneer has burnt his fingers by playing with a language he did not understand. One in Philadelphia sends out a catalogue under the title 'Bibliotheca Curioso.' Probably he has somewhere seen the title 'Bibliotheca Curiosomagica,' and, imagining himself at a feast of languages, has made off with one of the scraps.

The Société de l'Histoire du Protestantisme Français has commemorated the two hundredth anniversary of the Revocation of the Edict of Nantes by republishing Jean Claude's eloquent 'Plaintes des Protestans, cruellement opprimez dans le royaume de France,' edited by M. Frank Puaux, who has added numerous notes, including many hitherto unpublished documents which illustrate and confirm the statements of the great Huguenot preacher. The Society has also published, among other interesting documents bearing upon this event, the *Compte rendu* of the Synod of the Churches of the Desert. It was at first proposed to send delegates to all meetings held in Europe and this country by the descendants of the Huguenot exiles, but the design was abandoned for fear of reviving the old religious animosities. The principal reason, however, was probably that suggested by the *Times*, the necessity of accepting the invitations of the Prussian descendants. These are credited with "intense German sentiments, almost leading to the idea that they have not forgiven France for the crime of her monarch." On the other hand, there are no stronger patriots than the French Protestants, and it was hardly to be expected that they could listen with equanimity to the most guarded reflections made by Germans upon their country. In the great commemorative meeting held in Paris, it was noted that none of the speakers referred in a hostile spirit to the Catholic Church of the present day—a symptom of religious harmony which was also shown in the recent elections, where, in one instance at least, the Protestants voted for a "fervid clerical."

At the public meeting held in London at the Mansion House by the English descendants of the Huguenots, it was voted to strike a commemorative medal, and to raise a fund for the endowment of two scholarships, to be held at the Protestant Theological College of Montauban "by young men of Huguenot parentage, to prepare for the ministry in France."

There will be courses of lectures on railway science (*eisenbahnfachwissenschaftliche Vorlesungen*) in several German universities this winter. In Berlin they are to treat of the Prussian law of railways, and also particularly of their tariffs and management.

In the *Revue Scientifique* for October 24th, M. A. Gervais finishes his account of the conquest of Tonkin, drawn from unpublished documents. From it, says the editor, one can form some idea of the difficulties which have been overcome, the errors which have been made, and, above all, of the grand results which have been obtained. The writer closes with a description of the ceremonies attending the reception of the French envoy by the new King of Annam at Hué. The absolute refusal of the Annamite ministers to submit to a radical change in these ceremonies demanded by the French commander is said to have been the cause of the revolution in that country in July last.

Lossing's 'History of the United States' has been made the basis of an illustrated history in German, edited by Paul Heichen (Leipzig: Albert Unflad; New York: Christern). The issue is complete, or, at the buyer's option, in fortnightly parts. A German translation of Lossing has been on the market for some time in this country.

The death last week in Boston of Mr. John A. Lewis, at the age of sixty-five years, deprived the *Nation* of one of its most valued contributors. He was a native of Plymouth County, Massachusetts, and owed to his birthplace a fondness for and familiarity with the early history of Massachusetts, which made him an authority in many particulars. Practical acquaintance at one time with the art of printing, and a short experience in journalism on the Pacific Coast, directed his antiquarian taste to the collection of early products of the Bay press, and he especially affected (with an intrinsic delight in them) the works of Cotton Mather, of which he accumulated more numerous examples than (so far as we know) are to be found in any other private hands. His researches were restricted and his writing impeded

by steadily failing eyesight, which he bore with remarkable cheerfulness. His learning was cautious but sure, and could be trusted implicitly for its accuracy. Mr. Lewis was a man of great modesty and a most genial disposition, warmly attached to his friends, and drawing them to himself with hooks of steel.

— "E. S." writes us from Washington, November 3, 1885:

"What is the origin of the expression 'bloody shirt' as used in American politics? Léon Foucher, in criticising Guizot's 'Washington,' says: 'It is by spreading out the miseries of the workmen, the *bloody shirt of some victim*, the humiliation of all, that the people are excited to take arms.' General Cass, in commenting on this ('France, its King, Court, and Government,' pp. 49, 50), adds: 'Most assuredly the Americans did not want a visible signal to push them on; and he who should have displayed a *bloody shirt* for that purpose would have been followed by the contempt of the spectators and saluted with stones by every idle boy in the streets.'"

— The United States spent in 1884 through the office of the Public Printer close upon $3,000,000; and yet it is next to impossible for public libraries to get documents that they want very much, though they often get sacks of documents which they do not want. These latter the library and its groaning shelves keep, unless they are duplicates. If they are, it is as hard to get rid of them as it is to get the more desired volumes. They cannot be exchanged (the best resource for the disposal of duplicates), for other librarians say to themselves, Why should I give anything for this when I can get it for nothing by simply asking my Representative for it? They cannot be sold at auction, because the auctioneer says that they will not pay for the cataloguing. Did not Senator Anthony's two thousand volumes of Congressional documents sell for 8 cents a piece? The librarian's conscience will not let him sell them for old paper, and so they accumulate. But now an outlet has been furnished. The Department of the Interior, having very successfully acted as Clearing-house for libraries in the matter of the *Congressional Record*, receiving duplicates from those libraries that had them, and from the stock thus formed supplying deficiencies wherever they existed, has resolved to apply the same system to all public documents. Mr. J. G. Ames, Superintendent of Documents, Interior Department, if informed that any library has duplicates which it is willing to contribute to the common fund, will furnish wrappers which will enable the library to dispatch the volumes free of expense, and if the library will send a list of its wants, he will supply them so far as the volumes in his possession allow. Let every library hasten to assist in this good work.

—The announcement in our last issue concerning the Catalogue of Government Publications just issued from the Government Printing Office, while correct if taken literally, perhaps needs to be supplemented by an account of the origin and nature of the undertaking. It is more than two years since that Congress made the first appropriation for the purpose, and the sum appropriated to date amounts to $21,300. This sum was to be paid for clerical labor alone, the printing being otherwise provided for. No one will say that the end to be accomplished was not important enough to justify the expenditure of this large sum, provided it could not be done for a less sum; but in view of the fact that the Public Library of Boston prepared, with the greatest care, a similar catalogue many years ago, which has been continued to date, and which the library has repeatedly asked Congress to publish, the redoing of the work seems to have been an altogether unnecessary expense. Many titles found in the Washington libraries are doubtless absent from the Boston list, but this shows only that a revision of that was desirable. It is worth mention, moreover, that at the time of the first appropriation it was estimated by competent persons in Washington, familiar with the subject and accustomed to similar work, that a (from a bibliographical standpoint) thoroughly acceptable catalogue could be prepared for $5,000; while the present work, we are informed, is, when so judged, lamentably deficient. But, however imperfect, it will prove of great use, and we advise those of our readers who have the opportunity to secure a copy. We caution them, moreover, that it is the early bird which catches the worm, for there are indications that a "corner" in the work is to be attempted for the benefit of those who have no political connections. The act which authorized the publication modifies, with reference to this work, the general rule relating to Government documents, viz., that any one may order of the public printer, within a specified time, as many copies as he may wish at 110 per cent. of the cost; whereas in the present instance only 500 copies can be so ordered. Further, the rule is suspended which requires a considerable number of copies of each "Congressional" document to be furnished to the Interior Department for gratuitous distribution among public libraries. This last rule is indirectly evaded by providing that this is not to form one of the "Congressional set" of documents. A hundred or more copies were erroneously printed so as to correspond with the Congressional set, but, the error being discovered, those not already disposed of to Congressmen were at once recalled. Congressmen have, however, provided for the distribution of 800 copies on their order by the Interior Department, and thus will be able to favor the smaller libraries at the expense of the greater. The Catalogue is printed in the same style as the *Congressional Record*, and contains 1,392 pages—the index, which may be exhaustive, but which is constructed in a manner by no means convenient for consultation, occupying pages 1245–1392.

— The wonders of the world have become almost commonplaces of popular knowledge, and among the few that remain fabled yet untold the jealously guarded city of Petra has a preëminence both in the danger of its approach and the marvel of its ruins. The story of the picturesque defile in which the city lies, and the strange beauty of the rainbow-hued cliffs in which the temples are cut, have given a fascination to this ancient metropolis of the desert that pertains to half-mythical creations; and it has a peculiar interest as a development of the rock tombs, which makes its structures one of the most attractive episodes in architectural history. Everything yields at last; and now the *Century* opens its new volume with a profusion of photographs and an intelligent sketch about it, by Mr. Wilson, who penetrated to it by a stratagem in 1882. From his graphic account it would seem to have surpassed expectation, and the illustrations, even without the magic of that fantastic coloring, awake a lively curiosity. Besides this, two papers will attract much attention—one a discussion of socialistic tendencies, and the other a plea for a closer union of the Church, in our country. The former is a broad-minded and well-informed article on a matter which presses for most careful thought. In the beginning, perhaps, the author makes too much of the anarchist division of the Socialists, who are at most only guerrillas of the great movement, whose operations may be wanton and savage, but are after all incidental. In the main part of his subject he is not too emphatic, however, and he grasps clearly the obscured characteristic of labor organization as a growing *imperium in imperio*, a voluntary tyranny in the midst of our democracy, using methods which are essentially those of warfare; and while calling attention to this rise of a military system in trades-unionism, he is not less vigorous in his declaration that there is a real injustice at the root of it which must result, through violence or peace, in a readjustment in the industrial organization, probably through the Government's assuming new functions. In the other paper a basis of consolidation for the churches is sought in their dogma, their government, and their ritual. In the first, little encouragement is found; in the second, only an incomplete interpenetration of the same principles; and in the third, a marked gradual approximation to uniformity in the modes of worship. The author expends his energy in urging a more perfect consent in the last field, by adopting formularies for prayer and Scripture reading, and accenting the festivals of the Christian year. The reconciliation of the Protestant churches of America is likely, from the showing of facts here made, to be as constant a subject in the future as that of the Anglican and the Roman Catholic. The subject is, we believe, to be continued. The papers on dogs are renewed in this number, and, in connection with them, in addition to the engravings already mentioned, those by Mr. Gaston Fay call for praise on account of their technical excellence.

—The war paper in this number is an extract from General Grant's forthcoming autobiography, and contains his description of the battle of Chattanooga and the events which immediately preceded it. Like everything written by Grant, it is absolutely clear in narration and simple in style. Some new and very interesting facts are told of the circumstances of Grant's appointment to command the Military Division of the Mississippi, and of his interviews with Mr. Stanton at Indianapolis and Louisville in regard to it. Mr. Stanton's giving him the choice of two orders, one leaving Rosecrans in his command and the other removing him, with Grant's selection of the latter, is a dramatic incident, as characteristic of both men as it is striking. The story of the battle itself can hardly be said to contain anything not in Badeau; but its condensation and its modesty make one wish that all his campaigns may thus be read, free from the extravagant panegyrics, and assertions of more than human wisdom, which disfigure General Badeau's otherwise able volumes. In the "memoranda," General W. F. Smith, who was chief engineer of the army at Chattanooga, takes perhaps unnecessary pains to show the evident incorrectness of Badeau's assertion that the battle was fought exactly as it had been planned. It is better praise of Grant to say that he modified his plan as often and as far as the changing circumstances demanded.

— The Mexican press was filled, during the last summer, with a controversy caused by the revival of some old charges against the honor of Juarez. The accusations were brought, this time, by so respectable an authority as the Italian historian, Cesare Cantù, in his 'History of the Last Thirty Years.' The charges are, briefly, that Juarez obtained his recognition as President from the United States by a promise to cede the State of Sonora, and that he exacted a large ransom from the Emperor of Austria for the body of Maximilian. The Mexican Government has considered the matter serious enough to call for the publication of an official refutation. This has been issued in three languages; and the English edition, 'Juarez and Cesare Cantù,' has come to hand. It is a pamphlet of fifty-five pages, giving a thorough and satisfactory review of the whole case. The calumnies are first traced to

their original sources, which are shown to be prejudiced and untrustworthy, and then their groundlessness is conclusively shown by extracts from the national archives. The truth is, that as the passage of time is giving us the proper perspective, we are seeing more clearly that the figure of Juarez is to be one of the heroic ones of this century. The pamphlet is thickly strewn with typographical errors, misspelled words, and amusing instances of "English as she is wrote." A specimen of the latter is the repeated phrase, "an attenuating circumstance." Nothing of that nature can be urged, we fear, even by the most charitable, for such an extraordinary number of blunders in a Government publication.

—The recent appearance of the concluding parts of Prof. Dr. Reusch's 'Der Index der verbotenen Bücher' completes a work which is a monument of well-directed toil. The infinite capacity for minute detail which we are disposed to regard as a peculiarly German characteristic, has rarely received a more practical demonstration than in these 1,900 large octavo pages, mostly in small type and condensed to the utmost extent. All the precautions which the Latin church has found necessary in order to prevent the faithful from being contaminated by the misuse of the arts of writing and printing, are here set before the student in the most satisfactory manner. The result is such that no one hereafter can seriously investigate the struggles of human intelligence toward development and enlightenment without making abundant use of Doctor Reusch's labors. Many unexpected sidelights are also thrown incidentally on dark corners of literary history, which have interest for the general reader as well as for the special student. It is satisfactory to observe that, so far as the United States is concerned, the Congregation of the Index has been content to rely upon the intelligence of readers, and has not sought to fence them in from forbidden pastures. The only books originating in this country which have been "Indexed" appear to be the pamphlets which were published in Philadelphia in 1822, during the fierce strife over St. Mary's Church between Pastor Hogan and Bishop Conwell, and a Spanish translation of one of Doctor Hollick's notorious books, printed in New York in 1864, presumably for the Central and South American market. This confidence in the robust faith of our Catholics is further manifested in the fact that when in 1876 translations of Professor Draper's 'History of the Conflict between Religion and Science' appeared in Spain and Italy, the public in those countries was protected by promptly placing them in the Index, though the original work has never been so treated here. As the Congregation must necessarily depend upon reports and applications sent to it by the ecclesiastical authorities of distant countries, all this would seem to show that in this country the Church has wisely adopted the Anglo-Saxon aphorism, that error is harmless when truth is left free to combat it.

—When foreign vocalists, on appearing for the first time in an American hall or theatre, sing out of tune, the defect is commonly ascribed to the "nervousness attendant on a first appearance." More commonly, however, it is due to the fact that the standard pitch used by our orchestras is apt to be higher than in foreign cities, though the Philharmonic lowered its pitch a year ago. There is a constant antagonism between vocalists and instrumentalists on this point, the former desiring a high pitch because that adds to the brilliancy of tone, while the singers object to it as involving greater effort and possible injury to the voice. Not only does the pitch vary between different countries, but in the same country, and even city, a common standard is rarely accepted. Dr. Hanslick, in the *Neue Freie Presse*, gives an amusing illustration of this: On one occasion, in presence of the Austrian Court, two military bands united their forces to play the national hymn; but the result was so ear-splitting that one of the bands had to be commanded to stop. An absolute standard cannot be established, for the pitch of an orchestra is apt to undergo a change even during a single performance, when the instruments become heated. Thus Näke showed, by precise measurement, that during a performance of "Norma" the *a* of that period was raised from 932 to 936 vibrations; and in a modern opera the result would doubtless be greater, at least if the instruments got as warm as the players. But such minor deviations would not be apt to cause trouble if a uniform standard were once generally adopted. France is most fortunate in this respect. In 1858, the French Government, in order to regulate the matter, appointed a commission, including physicists, directors, and eminent composers (Berlioz, Auber, Rossini, Meyerbeer, Thomas, Halévy), who, after taking into account all circumstances of importance, adopted a standard of 870 vibrations for *a*. This was made obligatory by law throughout France, and its advantages were so apparent that many foreign cities, including Berlin, Vienna, Munich, Leipzig, Dresden, Hamburg, Frankfort, Stuttgart, Milan, Naples, etc., adopted it in course of time. England, which to a native weakness of musical instinct adds a peculiar obstinacy in clinging to antiquated methods and forms, failed to accept the benefits of the diapason normal, thanks largely to the opposition of Michael Costa, though it has been introduced in Covent Garden. Quite recently, following the appeal of the *Zeitschrift für Instrumentenbau*, a number of German musicians signed a petition to Bismarck to make the French pitch obligatory throughout the German empire; and at Vienna there is soon to be an international convention of musicians to discuss the methods of introducing further reforms. The preliminary circular issued in behalf of this Convention leads Dr. Hanslick to suspect that the intention is to advocate a still lower pitch than the French, the so-called Milan or Pythagorean pitch; and he justly opposes this undertaking, not only because vocalists as well as instrumentalists would suffer by having *too* low a pitch, but because the advantages derived from the wide acceptance of the French system would be jeoparded.

—Advocates of the theory that tobacco is harmless to adults have failed so far to explain away the explicit testimony of the Greely expedition, that those addicted to its use possessed lower powers of resistance and perished sooner than the abstainers; nor have they met the suspicion, suggested by General Grant's death, and rendered plausible by other circumstances, that tobacco is to some extent responsible for the alarming increase of cancer. As compared with most foreign countries, America has hitherto been a paradise for non-smokers, owing to the great deference paid to ladies; yet there is no question that there is everywhere a growing toleration of smoking. In Germany, on the other hand, where the smoker has always been more offensive and ubiquitous than in any other country, noteworthy is the result of a recent dispute between the managers and the passengers of the Berlin-Potsdam railway. To save time and trouble in the rush of business, the railroad officials took off the obligatory cars "for non-smokers," but this caused such a commotion that they were compelled to change their policy and to introduce a few separate coupés "for smokers." Apropos of this fact, the Berlin correspondent of the Cincinnati *Volksblatt* notes various other symptoms showing that the German non-smoker may hope, in course of time, to secure the privilege of breathing pure air in all public places. In the street cars and omnibuses smoking has been prohibited altogether, and in the minor concert halls it is only allowed on certain evenings, or in certain parts of the hall. He also remarks a large increase in the number of young men who have given up smoking, either from economic, æsthetic, or hygienic motives; and he states the fact, which certainly seems remarkable for Germany, that in his office there are nine non-smokers to three smokers. He further explains a mystery which has puzzled many tourists in Germany — namely, the fact that Americans cannot, for love or money (and cigars are cheap), procure any to suit them. The reason is that the American preference is for a fresh cigar, while the Germans keep theirs for some time before they are considered fit for use. This makes them milder, but Americans, in the opinion of this correspondent, prefer the stronger article, just as they would rather have whiskey than lager.

— Paul Bert is known as a passionate politician, an aggressive orator, a combative statesman, and an iconoclastic reformer, and to some also as the author of scientific works with titles forbidding to the vulgar, such as 'De la Greffe animale,' 'Recherches sur le Movement de la Sensitive,' or 'La Pression barométrique.' Few, however, on this side of the Atlantic, would expect of him pleasant *causeries*, soft descriptions of scenery and village life, and optimistic tourist observations. A very agreeable medley of all these can be found in his last little volume, containing 'Lettres de Kabylie' and 'La Politique Algérienne' (Paris). The letters, written in April and May last, form the main portion of the volume. The tour described is not the author's first in Algeria. It does not embrace the capital, nor Constantine, Bona, Oran, or other great centres, but is almost completely limited to the land of the Kabyles in the narrow sense, that is, the mountain quadrilateral comprised between Collo and Dellys on the seashore, and Aumale and Sétif in the interior. This magnificent highland territory M. Bert looks upon as the key of Algeria. As long as its intrepid inhabitants—a dense population on fertile slopes or in romantically secluded recesses—remain quietly disposed, France's hold on her greatest colony is safe, "even if the rest . . . were on fire." And the Kabyles can easily be rendered permanently pacific and friendly through equal justice, strict protection of property, rural self-government, the construction of roads and bridges, and the spread of such education as they need. These Berber cultivators of the soil, "sedentary, industrious, . . . monogamous, economic, fond of equality, jealous of municipal liberty," must not be confounded with "the Arab cavaliers, aristocrats dwelling in tents," with whom "they really have nothing in common but sobriety and bravery." M. Bert has a strong dislike for the Arab as an aristocrat and a foe to France. The Kabyle he hopes to see converted into a useful auxiliary at the coming of "the great European war, the necessary war, which everybody expects, hopes for, and dreads." Formerly his hostility was but too often justifiable; he was often designedly driven into insurrection by French commanders greedy of promotion and confiscation. The Republic treats him fairly now, if not yet wisely; and should he, at the wrong moment, rebel, the chastisement must be "terrible," involving "the deportation of entire tribes to the Senegal, or to Guiana"! Thus speaks the enlightened scientist, who can write charming idyllic pages, but confesses himself to be guided solely by the interest of France, "étant

chauvin de . . . nature et peu enclin à l'humanitairerie."

TILDEN'S WRITINGS AND SPEECHES.

The Writings and Speeches of Samuel J. Tilden. Edited by John Bigelow. 2 vols. Harpers. 1885.

MR. BIGELOW has done his work as editor of Mr. Tilden's state papers—if such is their proper title—very thoroughly. Each document or speech (the series begins as early as 1833, when Jeffersonian Democracy was a living creed, and comes down to these latter days of "Peculation Triumphant," and Electoral Commissions, and other things undreamt of by Silas Wright or Azariah C. Flagg) is introduced by a short note showing the circumstances which led to its composition or delivery; and thus the papers with the notes make a tolerably connected history of the life and times of the subject. The collection will probably become more and more valuable as time goes on. Just now the early papers are too remote from the interests of the day, and the recent ones deal with matters too familiar to every one to attract a great deal of passing attention. It must be said, too, that Mr. Bigelow's zeal has run away with him a little, and led him to speak of Mr. Tilden in a vein of prefatory laudation which is inappropriate. This raises anticipations of a higher degree of enjoyment in the perusal of the volumes than they are actually calculated to produce. We have ourselves always had a high appreciation of Mr. Tilden's intellectual capacity, wisdom in public affairs, and professional skill; but to most of his sincere admirers it must seem a little forced to suggest a comparison between him and La Bruyère and Vauvenargues; or to say, as Mr. Bigelow does:

"While disclaiming on behalf of Mr. Tilden any special pretensions as a man of letters, it would be doing him signal injustice to imply that as great distinctions were not within his reach in the walks of pure literature, if he had chosen to turn his talents in that direction, as have rewarded his exertions as a political leader. No one can run his eyes over the following pages without discerning in them abundant evidence of the rarest literary faculty."

Under ordinary circumstances it would perhaps seem too early during Mr. Tilden's life to attempt an impartial estimate of his public services and position as a statesman; but, on the other hand, his public life has ended, and the passions aroused by his Presidential candidacy have subsided, and most of the facts in the case are already beyond dispute. It is curious to notice, for instance, that even with regard to the dispute that once raged over the question of the credit which belonged to Mr. Tilden for breaking up the Tweed Ring, there is little or no question as to what he actually did. His admirers do not pretend that he did the work which fell to the press, the very courageous and difficult work of arousing public sentiment and promoting investigation; on the other hand, his critics do not deny that he performed, or helped to perform, the invaluable service of preparing the ingenious device by which the cohesive power of the Ring was first broken—the sudden substitution in the Comptroller's office of Mr. A. H. Green for Connolly; nor that it was through his masterly analysis of the Ring bank-accounts that legal evidence against its members was brought within reach. It is surely enough that the credit for these services—and most characteristic pieces of work they were, too—belongs to him; nobody really believes that Mr. Tilden was a leader in the preliminary agitation. A dispute as to the relative importance of his work and that of a newspaper in such a matter is like a dispute as to the relative merits of the early abolitionists who preached the crusade against slavery when that institution seemed a part of the natural order of things, and the lawyers and statesmen who afterwards guided the country on the road to abolition by legislative paths. Both played their parts and played them well, but their parts are too different to be compared; nor do we believe, now that the fury of the controversy is abated, that any one does think of comparing them. Here, again, the phraseology employed by Mr. Bigelow—especially the implication in the use of the word "storming party"—seems a little extreme. Mr. Tilden has been a great leader in his day, but "storming parties" have not been the sort of operations that he has conducted or for which he was by nature qualified.

Mr. Bigelow calls attention to the extraordinary hold which Mr. Tilden obtained upon the imagination and affections of his party—a hold which was so tenacious that when he came to feel the necessity of retirement, he had considerable difficulty in shaking his party off. But the fact is not so extraordinary when we reflect that the only instance in which the party had secured a victory in twenty-five years had been under his leadership, while his wealth was, in a period like ours of enormous election expenses and campaign funds, calculated to impress the minds of the organizers of conventions in a way that no amount of wisdom, purity, or intrepidity would ever have done. But, whatever the causes, the fact is indisputable; and it has always seemed to us to place Mr. Tilden in a position as a public man which might have taught his most bitter critics the folly of attempting to depreciate him in the eyes of the public by heaping upon him coarse and indiscriminate abuse. The brutality, vulgarity, and irrelevance of these attacks in the case of a distinguished man who never replied to them made them soon seem to his admirers like the barking of curs at the triumph of a hero; and when really serious charges were subsequently raised against his character, his followers found that for a long time they could afford to treat them as merely a new form of vilification.

Fifty years hence, in estimating the character and services of Mr. Tilden, what will be the verdict of posterity? Without attempting to answer this question, we may say that Mr. Bigelow's volumes will afford some of the best material for its solution. A good many of the papers relate to the economical questions which were so prominent in the days of Mr. Tilden's youth, and in which he was especially strong. It was here that he laid the foundation of that mastery of finance and political economy which stood him in such good stead in his later years, when he undertook the difficult task of uniting on a sound financial platform the discordant factions of a party filled with illusions and hallucinations on this subject. It is always necessary to remember that there are two Tildens—the one a publicist and economist, the other a practical politician. In his former capacity he was without a rival. No one had anything to teach him about the science of government, or about what is vaguely termed "business." He was essentially a "business" lawyer—that is, a lawyer with the knowledge of business details and management which few lawyers have; he was, as every one knows, a thorough accountant; while he was as well versed in the theory of economical science as he was in the practice of affairs. He might, however, have been all this and never risen to the height he attained in 1876. It is not simply intellectual greatness or knowledge which commands success in such contests as divide the American people every four years. He was also a master in the art of practical politics as it had been taught him in his youth and as he had practised it throughout his life. He knew how to use men so as to obtain his ends. All great statesmen must have this knowledge; the difference between them, the difference in their characters, is shown in their methods of using their tools. Now it is not unfair to say—and we believe that there is no dispute among candid people about this either—that there were peculiarities in Mr. Tilden's manner of making use of his fellow-creatures which up to a certain point helped him, and beyond that greatly interfered with his success. Without saying that he was fond of intrigue, it can hardly be disputed that both his friends and himself have always regarded finesse as one of his strong points; and while we would not for a moment throw doubts on his moral courage or readiness to sacrifice himself for the sake of principle, this is very different from boldness—and Mr. Tilden was not a bold man. He consequently was inclined to finesse too much; and when the Presidency hung in doubt he finessed so much that he left his own partners in doubt as to what he meant or could or wanted to do—a fault as unpardonable in politics as in cards. He was pitted against bold men who were playing for high stakes, and who won the game the moment they perceived that their adversaries were growing timid and confused. Thus it was that Mr. Tilden lost the prize he had played for so long and patiently—the prize which nine-tenths of the fair-minded people of both parties thought he was honestly entitled to; and thus it was that in the crisis of his life the characteristic vein of character which he displayed so successfully in private affairs, which had proved of such great use to him and the public in his proceedings against the Ring, ended by becoming his stumbling-block, and involved him in irretrievable disaster.

RECENT FRENCH BOOKS.

M. PAUL JANET has published, with additions, under the title of 'Victor Cousin et son œuvre' (Calmann Lévy; Boston: Schoenhof), the interesting series of articles upon his former master and friend which appeared not long ago in the *Revue des Deux Mondes*. To these he has added, as an appendix, the article published in the same review in 1867, a few days after the death of Cousin, in which most of the very few personal details contained in the volume are to be found. M. Janet has attempted to present to his readers only the relations which Victor Cousin bore to philosophy, and especially to philosophical study in France, during the first half of the present century; but these relations were so complicated, so changing under the various influences and conditions through which he passed, that the attempt was an unusually difficult one. The result has been a work written with the clearness and simplicity of a master not only of style, but of thought, and full of interest even for the general reader. All those portions which relate to the early philosophical teaching of Cousin, not only in his chair at the Sorbonne, but as *maître de conférences* at the École Normale, are especially new and valuable. It is difficult at the present time to understand the enthusiasm excited in France, and to a certain degree throughout Europe, by the teaching of this young *suppléant*, who at twenty-three took the place of such a man as Royer-Collard in one of the chairs of philosophy at the Sorbonne. In the most direct and striking manner M. Janet has shown that brilliant phase of Cousin's genius which made him for his contemporaries the greatest of modern teachers, the creator of a school of philosophical thought if not of a new philosophy. The influence of Cousin dates from these early years of his teaching, between 1815 and 1820. Then the reactionary course of the Government led first to the suspension of his lectures at the Sorbonne, and, two years later, by the suppression of the

École Normale, to the loss of his place there as *maître de conférences*. In 1828 another political crisis restored him to his chair at the Sorbonne; and that year and the succeeding one, in his famous courses upon the history of philosophy, he obtained his most brilliant successes, and closed his short career of only seven years' duration as a public lecturer. After 1830, as a member of the Government of July, his activity was turned towards the organization of the public teaching of philosophy in France. What M. Janet calls the *grande époque* of his philosophical work closes at about the time of the Revolution of 1848. "Les jeunes générations qui ne savent pas l'histoire" know him only in his later period, after he had corrected and modified his doctrines in the same way that he did his writings, under many complicated influences. M. Janet indicates this with a clearness of insight and a generosity which never fail, even when he sums up in a few forcible sentences the fatal results which followed both for his own fame and for the interests of philosophical study itself. There is necessarily but very little space devoted by M. Janet to Cousin's writings outside of philosophy, but there is no chapter in the book in which his profound and delicate appreciation is shown to greater advantage than in the one entitled "Cousin, littérateur et écrivain." The passion for literature and literary art which took possession of Cousin from the period of his studies upon Pascal, and the influence of this new ardor upon his philosophical writings, is here brought out with fine critical insight. Renan said of him toward the close of his life that he belonged even more to literature than to science. No one has disputed his rank as a great writer; M. Janet says: "Quelques-uns même disent qu'il n'a été que cela." He has certainly shown, however, that if Victor Cousin has invented no new system, created no original doctrine, his services to philosophy place him among its most faithful disciples.

M. Jules Simon has made good use of the forced leisure which his retirement from political life has given him, and has turned his thoughts to academic labors. Not long ago he published 'Une Académie sous le Directoire,' in which he gave the history of the section of the Institut suppressed by Bonaparte and reëstablished in 1832 under the ministry of Guizot. Now he gives us the biographies of three of the most eminent members of the section, recently deceased. 'Thiers, Guizot, Rémusat' (Calmann Lévy; Boston: Schoenhof) contains, besides a long preface which is by no means the least interesting part of the book, three historical notices read before the Académie des Sciences Morales et Politiques, at its annual public sessions in 1882, 1883, and 1884. These notices are very different from the eulogiums pronounced by a *récipiendaire* of the French Academy upon his predecessor at his public reception into that body. The Secretary, on whom devolves the duty of preparing one historical notice annually, unlike the new member of the Académie Française, does not have his subject imposed upon him by circumstances, but chooses freely from among the most eminent of the recently deceased members, as his own sympathies and opinions incline him. The historian Mignet, who preceded M. Jules Simon as perpetual Secretary of the Académie des Sciences Morales et Politiques, did not hesitate to omit even so important a man as Michelet. M. Jules Simon was the personal and political friend and associate of both Thiers and Rémusat, and his notices of them are the ardent and sympathetic appreciations of a friend rather than the critical opinions of even an impartial and kindly judge. Political and personal feeling enters less into his account of Guizot, and just so far this is more moderate in tone and nearer the ideal of what such a notice should be. The thread which connects the three notices and gives unity to the volume is the important part played by these eminent men in the political history of the present century. The book is full of information, and, in spite of the author's personal bias, which shows especially in the treatment of the political career of Thiers, it is accurate and valuable.

M. A. de Pontmartin belongs to a class of writers who have been justly called "prophets of the past." He is more Catholic than the Pope, and more Royalist than the King; nor have these tendencies lessened with age. He has just published the sixth series of his 'Souvenirs d'un vieux critique' (Calmann Lévy; Boston: Schoenhof), which is simply a collection of his critical notices of recent books. In articles upon the Duc de Broglie, Louis Veuillot, Camille Rousset, he can freely give vent to his monarchical and religious feelings; while in speaking of Victor Hugo, Edmond About, Richepin, Daudet, and Paul Bourget he takes every opportunity to lay the blame of the corrupt state of letters and manners upon the republican government of France. It is not necessary to agree with M. de Pontmartin to enjoy his writing. He hates all that is new so cordially, and yet, in spite of all, he is so thoroughly modern himself, that the contrast is amusing and instructive. The articles devoted to Sarcey are full of sympathetic admiration: and yet Sarcey, outside of his theatrical criticisms, is one of the bitterest opponents of the party which has M. de Pontmartin's prayers.

The volume of M. Augustin Challamel, 'Souvenirs d'un Hugolâtre' (Jules Lévy; Boston: Schoenhof), looks very uninviting, nor do the contents satisfy the expectations raised by the glaring title. The sub-title, "La Génération de 1830," indicates more truly the nature of the work, which gives the personal recollections of the author, who came in contact with many of the men celebrated in the reign of Louis Philippe, but who has very little to say of Victor Hugo himself. He has some pleasant things to report of his own literary beginnings, but he is very reticent in regard to the genesis and composition of the only work by which he deserves to be classed among French historians, his 'Mémoires du Peuple français,' in eight volumes.

It will not be enough to say of M. Guy de Maupassant that he belongs to the class of writers for whom morality is something that may be neglected. He is not satisfied with ignoring certain rules of action, as M. Bourget does. He deliberately chooses his characters, all his characters and situations, so as to be in complete disaccord with what to him is the Philistine view of right and wrong. If, therefore, you wish for a novel that will give an ideal picture of anything that is good or noble in man or woman, do not choose one of M. Guy de Maupassant's, especially the last, 'Bel-Ami' (Victor-Havard; Boston: Schoenhof). The title suggests the unsavory plot. Bel-Ami is the handsome animal who succeeds in life through the influence of women. The author has surpassed his previous efforts and those of the school to which he belongs, the successors of Flaubert, in the force and intensity with which he presents the exceptional as well as exceptionable phases of life in which this literature delights.

M. Catulle Mendès, in 'La Légende du Parnasse contemporain' (Brussels: Brancart; Boston: Schoenhof), has endeavored to present the rise and progress of a school of French poets, most of whom are still living, who have received the name of *parnassiens*. The author is himself one of the lesser lights of this constellation, which boasts already of two Academicians, Sully Prudhomme and Coppée. After relating the poetical beginnings of the vagabond Glatigny, he passes to his own friends, Léon Dierx, José-Maria de Hérédia, Albert Mérat, and others still less known, giving several of their poems and many of his own. These poets, he tells us, have never aimed at forming a new school of poetry; at the most they are only "un groupe." What he does not tell us is that this group or school, though proceeding directly from Victor Hugo, has made of verse a mere handicraft in which the highest importance is attached to form and sound. Even in the best of them, Sully Prudhomme, there is but a very slender thread of thought. The younger disciples have been devotees of art for art's sake, scorning many things which most people revere and love. These have gloried in the name of *les impassibles*. But whether they be called *parnassiens, stylistes, formistes, fantaisistes*, or *impassibles*, they have won their place, and now they have their periodicals, their publisher (Lemerre), and even their parodists, who but lately gave them a new name, *les poètes décadents*. All this M. Mendès does not tell us. But he has interesting pages upon their first journal, *La Revue Fantaisiste*, and upon the publication of 'Le Parnasse contemporain' in 1866, a now rare volume of poems in which, by the side of names already celebrated, several poets of the new school first made themselves known, and which was the occasion of designating the whole group as *parnassiens*—a name not very flattering, as the word was never seriously applied to a poet, but has always had and may continue to have only the meaning of poetaster.

CHILDREN'S BOOKS.

PLINY'S 'Natural History,' a work remarkable at the time when it was composed, more than eighteen hundred years ago, is to-day a literary fossil, interesting for its record of the myths and errors of that ancient time, full of data for the ethnologist and student of manners, but practically barren for any one seeking information of what we now call natural history. For well-grown youth (if there are any left), who have some knowledge of animals and of comparative history, Mr. John S. White's 'Boys and Girls' Pliny' (Putnam) will have an interest as a presentation of the ignorance of the ancients. The mental confusion which would follow the reading of it by children young enough to take it in earnest, would be pitiable, and it should be kept out of their hands. For adults it presents a literary curiosity, as the learned editor, presumably a "classicist" of the deepest dye, seems to suppose that by a dozen or two of references to Swammerdam and Cuvier (!) he has called attention to "all instances where the author's statements have proved in the light of modern science to be erroneous," "unless evidently preposterous." To make it a complete manual of natural history, doubtless, the publishers have included numerous excellent woodcuts of the reindeer, walrus, sea-elephant, musk-ox, and other animals not known to Pliny or referred to in the text. The make-up of the book is excellent.

'Four Feet, Two Feet, and No Feet; or Furry and Feathery Pets and How They Live,' edited by Laura E. Richards (Boston: Estes & Lauriat), is one of the most attractive books for children which have lately come to our notice. It is crammed with illustrations remarkable for their truthfulness and beauty; and accompanied by short stories, prettily told, and which convey much information about the birds, beasts, and insects whose portraits appear in the cuts. We can heartily recommend it.

A considerable amount of geographical information is given in an attractive form in the 'Boy Travellers in South America,' by Thomas W. Knox (Harpers). Two cousins, accompanied by an uncle, visit most of the countries and large cities

of South America, crossing the continent in doing so twice, descending the Amazon in the one case and going over the pampas in the other. They study up the history of the places they visit, as well as the accounts of other travellers, abstracts of which are given in the form of letters home or in conversations. Much attention is also paid to a description of the natural products of the various countries. The narrative is skilfully interwoven with this solid information, and the book is almost always interesting. Occasionally the author errs in giving unimportant details. He has evidently been careful to get the latest information on the subjects he discusses, and in only one instance have we noted an important omission. In his account of Chimborazo he errs in stating that no one has ever reached the top. Mr. Whymper ascended it twice in 1880 The pictures are mostly good and well illustrate the text. In some cases, however, it would seem as if the text had been written for the pictures. The book would have been far more useful had the author taken the pains to add an index. A table of contents, however full, by no means takes its place.

The same author has adapted the 'Travels of Marco Polo for Boys and Girls' (Putnams). One of the young members of a "Reading and Geographical Society" reads at each meeting one or two chapters of the 'Travels,' and another follows with explanations of obscure passages and additional information in regard to the countries and people described. In this way the greater part of the book is read "with very slight reduction or alteration." The additions to Marco Polo's story are generally well chosen and interesting, but, notwithstanding all Mr. Knox's care, a considerable knowledge of the geography of Asia is absolutely necessary for the understanding of many passages. The illustrations are admirable, with a few exceptions, and give the book a very attractive appearance.

The title of the 'Boy Travellers in Arabia,' by the Rev. Dr. Wise (Phillips & Hunt), is misleading, in that their journey from Aleppo to Bagdad and back by Damascus and Beirut is not in Arabia, but in the Syrian Desert and Mesopotamia. The descriptions of the scenery and the life of the Bedouins are fairly well done, but the author has not been very successful in the arrangement of his materials.

In 'Historic Boys,' by E. S. Brooks (Putnams), there are accounts of incidents in the lives of twelve boys, all of whom were or became monarchs, with the exception of the last, Stephen Van Rensselaer, the Patroon. The most noted are Marcus Aurelius, William the Conqueror, Henry V. of England, Leo X., Louis XIV., and Charles XII. of Sweden. Most of the sketches are interesting, but the author's style is too ambitious and is marred by archaic affectations. With regard to the typography and the beauty of the illustrations, this book deserves high praise.

It is to be regretted that so many books for the young, like those for older readers, should be made up of short disconnected sketches or stories. Little mental effort is required to read them, and the mind passes rapidly from one topic to another entirely different without dwelling at length upon any. There is serious danger that the power of prolonged and concentrated thought will thus be greatly diminished, and that the ability to read a *book*, in the old and highest sense of the term, will become one of the lost arts. With this reservation we can heartily commend 'Some Noted Princes, Authors, and Statesmen of Our Time,' edited by James Parton (T. Y. Crowell & Co.), consisting of fifty sketches nearly all of which originally appeared in the *Youth's Companion*. Though ostensibly written for the young, we are inclined to think that these essays may be read with even greater pleasure by the old. Some of them, especially those by Mr. E. P. Whipple on the college days of Macaulay, Prescott, Choate, and Charles Kingsley, are above the heads of all but the most thoughtful of young readers. Canon Farrar writes pleasantly of Dean Stanley and Westminster Abbey and of Disraeli. Especially interesting is the account of Victor Hugo's homes at Guernsey and Paris, and the poet's intense solicitude for his manuscripts. "Tea with Carlyle" is a capital bit of descriptive writing. The accounts of the royal families of England, Denmark, and Bavaria are entertaining, but not of much value. The best paper is on "Dickens with his Children," by Mamie Dickens, his daughter. In so large a collection of articles by different writers there will inevitably be some much inferior to the rest; but the editor has done his work well and has admitted few which have not some merit. He should not have permitted, however, Mr. G. P. Lathrop, in his account of Hawthorne, to put Brunswick on the Penobscot River. The portraits and illustrations are very good.

'Lives of Poor Boys Who Became Famous,' by Sarah K. Bolton (T. Y. Crowell & Co.), consists of twenty-eight short sketches fairly well written, beginning with Geo. Peabody and ending with Lincoln. This well-intentioned and in places stimulating book is marked by several inaccuracies of statement which detract from its merit. It is of no great importance that Joseph Addison, Samuel Johnson, and Garrick did not go to school together, and that Garibaldi was not "born in Southern Italy," and that the date of Gambetta's birth is incorrectly given; but it is important that a writer for boys, as much as a teacher, should be accurate in matters of fact. We suspect that some of our author's youthful readers will experience a different emotion from that intended by the writer when they read that, after Gambetta's death, "fifteen thousand persons called to see the great statesman as he lay upon his single iron bedstead"; and again when, in describing Ole Bull's narrow escape from death while playing, they are told that "he ruptured a blood vessel, and his coat had to be cut from him."

Mr. Edward E. Hale, in his 'Stories of Inventors' (Boston: Roberts Brothers), begins with Archimedes and Friar Bacon, and ends with Nasmyth and Bessemer. His method is to allow the inventors themselves, if possible, to tell their own stories in their own language. With some he has been fairly successful, but with others the materials at his disposal were not so easily used. Much in the account of the steam-engine, for instance, is beyond the intelligence of his readers. There is no harm in this, provided it makes them think; but Mr. Hale would have done better either to have omitted some technical details, or to have greatly simplified his explanations. His chorus of children, who, under the guidance of our old friend, Colonel Ingham, get all the facts from the cyclopædias and biographies, are a very remarkable group, talk familiarly of dividends and Agnostics, and are probably equally conversant with the intricacies of mechanics and chemistry. The account of Goodyear's invention should have been clearer, and a better representative of the inventors of his age than Benvenuto Cellini could, we think, readily have been found.

There is hardly a better class of books for boys and girls to-day than those which awaken a love for nature, and make them long to be in the fields and the woods, on the mountains and by the seashore; which teach them to enjoy, not country sports simply, but life merely in the country. 'Winter Fun' (Scribners) is such a book, and, so far as our experience goes, the author, Mr. W. O. Stoddard, has never been so successful as in this account of life in a mountain village during the winter season. He writes as if he thoroughly enjoyed the scenes which he pictures, and as if they were chapters from his own experience. His boys, it must be said, have exceptional luck in their hunting, getting a wild-cat, several deer, two wolves, and a bear in the course of a single winter. Besides the hunting scenes, there is sleighing, coasting, skating, fishing through the ice, a donation party, and a spelling match. But there is no singing school, we regret to say. If the publishers had put upon the title-page, "Reprinted from *St. Nicholas*," our satisfaction in it would have been complete.

Of a similar character to the preceding is 'Birchwood, by Jak' (T. Y. Crowell & Co.). A city boy hires himself out to a farmer to pick berries, and spends his summer vacation on a farm. With other boys and girls in the neighborhood, he forms a natural-history society. They fit up an old house for their collections of wood, minerals, birds, and insects, and start a library and reading-room. The story is naturally told, and the children whose doings are recorded are thorough boys and girls. We certainly hope that the author will be encouraged to give a further account of the "Riverside Museum" and its founders.

Mrs. Burton Harrison established at one stroke her reputation as a singularly graceful writer for children in her 'Old-Fashioned Fairy-Book' of last season. Her present volume of 'Bric-à-brac Stories' (Scribners) is a virtual continuation of the 'Fairy-Book,' giving, as did that, a new dressing to stories borrowed from all nations. As the title intimates, the ingenious device is adopted of making the various objects in a richly furnished drawing-room on Fifth Avenue relate, to a little boy, tales appropriate to their several nationalities, the Russian samovar leading off. The only fault we have to find with Mrs. Harrison's performance is the melodramatic *finale*. Mr. Walter Crane furnishes a great number of illustrations in his usual vein.

A large constituency of little people are in debt to Mr. Howard Pyle for his version, literary and pictorial, of 'Robin Hood.' He now appeals afresh to their gratitude with his handsome quarto 'Pepper and Salt, or Seasoning for Young Folk' (Harpers). Like Mrs. Harrison's, Mr. Pyle's invention is confined chiefly to reëditing the stories he takes from standard collections. Some of these he puts in verse, not bad of its kind, yet not remarkable. His designs, however, are quite up to his high level, and are at once humorous and picturesque, and decorative to a degree and with a certainty unrivalled by those of any other illustrator of books in this country. The title-page in red and black is a good example. A closer attention to the distinction between *shall* and *will* is the sole desideratum in this agreeable writer's style.

For a frank imitation of 'Alice in Wonderland,' Mr. Charles E. Carryl's 'Davy and the Goblin' (Ticknor & Co.) is undeniably clever—a remark which might be spared any reader of *St. Nicholas*, in which the story first appeared. The humor and the ingenuity are unflagging, and one only feels that the metamorphoses are rather too rapid. The illustrations are exceptionally good.

Lord Brabourne's 'Friends and Foes from Fairy Land' (Little, Brown & Co.) deals altogether with elves and witches, in three stories of unequal length, but all markedly original in treatment, well sustained in interest, and excellent in style, though there is no condescension to the infant vocabulary. There is true imagination in developing the several characters, whether human or brute, and it is seldom that descriptions of natural scenery are so felicitous without

being labored or conscious. The author's amusement in his own inventions will certainly be shared by his youthful readers. His artistic co-laborer, Linley Sambourne, known to all lovers of *Punch*, has a corresponding individuality of conceit and draughtsmanship, and, though he has made but an ugly cover piece, has done much to heighten the attractiveness of the volume.

Mention of Kate Greenaway will serve to characterize the now customary crop of juvenile picture-books consisting of colored prints of little folks, and appropriate verses. There is much that is graceful and feeling in the full-page illustrations by M. E. Edwards in 'Through the Meadows' (E. P. Dutton & Co.), and some of the vignettes in sepia by J. C. Staples can be commended. Mr. Weatherly's serio-comic verses are not remarkable, and their frequent allusions to Mr. Mundella will be quite lost on the American youngster. Both the coloring and the designs in Virginia Gerson's 'Rosebuds' (White, Stokes & Allen) are inferior to those of the foregoing, but now and then there is a bit of cleverness, as on page 23, and some of the ornamental borders show a fair decorative sense. The rhymes are of the nursery order.

GOSSE'S CLASSICAL ENGLISH POETRY.

From Shakespeare to Pope. An Inquiry into the Causes and Phenomena of the Rise of Classical Poetry in England. By Edmund Gosse. Dodd, Mead & Co. 1885.

THE subject-matter of these lectures, which were delivered last year in America, is narrower than the title implies The discussion does not include the body of English letters between Shakspere and Pope: it is limited to a single current of the poetic movement, sometimes called the classical from its supposed deference to ancient, and particularly Latin, theory and practice, or more commonly the Queen Anne, from the era of its culmination. Waller, the inventor or the new verse-form, is very fully treated, and Denham, Cowley, and Davenant, who continued it, and a few starveling bards who refused to conform, are also considered more or less thoroughly; but here, too, the author is further restricted, and the completeness of his survey is broken by his previous excursions in the same field, for which he refers to another publication. The scholarship displayed, the comprehensive and minute knowledge of facts, the antiquarian research and patience, are notable characteristics of his labor, and they result in some positive additions to the extensive fund of information in our possession. Investigation, however, has been practically subordinated to a kind of philosophizing, and the work makes its claim on our attention not on the score of its fresh finds of fact so much as on that of new views. The lines of these are simple. Three points are aimed at: that the origin of the school was not French but native; that the body of the literature does not represent a lapse into stupidity, but a reform and advance over barbarism; and that this movement was both necessary and beneficial—"the basis of style, in prose and verse, upon which all more recent literature has been elevated."

These statements have a revolutionary look. The existence of the French influence in our classical period is as firmly established in our conception of that time as that of the Italian or Spanish in other portions of our literary history. The exile of the wits of Charles II. at the French court, the traces of France in the versifiers of the Restoration, and the growing reference to French criticism at the end of the century, give a strong color of truth to the common view. Mr. Gosse himself declares that he should "be sorry to seem to underrate the part taken by France in the development of English classicism." What, then, is the fact he particularly emphasizes? Merely that Waller had worked in the rhymed pentameter, which does not allow the sense to overflow beyond the couplet, and had brought it to the form in which it was handed on to Dryden, without apparent aid or suggestion from abroad. This was worth bringing out, but its effect on the general view regarding the French influence in the period, as a whole, is slight. Distichs, having the meaning complete within themselves, had been written before Waller; and whether he had the talent to see that here was an undeveloped verse-form, or whether he merely felt it out by virtue of its aptitudes for his own limitations, as proverb rhymers find their measures, he was a lucky discoverer of the use of a common thing. The form had already been made essentially English, never to be confused with a truly adopted one such as the rondeau. What is really important in the accepted opinion is, that the cast of poetic thought in the classical period was in the direction of a logic and intelligence which were characteristic of a literary taste that came over with Charles II. Logic and intelligence are English, too; but the placing them above passion and imagination in the region of poetry seems to have been confirmed by a town predilection which began to rule at that time. Let Waller have all the credit for originating "the squared rhyme" out of his unassisted brain; but to emphasize unduly a fact which dates from before Charles I. lost his head, would warp our notions of the character of a long age, and of a literature which summons up the name of Queen Anne.

Mr. Gosse, however, does not rely on this point alone to reduce the tradition of the French influence to humbler pretensions. The invasion of logic and intelligence, he tells us, took place simultaneously throughout the West; it was a movement common to the modern world. In England he refers it to the lassitude following a great age, and to a disgust for the current writings in which, to use his phrase, only the barbarism of the Elizabethan period survived. By dwelling mainly on the rawness of the work which was displaced, he almost strikes out a new way of putting the case. To say that our literary task after Shakspere was to create a good prose is a commonplace; Mr. Gosse says it was to destroy a bad state of both prose and poetry. It is true that minor literature, meaning by that all except the literature of genius, was in general barbarous until the intellectual age set in. The literary movement after Shakspere was the reform of this minor literature, of what may be conveniently named bookcraft. So much of truth there is in the dictum that English classicism was not a lapse but an advance. It is not to be allowed, however, that this new rationalism was a reform of the literature of genius itself, of the creations of passion and imagination; it was the abandonment of it. The prose instinct was supreme in the circles which were the nurseries of the modern spirit. The poets who were curious about politics, morals, criticism, events, occasions, town and society topics, were smaller men than their Nestors knew—not of the make of the former age—citizens of the world, not children of Parnassus. They took the rhyming distich, of which the limitations were not narrower than those of their own minds; their subjects were to be talked of rather than sung, and professional poetry seized the mould in which verse comes nearest to prose. Poetry, the divine art, suffered; the Muse—*dea incedit*—would not put her feet into the Chinese slippers. But though at the end even the verse which was the beadstring of intellectual brilliants, came to naught, the reform of the barbarous common literature was complete: restraint, temperance, conformity were wrought into our bookcraft, and they had come to stay. How much of this change was merely a part of the evolution of modern taste, and would have taken place at all events, and how much of it was, in the way of history, directly due to the exile and French affinities of the court of Charles II., we cannot delay to inquire. The necessity for reform was English, and perhaps its working out was more an insular matter than has been thought; though in our view the vast weight of French influence is not to be gainsaid because of any evidence in this volume.

The remainder of our space should be occupied with Mr. Gosse's last assertion in regard to the influence of classicism on later times. He says, in words already quoted, that "it supplied that basis of style, in prose and verse, upon which all more recent literature has been elevated"; and he goes on to drive the nail home by adding, "and if we have chosen to cover it up and forget it, and to return in our poetical architecture to selected models from earlier schools, it is not the less due to the labors of Waller, Dryden, and Pope that we have solid groundwork on which to support these brilliant fabrics of the imagination." This seems to mean that the classical movement underlies the romantic period which is not yet at an end. The statement needs explanation. History is consecutive, we know; but Mr. Gosse can hardly be suspected of wishing to convey only the consecutiveness of the ages by his high-keyed sentence. It is conceivable that some reference may be intended to the existence of a cultivated public taste in the audience; but this is hardly likely. The assertion, as we understand it, is that the romanticists are indebted to the classical writers for some undefined training in style. For such a belief there is no ground. The romantic period is as utterly cut off from the classical as was that from the Shaksperian. In no intelligible sense was Burns indebted to Waller, Dryden, and Pope, any more than was Rossetti. "All more recent literature" is a comprehensive phrase. Similarly with Wordsworth, Coleridge, Shelley, Keats, Tennyson, Browning, and Swinburne—the earlier of these came nearest failure whenever they approached the paragons referred to, as did Byron also, and succeeded when they forgot all except the lift of their own lyric song. In other words, while English classicism was a reform in the bookcraft, whether prose or verse, it never affected the literature of genius, of passion and imagination, then nor now. In its own days the muse was with Donne and Herbert and Vaughan, and watched with Milton till song was silent; and when the new age came, it was not the resurrection of dry bones—at least not bones so dry as Waller's. In prose, too: was Bolingbroke the "basis of style" of Carlyle? But there is no need to pursue these queries. The scholarship and faculty of research shown in these lectures merit the highest praise and warmest welcome, but the general views, in which the whole is involved, indicate only a feeble mastery of the nature and influence and sweep of great agencies.

Mr. Gosse might well have called his book 'The Life and Literary Influence of Edmund Waller.' That is its real subject. The biography of this fortunately born poet is fully told, and some of the details of his plot against Parliament are given from unpublished researches by Professor Gardiner. Certain it is that his poetry, once in undisputed "immortal" vogue, will never be revived for his own sake. In a certain shamelessness he will retain preëminence among English poets, unless the oblivion of his works should prove the safety of his character. It is in this part of the field that Mr. Gosse excels—in the portraiture of decayed literary fashions, in æsthetic understanding of a lost taste. His muse, as shown in the opening dedication to

Mr. Howells, is of a modest kind; his attempts in the higher region of "the source and phenomena" of things are too apt to experience the uncertainties of Icarian flights.

Tuscan Cities. By William D. Howells. With illustrations from drawings and etchings by Joseph Pennell and others. Boston: Ticknor & Co. 1886.

We have already commented upon these sketches as they have appeared from time to time in the magazine whose pages they have made delightful; and it has been a pleasure to read them once more, and to note the skilful blending of beauty and humor, of romance and history and contemporary progress, of the mediæval and the modern *genre*, all of which give such propriety to their designation as an Italian "mosaic," whether in Florentine stones or Siennese candy. Mr. Howells is the prince of magazine travellers in Italy. The collection of these papers in a book, however, compels us to take notice of their combined effect; and in this there is a weakness which is indicated above by our restriction of his royal right to the magazine provinces. The fault belongs to his method, and is confessed by the subtitles, which prepare the reader for an incongruous mixture of scene and incident. It is true that thus a sense of the incongruity of Italy is very perfectly given, and the impression which is left on the mind is no more confused than it would actually be in the case of a tourist in his first perplexities. The author does accurately represent the state of mind of an intelligent American under the circumstances, with all his hesitations, his sense of lurking humbug (not to be overcome by his own self-distrust), his acknowledgment of practical discomforts and ever-present comedy, his shy sentiment suffering from frequent betrayal, his temptations to be insincere, and all such qualities. Now, our obvious criticism is that in this book this state of mind is the final one.

There is, perhaps, too much readiness in the suggestion which one cannot help entertainmg, that this is a cropping out of the vice inherent in the modern realist's theory of work, or bent of mind, as the case may be. The genius of discrimination is not among the presiding literary deities of the school. Here, in the study of a group of Italian cities, there are many values involved, and they are treated as if equal. The better Italian travellers, those whose pages are most instructive, have reduced their impressions to some sort of order, and have made the reader feel a difference in the worth of the various elements. Mr. Howells pours out his wealth, jewels and pebbles and glass and pinchbeck, all together. This ignoring of any principle of selection, this democratic assumption that one fact is as good as another, this universal suffrage which gives one vote and only one to each impression, is a denial of real inequalities as patent as any in politics, and much ha der to defend as a working theory of literature. But we go too far. In the present case there does seem to be a choice exercised in the subjects, and the criterion plainly is what an editor would call freshness. Certain things are left out, or incidentally mentioned, which are leading features, central facts, in the *ensemble* of Tuscan towns, because they have been over-written, just as the illustrations are noticeable rather for the scenes they avoid than for those they give. This may have been a stringent necessity of trade, but the result of it is that a character of incompleteness is given to a volume which seems to be at first sight a monograph.

These two reservations one is forced to make, on final consideration: one is dissatisfied with the lack of discrimination and with a too exclusive novelty. We could have spared some of the green paint for a little more of Giotto's Tower' and the dingiest and most bewritten of Cimabue's Madonnas would have been quite as welcome to us as the bride blowing her nose on her new-made husband's handkerchief. This discontent, however, is not very deeply seated, and when the author leaves his note-books and breathes the air of the Italy that is dear to him, we are at once transported by his imagination. There are many Italys; each traveller makes one for himself, and that of Mr. Howells is a very charming one, full of passive enjoyments of nature and human nature as they are, and faintly touched with the sentiment of the past. Notwithstanding his strong historical interest, one feels that his horizons are contemporary. His Italy is not the scholar's or the poet's, but the modern tourist's of however high degree; and the tourist has possession of such a multitude of delights there that he cannot fail to please, if he has anything of the *raconteur* in him. Mr. Howells makes the most of these, and his own tolerant amiability under his trials helps to pass off the unpleasant inconveniences of which he keeps the reader mindful. The artists have not succeeded so well. Their work is uneven, inaccurate in effects, not wisely chosen in subject. It is always hard to give Italian life and scenes in black and white, but when the sketches are so ragged, broken, and lean as these, the illustrations become a travesty.

The Tale of Gamelyn. From the Harleian MS. No. 7334, collated with six other MSS. Edited with Notes and a Glossarial Index by the Rev. Walter W. Skeat. Oxford: The Clarendon Press.

In the small compass of sixty-four pages Professor Skeat has given us a very handy edition of the 'Tale of Gamelyn,' which deserved this separate reproduction both from a linguistic and a literary point of view. While it is no longer regarded as written by Chaucer, having been in fact written about the time of Chaucer's birth (1340), it was, doubtless, found by some copyist among his papers, and, if he had lived to complete the 'Canterbury Tales,' we should, in all probability, have had it worked over and put into the mouth of the Yeoman, to whom Urry (1721) would assign it, as does Mr. Skeat also in his Introduction to the 'Prioresse's Tale.' The misnomer under which it usually appears, 'The Cokes Tale of Gamelyn,' is due to its position in the MSS., immediately after the imperfect 'Cook's Tale'; but Mr. Skeat says (p. xiv, note) that this title in the best MS., Harleian 7334, from which he prints, "is merely scribbled, as a headline to the pages, in a much later hand than that of the original scribe." From three of the best MSS. of the 'Canterbury Tales,' and one other, it is omitted altogether, though it is found in at least ten MSS. The metre alone is sufficient to warrant its denial to Chaucer, but the language also has a more archaic cast than his, and justifies the earlier date.

Mr. Skeat has provided an excellent Introduction, with notice of the grammar and metre, notes, and a glossary. The Tale belongs to the Robin Hood series, shows close connection with 'A Poem on the Times of Edward II.,' assigned to about 1320, and was written probably not long after the poem. Its language resembles the later writings of Robert of Brunne, and it is a good representative of the East Midland dialect of that period. It has few Scandinavian words—not more than twenty, half of which occur in Chaucer; and not very many Norman-French words—about a hundred and sixty in the 902 lines of the Tale. It is valuable in literature from having supplied the prototype of Lodge's novel, 'Euphues' Golden Legacy,' on which Shakspere based his "As You Like It." Mr. Skeat gives a short sketch of the story as it appears in the novel, the latter part of which is unlike the 'Tale of Gamelyn.' All other necessary help in understanding the poem is supplied, and it is needless to add that no knowledge of older English is required to appreciate it thoroughly. The language is no more difficult than that of Chaucer, but it is surprising how many are deterred from reading even his works merely by the appearance of the antique spelling. The book is well edited and will further the study of Middle Englsh.

Paris in Old and Present Times. By Philip Gilbert Hamerton. Boston: Roberts Bros.

This interesting book is made up of papers contributed to the *Portfolio* by its editor. Paris is so rich in historical association, so full of important buildings, so carefully planned and arranged, so brilliantly decorated, and so perfectly cared for and kept up—in short, is so clearly the nearest approach yet made to the ideal city—that one is never weary of reading about it. Mr. Hamerton knows his Paris well, her history and her aspect, without being so narrow in his exclusive devotion as the pure Paris-lover gets to be, and he is a very observant and sagacious judge of architectural effects, even if a little too catholic. The book is in nearly all respects just what that fortunate person needs who means to reside in Paris a while, with leisure to study it; it can hardly fail to give him generally sound notions of what the famous city has that is most admirable in its external aspects.

And yet we have one exception to take: the author is, as we have said, too catholic. His words of praise for the glittering splendor of the new Paris streets are too nearly of equal value with those he gives to really noble architecture. It is to be feared that he really admires far more than they deserve the façades on the Avenue de l'Opéra, which seems to be his favorite street. He has missed a chance to appraise properly that curious lack of power over details, that disposition to content themselves with few and poor ideas, if only the execution of them is perfect, which marks the Paris-bred architect—the most skilful planner and the best builder of modern times, but a terribly commonplace designer.

BOOKS OF THE WEEK.

Allen, J. G. Topical Studies in American History Rochester: Scranton, Wetmore & Co.
Arnold, Matthew. Dramatic and Later Poems. Macmillan & Co. $2.
Beale, C. E. Gately's World's Progress. Part I. M. R. Gately & Co. $1.
Beaufort, Duke of, and Morris, Mowbray. Hunting. Boston: Little, Brown & Co. Illustrated.

FALCKE'S GREECE AND ROME.

A new and cheaper edition, with over 400 illustrations. 4to, $10.

HENRY HOLT & CO., N. Y

The Shakespeare Library.

Collected by the Eminent Shakespearean,

JOSEPH CROSBY, Esq.,

of Zanesville, Ohio, is now offered for sale *en bloc*. It contains upwards of 500 titles, embracing more than 1,500 volumes, about equally divided between text and *ana*. Almost all the principal editions from Rowe's (1709) to the Riverside (1883) are present, and most of the standard Shakespearean criticism and illustrative literature in the English language. Mr Crosby's studies lay principally in the field of textual criticism, and many of his books are enriched by numerous marginal notes and emendations neatly written by him in pencil. These, of course, render the Library unique, and, it is believed, materially increase its value. The present owners dislike to disperse this valuable collection without giving some gentleman or institution the opportunity to possess it entire. Inquiries should be addressed to

JOHN J. INGALLS, Zanesville, Ohio.

IMPRESA di VENDITE

IN ITALY.

37 Corso Vittorio Emanuele Milan.

Sale of the splendid GALLERY MOLINARI de CRE MONE. PICTURES by the most distinguished masters of Flemish, Dutch, German, French, Spanish, and Italian schools of the XIVth, XVth, XVIth, and XVIIth centuries.

ESTES & LAURIAT.

301 Washington St., Boston.

*IN any family, whether large or small, but es*pecially where the number of children is large, a record of the constitutional peculiarities of each one, and the whole course of its physical development in sickness and in health, is certain to be instructive and may prove invaluable. Such a record is Professor J. B. Fonssagrives's 'Mother's Register,' consisting of a series of tables scientifically arranged for brief and convenient entries. A separate volume for boys and for girls. Price, post-paid, 75 cents per volume, or $1 25 for two volumes

Address Publisher of the *Nation*.

RECORD OF POLITICS and Politicians in the United States, 1865-1882: An analytical index to the *Nation* for that period (with occasional parallel references to McPherson's Political Handbooks and other sources). This index supplements the chiefly literary index to the *Nation* published in 1880. Valuable to all libraries, students, and editors. Price, in paper, $1 00. (Purchasers will please remit with order; accounts cannot be opened.) Address Publisher of the *Nation*, Box 794, New York City.

Houghton, Mifflin & Co.'s

NEW BOOKS.

The First Napoleon.

A Sketch Political and Military. By John Codman Ropes, member of the Massachusetts Historical Society. With Maps. 1 vol., crown 8vo, $2.00.

Mr. Ropes is widely known as one of the most competent and lucid writers on military topics. In this book he describes the condition of the great European Powers in Napoleon's time, the circumstances in France which enabled him to vault so suddenly to the supremacy; and depicts with wonderful vigor and clearness those campaigns and battles which shook the thrones and changed the map of Europe, and which have an irresistible fascination for readers of history.

Italian Popular Tales.

By T. F. Crane, Professor of the Romance Languages and Literatures in Cornell University. 1 vol., 8vo, $2.50.

A book of curious interest, like Grimm's German Tales, containing over a hundred Fairy Tales, Tales of Oriental origin, Legendary Tales, Nursery Tales, and Jests, collected from all parts of Italy. Equally engaging to young folks and their parents.

Bird-Ways.

By Olive Thorne Miller, author of 'Little Folks in Feathers and Fur,' etc. 1 vol., 16mo, $1.25.

A book describing the daily life and habits of the Robin, the Wood Thrush, the European Song Thrush, the Cat-Bird, the Redwing Blackbird, the House Sparrow, and other birds. These essays are at once accurate and delightfully fresh and interesting.

Myrtilla Miner.

With a fine Steel Portrait by Wilcox. 16mo, $1.00.

This is a story of the heroic age in the struggle between Freedom and Slavery in this country. Myrtilla Miner opened the first school for colored children in Washington, and, amid great opposition, persisted in her humane effort. The story of her experience and achievements in this enterprise is well told, and ought to find a large circle of interested readers.

The Oldest School in America.

An Oration by Phillips Brooks, D.D., and a Poem by Robert Grant, at the celebration of the Two Hundred and Fiftieth Anniversary of the Foundation of the Boston Latin School. 1 vol., 16mo, $1.00.

The exceedingly interesting address of Dr. Phillips Brooks fitly commemorates the long and noble work of the Boston Latin School, which has trained a multitude of men distinguished in all honorable professions.

Missy.

Happy-Go-Lucky.

Novels by the author of 'Rutledge.' New Edition. 16mo, $1.25 each.

*** For sale by all booksellers. Sent by mail, post-paid, on receipt of price by the publishers,

HOUGHTON, MIFFLIN & CO.,
BOSTON.
11 East 17th St., New York.

Have You a Collection of Books?

The Library Catalogue and Index is intended for private collections. It is arranged so that any book can be entered under author and title of work. Highly approved by those who have used it. The Library Catalogue and Index is handsomely bound and lettered in one volume, quarto (6¾x8½ inches), made of the best paper, and will be mailed, post-paid, to any address on receipt of $2.50 by the publishers,

SHEPARD & JOHNSTON, 146 Monroe St., Chicago, Ill.

NO. SEVENTY-EIGHT.

A Random Catalogue of CHEAP BOOKS in various departments of literature, all perfect and in good condition, unless otherwise described, and all offered at exceptionally low prices to effect a clearance. Sent free by

EYES Fitted with proper Glasses. Field, Marine, and Opera Glasses, Telescopes, Microscopes. Acoustic Cane for Deafness, Ear Cornets, etc. H. Waldstein, Optician, 41 Union Square, New York. Catalogues by enclosing stamp. Established 1840.

Messrs. Roberts Bros.'

NEW BOOKS:

Mrs. Herndon's Income.

A Novel. By Helen Campbell, author of 'The What-to-do Club.' One volume, 16mo. Cloth. Price, $1 50.

This is a story with a purpose—a purpose to do good—and it must take its place beside 'Ramona.' Mrs. Jackson, who was reading it during her sickness, was so impressed with it that she wrote to the author: "I am too ill to write, but I must thank you for your eloquent plea for the down-trodden. Your story is tremendously strong."

Nature's Teachings.

Human Invention Anticipated by Nature. By Rev. J. G. Wood, M. A., author of 'Homes Without Hands,' 'Natural History,' etc. With nearly 750 illustrations. 8vo. Cloth. Price, $3 00.

"A glance at almost any page of this work will denote its object. It is to show the close connection between Nature and human inventions, and that there is scarcely an invention of man that has not its prototype in Nature; and it is worthy of notice that the greatest results have been obtained from means apparently the most insignificant."—Preface.

The Alcott Calendar for 1886.

Containing a selection for every day in the year, culled from the writings of the author of 'Little Women,' by F. Alcott Pratt ("Demijohn"), mounted on a card illustrated with a portrait of Miss Alcott and a view of her present residence in Concord. Price, $1 00.

A MAGNIFICENT GIFT BOOK.

The Sermon on the Mount.

The complete Bible text beautifully engrossed and engraved, each page with a decorative border, the whole illustrated by the most gifted artists with scenes in the Holy Land, and imaginative interpretations of the reading. Says the *Art Amateur*: "It is not inferior to any American publication we know of similar scope." An instructive historical introduction by Rev. Edward E. Hale adds greatly to its interest and value.

One royal quarto volume, printed on satin-finish paper and bound in cloth, with elaborate cover design Price, $7 50; morocco antique or tree calf, $15 00.

Favorite Poems.

By JEAN INGELOW.

Containing three of this gifted author's most admired poems: "The Songs of Seven," "The High Tide on the Coast of Lincolnshire," and "The Shepherd Lady,' with many of her shorter pieces, in one royal 8vo volume. Illustrated with upwards of 100 engravings by the most celebrated artists. Printed on fine satin-finish paper and bound in cloth gilt, bevelled boards, with a bas-relief of St. Botolph Church inserted in the side Price $5 00.

SCRIBNER & WELFORD, 743–745 Broadway, N. Y.

Charles Scribner's Sons

HAVE JUST PUBLISHED:

Children's Stories in American History.

By Henrietta Christian Wright. Illustrated by J. Steeple Davis. 1 vol., 12mo, $1.50.

A book which is likely to gain a great popularity for the peculiar charm of its author's way of story-telling. The spirit and romance with which the stories, from those of Columbus and Balboa and Ponce de Leon and De Soto down to those of the old French War and the Revolution, are presented to the fancy of a child, remind one of Hawthorne's treatment of the old myths in the 'Wonder-book' and 'Tanglewood Tales.' There are admirable, spirited, and, above all, unhackneyed illustrations of the stories drawn by Mr. J. Steeple Davis.

Lyrics and Other Poems.

By Richard Watson Gilder. 1 vol., 12mo, $1.75.

The volume is divided into five parts: I. Lyrics and Hymns; II. Ballads; III. Sonnets; IV. Odes and Meditative Poems; V. The New Day. Like the others, it will be handsomely bound and decorated with head and tail pieces, and vignettes between the parts.

Stories by American Authors.

"Cabinet Edition." 10 vols., beautifully bound' gilt top. In a box, $7.50.

This fine edition has been made necessary by the repeatedly expressed demand for this standard collection of American short stories in a form suitable for preservation on the library shelf or for gifts.

"Never has an equal number of first-rate short stories appeared in the same compass."—*N. Y. Journal of Commerce.*

"The series is a capital one, well edited, and evidently meeting a well-defined desire on the part of the reading public."—*Boston Courier.*

"We do not abate our enthusiasm for these stories. They can be relied upon to be the very best."—*Hartford Post.*

"This well-chosen series of the best short stories American literature affords."—*Boston Advertiser.*

The Illustrated Library of Wonders.

A new and revised issue of twenty-four volumes, containing over a thousand beautiful illustrations. Each volume 12mo, complete in itself. Sold separately at $1.00 per volume.

NEW VOLUMES:

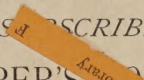
The Nation

VOL. XLI.—NO. 1064. THURSDAY, NOVEMBER 19, 1885. PRICE 10 CENTS.

THE BEST PERIODICALS FOR FAMILY READING.

NOW IS THE TIME TO SUBSCRIBE.



HARPER'S MAGAZINE.

DEPARTMENTS BY

G. W. CURTIS, W. D. HOWELLS, C. D. WARNER.

Subscription per Year, $4.00.

The SEVENTY-SECOND VOLUME commenced with the Number for December, 1885.

It is the purpose of the publishers to make HARPER'S MAGAZINE for the new year of unprecedented interest. On the conclusion of Miss WOOLSON'S novel, 'East Angels,' and Mr. HOWELLS'S 'Indian Summer,' there will be commenced serials from R. D. BLACKMORE and Mrs. D. M. CRAIK. A new editorial department, discussing topics suggested by current literature, will be contributed by W. D. HOWELLS, beginning with the January Number. With three departments, under the charge respectively of GEORGE WILLIAM CURTIS, W. D. HOWELLS, and CHARLES DUDLEY WARNER, the editorial portion of HARPER'S MAGAZINE will have the strongest possible claim upon the attention of every intelligent reader.

Among other attractions for the year may be mentioned a series of papers—depicting characteristic features of American society—written by CHARLES DUDLEY WARNER, and illustrated by C. S. REINHART; the continuation of the papers on "Great American Industries" and "American Cities"; the continuation of Mr. E. A. ABBEY'S series of illustrations for "She Stoops to Conquer"; "Sketches of the Avon," by ALFRED PARSONS; papers on "The Navies of Europe," by Sir EDWARD REED, illustrated; curious studies of American Colonial History, by Colonel T. W. HIGGINSON; more sketches of "Frontier Military Life," by R. F. ZOGBAUM, with the author's illustrations; "Southern Sketches," by REBECCA HARDING DAVIS; illustrated sketches of adventure connected with the hunting of "Large Game in America," etc.

PRESS NOTICES.

"*A model of what a family periodical should be.*"—Boston Traveller.

"*It meets the highest wants of the people.*"—Washington Post.

"*It abounds in brightness, variety, and in admirable illustrations. There is something for every kind of taste, and entertainment for all.*"—London Daily Telegraph.

"*Of all the magazines, this maintains the highest standard of uniform excellence.*"—Examiner, N. Y.

"*Its history is a large part of the literary history of the nineteenth century in America.*"—N. Y. Journal of Commerce.

"*Brimful of seasonable and delightful reading. A perfect encyclopædia of literature and art.*"—Observer, N. Y.

BOUND VOLUMES.

The Volumes of HARPER'S MAGAZINE, for three years back, in cloth binding, will be sent by mail, postage prepaid, on receipt of $3.00 each; or in half-calf binding, on receipt of $5.25 each.

HARPER'S YOUNG PEOPLE.

A SIXTEEN-PAGE

ILLUSTRATED WEEKLY FOR BOYS AND GIRLS.

Subscription per Year, $2.00.

The SEVENTH VOLUME commenced with the Number issued November 3, 1885.

The position of HARPER'S YOUNG PEOPLE as the best juvenile weekly is firmly established.

It is a miscellany of the choicest reading for boys and girls, and it contains the best literary and artistic work anywhere to be purchased.

Every line is subjected to rigid editorial scrutiny, in order that it shall contain nothing harmful, and that it shall be an effective agency for the mental, moral, and physical education of its readers. Its stories have all the dramatic interest that juvenile fiction can possess, without anything pernicious. Its articles on scientific subjects, travel, and the facts of life, are by writers whose names insure accuracy and value. Its historical stories, biographical tales, etc., present attractively the most inspiring incidents in history, and in the early lives of notable men and women; stirring poems, amusing rhymes, and ingenious puzzles appear in every number, and occasionally articles on embroidery and other forms of needlework. Papers on athletic sports, games, and pastimes have their place, while fine pictures by the foremost artists and engravers lavishly illustrate its pages. There is nothing cheap about it but its price.

That HARPER'S YOUNG PEOPLE fulfils the requirements of young readers is proved by its large circulation in this country and in Great Britain, and this circulation is a scarcely less emphatic testimonial to the fact that it has won the approval of parents also. Pastors, teachers, and the press are united on this point with parents and children.

PRESS NOTICES.

"*It deserves a place in every home blessed with children, whose lives it will make better and brighter with its weekly visits.*"—Zion's Herald, Boston.

"*This bold venture in the field of juvenile literature has proved a victory. . . . It deserves a welcome at every fireside.*"—Rev. J. H. Vincent, D.D., in the Sunday-School Journal, N. Y.

"*A model juvenile. A boy or girl can have no purer and brighter magazine as a weekly guest.*"—Independent, N. Y.

"*Its tone, variety, and general excellence of literary workmanship are admirably sustained.*"—Christian Union, N. Y.

"*A sort of necessity in juvenile life. . . . So firmly has the little weekly magazine taken hold upon its readers that one can scarcely conceive of the time when it was not.*"—N. Y. Evening Post.

BOUND VOLUMES.

Volume VI., with about 700 Illustrations. Pp. viii, 832. 4to, Ornamental Cloth, $3.50. A few copies of Volumes II., III., IV., and V. still on hand. Price, $3.50 each. Vol. I., for 1880, *out of print.*

HARPER'S PERIODICALS (Per Year):

DR. SCHLIEMANN'S GREAT WORK.

TIRYNS:

The Prehistoric Palace of the Kings of Tiryns.—The Results of the Latest Excavations.

By DR. HENRY SCHLIEMANN,

Author of 'Mycenæ,' 'Ilios,' etc.

Published Simultaneously in England, France, Germany, and America.

The Preface by Professor F. Adler, and contributions by Dr. William Dörpfeld. With 188 woodcuts, 24 plates in chromo-lithography, 1 map, and 4 plans.

1 vol., royal octavo, $10.00.

In this work, so long in preparation, and looked for with so special an interest, Dr. Schliemann has given the most splendid, and perhaps the most archæologically important, result of his great investigations on the plain of Argos. The uncovering of a typical ancient citadel, of a complete palace within it, and of the defensive walls, gates, aqueducts, baths, and even drainage system connected with it, is now accomplished; and the magnificent presentation here given by Dr. Schliemann of his discoveries makes this book a worthy record, like his former works, of these splendid "finds."

The Silent South.

Together with the Freedman's Case in Equity and the Convict Lease System. By George W. Cable. With Portrait. 12mo, $1.00.

Mr. Cable, in this little book, makes a strong and zealous defence of the rights of the negro. He presents facts which will prove a revelation to those who have not made a special study of the subject. He draws his statistics, which are striking in the extreme, from official documents, and offers indisputable evidence that will create a sensation among the thinking friends of the freedmen.

Afternoon Songs.

By Julia C. R. Dorr. 1 vol., 12mo, $1.50.

The new volume contains Mrs. Dorr's poems of the years since her former collection, 'Friar Anselmo.' The title embodies a fancy of the author that these are afternoon songs of life.

Faith and Rationalism.

With short supplementary essays on Related Topics. By George P. Fisher, D.D. 1 vol., 12mo, 75 cents.

A new edition of this valuable book for popular circulation. Prof. Fisher has thoroughly revised the text, and added notes and much interesting new matter.

Messrs. SCRIBNER have always ready for inspection in their retail department the richest and most complete stock of books issued by all English and American publishers in every branch of literature.

*** *These books for sale by all booksellers, or sent, post-paid, on receipt of price, by*

Charles Scribner's Sons,

743-745 Broadway, New York.

SCRIBNER & WELFORD, 743–745 Broadway, N. Y.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 19, 1885.

The Week.

SENATOR ALLISON, of Iowa, is quoted as saying at Chicago on Monday that in his judgment it will not be feasible to stop the coinage of silver dollars altogether in the coming Congress, although it may be practicable to suspend such coinage for a definite period, provided that, at the expiration of the period, it shall be resumed without further legislation. This means, of course, that, in Mr. Allison's judgment, the silver men would probably consent to give the country a breathing spell provided no risk were incurred of encountering an Executive veto when it should be proposed to resume the coinage. Meanwhile it is Senator Allison's idea that Europe should once more be invited to an international monetary conference, under the stress and discipline of coinage suspension by the United States and of a possible silver crisis. The Senator from Iowa is probably better acquainted with the current of opinion among the silver men than any other Republican statesman. Indeed, he may understand the drift of their counsels better than the Democratic leaders themselves, because he is a man of more intelligence and less prejudice than Bland, Warner, Beck, or any of those who figured as the special champions of silver in the last Congress. On the Republican side of the House his opinion is not likely to be at fault. If we may assume that the policy which he prefigures will receive the support of the Republicans who voted against coinage suspension in March last, and also of the more moderate Democrats like Randall, Carlisle, and Morrison, there is good reason to hope that it may be carried into effect early in the coming session.

Whether the leading Powers of Europe would consent to join us in another Monetary Conference, is extremely doubtful. The bi-metallic whimsy which had possession of Prince Bismarck some time ago has, according to late advices, altogether departed. Except in the brain of the Chancellor, bi-metallism has had no lodgment in Germany since the new monetary system of the empire went into operation. From England we may expect the usual courtesy which that country extends to proposals from friendly Powers, accompanied by the usual frank avowal of her purpose not to change her monetary system under any circumstances. The Latin Union is now reduced virtually to France and Italy, Belgium having withdrawn, and Switzerland and Greece counting for nothing at any time. In fact, the Latin Union is a simulacrum, a fleshless skeleton, a mere form of words, having no economical significance. Its monetary system is termed by Cernuschi "hump-backed bi-metallism," but it is worse than that. It is bi-metallism of the graveyard, and it will never be anything better, although probably both France and Italy would make a great show of doing something if another international conference were called. Both would require, as a condition of entering into an international compact, that England or Germany, one or the other, should give adhesion to it, and we on our part would be satisfied with nothing less. While we judge that such a condition is impossible of fulfilment, we should very cheerfully concur in the calling of a new conference on the plan suggested by Senator Allison, viz.: that the coinage of silver by the United States be temporarily suspended. Our position at the expiration of the interval would be no worse than it is now. It would probably be better, since the experience gained in the meantime would dissipate many of the illusions which now beset the honest supporters of "hump-backed bi-metallism," for it is almost certain that the business of the whole country would improve if the silver menace were once removed from the commercial horizon.

As we anticipated, Sterling has not been appointed to the vacant Weighership, and O'Brien, who stood first on the eligible list, has. In other words, the best man for the place has got it, and an end has been put to the glee with which all the enemies of the reform were expecting some sort of change in the President's attitude towards the competitive system. It is, on the whole, fortunate that the affair took the course it did, inasmuch as it has supplied a final test of the President's sincerity and good intentions. It was not unnatural that, as the Commission was in doubt whether the Weighership came under the rules or not, he should have questioned whether it ought to come under them, considering that the person filling the place has the command of a large force of men. When he was in this hesitating state of mind the suggestion of submitting the whole eligible list was made to him, as a way out of the difficulty, when what ought to have been done was to call his attention to the probation prescribed by the rules as a means of testing the qualities which cannot be reached by examination. It was perhaps at this stage in the affair that he wrote the explanation which appeared in the Washington *Post*. But more mature consideration doubtless proved to him that the suspension of the competitive rule in a case like this would furnish a precedent which would be used by the enemies of reform to ruin the whole system. It cannot be too often repeated that all they ask for is a non-competitive examination. With this and a low minimum which all "the boys" could reach, they would be happy as clams at high water. We congratulate Mr. Hedden on his escape from a fix into which he never would have got had he paid a little more attention to the drift of public opinion and to the policy of the Administration.

We do our best, as our readers will bear witness, to prepare the Lifelong Democrats for the repeated shocks which the President gives them by his appointing fit men to office. We warned them some time ago that they would get no comfort out of the Sterling case, or, in other words, that the United States would not take custom-house weighers from the adjacent pothouses; we told them, too, that Hill's victory in the election would do them no good, would not even alleviate their sufferings. Consequently, if they feel very low under the influence of the O'Brien appointment, we are not to blame. There is only one remedy for this low condition of the nerves, and that is to abandon resolutely the habit of brooding over the downfall of the spoils system and longing for its return. This produces exhausting dreams of custom-houses and post-offices filled with ward heelers, gamblers, drunkards, pugilists, and liquor-dealers, with a stream of removals pouring out of one door and a stream of new appointments constantly pouring in at another. Nothing is worse than these visions for the health both of mind and body. The remedy is air and exercise, and frequent visits to properly conducted and prosperous business houses, and the careful perusal of Mugwump newspapers.

"Dealers in wines and brandies in a small way" is the name the spoilsmen now give the liquor-dealers whom they put up for office. The liquor-dealers themselves employ similar devices to disguise their callings. Twenty years ago, they used to acknowledge that they kept bar-rooms. But they then began to call the bar-rooms "sample-rooms," and now the "sample-room" has given place to "the wine-room." Among the Massachusetts civil-service rules is a very wise one absolutely disqualifying liquor-dealers for office, for the very good reason that although a liquor-dealer may be and sometimes is a respectable man, as a general rule his bar is a source of social and political corruption for the whole neighborhood, a place in which a large part of the crimes both against order and good government are planned and prepared. In fact, the liquor-dealing politician is in this city and State to-day one of the curses of our society, and one of the worst enemies to every species of improvement either in the manners of the people or the administration of the laws.

The *World* announced in leaded type on Thursday, "Another Mugwump Appointment," with much mourning. But we have always told it and others of its kind that there would surely be another; we told them so before the election; we told them so, too, after the election, when they were flattering themselves that Mugwumpery was at an end. We tell them now again, that they may expect Mugwump appointments every few days. Used with regard to appointments, the term "Mugwump" means "good." A Mugwump appointee is an honest, intelligent, upright man, selected with sole or chief reference to his competency for the duties of the office. Mr. Leverett Saltonstall, the Boston Collector, is such a man, although he is not Patrick Collins's "man." The gentleman selected by Mr. Collins for the place was Mr. Peter Butler, who is also highly respectable and would have filled it worthily.

But may not his failure to get it be in some degree due to the fact that it was Mr. Collins's advice which led to the appointment of Pillsbury, one of the President's worst mistakes, and that since then he has been a little shy of following Mr. Collins's suggestions? Moreover, Mr. Butler is by no means committed to the cause of civil-service reform as Mr. Saltonstall is. Mr. Butler might possibly take a weigher out of a pothouse, but no one would ask Mr. Saltonstall to do it.

One of the agitating questions in the stock market and in other business circles relates to the probable attitude of the new Administration toward the railroads, and especially toward the Union Pacific's bond debt to the United States. The report of the Commissioner of Railroads, in whose charge this class of questions primarily fall, is said to be in no sense aggressive. He adopts the recommendations of the Senate Finance Committee of the last Congress, that the Union Pacific's indebtedness be divided into 120 semi-annual payments, which shall include the principal and interest due from the company for the whole period, in place of the uncertain requirements of the existing law. The Thurman act has been found to be unintelligible in part, and not susceptible of execution in any satisfactory way. It was declared by Mr. Thurman himself to be only a tentative measure. Its supporters in the Senate refused to be bound by it for any definite period. They voted down the Blaine amendment, which committed the Government against altering or amending it so long as the company should comply with its provisions. Sufficient experience has been had to show that it is difficult of execution and disadvantageous to the Government. The bill proposed by the Senate committee does effectually secure the payment of all the money due, if the company can earn it. Of course if the company cannot earn it the money cannot be paid under any act whatever. The concurrence of the Commissioner of Railroads, which presupposes that of the Administration, in this plan affords good ground for the belief that there is to be no wanton crusade against the Union Pacific or against railroads generally during President Cleveland's term.

The anti-Chinese craze on the Pacific Coast has reached its limit of insane folly. Hitherto the people of that region have only insisted upon legislation to prevent the coming of more Chinese to this country. Now they are beginning to demand that those who are already here shall be shipped home post haste. The San Francisco *Post*, which aspires with success to lead the raid upon the race, declares that "agitation for the enactment of a law prohibiting further immigration, *and providing for the return to their own country of the Chinese now here*, has become the duty of the people of the States and Territories cursed by the presence of the coolies." According to the census of 1880, there were in the State of California 73,548 Chinese out of 864,694 people of all races, or one Chinese out of every twelve. The proportion in Oregon and in Washington Territory was even smaller. The practical stoppage of immigration from China after 1882 must render the ratio of Chinese to the whole population still less now than in 1880. But admit that there is still one Chinaman out of every dozen people. Did the Caucasian race ever make a worse showing than when eleven white men insist that the yellow man who makes the twelfth must be sent out of the country because otherwise they will be ruined by his competition!

The Marquis Tseng, the Chinese Ambassador in England and France, is said to be very indignant over the attacks on the Chinese in Washington Territory and elsewhere, and thinks something should be done by way of retaliation. But something is being done. The Government is prosecuting the perpetrators of the outrages, and this is all any government can do. It may be that verdicts cannot be obtained against them. In this case it will be more than ever the duty of the President to take extraordinary measures for the protection of the Chinese in any Territory in which they seem to be exposed to violence.

The terrors of a receivership have been set forth in the direst colors by the demand made by the two receivers of the New York, West Shore and Buffalo Railroad for the sum of $700,000 for their individual services for a period of eighteen months. This claim is founded upon the Haggerty act, so called, which was passed by the Legislature April 11, 1883, entitled "an act in relation to receivers of corporations," the second section of which reads as follows:

"SEC. 2. Every receiver shall be allowed to receive as compensation for his services as such receiver five per cent. of the first hundred thousand dollars actually received and paid out, and two and one-half per cent. on all sums received and paid out in excess of said one hundred thousand dollars."

It may be assumed without argument that neither the valiant Haggerty, whose name is attached to this act, nor any member of the Legislature who followed his lead, intended to frame a measure which should enable a railroad manager to charge at the rate of $250,000 per year for his services and collect that sum out of the passengers and freight transported by the road. Yet this is *prima facie* what the law authorizes. We say *prima facie* because Judge Brown, in whose court the receivership proceedings were instituted, allowed only $40,000 each to the receivers for their services, or at the rate of $25,000 per annum each, taking for his guide the highest compensation now paid by any solvent railroad company to any officer. When asked to increase the compensation of the West Shore receivers, according to the terms of the Haggerty act, the Judge refused to do so. He also refused to postpone the sale of the road under foreclosure, which has been fixed for the 24th of November. He has, however, so far modified the order of sale that the receivers can prosecute their claims to the Court of Appeals, retaining a lien for their compensation on the road itself.

The $700,000 claim has a twofold aspect, one to the parties immediately interested and another to the public. To the purchasers of the West Shore property, viz., the New York Central Railroad Company, the demand of the receivers naturally appears to be the most unreasonable and unprecedented claim ever set up in the history of the world. It is certain that if it were presented to any legislature or court in Christendom on the basis of *quantum meruit*, it would be rejected with derision and contumely. But to the public it suggests another line of thought, and first and foremost, that when ignorance is vested with the law-making power in any State, it becomes a dreadful instrument of torture. The Haggerty act was undoubtedly intended to curtail and limit the compensation of receivers and not to augment them. But this idea being committed to the execution of clowns, it turned out to be something widely different from the preconception of the framers. Conjoined with this reflection it will occur to all thinking men that the haste with which laws are commonly passed at Albany, and must under our present system be passed, is destructive of all methodical habits of legislation and extremely dangerous to the public weal. Look at the last volume of laws matured and passed by the Legislature of New York in the short space of 113 working days. Here are 941 printed pages covering every variety of legislation, large and small, from the General Appropriation Bill down to "an act to legalize the official acts of a police justice in the village of Sandy Creek." No wonder that Haggerty bills slip through such a threshing machine and become laws without any certain knowledge on the part of even their authors of their real effect and meaning.

The closing of the great factories of one of the largest cigar-making firms in the country, and the consequent throwing out of work of over 2,000 men, women, and children upon the edge of winter, because the manufacturers have been boycotted for some reason which neither they nor anybody else can clearly understand, is the most startling manifestation we have yet had of this new and alarming force in business affairs. As nearly as can be made out, the trouble in Straiton & Storm's case is due to the quarrel of two rival unions of workmen, one of which has set out to destroy the business of the firm as a means of showing its superiority to the other organization and establishing its power in future to dictate terms to the trade. The inhumanity of the boycotting system could not be more forcibly exemplified than in the reckless disregard of the comfort of thousands of families involved in this heartless performance. Indeed, boycotting is really only the application of dynamite methods to business. The same spirit which endangered the lives of innocent women and children in the Tower of London, in order, by a frightful explosion, to inspire dread in the hearts of the British Government, nonchalantly condemns 2,000 New York workmen to idleness, and the other thousands of people dependent upon them to privation, in order that a union which is as devoid of soul as the traditional corporation may demonstrate its power.

Cincinnati has long suffered like New York from having the machinery of both of its political parties in the hands of gamblers and

traders. The necessity of carrying the State at October elections in order to get the "moral" influence of a victory upon the November elections has induced both parties to spend large sums of money in Cincinnati, with the usual result of completely demoralizing the workers on both sides. The effect, as described last week in some frank and wholesome speeches at the annual dinner of the Cincinnati Commercial Club, has been to throw the city government into the hands of thieves. Whenever either party has nominated a professed reformer for office he has invariably "sold out" to the other party either before or after election. The honest voters of the city have been betrayed in every instance, and have been shown that one party is no more worthy of trust than the other. The conclusion of the speakers is, that the only remedy is the complete separation of the honest voters of the city from all party organizations, in order that they may secure a city government and a judiciary with no party obligations. This is the only remedy for municipal misgovernment, but the main hindrance to its application is the indifference of the honest voters to their own welfare. If they would absolutely refuse to support an unfit man for office, no matter which party had named him, and would support fit men wherever found, there would soon be an improvement in the character of the nominees of all parties.

New Hampshire continues to flounder about in a desperate attempt to extricate her industries from the snarl in which they were involved by the passage of the "valued policy" law. The situation grows worse all the time, and the speeches made by business men at a meeting of the New Hampshire Club in Boston on Wednesday week were almost uniformly discouraging. Thus, ex Governor Cheney said that he had been unable to get more than half insurance on his pulp mills, and the insurance he got was only obtained by placing in the mills appliances for the speedy extinguishment of fires, and thus reducing the risk; and a number of other manufacturers had been unable to do even as well as that. There seems to be a general agreement among business men that the law must speedily be abrogated or modified, but the trouble is that most of the legislators who enacted it seem to feel that they are bound to stand by it, so that there is no assurance that it would be changed if an extra session were to be called. To cap the climax, it has come out that the original introduction of the measure was purely an attempt at a "strike" on the part of the lobby. A leading insurance man told the Club that the foreign companies were plainly notified that the measure would be killed if they would "come down" with a few thousand dollars. They declined to make terms, and the result is a general disturbance of the State's industries.

The Conference of the Congregational Churches in Connecticut at its annual session last week appointed a committee to report to the Conference next year concerning the expediency of suggesting to the Governor the discontinuance of the annual proclamation for a fast day. This action is the recognition of a change in the relation of the Church to the State in Connecticut which has come about so gradually that few people realize the extent of the revolution. The custom of a gubernatorial proclamation for a fast day throughout the commonwealth is now an anachronism, but it is the survival of a period when such action was a perfectly legitimate manifestation of the Governor's position toward the State. The original agreement adopted by the New Haven Colony in 1639 provided that "church members only shall be free burgesses, and they only shall choose among themselves magistrates and officers to have the power of transacting all public civil affairs of this plantation." This connection between the Church and the State continued intimate throughout the eighteenth century, and even later than 1800 the town as a corporate body in some cases participated formally in the settlement of a pastor over a New England church. The last of these legal bonds of union was severed years ago, and it is absurd that the fiction should be longer maintained even in so meaningless a form as the proclamation of a fast day, which only a small fraction of the population pretends to observe. To be consistent, the Conference should have gone a step further, and suggested the disuse of the Thanksgiving proclamation also. Probably, however, the ministers have observed that the public is much more inclined to feast than to fast, and that even the agnostic does not resent very bitterly a recommendation to eat a particularly good dinner on a certain day. Governor Hoadly, of Ohio, by the way, has taken pains to make clear the distinction between Church and State by omitting all reference to the Deity in his Thanksgiving proclamation, both last year and this, on the express ground, as he explains to an inquirer, that this is "a free country in matters of worship or non-worship," and that he has no right to command the people of the State to worship God on a certain day.

The efforts of our esteemed contemporary, the *Herald*, to save Riel, proved abortive, for he was hanged on Monday morning. Its last resource, an examination of some of the books "on the subject of treason and rebellion" in the British Museum Library by its London correspondent, was no more successful than its numerous editorial articles or the threats of the French sympathizers in Canada. The Canadian Premier must be an iron man to read the *Herald* through every morning, as he undoubtedly does, and yet go on as if he never saw a copy of it. But the truth probably is that he felt, as most unprejudiced observers must, that a man who has stirred up two rebellions, neither of which had the smallest chance of success, ought either to be made head of the political community, or permanently removed from human society. Riel in his first affair in 1869 committed a most foul murder on an unarmed prisoner, came near causing a great deal of bloodshed, and put the Dominion to great expense, and dragged a large number of young men from their homes for two or three months. Yet he was forgiven, and allowed to go about his business. He has now repeated the offence, this time getting the Indians to join him, or, in other words, letting loose bands of savages on defenceless frontier settlements. They committed one dreadful massacre at Frog Lake, and, under his leadership, engaged in three or four fights with the troops. The general result was that on the Government side 67 men were killed and 119 wounded. The killed were mostly young business men who were serving in the militia. If a man ought ever to be hanged for taking other men's lives and making their homes desolate, Riel certainly deserved his fate. To dignify his operations with the name of war is absurd.

It is not surprising that Mr. Gladstone should try to put the question of disestablishment aside. It is the most serious question which has come into British politics since the passage of the Reform Bill of 1832. Not only will any legislation on the subject rouse extraordinary bitterness of feeling, but require an amount of constructive ability such as, it is safe to say, no man in England is known to possess except Mr. Gladstone, and he is too old to venture on it, and he knows it. The disestablishment of the Irish Church was child's play compared to it. A very large part of the Church property—about $30,000,000, it is said—has come from gifts in comparatively recent times, and one of the very knotty ethico-legal questions which would arise in the case would be whether the State had any right even to assume the management of this fund. That the Radicals are going to try their hands at the job, however, if they get a chance, appears very clear, and the way the clergy are preparing for the fray is putting their assailants already into a very bad temper.

For example, Archdeacon Denison some weeks ago announced from the platform that "he had known Mr. Gladstone for forty-five years, and would not trust him with a brass farthing." An Essex minister, a Mr. Lefroy, having been asked for the use of the parish schoolroom by Mr. Martin, the Liberal candidate, refused it, because of the "scurrilous, lying, deceitful, and revolutionary teaching contained in most of the speeches of the Radical and Liberal party from Messrs. Gladstone, Chamberlain, and Bright downwards," and he suggests "the tap-room" for Mr. Martin's meeting, as "a more suitable place in which to advance the doctrines of many Radicals (upholders of atheism, dissent, falsehood, and revolution) than a school in which the name of God is honored, and the Gospel of our Lord Jesus Christ taught to the scholars." It must be remembered that the "dissent" which he here couples with "atheism, falsehood, and revolution," means the religious opinions of the Congregationalists, Methodists, Presbyterians, and Baptists, or, in other words, of the bulk of the middle and working class in England. What admirable campaign documents such letters as these—and there are many of them—furnish to the enemies of the Church, it is needless to say. In fact, they make disestablishment almost certain; and it will not be a peaceable, good-tempered process either, but a ruthless, revengeful one, in which religion itself will share in the odium which these angry parsons are bringing on themselves.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, November 11, to TUESDAY, November 17, 1885, inclusive.]

DOMESTIC.

THE Civil-Service Commission ordered on Thursday that the entire eligible list of candidates for the vacant Brooklyn Weighership should be sent to Collector Hedden, with the disabled soldiers at the head of it. This brought Sterling among the number of possible successful candidates. Commissioner Edgerton has expressed the opinion that the order is not to be regarded as a precedent. He said that there were good reasons why in this particular case it should be done. Late Friday afternoon, Collector Hedden announced that he had selected John W. O'Brien as Weigher, in place of George H. Sterling, suspended. O'Brien obtained the highest grading given to any candidate, is an honorably discharged soldier of the United States, and has had experience as an assistant weigher. The appointment is directly in the line of civil-service reform and was a great disappointment to the spoilsmen.

Colonel Trenholm, of the Civil-Service Commission, in conversation recently was emphatic in asserting that any expectations that the reorganized Commission would be governed by partisan considerations were doomed to utter disappointment. In all his consultations with the President he said he had been most impressed with the sincere and earnest purpose which Mr. Cleveland showed to enforce the law strictly and impartially, and it can be regarded as beyond any question that the Commission will with all its power hold up the hands of the President at every step.

It is very probable that the President will recommend to Congress the enactment of a law which will either give the existing courts jurisdiction over all private claims, or will create new courts for that purpose. This was a pet scheme of Attorney-General Garland when he was Senator.

The report that the Secretary of State is one of the movers in a diplomatic project to secure the neutrality of the islands of the Pacific which are not now occupied by European Powers, is officially denied at the State Department. It appears to be a fact that the Hawaiian Minister has been endeavoring to initiate a movement of this kind, and that he has endeavored to secure the active coöperation of this Government; but it is also quite clear that, in the absence of some specific authority from Congress, the State Department will not venture to commit itself in the matter, except possibly to approve recommendations designed to accomplish the desired object, if this can be done without violating international law or interfering in any disputed questions with foreign Powers.

The Treasury Department persists in its efforts to put silver dollars and minor coin into circulation. The officials believe that for some weeks the output will exceed the inflow, but that later the current will be changed.

The annual report of the Lieutenant-General of the Army was made public on Tuesday. At the date of the last consolidated returns the army consisted of 2,154 officers and 24,705 men. General Sheridan summarizes the movements of troops in the various departments during the year, and concludes with this general observation: "The discipline throughout the army is good. I have no recommendations to make, except to increase the number of men in the companies, and to add two more companies and two majors to each regiment of infantry. I most heartily coincide with the remarks of General Schofield on the need of military legislation."

Mr. Pendleton, the United States Minister, has protested to the German Government against the expulsion of the five German-Americans from the island of Foehr.

The National Free-Trade Convention assembled in Chicago on Wednesday, about 200 delegates being present from all parts of the country. David A. Wells, the President, delivered an address, in which he said of the purposes of free-traders: "We intend no revolutionary action. We will not denounce you as spoliators and robbers, even if you do continue to accuse us of being enemies to American industry and corrupted with British gold. We admit the integrity of your motives. We desire to join with you in *promoting* American industry, in developing American agriculture, arts, manufactures, and mining. We agree with you that the prime object of all our work should be to take such measures as will reduce the cost of production, while yielding to American labor a constantly increasing rate of wages. What we mean by an increasing rate of wages is this: We desire to adopt such a policy as will raise the rate of wages in all the arts of this country in terms of money, and at the same time will give to each unit or dollar of that money a greater purchasing power in each decade than it had in the preceding. We also admit that inasmuch as the war created the necessity for a large increase in the duties on imports, time and *discretion* should be considered in their method of removal. People who have been taught for long years to use crutches may reasonably ask to be permitted for a little time to use canes."

The Supreme Court of Illinois has rendered a decision in the case of Joseph C. Mackin, convicted of perjury in denying that he received fraudulent ballots, affirming the decision of the lower court. This will send Mackin to the penitentiary for five years.

Mayor Grace has sent to Governor Hill a long list of charges against Excise Commissioners William P. Mitchell, Nicholas Haughton, and John J. Morris for malfeasance in office. The charges are accompanied by specifications founded on evidence lately produced before the Senate Investigating Committee. Commissioners Mitchell and Haughton are accused of licensing improper places, and all three Commissioners are charged with licensing many bar-rooms connected with theatres.

The official plurality for Foraker for Governor of Ohio is 18,197.

The directors of the Boston *Post* on Thursday declined the offer of Carl Schurz for a controlling interest in the paper, and arrangements were made to provide fresh capital and continue the *Post* as a Democratic organ.

A great fire in Galveston, Texas, on Friday destroyed about sixty blocks of houses, in all about 700 residences, many of them among the finest in the city. Hundreds of people were made homeless. The firemen were helpless, a great gale prevailing at the time. The loss is about $2,000,000.

The funeral services of John McCullough, the actor, were held in Philadelphia on Thursday. Many distinguished actors were present.

Charles J. Osborn, for many years well known in Wall Street, died on Wednesday in this city at the age of forty-eight. He left a fortune estimated at $5,000,000.

Ex-Senator Wm. Sharon, of California, died on Friday afternoon. He was of Quaker descent, and spent his younger days in Ohio, where he was graduated from Athens College. He was admitted to the bar in Missouri in 1845. He went to California in 1849, made a small fortune in real estate and lost it. He was made the agent of the Bank of California at Virginia City, Nev., and made an immense fortune out of the mines there. He was elected to the United States Senate in 1874.

Horace B. Claflin, the head of the great wholesale dry-goods house of H. B. Claflin & Co., died at his country seat in Fordham late on Saturday afternoon. He had a stroke of paralysis while entertaining some guests at dinner on Thursday evening. Mr. Claflin was born on December 18, 1811, in Milford, Mass., where his father kept a country store. Entering his father's business when he reached his majority, he caused a discontinuance of the sale of liquor, which had formed part of the trade. Soon removing to Worcester, Mass., he started there with a partner in the dry-goods business, and was successful. In 1843 he removed to this city, and established the dry-goods house of Bulkley & Claflin in Cedar Street. This was succeeded by the firms of Claflin, Mellen & Co. and H. B. Claflin & Co. An immense business was done by the last two houses, and, although twice embarrassed in times of general financial disaster, Mr. Claflin tided over all difficulties, and accumulated a large fortune. He was very liberal, and also unostentatious in his gifts to charitable objects. For many years he had been one of the most prominent members of Plymouth Church, and he was also connected with various benevolent institutions and business corporations.

Dr. Gustav Seyffarth, the learned German archæologist, died on Tuesday in this city in his eighty-ninth year. Dr. Seyffarth was born in Saxony, and was educated in Leipsic, where he became Professor of Archæology at the early age of thirty. He turned his attention to Egyptian studies, and disputed with Champollion the authorship of the now accepted theory of hieroglyphics. In 1855 he came to the United States and was for six years a professor in the Lutheran Seminary of St. Louis. In 1857 he published in this city a 'Summary of Recent Discoveries in Biblical Chronology, Universal History, and Egyptian Archæology' in English and German. He was a constant contributor to European and American periodicals.

FOREIGN.

The Balkan Conference agreed on Wednesday that the basis of its deliberations should be the restoration of the *status quo ante* in Rumelia. No details were adopted.

Believing that the final struggle of the Turkish empire for existence is approaching, Lord Salisbury has telegraphed to Mr. White, the British representative at Constantinople, to assure the Porte that England will do her utmost to preserve the integrity of Turkey.

It was officially announced from Belgrade, Servia, early Saturday morning that the Bulgarians had attacked the Servians at Vlasina, and King Milan accepted the act as a declaration of war. Peace therefore ended at 6 A. M. Saturday. King Milan assumed command of the Servian army at once, and advanced into Bulgaria. The army marched in three divisions on Sofia. General Horvatovich commands the left wing, General Leshyanin the right, and King Milan the centre. The whole force is expected to concentrate at Sofia on November 22. The roads are covered with snow, retarding the progress of the army. A sharp fight occurred on Saturday between the advance guards of the Servian and Bulgarian armies on the road between Trn and Vlasina. The Bulgarians retired. Intense excitement prevailed at Sofia. Active preparations were made to defend the city. The total available army of Servia, including the Landsturm or third levy, is about 170,000. The combined forces of Bulgaria and Eastern Rumelia are about 110,000. Probably not half of these numbers are now in the field.

Six battalions of Servian infantry, two battalions of artillery, and two squadrons of cavalry on Sunday attacked two battalions of regular and irregular Bulgarian troops. The Bulgarians lost thirty-four killed and wounded. Servian troops have occupied Tzari-Brod, sustaining small loss. Fifty Bulgarians were captured. Topalovitch, with the Morava Division, is operating against Trn. There was a rumor current on Sunday that it had been captured. Colonels Mitchkovitch and Benetzki lead the advance on the Dragoman Pass. General Yovanovitch is in command of the Danube Division, which is held as a reserve force at Bela Palank. Diuknitch is leading the Timok Division against Belgradjik. Each division consists of 2,000 men. Prince Alexander, of

Bulgaria, arrived at Sofia on Sunday morning, and was greeted with great enthusiasm. Bulgaria has decided to remain on the defensive.

An official report from Colonel Benetzki on Monday said: "After a brilliant charge the Servians carried four Bulgarian redoubts beyond Tzari-Brod. Colonel Diuknitch, with the Timok division, has taken Kiela. The Servian troops continue advancing everywhere, and have captured 400 Bulgarian prisoners. The Servians have lost 200 wounded and 50 killed. A great battle is now being fought in the direction of Dragoman."

Turkey on Monday refused to interfere between Servia and Bulgaria.

The Bulgarians on Monday evacuated their fortified position at Dragoman, which the Servians attacked on Sunday.

General Topalovitch, with the Morava division, on Tuesday had a desperate battle with the Bulgarians at Trn, and the latter were totally defeated. The Servians fought with great gallantry and captured two guns and many prisoners. Three battalions of Bulgarians surrendered. A battalion of Bulgarian volunteers stationed at a point on the Timok River capitulated without firing a gun to Colonel Diuknitch, commanding the Servian Timok Division.

The Servian division marching on Widdin gave battle on Tuesday to the Bulgarians near Widdin, and inflicted upon them a crushing defeat. The loss was heavy on both sides. The Servians captured 1,000 prisoners. The headquarters of the Servian army has been fixed at Tzari-Brod.

The invasion of Macedonia by the Greek army is imminent.

The unanimous opinion of both the English press and the public condemns King Milan in the severest terms, not so much for the actual Servo-Bulgarian troubles themselves as because, in the *Standard's* words, "the eager eyes of Russia and Austria are peering from behind."

M. Brisson, the French Premier, made a statement on Monday in the Chamber of Deputies respecting the policy of the Government. It was received very coldly by the members, especially an allusion to the refusal of the Government to grant a general amnesty to political prisoners. A Cabinet crisis is probable. The statement indicated a probable abandonment of the Tonquin and Madagascar campaigns.

Mr. Gladstone formally opened the Midlothian campaign with a speech at Edinburgh on Wednesday. He spoke about eighty minutes. When he appeared on the platform the audience rose as one man with such a shout as fairly took him aback for the moment by its loudness and suddenness. He recovered at once and bowed to all sides. When he said he approached "a graver question," there was instantly an eager cry, and the hush following showed that the audience saw a reference to the burning question of disestablishment. He distinguished throughout between the churches of Scotland and England, and said that the former question was for the Scotch people. In the whole speech there was not a single definite statement as to whether he approves disestablishment or not. The following came nearest it, and frankly admits his present purpose: "I am far from saying that if I were a man twenty years younger, if I could stand before you at a future election, and if at a future election circumstances were ripe for taking a matter of this kind in hand on one side or on the other—I am far from saying that I should then urge you not to give it the first place in your thoughts. But, gentlemen, I am now laboring with all my heart for the unity of the Liberal party." In conclusion he declared the question was a phantom light to lure the Liberals from the path of duty. The Scotch Liberal papers generally give the speech faint praise or condemn it.

Mr. Gladstone delivered another speech in Edinburgh on Wednesday. He said it was impossible for Parliament to deal with the Irish question satisfactorily, except by the action of a party powerful enough to act independently of the Irish vote. According to Tory as well as Liberal reports, such a party in the coming Parliament can only be the Liberal party.

Mr. Gladstone delivered the second regular speech of his Midlothian campaign at West Calder on Tuesday. He said: "I have heard complaints since the passage of the Redistribution Act that in Scotland the increase in the representation in Parliament is inadequate. This is not my fault. The whole Tory party opposed the proposal, but I was still able to secure a resemblance to what, in my opinion, should be the Scotch proportion. Dealing now with local administration, I can say that if the Scotch people in the future make a demand for extended measures for local government, the demand will be duly considered." Referring to the Irish question, Mr. Gladstone said: "Mr. Parnell has conveyed to me, through the confidential medium of the newspapers, a suggestion that I had better frame a plan for the local government of Ireland. I propose now to reply to Mr. Parnell in an equally confidential manner. Perhaps you gentlemen won't mention it. But my reasons for not complying with Mr. Parnell's request are that, though Ireland wishes and deserves respectful and favorable attention, yet until the elections the Irish wishes are constitutionally unknown. I believe Mr. Parnell has taken me for a person wanting in experience in public life or one who has not profited by experience, if he imagines me rash enough to make myself a voluntary physician for the people of Ireland instead of those authorized doctors she sends to the House of Commons. It would seriously damage any proposal hatched in my mind if the Irish constitutional question should arise. If a proposal be made it can only be effectively made by the Government, although the Government are rather silent on the subject, and appear disinclined to use language calculated to render less easy their relations with the party to whom they owe much through the transactions of the last Parliament. If the present Government continues, every Minister of the Opposition will require to hear their views before expressing his own. Thus it is impossible to accede to Mr. Parnell's kind invitation."

A large crowd of factory girls on Thursday mobbed Mr. Charles Edward Lewis, the Conservative member of Parliament for Londonderry, Ireland, and treated him in a most shameful manner.

The terms of settlement of the Adams-Coleridge case have been made public in London. Some person of eminence is to decide whether compensation shall be paid to Mr. Adams, and if so, what amount. Mr. Bernard Coleridge, while unreservedly withdrawing the charges made, states most positively that he made them in good faith. Mr. Adams is happy frankly to accept such assurances. Lord Coleridge withdraws any language which may be construed as casting imputations upon his character or motives. He is perfectly willing to make Mrs. Adams a pension of £600 a year.

Mr. Stead is now in prison garb at the Coldbath Fields Prison. His term will expire on January 19.

Lord Dufferin, Viceroy of India, on Thursday ordered General Prendergast, Commander of the Burmah expeditionary force, to invade Burmah forthwith and proceed with all haste to capture Mandalay. The British forces crossed the frontier immediately.

Advices from Calcutta state that King Theebaw has ordered that all Englishmen in Burmah be exterminated. King Theebaw has issued a proclamation refusing to accept "the absurd proposals of the Indian Government," and therefore declaring war. He promises to lead his troops personally, and calls upon his subjects to fight for the defence of their country and their religion. Europeans are not to be molested until the invaders cross the frontier, when all are to be slain. Many Europeans are leaving Mandalay unhindered.

King Theebaw's man-of-war has been captured. Only one British officer was wounded. A slight skirmish has taken place between a small body of British troops and Burmese frontier guards. The latter fled.

Ruiz Zorrilla, the Spanish Radical, writes to the London *Standard* denying that he instigated the Carthagena revolt. He recounts his long political services to Spain, and declares that he has never been a demagogue. His programme now is the same as before—progress as opposed to reaction, and conservatism as opposed to anarchy. He is ready to return to Spain when the liberties cherished by honest men are restored.

The Socialist Lieske, who was convicted on July 1 of the murder of Police-Counsellor Rumpff at Frankfort, Germany, on the night of January 13 last, was on Tuesday beheaded. He protested to the last that he was innocent of the crime, and behaved composedly.

Vesuvius is again in a state of eruption. The lava is streaming down the west side of the mountain, and some alarm is expressed.

It became definitely known on Saturday that Riel would surely be hanged at Regina on Monday. Intense excitement prevailed among the French-Canadian population, and threats were made by their representatives in Parliament to withdraw their support from Sir John Macdonald.

The execution took place on Monday morning, at 8:53 o'clock. He acted with remarkable firmness on the scaffold, but made no speech, at the earnest request of his priests. Only twenty people were present. Riel was forty-one years of age, was the son of an intrepid hunter who married a squaw, and was educated at St. Mary's College, Montreal. In 1869 he led the first revolt of the Metis, which General Wolseley repressed. He acted as a professor in a Montana Jesuit college for some time. In the fall of 1884 he again returned to the Northwest, and, failing to get the Government to accept his offer to leave the country for $5,000, he fomented the second rising, for which he has paid the penalty.

The French Canadians were greatly excited over Riel's fate, and hoped until the last moment that he would again be reprieved. When it was announced on Monday that the execution had taken place, the French quarter in Montreal displayed symbols of mourning everywhere. Threats of revenge were heard on all sides; students paraded the streets cheering for Riel, and mass meetings were called for the evening.

The excitement in Montreal over the hanging of Riel culminated on Monday night in a great procession of 12,000 French Canadians carrying French flags and transparencies. They marched down St. Lawrence Street with effigies of the Cabinet Ministers mounted on a wagon. Arriving at the Champ-de-Mars, the effigies of J. A. Chapleau and Sir Hector Langevin were hanged and burned. The mob then marched to Victoria Square, and one of them, climbing up on the statue of the Queen, lowered a noose to the crowd. This was placed around the neck of Sir John A. Macdonald's effigy, which was pulled up. Oil was then sprinkled over the figure, and, a light being put to it, the figure and statue were soon enveloped in a cloud of smoke and flame. A large body of police found their way within a few feet of the statue, but were afraid to interfere. The mob then marched to Colonel Ouimet's house, and hanged his effigy to a tree opposite. Several places were stoned and Protestant churches were hissed. The disorders subsided on Tuesday. There was considerable excitement in other Canadian cities.

The death sentence passed on those recently convicted of murder in connection with the Northwest rebellion will be commuted in several cases. The others will be carried into effect on the date fixed, November 27th

WAR IN THE BALKANS.

SERVIA has declared war against Bulgaria, and begun hostile movements. Her army, in three divisions, is entering the territory of the Principality. The left, or northern, wing, crossing the Timok, at Bregova, near its mouth in the Danube, is operating in the direction of Widdin. The centre, under King Milan in person, advances on the road from Nish to Vratza. The right wing has entered Bulgaria at Tzari-Brod, and occupied the defile of Dragoman, on the direct road to its apparent objective point, the capital, Sofia, and has been successful in a desperate engagement before Trn. Unprepared and outnumbered, the Bulgarians retire before the invader; but Prince Alexander calls his people to arms, and troops are gathered, and cannon mounted, at Sofia. Milan, in his declaration of war, assigns various flimsy reasons for his aggression; Alexander, in his appeal, calls his foe "treacherous and cowardly."

If not treacherous, Servia's onslaught on the Bulgarians is certainly more wantonly unprovoked and more unjustifiable than were even the atrocities committed on that people by the Turks, a year before the outbreak of the great war of 1877. When the Moslems drenched with blood the soil of what is now—or was lately—Eastern Rumelia, their Christian subjects of Servia, Bosnia, and Herzegovina were up in arms against them, the Russians were preparing to invade and destroy the Ottoman Empire, and the Bulgarians conspiring to rise and join in the crusade. Fanaticism and fear maddened the Turks to do the bloody work which was to cost them most of their dependencies in the Balkan peninsula. The Servians have no such excuse for lighting the torch of war. They do it against men of their own Slavic race and Christian faith and Greek creed, their fellow-sufferers for centuries under the Turkish yoke—a people whose surpassing sufferings, in fact, brought on that final deliverance of Servia herself which Milan and his generals, aided by bands of volunteers from Russia and the desperate struggles of the Montenegrins and Herzegovinians, vainly endeavored to achieve in 1876. The Czar's Bulgarian campaign made Servia independent, and created the semi-independent big Bulgaria of the treaty of San Stefano. Beaconsfield, Andrássy, and Bismarck substituted for that creation at the Berlin Congress the collectively smaller and separately governed Bulgaria and Eastern Rumelia of the last seven years. The latter province was less than semi-independent. Its people rose two months ago, and proclaimed their union with their brethren north of the dividing Balkan range. Prince Alexander accepts the revolutionary call, and thus infringes upon the rights of his suzerain, the Sultan. But it is not the Sultan who draws the sword to revindicate his rights and save his possessions. It is Servia, neither robbed nor threatened nor insulted, but apprehensive lest her neighbor's aggrandizement prevent her in future from annexing a coveted adjoining part of the still Turkish territory, which was her own before the fatal battle of Kosovo in 1389. She proclaims the union of North and South Bulgaria a "disturbance of the balance of power in the Balkans," which she must prevent by force of arms, and rushes her army madly into the mountains.

King Milan's forces are more numerous and better organized, armed, and trained than those of the invaded countries, whose national autonomy is ten times younger than that of Servia. In population, however, the united Bulgarian State is much superior, containing about 3,000,000 to Servia's 2,000,000. Its defensive attitude and the opening of winter also offer considerable advantages. But it is not the relative strength and position of these two combatants that will decide the contest. It opens while an ambassadorial conference of the great European Powers, assembled for the very purpose of settling this new "Eastern question," is holding its sittings in Constantinople, and while Turkey, Austria-Hungary, and Russia are beginning to concentrate troops for an arbitrament of war. "The fact that Servia has declared war against Bulgaria will not alter the prospects of the Balkan Conference," says Prince Bismarck's semi-official organ, the *North German Gazette*, laconically and coolly. But what those prospects are, and what is likely to follow if the Conference fails to result in a European concert, Prince Bismarck himself is probably unable to tell.

Incalculable passions and interests, personal as well as national, have entered largely into the complications. Prince Alexander will risk everything, from youthful ambition. Milan is driven on by the perplexities of his situation, arising from the dissatisfaction of his people with his pro-Austrian policy, and the plottings of a pretender to his throne, Peter Karageorgevitch. Czar Alexander III. has evidently been made ungovernably angry by his Bulgarian namesake's stubborn resistance to Russian imperial directions, and skilful use, for his own purposes, of schemes hatched by Muscovite workers for different if not opposite objects. The Czar's subjects, on the other hand, are equally ardent in their manifestations of sympathy with the Bulgarian revolution, which they deem a step in the right Panslavic direction. Milan is denounced by the Russian press as a Slavic renegade and fratricidal tyrant. *Per contra*, the Hungarians, who, in 1876, exulted at the news of every Servian defeat at the hands of the Pashas, now—from the same almost blind animosity toward movements favored by the Panslavists—give their loudest cheers to the faithless Slav Prince, forgetting that the Czar, too, wishes him success. The Greeks burn with desire to mingle in the fray on the anti-Bulgarian side, in order to seize Macedonia. Turkey waits for a favorable opportunity to seize the Balkan passes and recover some power, in alliance with somebody. Her former friends, the Tory statesmen of England, stand now on the side of Bulgaria, on account of the British elections to come, and France and Italy are likely to throw their diplomatic influence into the same scale. At the moment, the decision still rests with the three Emperors—but is the *entente cordiale* of Skiernie wice still alive?

THE TRANSFORMATION OF THE COLLEGE.

THE recent announcement that President Porter, of Yale College, will resign his position at the close of the present educational year has provoked a lively discussion regarding the succession. A host of candidates have already been suggested, and many new names will be presented during the months still to elapse before a decision is reached. Without at present entering upon the personal question, it is well to point out the opposing principles which contend for mastery in the choice of a new President.

The American college in its origin was essentially a church institution. When the people of the Connecticut colony began to talk about an institution of learning, it was expressly proposed that they should found a "school of the Church," by contributions from the several Congregational churches. The sole object, indeed, was to provide a learned ministry, that every church might have "a scholar to its minister." Even when, years later, the scope of the institution was somewhat broadened, its object was still declared to be "the upholding and propagating of the Christian Protestant religion, by a succession of learned and orthodox men," their development into supporters of "orthodoxy" being thus made an end of their education equally with their mastery of knowledge. The control of the College was vested in a body of "orthodox" clergymen of the colony, "orthodox" in all these cases being equivalent to supporters of the Congregational Church, since there were at that time no other ministers of the Gospel in the region. This original body was empowered to fill vacancies among the trustees from the same class of the community, the purpose (which has been consistently carried out) being to keep the government of the institution in the hands of the Congregational clergy of Connecticut. Church influence was scarcely less prominent in the early history of Harvard. The act of 1642 constituted a number of the "teaching elders" trustees, and the State Constitution of 1780 made "the ministers of the Congregational churches in the towns of Cambridge, Watertown, Charlestown, Boston, Roxbury, and Dorchester" overseers in connection with the Governor, Lieutenant-Governor, members of the Council, and State Senators, while it was not until 1843 that a clergyman of any denomination other than Congregational became eligible to a place in the Board. In its early period "the College," according to President Quincy, "was conducted as a theological institution, having religion for its basis and chief object."

The college in this country was thus originally a school for the training of young men to become ministers of what was virtually the Established Church. In fact, in the early days the education of a youth almost implied his preparation for the ministry. So subordinate were the other "learned professions" that during the first half century of Yale College only thirty of its graduates became physicians, because medical service in New England was mainly supplied by the clergy. A graduate of the class of 1716 became involved in trouble with his church at Northfield, Mass., because he gave so much of his time to the healing of bodily rather than spiritual disease; and the inventory of his effects mentions, besides the religious library, a "surgeon's pocket case of

instruments," "two lancets," and other like appliances. A full half of all the graduates from Yale during the first fifty years of its existence became Congregational clergymen, and the proportion was even larger at Harvard in its early history.

Under such circumstances, the construction of a college curriculum was a very simple matter. The college was really only a theological seminary, and a Board of clerical Trustees were merely called upon to decide what were the studies best calculated to fit young men for the ministry. It was natural and proper enough that they should proceed upon the theory that, the end being to make a minister of the student, all students should pursue the same course. Hebrew and theology thus became features of the curriculum as naturally as Latin and Greek, and every student was as much bound to take the former as the latter.

The ancient theory of the college was thus that of an institution to turn out "orthodox" ministers. The modern theory makes it an institution to ground young men in the elements of an education which shall fit them for any pursuit. The ancient theory is exemplified in the foundation of Yale; the modern in the present management of Harvard. The Cambridge student has scarcely entered the institution before he is called upon to decide for himself what course of study he will pursue. Less than half of the studies of the Freshman year are prescribed for the whole class, and after the Freshman year everything is elective, with the exception of a few exercises in English composition. This is the result of a steady growth in the permission of choice, which began with the experiment of allowing options in modern languages in 1825, proceeded to the establishment of electives for Seniors and Juniors in 1846, extended the system to Sophomores in 1867, and enlarged it to comprehend Freshmen in 1884. No fewer than 189 courses, divided among twenty departments, are now offered the student, instead of the one invariable system originally prescribed for all. The only relic of the attempt to make him as "orthodox" as "learned," is the compulsion to attend chapel prayers; but even as to this there is so much latitude that the regulation cannot much longer be maintained. In short, instead of being run through a mill with cogs designed to grind out a clergyman, or at the very least an "orthodox" believer, he is treated as a young man who, at nineteen (the average age of admission to Harvard), is qualified, and should be made, to choose how he will prepare himself for what he plans to make his life work. How well the system works appears very clearly from the showing made by Professor Palmer, himself originally a disbeliever in the elective principle, in his very valuable article in the November number of the *Andover Review* upon "The New Education."

Yale College has greatly modified its course, and has given considerable scope to the elective principle; but it has clung pretty stoutly to the original theory of its establishment. It is still an institution practically governed by a few clergymen of a single denomination in a single State. It is still insisted by the believers in the old theory that the first requisite for a President is that he shall be a clergyman of the "orthodox" church. The conservative party may carry their point in the election of a new President, but they will only postpone the inevitable. A great modern college cannot be permanently conducted upon the same lines as a colonial divinity school.

ENGLISH "SENSATIONAL JOURNALISM."

THE full text of the evidence on the trial of the editor of the *Pall Mall Gazette* and others, for abduction has reached this country, and it furnishes altogether a most singular and interesting chapter in the history of the newspaper press. The first thing that strikes one on reading it is the extent to which Stead, the editor, was probably indebted for the success of his venture to the deep interest taken by the English people in all the doings of the aristocracy. The "society papers" live on this feeling, and some make a good deal of money out of it. Stead appealed to it in the strongest way when he announced that he had, in his explorations in vicious resorts, come on the track of noblemen and gentlemen of the highest position, and even of "princes of the blood." This touched the imagination not only of all those who like the scandals of high life and revel in the "secret memoirs" of dissolute courts, but of the rising democrats all over England who are now girding up their loins for the overthrow of "caste" and the destruction of privileges. For this reason, if for no other, no such stroke of journalistic enterprise could have been made in this country. We have no class here, except clergymen, whose position makes their vices highly sensational material for newspapers, and no editor would be believed who announced that he was going to lay bare the moral rottenness of the clerical profession. Those of our journalists who try in any degree to walk in Stead's paths, have to rely almost wholly on the indecency of their narrative to make it sell, and this alone repels respectable people at the outset, and soon palls on the others.

It appears also from the evidence that Stead, who was a new arrival in London and has no great gifts as a writer, had no pecuniary interest in the *Gazette*, was determined to make himself valuable to the proprietors by working the sensational vein, and transformed the paper from the outset. He got up various small sensations, and then one great one about the condition of the navy, and finally took up the trade in young girls, which was known to be carried on to a greater or less extent between England and the Continent, owing largely to defects in the English law. Out of this he determined to make something. He said on the trial that the question had interested and occupied him for years, but he produced no proof of it. His general allegations as to the phenomena of London vice were all to be found in the evidence taken before the Lords' Committee in 1883. What he undertook to do was to supply proof, and expose individual offenders. His first article led people to suppose that he had really accomplished this—that is, that by a series of elaborate investigations, conducted with extraordinary skill and care, and at great expense, he had laid bare the whole secret of the trade; could tell people where young girls were "kept in stock;" who purchased them, and who took orders for them, and by what means their abduction was kept secret from the police and the public. All this was of course highly important if true, and the way in which he announced it raised public curiosity to the fever point. His management of this part of the sensation was a masterpiece of skill. He put every class of the community, high and low, virtuous and vicious, on the tiptoe of expectation. He caused the office of the paper to be surrounded by vast crowds, who were ready to purchase the paper at any price. The editions of it that were sold surpassed in size anything known in periodical literature. The presses were kept going night and day for weeks. The proprietors, who had only put $2,000 into the "investigation," must have been delighted by the results of their venture, although they employed another man to revise Stead's articles and remove some of the nastiness. Stead himself rose suddenly into that most delightful kind of fame in which both the good and the bad regard a man with envy and admiration — that is to say, he had ingratiated himself with archbishops and philanthropic bodies by a performance which the venders of obscene literature all over London would have given their eyes to have thought of.

After all this, the breakdown of his case in court could not but be highly dramatic. The case rested almost wholly on the evidence of two persons, himself and a woman named Jarrett, an old and worn-out procuress. The ease with which he was deceived—for deceived he undoubtedly was—would be remarkable if a turn for the sensational were not nearly always accompanied by an eager credulity. The woman Jarrett seems to have exhausted all the means of livelihood offered by vice, and to have determined to fall back, at least for a few months, on penitence. She accordingly went to Mrs. Josephine Butler in the character of a Magdalene, and was taken up by that excellent lady with great avidity, as an extraordinarily bad case. The fallen women with whom charitable people like Mrs. Butler have to deal are usually young and not very far gone in iniquity. It is rare that old offenders, like Jarrett, fall into their hands, and Jarrett appears to have made an unusually strong impression, and played the part of an eleventh-hour sinner in a "Home" with much skill. When Stead came to Mrs. Butler, therefore, to look for an expert to aid him in his investigations, she at once recommended Jarrett, but begged Stead to be careful in questioning her, so as not to torture her too much with the awful reminiscences of her past life. It was Jarrett, therefore, who was to furnish proof of the way young girls were "kept in stock" and sold by their parents to wicked aristocrats, and spirited away. To make a long story short, she apparently knew no more about the matter than Stead himself. She took his money, went to a decent family and got them to let her have their daughter for respectable domestic service, delivered the girl to him, and told him a pack of lies. In court she acknowledged her falsehoods, threw off the penitent's mask,

and was saucy to the Attorney-General and the Judge, and poor Stead had to acknowledge that she had deceived him, and that many of the things which he had vouched for as within his "personal knowledge" rested solely on Jarrett's word. One wicked girl, who had tried to sell her little sister, of whom he gave a doleful account in the *Gazette*, he confessed he had searched for in vain. On no trace of her had he ever lighted.

The accounts of the bad noblemen, and the princes of the blood, who were engaged in this infamous traffic, he seems to have got wholly from inmates of brothels, when treating them to champagne. Of course they saw what he was after, and appear to have "stuffed" him to his heart's content. Not one particle of other proof was he able to produce. The witnesses whom he called, besides Jarrett, were intended simply to show his good faith and the purity of his motives. His humiliation in court would in fact have been most pitiable if his articles in the *Gazette* could have been produced. The jury were confined to the consideration of the Armstrong case, however, and therefore could not see the full extent of the man's folly. The Armstrong case was very important from the fact that it has proved the means of exposing Stead's absurd credulity, and yet, had he been only a little more cautious, the trial would never have taken place, and he would now be vaporing away, as the holder of the most awful secrets about English society. It was his desire to furnish a practical demonstration that brought him within the meshes of the law, and yet he might have kept his hold on his public without attempting anything of the kind. When once he got himself and his colaborers under the cold eye of a judge and cross-examining counsel, the wonderful stories which so roused the bishops and the philanthropic ladies, and filled cynical foreign observers of English society with glee, were instantly dissolved into nothingness.

We speak of his credulity as absurd because it appears to have been so great as to relieve him from the charge which we have ourselves several times made against him—of being a merely mercenary concocter of sensations. On the trial he appears to have excited pity rather than disgust, and consequently his treatment in jail as a common malefactor has caused enough indignation to make the Government put him among the first-class misdemeanants. But his career as a sensational editor may fairly be considered over.

His failure in this field shows how unfamiliar it is in England. No American editor of the Stead school would ever have attempted so much, with such slender materials, and, moreover, never could have accomplished so much, owing to the greater wariness of the public. The American speculator would have cautiously put Jarrett's stories into the form of an interview, and let it go for what it was worth. He would have left it as highly spiced as possible, he would have kept away from the archbishops and the philanthropists, and, far from announcing himself as the apostle of a great reform, would have devoted all his energies to selling large editions during the first day or two of the excitement.

PAUPERISM IN THE GERMAN UNIVERSITIES.

UNDER this title a correspondent of the *Revue Internationale de l'Enzeignement* for October 15 has written an article of unusual interest. The writer is a German, or at least gives himself out for one; and the criticism is not the malignant fault-finding of an enemy, but the close scrutiny of a friend who thinks that the recognition of an evil is the first step to a remedy, and who does not rest satisfied with that first step. The questions which he raises are not yet burning questions with us, although the "seed of fire" shows itself here and there in our educational systems, and people have begun to ask about the limits of State aids. It is no secret that higher education needs endowment. No considerable university or college can live by the fees of its students, and in the best equipped institutions of learning every student is in debt to the foundation for the necessary difference between the price and the cost of tuition. This is legitimate; but it is a much nicer question how far aid should be extended to those who are too poor to meet the other expenses of university life. It is a question that the churches have settled for themselves long ago, and the ministry of the Word is largely recruited from the beneficiaries of the theological seminaries. Every now and then some religious paper is assailed by queries on the part of some dissatisfied person, who thinks that the whole system of beneficiary education is wrong, and who is rash enough to maintain that the clerical profession would stand higher, would wield more influence, and, which is not to be despised, would command more ample emoluments, if it were put on precisely the same footing with the other learned professions. Every such malapert inquirer has been silenced almost as soon as he had formulated his views, if they may be called views. The beneficiary class has furnished the lights of the profession, and the future soldier of the cross is compared with the cadet at West Point, the cadet at Annapolis, who are educated by the nation to defend the nation. The thought of obligation is peremptorily rebuked. The young man who devotes himself to a sacred calling which holds out so few worldly prizes to its followers, has thereby earned his support for the six or seven years necessary for collegiate and theological training. It is true that every one who enters any other profession goes in for the big prizes, and perhaps the city church, which corresponds to the marshal's bâton of the French soldier, may tower high in the day-dreams of most young theological students; but this is a matter for the churches to settle, and, as has been said, they have settled it —and the only reason theological education has been brought in here is, that the clerical profession is the only one in which systematic aid is given in this country.

In Germany every one knows that a greater or less proportion of the university students receive aid from certain endowments, and some of the smaller universities are fabled to have so many bursaries at command that the authorities are only too glad to find students on whom to bestow them. But, according to the correspondent of the *Revue*, the larger universities are invaded by an ever increasing mass of destitute students, and the evil has gained such proportions that, delicate as are the social questions involved, something must be said, something, if possible, must be done. In the course of the same week one student petitioned the municipal authorities of Berlin to be put on the night-gang of street-sweepers in order that he might not intermit his attendance on lectures, and a student at the University of Vienna was sent out of town as a vagrant without profession and without visible means of support. These instances, which the correspondent puts in full relief at the beginning of his article, do not stir any very deep emotion. Occupation is very much a matter of taste, and the position of a street-sweeper has a certain fascination that is denied to that of a waiter in a hotel. In every American college, men can be found who provide for their daily wants by their daily toil while pursuing their academic studies, and nowhere are men in this position treated with more respect than here. But work is not pauperism, and it is pauperism that we have to consider—the revival on a grand scale of the order of begging-students, known to every one who has looked into the history of the Middle Ages.

The greatest contingent of this army of unfortunates, says our informant, is naturally furnished by the provinces. The richly endowed schools of Berlin and Vienna have powerful attractions for all young men who desire to devote themselves to higher studies, not to mention the many resources of these great capitals in the way of general culture. Besides, students of this class hope to find more ready means of support in the great cities, in which many benevolent institutions have been founded for the relief of needy students. Berlin presents fewer advantages in this respect than her venerable Viennese sister, enriched as she has been by legacies ever since the foundation in 1363. In 1874 Vienna disposed of 283 bursaries. Then there are mutual-aid societies formed by the students of each Faculty—societies which grant their members regular assistance in money, or help them to defray the expenses of examinations. Besides these unions composed of students, there are several private benevolent institutions, each with its own sphere; there are the *Rudophinum* and the *Asylverein*, which take care of seventy students of the Polytechnic School and twenty-two students of the University. The Committee for Students' Refectories issues annually ten thousand tickets for meals, to say nothing of similar provision for Israelitish students. The Sick Students' Relief Association provides beds for students in the section of the hospital reserved for that class, and sends annually a large number to health resorts. Analogous institutions are developing rapidly in Berlin, and are assuming vast proportions in that great city, the growth of which strikes even the Western imagination with wonder.

The heart of the philanthropist may rejoice at this multiplication of benevolent agencies, but the trouble is that the supply only serves to increase the demand, and the class of pauper students is growing out of all proportion to the population. And here the correspondent of the *Revue* touches the weak spot; but touching the weak spot only hurts and does not help. Many of these pauper students are absolutely without any vocation for higher studies. This is also true of the well-to-do; but the well-to-do can take care of themselves, while the poor student has to make his way by his studies, and the question comes up: Is it well to attract, by systematic benevolence, a host of mediocrities to engage in studies which demand a certain amount of talent to begin with and an average of culture that is incompatible with penury?

The elevation of the masses is not a potent cry in America, because the masses are already elevated; perhaps, as the struggle for existence becomes harder, we shall recognize more distinctly the stratification of society for which thus far we are mainly indebted to the insight of the local editor. In Europe it is a cry that cannot be neglected, and any attempt to find fault with any organization for furthering the rise of the so-called "lower orders" is apt to excite the bitterest animosities, and the correspondent of the *Revue* is evidently a little afraid of his thesis. Still, he maintains that all this mass of pauper students

cannot be actuated by ideal aspirations, by a disinterested love of science; that there is vanity at work, and, what is worse, a secret hope—too often illusory—of making an easy and comfortable living. Many of these unfortunate aspirants succumb physically in the struggle; many of them give up their hope of a career, and subside into the dreary work of mechanical instruction. American students are usually little concerned in the future of their German fellow-students outside of the narrow circle of their special friends; but if one could see what becomes of the crowds that throng the more popular lecture-rooms, it would be a sad procession of failures. At the distance of ten, twenty, thirty years, how many are there who have done anything for the science to which they devoted their early vigor and enthusiasm?

But these are not novel reflections, and it is time to turn to the second point of view. Apart, then, from the miserable failures which show how hazardous such a career is, we have to consider the interests of science which are compromised by this pauperism. It appears that there are more poor students at Vienna than elsewhere, and that some of the Viennese professors have for several years deliberated very gravely about the injury done to the reputation of the University by the swarms of young men who come up (notably from Galicia and Hungary) to pursue their medical studies while making their living by private lessons, by peddling matches, by small employments in connection with the exchange, the post-office, the telegraph. An American messenger-boy might, indeed, find time to read many a medical book on his leisurely way; but one wonders how that could be managed among a less good-humored people than the Americans—decidedly the most good-humored people on earth. One of the employments in vogue among these students—a curious survival which, however, is now dying out—is the profession of itinerant musician; and of course this calling cannot be followed to advantage at the small seats of learning such as Graetz and Innspruck. Nothing will serve but Vienna. And in this infatuation these unfortunates are confirmed by the public at large, by the railway companies, and, it seems, by some of the professors themselves, who take for granted that the only motive that can prompt a young man to so desperate a struggle is an irresistible vocation, and that all these eager spirits are men of unusual genius. But, unfortunately, in the judgment of those who know, parental vanity is often the moving cause; and the power of application, the power of production are not confined to genius—they are found in hopeless mediocrity as well; only the application amounts to nothing, and the production is a mere beating out of the threshed straw.

More grave than the lack of sufficient food, of decent lodging, of comfortable clothing, is the absence of a suitable early education at home, the want of intercourse with cultivated people during the time of study. The student of this class has never had an atmosphere that would fit him for the free breath of university life, and the necessities of daily toil prevent him from following the university instructions in the appointed way, and cut him off from the privileges which belong to his untrammelled brethren. The result is in most cases a sad failure. One only hears of the few successes; but those few successes must be set down as accidents, and the general outcome is a lowering of the intellectual tone of the professions.

All this is uncomfortable in the extreme. Much of it, as has been said, has little meaning for us, but it may come to have a meaning, and, in any case, students all over the world have an interest in the fortunes of students.

When we come to the remedies, we find in the first line the somewhat futile appeal to the good sense of parents, who are, apparently, to renounce pomps and vanities, and put their sons to a trade. We know what that means. We know that any good American mechanic, from a plumber down, can make an excellent living, and yet the ranks of the professions are crowded with failures. The second remedy is a peculiarly German one, and that is an increased stringency of examination at the close of the gymnasium course. Without a certificate of fitness, no one can enter the university; and this certificate should be withheld unless the examination prove entirely satisfactory. And even after that, the student should be solemnly warned of the difficulties of life in a great city. Students cannot be forced to attend any particular university, but they may be coaxed away from the pitiless centres of civilization to smaller schools, where they can enter into personal relations with their teachers, and enjoy advantages of a certain sort that are denied to those who frequent the great universities. It is absolutely impossible, says the contributor to the *Revue*, that 1,000 students can give themselves up seriously to anatomical studies, no matter how well equipped a university may be, or that 1,500 can find the means of devoting their time usefully to chemical experiments or microscopic researches. The evils are German; the remedies are also German. At the same time, there is matter enough to make an American think.

CHURCH AFFAIRS IN ENGLAND: THE LATE BISHOP OF MANCHESTER.

LONDON, November 7, 1885.

QUITE suddenly, and contrary to the expectations of most politicians, we have been plunged into warm discussions on the merits of established churches and the propriety of putting an end to them. In Scotland the question has been before the people for a good many years, but it went on simmering without seeming to come any nearer to boiling point until the approach of this general election. In England little or nothing had been heard of the matter since the fall of the Episcopal Establishment in Ireland in 1869, because every one sees the Established Church of England to be so strong and deeply rooted that a long and bitter contest would be needed to overthrow it. However, Mr. Gladstone, somewhat to the surprise of those who know his habitual caution, referred to the question of disestablisbment in his election programme issued six weeks ago, and although he relegated it to the "dim and distant future," the expression of his opinion that it would eventually become a practical question, joined to the avowals of Mr. Chamberlain and other Radicals that they approved of disestablishment in principle, made it a theme of animated controversy. The Tory party, who had been at a loss for a good election cry, seized on the defence of the Church as the leading plank in their platform, and the clergy of the Church of England (no inconsiderable force in our politics) have naturally been led by this to throw in their lot more heartily than ever with the Tory party. Even those who believe that the problem is still far from a solution, cannot now deny that the present agitation is hastening that solution, for the number of candidates who pronounce for disestablishment is increasing fast, and the newly enfranchised agricultural laborers, whom the country clergy seem to have relied on as their friends, are, in many districts, giving their support to these disestablishers.

In these circumstances your readers may be interested to hear something regarding an eminent man, just deceased, whose episcopal career illustrates more fully and more brilliantly than that of any other recent prelate the strength and worth of the Church of England. I may add that the Bishop of Manchester had visited the United States, as special commissioner to investigate your educational system, and described what he saw in an official report, published in 1868, which remains the best general account of American schools that any stranger has produced.

Till about forty years ago the English bishop was usually a rich, dignified, and rather indolent magnate, aristocratic in his tastes and habits, moderate in his theology, sometimes to the verge of indifferentism, quite as much a man of the world as a pastor of souls. He had usually obtained his preferment by his family connections, or by some service rendered to the court or a political chief—perhaps even by solicitation or intrigue. Now and then eminence in learning or literature raised a man to the bench: there were, for instance, the "Greek play" bishops, such as Doctor Monk, of Gloucester, whose fame rested on their editions of the Attic dramatists; and the *Quarterly Review* bishops, such as Doctor Copleston, of Llandaff, whose powerful pen as well as his wise administration of the great Oxford College over which he long presided, amply justified his promotion. But, on the whole, the bishops of those days were more remarkable for their prudence and tact, their adroitness and suppleness, than for intellectual or moral superiority to the rest of the clergy. Their own world, and the middle class which took its tone from the upper class, respected them as a part of the solid fabric of English society, but they were a mark for Radical invective and for literary sneers. Their luxurious pomp and ease were incessantly contrasted with the simplicity of the apostles and the poverty of curates.

That revival within the Church of England which went on in various forms from 1800 till 1870, at first Low Church or Evangelical, latterly more conspicuously High Church and Ritualist, at length reached the bishops. Lord Palmerston filled the vacant sees that fell to him with earnest men, sometimes narrow, sometimes deficient in learning, but often good preachers, and usually zealous for the doctrines they held. When the High Churchmen found their way to the bench, as they have done very largely under Mr. Gladstone's rule, they showed as much zeal as the Evangelicals, and greater practical activity. The popular idea of what may be expected from a bishop rose, and the bishops rose with the idea. As Bishop of Oxford, Dr. Samuel Wilberforce was the first to make himself powerfully felt through his diocese; his example told upon other prelates, and made prime ministers more anxious to select energetic and popular men. So it has come to pass that the bishops are now among the foremost men in the Church of England. Some, like Doctor Magee, of Peterborough, are brilliant orators; some, like Doctor Lightfoot, of Durham, profound scholars; some, like Doctor Temple, of London, able and earnest administrators. There is scarcely one who has not some good claim to the dignity he enjoys. Nobody now thinks of sneering at bishops as a class, for no set of men take a more active and, on the whole, creditable part in the public business of the country. Their incomes, curtailed of late years in the case of several of the richer sees, are no more than sufficient for the expenses which fall upon them, and they work as hard as any other men for their salaries. The only defect which is still generally charged upon them is a certain episcopal conventionality, a disposition to try to please everybody by the use of vague professional language, a tendency to think too much about the Church as a church, and to yield to clerical opinion when they ought to speak and act with independence. Several of them, and notably the three I have just

mentioned, are not open to this reproach. But the one who has just passed away was so singularly free from it, and so eminent a model of all the virtues which ought to characterize a great Christian pastor, that his career as a bishop may be said to mark a new departure, to have created a new type of episcopal excellence.

Doctor Fraser spent the first years of his manhood in Oxford, as a tutor in Oriel College, teaching Aristotle and Thucydides. He then took a college living in a quiet nook in the south of England, and discharged for nearly twenty years the simple duties of a parish priest, unknown to the great world, but making himself beloved by the people, and doing his best to improve their condition. In 1865 he was sent as an assistant commissioner to examine the common-school system of the United States, and the excellence of his report thereon attracted the notice of the late Lord Lyttleton, one of a commission which was then sitting to investigate the state of secondary education in England. On the recommendation (as has been generally believed) of Lord Lyttleton and of the then Bishop of Salisbury, who was a friend of Doctor Fraser's, Mr. Gladstone, at that time Prime Minister, appointed him Bishop of Manchester in 1870. The diocese of Manchester, which includes all Lancashire except Liverpool and a small district in the extreme north of the county, had been under a bishop who, although an able and learned man, was personally unpopular, and had done little beyond his formal duties. He lived in a large and handsome country-house some miles from the city, and was known by sight to very few of its inhabitants. Doctor Fraser had not been three months in the county before everything was changed. He got the country-house sold, and established himself in a modest house in one of the suburbs of the city. He preached twice every Sunday, usually in some parish church, and spent the week in travelling up and down his diocese, so that the days were few in which he was not on the railway. He stretched out the hand of friendship to the Dissenters (numerous and powerful in the manufacturing districts), who had hitherto regarded a bishop as a natural enemy, gained their confidence, and soon became as popular with them as with the laity of his own Church. He associated himself with all the works of benevolence or public utility which were in progress, subscribed to all so far as his means allowed, and was always ready to speak at a meeting on behalf of any good enterprise. He dealt in his sermons with the topics of the day, avoiding party politics, but speaking his mind on all social and moral questions with a freedom which sometimes involved him in passing difficulties, but stimulated the minds of his hearers, and gave the impression of his own perfect candor and perfect courage. He lost no opportunity of meeting the workingmen, would go and talk to them at the mills, or in the evening gatherings of mechanics' institutes; and when any misfortune befell, such as a colliery accident, he was often among the first to reach the spot, to help the survivors, and comfort the widows. He made no difference between rich and poor, showed no wish to stay at the houses of the great, and treated the poorest curate with as much courtesy as the most pompous county magnate.

Such a simple, earnest, active course of conduct soon told upon the feelings of the people. But the impression made by his personality seemed even greater. He was a tall, well-built man, very erect in figure, with a quick eye, a firm step, an expression of singular heartiness and geniality. He seemed always cheerful, and, in spite of his endless labors, always fresh and strong. His smile and the grasp of his hand put you into good humor with yourself and the world; if you were dispirited, they led you at once out of shadow into sunlight. He was not profoundly learned, and he had no time for sustained and searching thought; yet he seemed always abreast of what was passing in the world, and to know what the books and articles and speeches of the day contained, although he could not have read them. With strong opinions of his own, he was anxious to hear yours; a ready and eager talker, yet a willing listener. His oratory was plain, with few flights of rhetoric, but it was direct and vigorous, free from conventional phrases, always charged with solid thinking and genuine feeling. However, the greatest charm, both of his public and private talk, was the transparent sincerity and honesty that shone through it. His mind was like a crystal pool of water, in which you saw every object, and saw nothing that was mean or unworthy. There has not been in this generation of Englishmen any more simple or noble soul.

No one will wonder that such a character, set in a conspicuous place, and joined to extraordinary activity and zeal, should have produced an immense effect on the people of his city and diocese. No bishop in our time has been nearly so popular or so useful as he; none certainly has been so much lamented by the masses of the people. But it is a significant fact that he was more popular with the laity than with the clergy. Not that there was ever any slur on his orthodoxy. He was a moderate High Churchman, verging toward what would be called a Broad-Church position; always maintaining the claim of the Anglican Church to undertake the education of the people, and upholding her status as an Establishment, but dwelling very little on minor points of doctrinal difference, and seeming to care still less for external observances or matters of ritual. This displeased the Ritualist party, and even among other sections of the clergy there was a kind of feeling that the Bishop was not sufficiently clerical, did not set full store by the sacerdotal side of his office, and did not think enough about purely clerical questions. Even his friendliness to the Dissenters was ill regarded by those clergymen who deny to the Dissenters the title of Christian ministers.

Such a career as I have described is only possible in a country where the clergy is not wholly separated as a caste from the lay people, and where at the same time the existence of a state church gives one of its high officials a legal standing of great dignity and considerable power. It may be thought that a church with such leaders is in little danger. Unfortunately such leaders are rare. Were all her bishops like Bishop Fraser, the Anglican Church might stand as an Established Church for generations to come. Were his spirit of broad, generous friendliness to all classes and sects to pervade the clergy generally, that hostility which the Nonconformist ministers and a large part of the working-class feel toward them would soon disappear. This is too much to hope for. Although there is now greater external courtesy between the ministers of different religious bodies toward one another than formerly existed, the growth of sacerdotalism in England tends to make the Anglican clergy feel themselves more and more a separate caste, invested with supernatural powers; and their teaching has in it less and less of Protestant theology. The association of zeal and fervor with narrowness and even bitterness is so frequent that it is pleasant to dwell on so noble an example as Doctor Fraser presented of a truly catholic spirit combined with intense feelings and untiring activity. In these respects he resembled Dean Stanley (who admired and valued him), and they deserve to be remembered together as among the brightest lights of their church and generation. Y.

PARCHMENT-HUNTING IN FRENCH COUNTRY TOWNS.

ROYAT, PUY-DE-DÔME, October, 1885.

PROBABLY no French town of twenty thousand people is without an antiquary's shop. Especially in regions little frequented by strangers, the tourist, however insensitive he may be when at home to the attractions of similar places, will find them hard to resist when he has time on his hands abroad. Their peculiarity is that they contain real antiquities.

It was in Blois that I first rummaged among these shops, whose attractions are almost a rival to those of the castle, though this is certainly one of the most interesting in France. The traveller will remember the long flight of stone steps which climbs the steep hill in the centre of the town. Near the foot of this hill there is a well-furnished book-shop; its windows display old editions and rich bindings, and tempt one to enter and inquire for antiquities. Here I found a quantity of old notarial documents and diplomas of college or university, all more or less recently cleared out from some town hall, or unearthed from neighboring castles, and sold by a careless owner, as no longer valuable to him. This was the case with most of the parchments I found at Blois; they had been acquired within a few years from the castle of Madon and from a former proprietor of the neighboring castle of Chaumont (the *calvus mons* of mediæval time), and most of them pertained to the affairs of the *seigneurie de Chaumont*. Contracts, executions, sales of vineyards and houses, legal decisions, *actes de vente*, loans on mortgage, the marriage contract of a M. Lubin—these were the chief documents that I found and purchased. Similar documents may be found from time to time in many a French country town; and even at the monthly fairs in the market-place I have occasionally seen old parchments exposed.

For what purpose are they usually bought and sold? For relics of the old time? for their historical value? for their signatures, or as specimens of old handwriting? By no means; they are not even bought to sell again. They are generally sold at so much a pound or sheet, for the very serviceable yet quite unliterary purpose of covering jelly-pots. Nothing covers a jelly-pot so well as a sound piece of vellum or parchment; and the script of the eleventh century, or a gilt *fleuron* of the fifteenth, by no means impairs the quality of the parchment—perhaps even gives it a decorative value in the eyes of the good housekeeper. The French housekeepers probably make the best jelly that is made in the world. What is more natural than that they should use these fine old parchments to cover their excellent *confitures?* The amount of local history and chronicle that has thus disappeared in French kitchens is something quite incomputable, unless by one who has lived in one of those most interesting and unknown countries, the interior departments of France. From this insufficiently honorable doom I rescued a considerable number of parchments, but rescued some of them only in part: from several of the finest, large pieces had already been cut away. The binder, too, as well as the housewife, is a great consumer of ancient vellums. I was told in Besançon that certain Swiss towns had supplied their ancient archives to binders in eastern France. Not only ancient writing, but fine illumination, is thus sacrificed. For the European collector, such manuscripts as I have described have generally but little interest. He demands some special historic or artistic value, some rare signature, some curious illumination. He is spoiled for antiquity, and the mere age of a document counts for nothing with him. Five hundred years are but as a day in his sight.

Hence an old manuscript, as such, has but little value, for him, and this leaves quantities of parchments for the tourist who will give a little time to the search.

At Besançon a little later I found many interesting parchments. Among these were some beautifully illuminated diplomas; of these the half of one, and that the prettiest, had already gone to the book-binder or the jelly-pots. The other half bore the names of families known on both sides of the water. Such names, indeed, presumably those of the ancestors or the ancestral relations of the present families, I found in a number of instances. Among them was the name of Domett, the English poet, the intimate friend of Browning and the original of his "Waring," whose ancestors came from Arbois, in the Jura. A number of the Besançon parchments illustrated the occupation, marriages, and fortunes of the ancestors of a friend of my own, an American, who knew that his family came from the east of France, but had never looked up its records. This was a chance find on my part; and there were others of a certain historic interest. One authentic signature of Louis XIV.—a signature now getting rare—turned up, besides several that were made for him by his Master of the Seals, and recognizable as such by a peculiar tailed cipher or flourish affixed to the signature. Another find was a splendid parchment of the year 1534, about two feet broad by five feet long, and containing a curious bit of historical information. It related to the corner lots adjoining Cardinal Granvelle's palace in Besançon, perhaps the finest edifice in the city. Why had not the magnificent minister of the Emperor Charles built clear to the corner? To this day the plain structure that occupies the corner testifies that some obstacle stood in the way of completing the Palais Granvelle as the builder desired. What the obstacle was the histories of the time do not say, though the Cardinal's own published letters refer to his disappointment. My ancient parchment explained the whole thing. It was a will, bequeathing the property from a father to a son, who held to it for the purpose of standing in the way of the Cardinal. He coveted it, but could not treat the sturdy owner *à la* Naboth. The document was beautifully written, and merely as a specimen of the sixteenth-century orthography it was interesting.

But the curiosity-hunter should never permit himself to take away from a city the things that are the city's, and I turned over to the library of Besançon this parchment illustrative of the city's history, well content to have saved it from covering pots of quince jam. I hasten to add that I was no loser, for the city librarian, M. Castan, one of the most accomplished and courteous of gentlemen, insisted on my taking in return a dozen Roman medals of bronze and silver, ranging from the time of Julius Cæsar to the end of the second century, and all found in the teeming soil of Besançon, which is as full of Roman coins as a peanut hill is full of peanuts.

Other manuscript finds were scarcely less interesting. Among them were some leaves of a missal of the eleventh century containing a fragment of St. John's Gospel: their beautiful characters were traced at a date that ascends nearly halfway to the time of the events recorded.

Here at Royat, among the mineral springs of the Auvergne Mountains, I have come across a quantity of ancient German parchments, some of them curious and dating from the early fifteenth century. But here the dealer is somewhat spoiled, at least from my point of view, by living in a frequented watering place, and by having learned, in consequence, to expect high prices for her wares. These she exposes to air, sun, and rain with impartial and distressing indifference. Documents of the fifteenth century are parcelled up in a corner of a tray, and carried indoors only when the clouds roll down heavily from the Puy-de-Dôme and the large raindrops begin to fall. I have secured a few, however, and the *antiquaire* assures me that more can be found in a neighboring town. How much marketable value such documents may have among us I do not know; but both for their antiquity and for the glimpses of ancient manners that they afford, they have had interest enough to keep me busy for days. I know of nothing more fascinating than to search among these documents, sitting before two large tables, one covered with an oscillating pile of old parchments and vellum, the other ready to receive the finds that you may sort out from the unrummaged pile. One must be quick to forestall the bookbinder and the jellymaker, but even now no inconsiderable quantity of old parchments may be gathered in the inland and little visited towns of France. Do you ask what guarantee of genuineness these old parchments have? Every intrinsic guarantee that one could wish; but I need mention only one. These parchments are offered at about a twentieth part of the price that it would cost to produce imitations of the documents. T. M. C.

Correspondence.

ONE MORE GOOD APPOINTMENT.

To the Editor of The Nation:

Sir: A recent appointment by the Secretary of the Treasury, that of Artemas Martin, of Erie, Pa., as Librarian of the Coast and Geodetic Survey, is so characteristic of the present Administration that it ought not to go unnoticed. Artemas Martin has been long known and honored by the mathematical world as one of the few really good mathematicians on this side of the Atlantic, and as a striking example of a self-made man. Almost absolutely without scholastic training, he has risen to so enviable a position among geometers and analysts by the sheer force of inherent intellectual and moral qualities, that scholastic prejudices have given way, and the colleges have vied with each other in showering their degrees upon him. He has also been honored with membership in the chief mathematical societies of Europe. He is a lover of books, and just the person to be put in charge of the library of a mathematical institution like the Coast Survey. Formerly the archives of the Survey were separate from the library, and in charge of another official. These have now been consolidated with the library under Mr. Martin, who is quite competent to discharge the duties for both, thus saving to the Government the salary of one official.

This appointment of Mr. Martin not only subserves the public interests, but is a graceful recognition of superior fitness and personal worth, and an evidence of the enlightened policy of the Administration in dealing with scientific bureaux and scientific men. Alex. S. Christie.

Washington City, November 16, 1885.

ENTAIL IN VIRGINIA.

To the Editor of The Nation:

Sir: Mr. McMaster, in his first volume of the 'History of the People of the United States,' page 74, says, speaking of the Virginian of 1784:

"His opinions respecting forms of government and forms of creed were not the result of long study or of deep meditation, but were inherited with his estate, which passed from father to son by the *strictest laws of entail*."

Now, at that time, in Virginia, the whole real estate of a father who died *intestate* passed to his eldest son, according to the *common law of descent* which prevailed from the first settlement of Virginia down to 1787. It will be remembered that Mr. Jefferson, who formed one of the Committee appointed by the colony of Virginia, four months after its independence was declared, to revise the laws, succeeded in abolishing primogeniture. The laws framed by this Committee, which consisted of those distinguished Virginians, Edmund Pendleton, George Wythe, George Mason, Thomas Ludwell Lee, and Thomas Jefferson, were enacted in October, 1785, but did not take effect until January 1, 1787.

If Mr. McMaster means by "strictest laws of entail" anything but this, he is in error. One would infer from the passage cited either that there were laws rigidly restraining the power of alienation, or that the old "family law" of estates-tail, by which estates could be granted by deed or will to one and the heirs of his body forever, still existed and enjoyed the favorable regard of Virginians in 1784. But the truth is that by act of October 7, 1776, an attempt was made to prevent the *entailing* of estates in Virginia, because, as stated in its preamble, the perpetuation of property in certain families "is contrary to good policy, tends to deceive fair traders, who give credit on the visible possession of such estates, discourages the holder thereof from taking care of and improving the same, and sometimes does injury to the morals of youth, by rendering them independent of and disobedient to their parents." This act was amended in 1785 so as more completely to accomplish its purpose. It is, therefore, substantially true to say that in Virginia, in 1784, not only were there no strict laws of entail, but that, on the contrary, the perpetuation of estates in families by act of the parties was, by a law which had been in existence eight years, strictly prohibited. It is only proper to add that all of the law touching this matter may be found in the second volume of Minor's Institutes, pages 85 and 86.—Very respectfully,

E. I. Renick.

Washington, D. C., November 8, 1885.

IDEALISM AND REALISM ONCE MORE.

To the Editor of The Nation:

Sir: The letter from Professor Sill in last week's *Nation* a little darkens counsel, it seems to me, by regretting that the terms idealism and realism should be used in characterizing literary products. He regrets it on the ground that those works commonly called idealistic depict what is more real, not less real, than those of the realistic school.

But is not this the case with *all* embodiments, effects, and results of ideal conceptions? Are they not truer, and in that sense more real, than anything else? Whether the ideal takes shape in character or in any of the expressions of genius, it partakes of the nature of the Rock of Ages, around which seethes and bubbles the changing vastness of what we call *real*—the waves on which no man can build; and Professor Sill says well that "the best fiction and the best art of any sort . . . gives us what is universally and always true, and not merely what is locally and temporarily true." It seems to me a curious incongruity that he should preface this by saying that "the best fiction and the best art of any kind is realistic," and that he should designate Shakspere as "realistic." He surely confuses terms; and he must permit us still to retain "ideal" and "real" in their familiar significations—the one as meaning what *might be, anywhere;* the other as what *is, somewhere: Othello*—Silas Lapham.

The excellence of the literature of the ideal is not to be measured, as Professor Sill seems to imply, by the degree to which it is permeated

with "ideas," but by the height and strength of those ideas, and by the light that rays out from them. There are books

> "Whose light doth trample on our days:
> Our days, which are at best but dull and hoary,
> Mere glimmerings and decays";

and we cannot forego the use of the terms clearly discriminating between these enduring achievements of literary art, these stars which, informed with light, illuminate the heaven of the soul's imaginings, and those magic-lantern pictures which—with whatever ability of "selection" (to use Professor Sill's word)—attempt but to represent, to give back to us in artistic forms, our dull and merely glimmering days, with no more will than power "to quicken our cold love."

AN IDEALIST.

TELEPATHIC NEWS OF BATTLES.

TO THE EDITOR OF THE NATION:

SIR: In addition to the instances of telepathy given in your article of this week, another may be given. Robert White, in a 'History of the Battle of Bannockburn,' states that Hector Boece, of Aberdeen, relates, that on the same day the battle was fought, a knight, in bright shining armor, intimated to the inhabitants of Aberdeen how the Scottish army had gained a great victory over their enemies of England. Soon afterward this warrior, mounted on horseback, was seen to pass over the Pentland Firth. He was believed by the people to be Saint Magnus, Prince of Orkney, and thereon King Robert endowed the Church of Orkney with five pounds annually, out of the customs of Aberdeen, to purchase bread, wine, and wax for the abbey.

Probably the reason why he stopped to tell the glorious news in Aberdeen was because Aberdeen was very largely represented in Bruce's army at Bannockburn, where the Aberdonian pass-word was "Bon-accord"—now the motto of Aberdeen.

Yours truly, JOHN JOHNSTON.

MILWAUKEE, November 7, 1885.

RELIGIOUS COURSES AT JOHNS HOPKINS.

TO THE EDITOR OF THE NATION:

SIR: In enumerating religious courses given at Johns Hopkins University in your last issue, Mr. Wadsworth fails to state the course in New Testament Greek and in Sub-Apostolic Literature, each of three hours weekly, given 1884-85 by Professor Harris; also the course in Church History twice weekly by Doctor Adams. The addition of these three courses raises the number of hours given here to religious and allied subjects from ten hours weekly to eighteen. X.

BALTIMORE, MD., November 13, 1885.

UNBELIEF AT YALE.

TO THE EDITOR OF THE NATION:

SIR: The brief but remarkable communication from "An Old Graduate" upon "Cause and Effect at Yale," in the last number of the *Nation*, contains the following sentences:

"The opinion is gaining ground that prominent positions at Yale are held by unbelievers. Now unbelief is either a sin, or else (like faith in perpetual motion, for instance) the sign of mental obliquity, of an intellect not in perfect working order. . . . No institution will find favor with the public whose standard-bearers are . . . men whose mental process s have led them on such a vital point to false conclusions."

To the intelligent readers of the *Nation* it will be surprising to find any graduate of a university, however "old" he may be, who can, in this year of grace, give serious utterance to these views. If they were shared in by the Faculty of Yale College, his question why "the class which entered the College this year is so small" would seem to answer itself. QUATORZE.

[We have, for our part, felt doubtful about taking "An Old Graduate" as seriously as our correspondents have done. Dr. John P. Gulliver, however, in the November number of the *New-Englander and Yale Review*, discusses "The Clerical Element in the Yale Corporation" in a way which shows that he would have little difficulty in adopting "An Old Graduate's" major premise. He mentions as an "excellent plan" the original proposition to organize a General Synod of the Congregational churches of Connecticut, which "should have such influence in the elections [of Trustees] as might be necessary to maintain orthodoxy in the governors." Doctor Gulliver says "this has been substantially adopted in the organization of the Chicago Theological Seminary," thus clearly showing that he regards the proper discipline for a college of the liberal arts to be the same as that for a divinity school. In view of this, we are surprised that he punctuates with an exclamation mark his suggestion whether a degree in orthodoxy as well as in learning "should not be legally demanded if all the alumni are allowed to vote for members of the Corporation," seeing that the propagation "of the Christian Protestant Religion, by a succession of learned and orthodox men," was from an early period the declared object of Yale College.—ED. NATION.]

Notes.

FOUR thousand dollars have already been subscribed for a permanent building at Athens for the American School of Classical Studies, on ground freely bestowed (as our readers are aware) by the Greek Government, and in close and convenient proximity to the site of the projected British School. The sum estimated to be necessary is $20,000, the interest on which is not materially greater than the present annual rent of the building actually leased, viz.: $1,000. An appeal to the friends of classical studies and of the School for the raising of the sum named above has been put forth by Professors C. E. Norton and John Williams White, of Cambridge, to either of whom contributions may be sent.

During the coming month the Historical Society of Pennsylvania will commemorate the 200th anniversary of the art of printing in the middle colonies of North America. An address in the Society's hall on December 11, by the Rev. George Dana Boardman, D.D., will be followed on the next evening by a dinner in the same place, in which the various representatives of the typographic craft will take part. It is fortunate that the first volume of Mr. C. R. Hildeburn's 'Issues of the Press in Pennsylvania, 1685-1784,' has already been completed to signalize this occasion.

It was inevitable that the Appalachian Mountain Club should outgrow the hospitality accorded to it by another institution in Boston. It has now secured a room in the Ticknor house on Park Street, Boston, certainly a site more consonant with the object and title of the Club than the Back Bay afforded. It will be open to members in the afternoon, but as yet the Club cannot maintain a curator.

G. P. Putnam's Sons have in preparation and in press 'Humorous Masterpieces from American Literature,' edited by Edward T. Mason; 'Mechanics and Faith: A Study of Spiritual Truth in Nature,' by Charles Talbot Porter; 'Songs of Sleepy Hollow,' by Stephen H. Thayer; 'The Adirondacks as a Health Resort,' by Dr. J. W. Stickler; 'Relations between the Army and the People,' by Captain George F. Price (in the series of Military Monographs); and 'The Louisiana Purchase in its Influence upon the American System,' by the Rev. C. F. Robertson D. D., and 'The Political History of Canada,' by Prof. Goldwin Smith (in the Monographs of the American Historical Association).

T. Y. Crowell & Co. have just ready a translation of Count Leo Tolstoi's 'My Religion,' of which our Paris correspondent lately gave an interesting *précis*.

The Rev. D. C. A. Agnew's 'Protestant Exiles from France in the Reign of Louis XIV.' is well known to students of the Huguenot dispersion. The first edition of this work was published in 1866. A "new and remodelled" edition appeared in 1871, in two volumes, followed in 1874 by an "index-volume" containing much supplementary matter. Since then Mr. Agnew has diligently pursued his investigations, and he now proposes to publish "a new enlarged and remodelled edition," embodying the results of his further labor. It will be published in two handsome volumes, for private circulation, at £5, and only fifty copies will be printed. Names for subscription may be sent to the Rev. Charles W. Baird, Rye, N. Y.

Ginn & Co. will publish at New Year's 'Studies in Greek Thought,' being essays selected from the papers of the late Prof. Lewis R. Packard, of Yale.

A biographical sketch of Adelaide Neilson, by Laura C. Holloway, is about to be issued by Funk & Wagnalls. It will contain nine portraits by Sarony.

George H. Buchanan & Co., Philadelphia, issue immediately 'The Ethics of George Eliot's Works,' by the late John Crombie Brown.

'The Women Friends of Jesus,' a series of popular lectures by the Rev. Henry C. McCook, D. D., is announced by Fords, Howard & Hulbert.

Cupples, Upham & Co. will shortly have ready 'Sketches of the Clans of Scotland,' with colored representations of the distinctive tartan worn by each.

The Carlyle reprint now in progress at the hands of Estes & Lauriat, Boston, of which we have already mentioned the first volume, is denominated the Sterling Edition, and is issued "at a popular price" in twenty volumes. It is wholly new in its manufacture.

Mr. Edmund Gosse is about to receive the degree of M. A. from Cambridge, where, as Clark lecturer, he has just delivered six lectures on Sir Walter Raleigh as a man of letters, the substance of which will probably reappear in his forthcoming sketch of Raleigh in Mr. Lang's series of "English Worthies."

Two books about the stage likely to be of general interest are 'Rachel,' by Mrs. Kennaird, in the 'Eminent Women Series,' and 'David Garrick,' by Mr. Walter Pollock, in Mr. Lang's series of 'English Worthies.' Although there are three biographies of Garrick, no one is altogether satisfactory; and of Rachel there is no good biography either in French or English.

In welcoming the new 'Publishers' Trade List Annual for 1885' to our table, we need only remark on the ingenious device by which pagination is made easy for the possessor of this huge compound of catalogues. Alphabetical reference is also facilitated by a well-known contrivance on the margins.

The first volume of an important work on the art monuments of Hesse is very soon to be published by a commission appointed by the Grand Duke. It will contain an inventory, accompanied by a profusely illustrated description, of the works

of art, including architecture, in that country at the close of the eighteenth century.

The King of Saxony has given to the Royal Public Library in Dresden the library in the castle at Oels formerly belonging to the Duke of Brunswick. It contains some manuscripts and between 20,000 and 30,000 volumes, many of which are rare and valuable.

'Austria and Hungary in Word and Picture' ('Oesterreich-Ungarn in Wort und Bild') is the title of a work the first part of which is to be published this month in German and Hungarian. The introduction is written by the Crown Prince Rudolf.

Another Austrian Archduke, the well-known traveller, Ludwig Salvator, has in press a book on Los Angeles in Southern California. A popular edition of his travels 'Around the World,' published two years ago, is also about to appear.

Still another royal author, King Oscar of Sweden, is about to publish a work relating to the political events in Europe between the years 1864 and 1872.

The fifth volume of Mr. Lodge's edition of the works of Alexander Hamilton (Putnams) is more than half occupied with the "Camillus" essays in defence of the Jay treaty. The remaining portion is divided between essays on our foreign policy, in opposition to the endeavor to yoke this country to the fortunes of France, and official communications from Hamilton while Secretary of the Treasury concerning the Whiskey Rebellion. Among the essays is one signed "Detector," derived from the Hamilton MSS., and never before published; together with a paper, dated 1803, which has already seen the light in J. C. Hamilton's 'History of the Republic,' and which is remarkable for Hamilton's opinion that Bonaparte would not negotiate for the transfer of the Louisiana territory, and his consequent advice that New Orleans be seized in order to force a sale. In an essay of 1799 we read: "German patriotism is a heinous offence in the eyes of French patriots." The editor exhibits a mixed practice in regard to his annotations, sometimes acknowledging them, and sometimes not; and his table of contents is still far too meagre.

'*Life's* Verses' (Mitchell & Miller) comprises the best of the recent *vers de société* of our esteemed humorous contemporary, and some of the best of Mr. F. G. Attwood's vignettes (among many clever designs by other hands). The whole Butler series, beginning with Abou Ben, is not so much caricature as it is insight.

The typographical conception and execution of Mrs. Norton's 'Lady of La Garaye'—a poem now nearly a quarter of a century old—in the rubricated edition just published by A. D. F. Randolph & Co., are very commendable. We should have liked the cover, of a Chinese gilt pattern, better without the red stamp, though not solely on the ground of color contrast.

Another reprint, by the same firm, Dr. Neal's translation of 'The Celestial Country,' is entitled to equal praise for the beauty of its presswork. But by what canon of art the illustrations (photographs from absolutely mediocre designs) were admitted; or of taste, the cover adopted, we cannot divine.

We cannot conceive that any one capable of appreciating Wordsworth's "Ode on Immortality," and "Lines on Tintern Abbey," should fail to be offended by the "illustrations" offered by Cassell & Co. in their holiday edition of these two poems. The verse and the engravings appeal to two different orders of intelligence.

Jean Ingelow is a poet whom the designer need not approach with awe. The composite volume of 'Favorite Poems' which Roberts Brothers put forth exhibits great inequality of artistic power, the designs for the "Songs of Seven" being almost without exception commonplace; those for "The High Tide" for the most part of more than ordinary excellence; and those for "The Shepherd Lady, etc.," quite as low in level as the first. With a view to being laid on a drawing-room table, the cover of the book has been adorned with a sunken panel containing a metallic high relief of St. Botolph Church.

Mr. Harry Fenn's contributions to the artistic product in the 'Sermon on the Mount' (Roberts Bros.) are much the best of the series. A few of Mr. Sidney L. Smith's emblematic borders are well considered and agreeable. Beyond this the enterprise does not challenge our admiration. Mr. Edward Everett Hale furnishes an introduction, in which he reconciles worldliness and the Sermon on the Mount with all the ease of a veteran practitioner in the art of accommodating theology and science.

The useful part of Mr. Allen Dodworth's 'Dancing and Its Relations to Education and Social Life' (Harpers) consists in its practical instruction in a great variety of dances, particularly the cotillion. The amusing part is this well-known teacher's moralizing, as when, having remarked how the greater lapses from virtue are preceded by lesser ones, he asks, "What may we expect, therefore, from those young men who, in dancing, recklessly soil the beautiful fabrics of women's costumes with perspiring hands, rather than avoid that injury by wearing gloves?"

Harper's Young People comes to us in its sixth bound volume, of which it is neither easy nor necessary to summarize the varied contents. Here appear portions of Mr. Howard Pyle's 'Pepper and Salt,' and one also remarks the series of beautiful engravings of infant heads by Mr. Frank French.

It is well to be warned in time, and any friend of psychic research who may be tempted to explore the phenomena of spiritualism should read a little book from the German, just published by the Harpers and called 'Beyond the Grave.' No Christian, says Dr. Hermann Cremer, can "for a moment put himself on the footing of negotiation and investigation with spiritualism, but can only brand it as a lie oppugnant to God," etc. To attempt intercourse with the dead "is wicked."

Dr. Beardsley's 'Life and Times of William Samuel Johnson' (Houghton, Mifflin & Co.), which originally appeared in 1876, has continued to be in demand, and a second edition is now published, revised as the plates would permit, and enlarged. The index, too, would have borne overhauling, for both the letters M and T are alphabetically faulty.

One of the pleasantest of the French theatrical annuals, *Les Soirées Parisiennes*, has only now made its appearance for last year—and for the last time. M. Arnold Mortier, the clever "Monsieur de l'Orchestre," fell ill toward the end of last year, and died on the first day of this. He was a Dutchman, and his last book has a biographical and critical preface by a German—Albert Wolff—and both of them were typical Parisians, as were Grimm, and Fiorentino, and Hamilton. The typical Parisian is rarely born in Paris, and not always even in France. M. Mortier's theatrical fantasies are as clever in this eleventh volume as in its predecessors, and the series will be a mine of hints for the future historian.

The late Charles de la Rounat, who, when he died a year ago, was manager of the classic Odéon Theatre in Paris, had been a dramatic critic of wide experience and sound judgment. There has recently been published by J. Rouam (New York: F. W. Christern) a thin volume of his 'Études Dramatiques,' apparently the first of a projected series, and devoted wholly to the chief actors of the Comédie-Française of a decade ago—Mme. Arnould-Plessy, Régnier, M. Got, and M. Delaunay. They supplement admirably the more vigorous and incisive criticisms of M. Sarcey in the first series of 'Comédiens et Comédiennes.' The nearly twenty rather scratchy "process" sketches are quite sufficient to give a fair idea of the actor's appearance in a given part.

Quite the best map that we can name, at this moment, of the seat of war in the Balkans is the fresh edition by Dietrich Reimer, Berlin (New York: L. W. Schmidt), of H. Kiepert's General Map of the Southeastern European Peninsula. The scale is large: 1:1,500,000, and all of Greece, the Ægean, Turkey, Bulgaria, Rumania, Servia, Bosnia, etc., is comprehended. The boundaries of the territories in dispute are authoritatively set down; the physical features are duly depicted, and as great accuracy as is possible has been secured for the proper names. The map is folded in neat covers, from which it can be wholly detached.

The great map of Africa undertaken by the house of Justus Perthes in Gotha on a scale of 1:4,000,000 has begun to appear (New York: B. Westermann & Co.). Part I.—there will be five in all—sets forth the scheme of the work, which is to furnish a map large enough and detailed enough to meet the wants of every class. The projection is Flamsteed's The continent is skilfully divided into ten rectangles, six lying north of the equator and four to the south. Commencement is here made with sheets 1 and 5—namely, the northwestern, of which the diagonal is approximately a line drawn from Algiers to Cape Blanco; and the central, or a line drawn from the Nile at New Dongola to Fernando Po. In the making of No. 5, Barth's observations are declared to have been more trustworthy than those of any more recent explorer. Peculiar difficulties attended the making of No. 1 from the extraordinary variety of materials, the want of astronomical precision, and the exuberant Arab and Berber terminology.

On October 19, Dr. Heinrich Leberecht Fleischer, incontestably the greatest Arabic scholar in Germany, celebrated the semi-centennial anniversary of his accession to the chair of Oriental Languages at the University of Leipzig, as successor to Rosenmüller. That position Dr. Fleischer has held to this day, declining in 1860 a call to fill the professorship of Arabic, Persian, and Turkish at the University of Berlin, and continuing to lecture after entering (on the 21st of last February) upon the eighty-fifth year of his life. Many distinguished marks of esteem and congratulation were showered upon the veteran teacher and author. The most striking was an album, presented by an international committee of Orientalists, and embracing votive photographs and inscriptions from 117 Oriental scholars of Europe, Asia, and America—all of them more or less strictly his pupils. The University and city of Leipzig, the Royal Academy of Sciences, and King Albert, vied with each other in paying homage to the eminent Saxon.

A very acceptable addition to the handsome 'Bibliothèque Orientale Elzévirienne,' published by Ernest Leroux in Paris, is 'Les Langues Perdues de la Perse et de l'Assyrie,' by M. Joachim Menant, of which the first part (Persia) has appeared, and the second (Assyria) is in press. These two little volumes, which tell the story of the discovery and gradual decipherment of the cuneiform inscriptions of Persepolis, Behistun, etc., in a very agreeable and lucid manner, are only slightly altered and augmented reproductions of the author's 'Les Ecritures Cunéiformes,' of which the second edition appeared in 1864. His name is, on the title-page as well as in the publisher's preface, spelled Menant, as it is also in his 'La Bibliothèque du Palais de Ninive,'

forming vol. xxviii of the same Elzevirian Library; and in Vapereau's 'Contemporains.' The greater works of the same French Assyriologist, however—such as his 'Annales des Rois d'Assyrie,' 'Babylone et la Chaldée,' and 'Leçons d'Épigraphie Assyrienne'—have on the title-page the name Ménant, and under this name we find him consistently quoted by Friedrich Delitzsch, Hommel, Duncker, etc., and noticed in Brockhaus's 'Conversations-Lexikon' (1885). We find Menant in Maspero's 'Histoire Ancienne,' etc., and Ménant in Lenormant's 'La Langue Primitive de la Chaldée'—each of whom ought to know well—and both forms on one and the same page of the 'Records of the Past.'

—Mr. Halliwell-Phillipps still brings forth fruit after his kind. Writing to an American friend in the last week of October, he says: "I have had one piece of luck of late, in buying a deed of 1579 with the signature and beautiful handwriting of Walter Roche, who was Master of the grammar school at Stratford-on-Avon when Shakespeare was a little boy there. Only one other specimen of his handwriting—that in the Museum at the Birthplace—is known to exist. Another acquisition: I am not fond of mulberry-tree relics, wanting faith, but, by the death of my father's last surviving relative in Lancashire, I come into possession of one which was purchased by my grandmother at Stratford from Sharp himself in the last century, and so far has an undoubted pedigree." Sharp will be remembered as the relic-carver who, on the cutting down of Shakspere's mulberry in 1758 by Rector Gastrell, the then owner of the estate, "purchased the greatest part of it"—as he declared in a formal death-bed affidavit in 1799. The autograph of Roche, as the first schoolmaster the future dramatist ever saw, and one so nearly unique, deserves a station in Hollingbury Copse beside the signature of Shakspere's friend and patron, the Earl of Southampton, and that of Sir Thomas Lucy of Charlcote, who was perhaps in truth a still greater friend, albeit in the disguise of driving the poet to his field of future fame by a prosecution for deer-stealing. The free-school of which Roche was master, and which gave Shakspere his "small Latin and less Greek," has been shown by a recent writer in *Notes and Queries* to have been endowed before the year 1453. The master's salary was fixed at £10, and he was forbidden to receive any fees from pupils. Mr. Phillipps, while remarking that he would as soon think of making money by keeping a yacht as by the sale of his Shakspere 'Outlines,' adds that the fifth edition of that work is already out of print, and that he shall soon be at work on the sixth.

—That in 1633, not many months after the death of Gustavus Adolphus at Lützen, Wallenstein entered into secret negotiations with Sweden and France, Saxony and Brandenburg, with the object of forcing Ferdinand II., his master, to conclude a peace which would have completely humbled the Emperor and raised his generalissimo to the highest princely position under him, is a fact universally acknowledged by recent historians. On the strength of it, the great Catholic commander in the Thirty Years' War is now almost unanimously called a traitor in universal and special histories. Only his degree of criminality in the transaction—owing to diverse views of the causes which led to it, of the perplexities of the situation which Wallenstein's ambition and the fear and envy of him had created, and of the ultimate aims of his intended defection—has been variously judged, sectional and religious leanings entering largely into the formation of opinion. What was not known, or at least not conclusively known as authentic, down to very recent days, is that Wallenstein began negotiations with the defenders of the Protestant cause as early as 1631—that is, at a time when the King of Sweden was living and advancing, and the power of the Catholic Emperor was less threatening than ever. Authentic documents drawn from the archives of Sweden and Saxony, and recently published in two simultaneous collections (Frankfort, 1885), remove the last doubt in the matter. Such, at least, is the weighty opinion of Professor Gindely, the foremost historian of the Thirty Years' War, in a résumé of the two publications, in the Munich *Allgemeine Zeitung*. The more important of the documentary collections is a reproduction, in German, by Dr. Emil Hildebrand, the veteran archæologist of Sweden, of sixty-six documents published by him in 1883 in the Swedish *Historisk Tidskrift;* its title is, 'Wallenstein und seine Verbindungen mit den Schweden: Actenstücke aus dem schwedischen Reichsarchive zu Stockholm.' The two papers most to the point are a letter of Count Thurn, the leader of the Bohemian Protestants at the outbreak of the war, to Gustavus Adolphus, under date of June 23, 1631, reporting the beginning of the "negotium," and confirmatory of other reports previously known but objected to as of doubtful authenticity, and a longer statement sent to the secretary of the same king by Nicolai, the Swedish Resident at Dresden, and detailing an interview at Kaunitz, November 20, 1631, between the Saxon Fieldmarshal Arnim and Wallenstein, in which the latter, "obtestando per omnia sacra," assured the Swedish King of his excellent intentions toward him, though still compelled to display fidelity to the Emperor and command his armies. The other collection, by Dr. Arnold Gädeke, contains 165 documents, all drawn from the Saxon archives; it is entitled, 'Wallenstein's Verhandlungen mit den Schweden und Sachsen, 1631-4.'

—Theophil Zolling, editor of the *Gegenwart*, presents in a recent number of his journal some interesting facts and opinions concerning the status of the Germans and of things German in Paris. Herr Zolling writes apropos of a new German book upon Paris by Arthur Mennell ('Pariser Luft,' Leipzig: Albert Unflad). He remarks very calmly upon the increasing manifestations of Parisian Germanophobia, and with equal calmness shows how, in spite of all that, the "Germanization" of the French capital is progressing with astonishing rapidity. The latter subject makes a longer chapter than the former. One is perhaps not surprised to learn of the existence of an association of German students in Paris whose sole object is to prevent their newly-arrived countrymen from being gulled by the Parisians. Speaking of students, Herr Zolling is led to comment upon the disillusionment which Germans are compelled to undergo with regard to the Sorbonne. The "students" of the Sorbonne are said to number nominally 1,700, of whom a quarter attend lectures regularly. This aggregate audience consists mainly of elderly Frenchmen, German students, and women. Young Frenchmen who are studying for a profession attend the Sorbonne courses if they feel the need of them, but usually they feel no such need, or feel it very spasmodically. No professor lectures more than twice a week. There are no seminaries and no *privatissima*, and the hundred or so of German students at the Sorbonne get no mental aliment which they could not have of better quality and for less money at home. The position of German clerks in Paris is painted in very sombre hues. A trilingual correspondence clerk gets 100 francs a month, and is exposed to constant annoyance from his fellows. Germans out of employment are a common sight in Paris, and if they are poor it goes hard with them.

—But, in spite of all this, *Deutschthum* is gaining ground in Paris all the time. The number of German-speaking residents is not far from 100,000, and of these about a third are subjects of the Empire. The naturalized and (more or less) Gallicized Germans constitute a numerous class in nearly all phases of French life. Two admirals of the French fleet bear the names Ledebur and Meyer; three corps-commanders in the army are called Schmitz, Wolff, and Schneegans. The *personnel* of Parliament, of administration, of the book trade, the Bourse, the university, and of journalism has a large German element. Many of the newest song writers bear German names. Half of the police (says Herr Zolling) are German; so is nearly every *concierge*, and the executioner of Paris is a Monsieur Deibler. German beer, too, is indubitably capturing Paris, though it does not seem to be captivating the recognized organs of public opinion. Several newspapers make a specialty of denouncing beer as the very symbol of all vileness, as being, in short, German; and yet the beverage makes its way. Herr Zolling takes pains to correct the popular misapprehension that real beer is not to be had in Paris; he assures us that such a thing can be had for one's money, though it be an incontestable fact that an order for beer in an average Paris café or restaurant is certain to be answered *mit purem Rattengift*. Music, also, is helping to Germanize Paris. The concerts of the Conservatory offer "almost exclusively" German music; the opera-houses get rich upon Mozart and Weber; military music patterns more and more after German models, and the triumphant Wagnerians are pleading to be allowed to come to the rescue of the Grand Opéra with "Lohengrin" and "Tannhäuser." School and army are adopting German ideas, and German *Vereine* for various purposes are imitated by corresponding associations in France. Even the language of Paris is assimilating German words and German idioms at a rate which is considering the conservatism of the French in these matters, surprising. Here it is that the influence of the bilingual Alsatians is felt. That there is any marked increase of interest in the German language on the part of the schools or of the educated class does not appear. A limited study of German is, however, required from French soldiers, who are provided with a 'Questionnaire usuel français-allemand,' from which these curious-looking specimens are taken: *Capitaine=haouptmann; cidre=apfailvain; coucher=chlaffen; aux armes=inns guévair; où est l'ennemi ?=vo stait der faymnd ? la route traverse-t-elle ?=furt de strassé nak ?*

—J. J. von Tschudi's 'Organismus der Khetshua-Sprache' (Leipzig: Brockhaus) contains the summary results of a life-long study and literary activity devoted to the languages and people of Peru. The main purpose of the author was to show the historic evolution of the language, not that of furnishing grammatic rules and paradigms to the students of Khetshua. Fair specimens of his method are the discussions on the gutturals, on some of the nominal cases, and on the plural ending *-kuna*, in which *-na* is the real suffix of plurality. Frequently he has to defend his views against contrary opinions, and his polemics against Lopez, Nodal, Pacheco-Zegarra assume sometimes an acrimonious character. Even a tyro in the study of Khetshua can derive great benefit from the volume, which is remarkable for the perspicuity of its statements, although paradigms are to be found in it only to a limited extent. The bibliography, the remarks on sister-dialects, and three extensive texts are very valuable additions to the book. The introduction is of an ethnographic character: it classifies the various South American languages into

families; speaks of the physical characteristics, complexion, etc., of the American natives, of the climate, topography, animals, and plants of the Peruvian highlands; and of the political changes in Peruvian history and aboriginal life. This section contains many assertions of a rather startling nature, as that the Khetshua-speaking people came originally from the north (about Quito); that the Aimará language belongs to another family than the Khetshua, viz., the Kolla family, etc. Von Tschudi's views concerning the totality of the American language-families may be summed up in the result, expressed in a negative form on page 125: "We are not yet entitled, from the little we know of them, to assume that they are not deducible from one another (L. Adam's opinion); nor can we assume that all these forms of speech show an embryonic similarity, and that the languages, now differing so largely, owe this discrepancy only to divergence in their evolution in time (Forchhammer's idea)." Evidently, the embryonic similarity observed is merely the fact that all American languages are agglutinative, and many of them largely polysynthetic; but this does not by any means explain the total discrepancy in the radical syllables of the various linguistic stocks.

THOMAS'S BIOGRAPHICAL DICTIONARY, REVISED.

Universal Pronouncing Dictionary of Biography and Mythology. By Joseph Thomas, M.D., LL.D., author of the system of pronunciation in 'Lippincott's Pronouncing Gazetteer of the World,' of 'A Comprehensive Medical Dictionary,' and of various pronouncing vocabularies of biographical and geographical names. New edition, thoroughly revised and greatly enlarged. Philadelphia: J. B. Lippincott Company.

In a review of the first edition of this work, written after the appearance of one-third of it, and published in No. 255 of the *Nation*, we said:

"We must declare it the best as well as the most comprehensive book of its description, emanating from the pen of one writer—in any language—which has come under our notice. . . . What the comprehensive scholarship, perseverance, energy, and critical accuracy of one man may fairly be expected to do in this field, our author has amply done."

We qualified this approbation by emphasizing, what it implied, that, after all, a cyclopædia of universal biography, "if not done by a number of scholars, each elaborating his special branch, can at the best be an excellent compilation"—which Doctor Thomas's work was "on a vast scale." We praised its fulness, fairness, bibliographical richness, plainness of style, elaborate pronunciation of names, and—in justice to the publisher—the excellence of its mechanical execution. We pointed out some omissions of titles, alluded to more frequent omissions of facts and defective descriptions, and specified a few slight inaccuracies in dates, adding, "Even errors so slight as these are exceedingly rare."

Since writing that review—fifteen years ago—we have used Doctor Thomas's 'Dictionary of Biography' almost constantly, as one of the handiest (on account of its conciseness) of the larger books of reference in our possession. For six years, while engaged in literary labor demanding incessant examination of biographical facts and dates, and critical comparison of authorities, the present writer daily turned over its pages again and again, marking on the margins the tangible slips discovered. Now, being thus fully familiar with its contents and execution, we cannot but leave unmodified the judgment passed on its merits in 1870. Referring our readers to our statements of that date, we limit our present remarks to the additions in the revised edition before us. And here, too, we must say, after close examination, that the Advertisement by the Publishers, which stands in lieu of a preface to the new edition, tells what is substantially true when it says: "Great pains have been taken not only to include within its pages appropriate notices of all persons who have risen to any considerable degree of prominence since the issue of the first edition, but also to make such revisions in certain of the original articles as the lapse of time has rendered necessary to bring the accounts of the subjects down to the present date." And we have no reason to doubt that the statement which follows, that "several thousand new articles now for the first time appear, while of the revisions and expansions of original notices . . . *many* thousand instances will come to the notice of the reader," is equally correct.

Our own experience is this: We have looked for and found notices, not contained in the original edition, of Schweinfurth, Nachtigal, Munzinger, Cameron, Serpa-Pinto, Lenz, Fedchenko, Przhevalski, Greely—but not of Brazza; of Kuenen, Wellhausen, Robertson Smith, Friedrich Delitzsch, Dümichen, Ebers, Sayce, Lazarus Geiger—but not of Oort, Ménant, or Darmesteter; of Tchernyshevski, Tolstoi, De Amicis, De Gubernatis, Dóczi, Daudet, Leroy-Beaulieu, Laugel—but not of J. E. Thorold Rogers, Sheldon Amos, William Minto, Edward Fitzgerald, J. G. Romanes, Edward Caird, H. Labouchere, or Fortuné du Boisgobey; of Howells, James, Julian Hawthorne, Cable, Eugene Schuyler, Higginson, Chadwick, MacMaster, Swinton, Whitelaw Reid, Medill; of Grévy, Faidherbe, Chanzy, Bourbaki, Frossard, Clémenceau, Spuller—but not of Chaudordy or Barodet; of Kálnoky, Tisza, Hohenlohe—but not of Taaffe; of Bennigsen, Lasker, Bamberger—but not of Treitschke, Richter, Bebel, or Stöcker; of Sagasta, Zorilla, Figueras, Cánovas del Castillo—but not of Pavia or Martos; of Skobeleff, Gurko, Tcherniayeff, Kaufmann, Melikoff, Fadeyeff, Dragomanoff, Aksakoff—but not of Katkoff; of Midhat, Osman, Mukhtar, Fuad, Arabi, and Aleko Pashas—but not of Suleiman; of Milan of Servia, Nicholas of Montenegro, Alexander of Bulgaria, El-Mahdi, and Tewfik; of Hobart, Gordon, Burnaby, and Forbes—but not of Valentine Baker or MacGahan.

Some of the omissions are evidently due to oversights, others to laudable discrimination. Transient notoriety does not, in Doctor Thomas's eyes, entitle one to a niche in a biographical dictionary. Hence we also look in vain for Zhelyaboff or Sophia Perovskaya, Hödel or Nobiling. That there is no allusion to the attempts of the last two regicides in the notice of Emperor William is perhaps less defensible. Nor is there any allusion to the Prussian *Culturkampf* under that head or under "Bismarck." There is also much looseness of expression in the former notice: The battles of Courcelles, Mars-la-Tour, and Gravelotte are designated collectively "a great battle near Metz (August 14-18)." The fights at Beaumont and Sedan are also coupled into one "great battle." "Bavaria and Baden in August, 1866," stands for Bavaria, Würtemberg, and Baden, etc. The date of Aurelle de Paladines's victory near Orleans as given here ("9th of November") is, on the other hand, more correct than "November 10," under "Palladines . . . (D'Aurelles)." Why the author has chosen this form of the general's name, referring to it under "Paladines," but not under "Aurelle," is not clear; ours we have before us in the diaries of George Sand, Claretie, and D'Arsac, in Vapereau, Brockhaus, etc., etc.

The new notices are generally ampler than the additions to the old ones—which will surprise nobody familiar with cyclopædic work of this kind. Some of the expansions are very meagre, indeed. Compare, for instance, "Gladstone," "Disraeli" "Grant," or "Victor Emmanuel." "Kraszewski" and "Pulszky" are striking instances of the entire absence of needed continuations. Freshness, on the other hand, is constantly evinced by insertions of late dates of decease. The latest we have noticed are "July 23, 1885," under "Grant," "July 28, 1885," under "Montefiore," and "August 11, 1885," under "Milnes (R. M.)"; the prefatory Advertisement being dated August, 1885. Sir J. E. Alexander, Georg Curtius, and William Veitch, who also died before the latest of the above dates, have been overlooked. The wonted accuracy in rendering foreign names and titles occasionally fail: "Babylonisch Keilinschriften" (in "Schrader") is misprinted German; "Czók" ("Dóczi") bad Magyar; "Oz-to-dielat" ("Tchernyshevsky") worse Russian. "Skobeleff," "Tcherniayef," "Faveyer," show an inconsistency in transliterating which we ought not to meet with in so admirable a compilation.

A genera revision of the en ire old text, for the sake of improved correctness and uniformity, has not taken place. It would have been too vast a task. Still, we could have wished that Doctor Thomas's cautious "about" had been occasionally exchanged for the precise date; as, the spring of 1851 for "about 1850," as the date of John Stuart Mill's marriage; October 24, 1829, for "about 1830" as the date of John Veitch's birth, etc. Under "Robert Chambers" should have been inserted the fact of his having written 'The Vestiges of Creation.' We cannot account for the fact that the first edition of this Dictionary mentioned in the notice of George Eliot her marriage to Mr. Lewes, while the present edition makes no allusion to Lewes under "George Eliot," nor to George Eliot under "Lewes." The bibliographical references of 1870 had not a few shortcomings that might have been repaired, but these have rather been increased than diminished. Thus, under "Abinger," one is referred to review articles only, though Scarlett's biography was published in 1877. Under "John Adams," "Jefferson," "Monroe," "Hamilton," "Randolph," "Webster," the work is silent as to the recently published lives of those worthies, while, as regards our literary heroes, admirers of Poe will be shocked to find that all the recent vindications, as well as Woodberry's 'Life,' are ignored, Griswold's memoir being the only work recognized. The same is true of the biographies of Irving, Cooper, Willis, Noah Webster, Emerson, though those of Margaret Fuller and Thoreau are given. Under "Bonaparte," neither Jung nor Böhtlingk is mentioned, nor is Seeley's 'Stein.' Still stranger is the omission of any reference under Prince Albert; the Princess Alice (Grand Duchess of Hesse) is not mentioned even in the text. Alison's Autobiography (1882) is ignored, as are the two lives of Governor Andrew, all the recent lives (since 1865) of Mendelssohn, Thayer's 'Beethoven,' etc., etc.

Not by way of censure, but as a service to such of our readers as may own this work, we conclude our notice with a few errata. There are two notices of one and the same person—Robert and Robert William Buchanan. Henry James's '*Female* Poets and Novelists' should be 'French Poets and Novelists'; Mrs. Southworth's 'Curse of *Clifford*' should be 'Curse of Clifton'; Sir Walter Scott's 'The Red Gauntlet' should be 'Redgauntlet.' James Thomson was born at Port Glasgow, not at "Port *Greenock*." Under "Savonarola," the reference is to vol. 1 of the *Living Age*, instead of vol. 50. William Motherwell was born October 13, 1797 (not "1798"); Wm. Lloyd Garrison, December 10, 1805 (not "December 12, 1804"—a pardonable error); George Eliot, November 22, 1820 (not "1819").

RECENT NOVELS.

A Wheel of Fire. By Arlo Bates. Charles Scribner's Sons.

Love—Or a Name. By Julian Hawthorne. Boston: Ticknor & Co.

Healey. By Jessie Fothergill. [Leisure Hour Series.] Henry Holt & Co.

A Family Affair. By Hugh Conway. [Leisure Hour Series.] Henry Holt & Co.

The Prophet of the Great Smoky Mountains. By Charles Egbert Craddock. Boston: Houghton, Mifflin & Co.

Andromeda. By George Fleming. Boston: Roberts Brothers.

A THOUGHTFUL person will more than once turn from the book while reading 'A Wheel of Fire' to speculate upon the characteristics of the mind that could busy itself in such a way upon such a subject. A woman, still young, has spent all her mature years in terror of inherited madness. Her mother dies mad before her. Her brother hangs himself in his bed-room. The blessing of happy love given and returned comes to her, but at the very hour set for her marriage she goes raving mad, and dies in a week. Ghastly is the mildest word that will describe the book. The purpose of it is a mystery. If it were to excite horror, the lovers of that could find it already in the famous French novel that describes madness with the last accuracy of science. Mr. Bates has not even attempted to rival that. There is not, on the other hand, the tracing of the effect upon character from this dread, either in the heroine or upon her friends, which would have led into that study of the conflict of the human spirit with inevitable destiny which has always stimulated the imagination. There is no change or growth in the heroine, and as to her friends, they simply do not believe anything about it. There is not a scene or incident that is aught but painful, so that, accept what view we may of the purpose of fiction—to instruct, to amuse, to elevate—this has no reason for existence.

The notion that any intelligent critic speaks from personal bias was long since dismissed from circles that appreciate either good literature or good criticism, but only too few people have yet taken in the further idea that the more intelligent the critic, the more anxious he is not to bring forward his own judgments at all (no matter how impartial), but to ally himself with the great authorities before him—not this or that man who has devised a clever critical apparatus, but the true authorities, the great works themselves, that stand for all the world to make comparisons by. And since all the world has been making comparisons these many years, it follows that the critic finds that some things are settled; and often and often he wishes that those who begin to write could be compelled to follow the same road he has travelled, where they would find out that for them, too, some things are settled. The art of fiction is no new art. Nothing is older. Our novel is only the latest form of it. There is a long line of recorded experience, full of lessons that ought to be studied. There is no other art where any one dreams of succeeding without, at first, long study of what has been done before, of what has been found possible and what impossible, or, to repeat our own phrase, what things are settled. If the author of 'A Wheel of Fire' should set about such study, he would find for himself better than any one could tell him what subjects are fit for fiction, what are the possible limits of tragedy, and why his own tale is too monstrous to be artistic. He may already have gone so far as to find a small school that devotes itself to "the flowers of evil." The verse may be exquisite, but there are few that heed those writers. To follow their example is to shut one's self up in an ever narrowing circle. If Mr. Bates will look beyond these men, he will find that the Olympians, in whatever tongue, have embodied the terror, the pain of the world in strength and beauty, not in the horrible, the hideous.

Mr. Hawthorne, too, has not learned wisdom in the choice of subject. No one could open 'Love—or a Name' a second time, supposing it possible to read the dreadful tale to the end even once. It is the greater pity, for the first half is of his best. Some one might even say better than his best, for the sake of the naturalness of the early chapters. If he meant to elaborate the thought he suggests in the sentence, "We are misled most of all by success, which seems the test of merit, but is never given in this world as a reward; it is only the most inscrutable of the dispensations of Providence," no finer theme could have been chosen to show the working out of character, nor one more timely for these very days; but he has only hinted it, and turned aside to hackneyed melodramatic incident till he winds up with a situation too brutal to be matched among savages.

It is an ill-fortune that brings before us at the same moment a third such book. We only pause to warn off the reader from 'Healey.' Jessie Fothergill has fallen far below the promise of 'The First Violin.' Such ingenuity of evil as she has imagined for her hero can only excite a wondering disgust. Is it not possible for novel-writers to learn that no lasting fame, not even transient popularity, can ever be attained by books that every one will strive to forget?

'A Family Affair' must remain the measure of what Hugh Conway could accomplish. He succeeded in the vigorous short story of the comparatively harmless sensational type, and the present work is neither more nor less than the first from his hand. It is rather a collection than a well-ordered whole, the personages having no real dependence on each other except in the chance contiguities of time and place. Break it up into six pieces, and each would stand by itself by simply changing the names. There are always enough people, children of a larger growth, who are delighted with a straight-away narrative, without reflection and without depth, to make such work popular. Hugh Conway never goes below the surface, even though subjects far better than any of his lie in plain sight there. For instance, in 'Carriston's Gift,' a short story in a prior "Leisure Hour" volume, he passes a rare chance without suspecting it. He busies himself only with the old themes of presentiments, ghostly visitations, etc. Not the man who has "second-sight," but the man who is afraid he shall have it, would be the novel figure. We commend him to the seekers for a plot. They would have modern rationalism on their side, not against them, as Mr. Conway had.

'The Prophet of the Great Smoky Mountains' has been so widely read in the *Atlantic* that we proceed at once to comments which presuppose an acquaintance with the story. Like 'In the Tennessee Mountains,' it is a picture of manners, using the word in that large sense which includes all the complicated relations of things, animate and inanimate, that make up the circumstance of life. It has the same strongly etched outline and the same vivid color. If the impression is anything less, it is only because the first gave the surprise of entire freshness. There is the same effect of dealing with life as a whole—with a community, a class, rather than with an individual. As we said of the first book at the time, it gives us, "not lives, but life"; therefore it happens that while there are not the single figures that take hold of us intimately as positive existences, there would not be in all that land a man or woman a stranger to us, so well do we know the sky and the mountains that surround their days, and the changing events that fill them. Hitherto Miss Murfree had not chosen for her main purpose the presentation of character. In saying this, we are not supposing entire separation of manners and character to be possible; but in a novel the one will appear only for the sake of the other, according to the intention of the writer. The title of the present book points to the conclusion that it had here been the author's intention to put character foremost, and that the so-called Prophet was meant to be the central figure. As an actual fact, he is hardly so much as a distinct figure at all. We know him only as we should know the mountain itself, through the drifting mist and the sudden cloud-rifts of a day of storm.

The author's hold upon her reader is strong enough to carry him on to the climax with acquiescent sympathy in her working out of her plot. Reflection, however, will bring persistent doubts. Self-sacrifice is the grandest or the poorest of human actions, according to motives. Of these we are left in the darkness of conjecture. The catastrophe becomes merely one of the horrible incidents of a semi-outlawed manner of life. For us it has nothing to do with character. The author becomes the mere narrator of facts, a historian. She is not the clairvoyant of the earlier chapter, reading, in the quick glance of the Prophet's eye, "fire, inspiration, frenzy—who can say?" It was a question she herself was expected to answer. If the Prophet were really her subject, she has done her own original conception scant justice. She has deserted it, to give us instead separate pictures (all strong, we admit) of detached groups. Nor are the pictures placed directly before us. It is surprising that so large a proportion of the book is second-hand. We are told, not how this or that was in itself, but how somebody saw it. The method is an accepted one for special purposes, but, used to such an extent as this, it materially weakens the effect. Moreover, as the groups are all thrown against the same general background, there comes a slight weariness of descriptive phrases too little unlike not to seem repetition. Landscape painting in a novel is, after all, only costume on the grand scale, and one story will carry off successfully only a certain amount of it.

Even with these serious deductions, the story is another brilliant promise for the future. Each book has left the impression that the author is still trying her powers. 'Down the Ravine' proves that the lack of unity of effect in this last book is not because Miss Murfree does not know what it means. That little story fills out its *cadre* as perfectly as a crystal shapes itself to the law of its line. It is only needful to submit the chosen material to a like ordering of development to reach success in the larger work. Again, in this new heroine, Dorinda, we have what the Prophet is not—a clearly defined character growing through its joy and sorrow to full stature before us. There is not a wavering line, not an inharmonious tint, in the whole of it. We know her as we know no other personage from Miss Murfree's hand.

Nor is it for lack of spiritual insight that the Prophet is left but an intangible shadow, and we ourselves made but mere spectators of the outward show of life. In all the overcrowding and the abrupt transitions of 'Where the Battle was Fought,' there was one situation which could have been found only by that divining instinct which makes of imagination a revealer. When the pretended John Fortescue, stung by the supposed betrayal of his tempter, is about to disclose the plot, his remorseful conscience believes that the dead friend to whose memory he has been ut-

terly treacherous stands before him. That moment his crime is punished, not by the law he has outraged, not even by the reproach of her whom he would have robbed, but by his own recoil upon himself. Against his own soul most of all had he sinned, and from it and within it he finds the keenest and bitterest punishment he can suffer. Such beginnings justify the enthusiastic expectations of Miss Murfree's admirers, but the work of matured and balanced powers is yet to come.

If 'Andromeda' has more of pure narrative and less of drama than George Fleming has accustomed us to expect from her, it is still a very touching story of self-sacrifice, wrought with great delicacy. The name is given to the heroine in half-playful earnest at the outset by one who is watching with eyes already alert with yearning affection; but only a small bit of the old myth will fit her story, for Perseus, when Perseus comes, is bound by every instinct of loyalty to leave her to her fate. What follows after, deals with motives of self-denial and patience, of which the careless ease of demi-gods and mythical heroes knew nothing. "For to have a will and a conscience, Richard reflected, means chiefly to possess the power, amidst the world's wild struggle, of enforcing one's own decision against one's self."

The tale is romantic, if one pleases to use the phrase; but so long as there is any ideal left to human consciousness, hearts will thrill with the admiration of high-heartedness. Besides, George Fleming knows the power of a wise restraint. To it she owes the artistic perfection of her pictures, and from it no less comes her fine discrimination in moral forces. The healthful atmosphere of the book gives it an importance apart from its literary merit. The chief situation is the same that has oftenest been used for evil example—a woman betrothed to one man, but loving his friend, who in turn loves her. That the author has chosen to show not sin and ruin, but how pure and noble souls may save themselves in such peril, is another welcome witness against the theory that a story cannot be vivid or exciting without the appeal to the passions of sense. The tale is somewhat broken. It does not all lie in one clear light, as did 'Vestigia,' but for single scenes we should call it the author's best. They are true drama, the characters developing themselves before our very eyes. Many readers would pronounce the final explanation between San Donati and Clare most effective. A keener sense will prefer the scene amid the heather, in the sunshine of the mountain pass. Its very simplicity makes the charm more subtile. There is throughout the same happy, pellucid style, carrying its beauty in itself, as it were—not seeking it as an added ornament. All the way, an undertone is delicately hinted. The full chord is a minor one, for the notes of joy are not struck till just as the strain passes out of our hearing. The minor lingers even with them, until the undertone rises and blends them into one harmony. It is the hope, the faith in compensation. Said the old nurse Monica: "Oh! my dear master, the blessed saints up there put all the little good things in life just on purpose to make up for—for the big ones." "Surely you don't think death like a disappointment?" asks Clare. San Donati's words, as he declares his love to her, strangely foreshadow his own fate and yet embody its consolation: "The visions were vouchsafed to those to whom the world gave nothing, and heaven opens before the eyes of men who live in desert places."

The Greville Memoirs. (Second Part.) A Journal of the Reign of Queen Victoria from 1837 to 1852. By the late Charles C. F. Greville, Esq., Clerk of the Council. London: Longmans, Green & Co.; New York: D. Appleton Co. 1885.

THE second instalment of the Greville Memoirs is not so entertaining as the first, though it is perhaps of more permanent value. It presents a picture of the author's times, and has also a certain autobiographical value, for the confidences of Mr. Greville with his reader are abundant. It is possible to gather from his pages a tolerably accurate idea of the man, and, as has been so often said, any man can make an interesting book if he will only tell the truth about his own life. Mr. Greville was a man of the world and a courtier, who, qualified by his training and surroundings to be a gossip, became by sheer force of character something more important. Modesty and candor are perhaps the qualities which, as his character matures, seem to become most striking in him, and his complaints about his wasted life, and his regrets over lost opportunities, are so *naïf* as to be almost amusing. Yet his character and style in general are not at all *naïf*. No one would ever think of comparing him to Pepys, and no one will ever derive from his journals the kind of pleasure that is to be found in the childlike frankness of that great diarist. The value of Mr. Greville's work is chiefly that of accurate and painstaking political memoirs.

Brought up in the old order of things, and a member of a society on which the democratic tendencies of our day had had an awakening, but as yet no disorganizing effect, he remained to his dying day a spectator of the march of modern events without having his views colored by an active party interest. He was not, on the one hand, a Conservative in the partisan sense of the word (his book on Ireland seems greatly to have disgusted the Tories), nor was he, on the other hand, a man of "broad," "progressive" views as to the destiny of mankind which he wished to see embodied in political action. In fact, it may be said that he was a Liberal with no "views" at all, except that among gentlemen a certain code of morality was obligatory, and that Government ought to be carried on by gentlemen. He was almost the ideal man of business of a constitutional court, in which the sovereign's government is carried on alternately by both parties, but where the sovereign, by the nature of her position, is averse to "Radicals."

Mr. Greville had no more sympathy for Radicalism than he had for Buddhism. One would have been as foreign to the order of thought in which he was born and brought up as the other; and this is precisely one of the facts which make his journal so valuable. He watched the course of affairs, and the character of the men who took part in public affairs—Brougham's antics, Melbourne's amiable cynicism, Peel's mutations, Palmerston's audacity, Cobden's speeches, the anti-corn-law agitation, O'Connell's trial—with the eye of a highly intelligent observer who did not profess for a moment to possess the key of it all in a comprehension of or sympathy with the great popular movements which were threatening to upheave the foundations of English society; who, in fact, would have considered it a mere piece of pretence to profess to have such a key. He consequently did not measure people, as we are nowadays so fond of doing, by their devotion to "causes," or by their success in creating a sensation, but by the old-fashioned conservative tests of character—gifts, attainments, and intrinsic merits. He seems to have had a good deal of taste and capacity for judging character, and the portraits he draws of the distinguished men and women with whom his life brought him in contact, generally drawn with more than common care, are of considerable interest. One or two extracts will give an idea of his powers in this way. Of Sydney Smith's wit he says:

"If there was a fault in it, it was that it was too amusing. People so entirely expected to be made to die of laughing, and he was so aware of this, that there never seemed to be any question of conversation when he was of the party, or at least no more than just to afford Sydney pegs to hang his jokes on."

Of Lord Brougham, whom he certainly did not like, he writes in 1844:

"None but Brougham himself can be his parallel; no other man would have dared to get up and, in the presence of at least half-a-dozen men who knew the whole truth, deliberately and vehemently tell a parcel of impudent lies—lies, too, which, if he succeeds in his object, must be exposed to the whole world. But one of his most curious characteristics is his utter shamelessness."

His analysis of Lady Holland's character is neat and classical:

"Although she was known to be wholly destitute of religious opinions, she never encouraged any irreligious talk in her house. She never herself spoke disrespectfully or with levity of any of the institutions or opinions which other people were accustomed to reverence; nor did she at any time, even during periods of the greatest political violence, suffer any disloyal language towards the sovereign, nor encourage any fierce philippics, still less any ribaldry against political opponents. It was her great object, while her society was naturally and inevitably of a political color, to establish in it such a tone of moderation and general toleration that no person of any party, opinion, profession, or persuasion might feel any difficulty in coming to her house, and she took care that no one who did should ever have reason to complain of being offended or annoyed, still less shocked or insulted under her roof. Never was anybody more invariably kind to her servants, or more solicitous for their comfort. In this, probably selfish considerations principally moved her; it was essential to her comfort to be diligently and zealously served, and she secured by her conduct to them their devoted attachment. It used often to be said in joke that they were very much better off than her guests."

Several pages are devoted to Peel and his peculiar relations with his party, of which Mr. Greville gives the following very simple, and, we believe, perfectly accurate explanation:

"There was an unexpressed but complete difference in their understanding and his of the obligations by which the Government and the party were mutually connected. They considered Peel to be not only the Minister, but the creature, of the Conservative party, bound above all things to support and protect their especial interests according to their own views and opinions. He considered himself the Minister of the nation, whose mission it was to redress the balance which mistaken maxims or partial legislation had deranged, and to combine the interest of all classes in one homogeneous system, by which the prosperity and happiness of the whole commonwealth would be promoted."

Of the Duke of Wellington we get a very complete picture. Mr. Greville was thrown a good deal into his society, and had the warm attachment to his character that all Englishmen, and especially all conservative Englishmen of his class, had. But it is useless to enumerate instances. A glance at the index of these volumes serves to show that Mr. Greville knew every one who was worth knowing, and who had any acknowledged position in society or Government, in his day, and has something to say about them all. The tone of his criticism in this last instalment of his diary is much more agreeable than that of the first. As he grew older, his opinions and feelings seem to have mellowed, while his interests became broader and more generous. To the last he remains an accomplished courtier, and in a certain sense of the word a gossip. He is always a man of detail and of consummate breeding. He gives, himself, an amusing instance of this in the case of a visit to the Queen,

which he had to make (owing to an attack of the gout) on crutches. He records himself as much pleased with the success with which he *sidled* out of the room so as to avoid the rudeness of turning his back on the Queen. His interests, as we have said, are mainly in persons; he is not an historian so much as an observer of people; he gives the details of all the transactions in which he took a part, and his impressions of all the people with whom he came in contact, and thus his pages, without constituting history in the true sense of the word, throw interesting side-lights upon it.

The American Caucus System. Its Origin, Purpose, and Utility. By George W. Lawton. G. P. Put. am's Sons. 1885.

THE first rule for any writer who proposes to treat of a subject which is not very attractive or clear in itself, should be to so form his sentences that his readers may not be puzzled to find out what he really means to say. In this respect Mr. Lawton leaves much to be desired. For example, it requires a second thought to read a sentence constructed and punctuated like the following: "It was a cardinal rule of one of the most sagacious of American politicians, to go into caucus in support of measures, primarily and secondarily, in support of men."

The caucus, as Mr. Lawton gives its history from the time of Moses down through the States of Greece and the British Islands, is really a very simple institution, being nothing more than an assemblage of the people to consult as to measures to be adopted and men to carry them out. What has given the word its obnoxious significance in this country is the fact that the primary meetings have come to have very little to do with measures at all, and merely form a machinery by which politicians distribute at their pleasure places of power and profit, by no means always legitimate. The reluctance of the best citizens to attend such meetings, where they are merely used as tools, has become a well-established fact, and it is curious that one of the remedies which have been occasionally proposed was in use in Rhode Island in 1636, where any citizen who had been notified to attend town meeting and did not appear within a quarter of an hour after it opened, was fined a shilling and sixpence. Such perfunctory attendance may have been of use then, but would be of little avail now.

Mr. Lawton is very severe upon what he calls the system of self-nominations, quoting the instances of Burke at Liverpool and Macaulay at Edinburgh, and Abraham Lincoln and Henry Clay in this country. The open-minded reader may have some doubt whether the statesmen who are presented to us by the modern caucuses offer convincing proof of the superiority of this method. However, Mr. Lawton decidedly prefers the caucus system, though we cannot see that his somewhat desultory snatches at our political history throw any particular light upon its working, or discover in his rules for conducting a caucus any remedy for its confessed evils. In fact, these evils are in their origin wholly outside of the caucus, and may be summed up in the sentence with which the book closes, and which the writer apparently regards as a triumphant vindication of his favorite method—

"'the watchword being, 'Every elector to unite in caucus with his neighbor, to be represented in a convention to nominate men for public office—the legislator to make the laws, the executive to execute them, the judge to point out their application.'"

It is just because law-making is intrusted to a haphazard body of men, without leadership and without individual responsibility, working in secret committees and under lobby pressure, with no reference to administration either past or future; and because execution is intrusted to another body of men who have had no voice in shaping the laws they are administering, and cannot be held to public accountability for any failures or credited for any success—it is for these reasons that the citizens will not attend meetings where, instead of discussing practical measures, they are put off with glittering generalities, and, instead of selecting agents to carry on their Government, they can merely ratify nominations of placemen made by unseen intriguers.

J. F. Millet. Par Charles Yriarte, Inspecteur des Beaux-Arts. Bibliothèque d'Art Moderne. Paris: Jules Rouam; New York: Christern. 1885.

THIS little monograph gives, in its twenty-three pages of text, a very fair and full notion of the place of Millet as an artist. It is a piece of sound French criticism, written in the clear, easy French style. Its principal characteristic is that reasonableness and lack of exaggeration which are so rare in other than French criticism, and which, in this case, to an admirer of the artist of whom M. Yriarte writes, might almost seem coldness and insufficient admiration of that great genius. One almost grudges so much concession to the unappreciative. But the praise, when it is given, is all the more effective for this dispassionateness and candor; and, having learned that no more is said than is meant, one finds that quite enough is said to satisfy the greatest lover of Millet's work.

There is no attempt at biography beyond a bare date or two, but there is a short appreciation of Millet's character as a man. A few lines from the beginning and from the end of the book give very compactly the lesson of Millet's life: "The artist belongs by his origin and his tendencies to that pleiad of contemporary French painters who, while professing admiration for the masters and respecting their traditions, went directly to nature for their inspiration and for their methods of execution." And again: "He was the contemporary of all of us (his death dates from but a few years back), yet, nevertheless, we can say that he belongs to an epoch when the first care of an artist was that of production, and not that of the brilliant outlet his work might find." This combination of reverence for art and its traditions with the power and the determination to study nature for himself, and to follow fearlessly wherever nature might lead, and this singleness of mind, were the great characteristics of Millet, as of all true artists. The innovators are often the true followers of the masters, for they do what the masters did before them.

The illustrations are of varying merit, the facsimiles of Millet's own drawings being by far the best. Among the most impressive of these are the "Jeune mère préparant le repas de sa famille," with its Michaelangelesque grandeur of line and gesture, and the delightful "Soins maternels," which, as an instance of the successful treatment in art of a subject that, before seeing the drawing, one would have thought vulgar, is to be recommended to the prudish.

Studies in Shakespeare. By Richard Grant White. 8vo, pp. 383. Boston: Houghton, Mifflin & Co.

FEW students of Shakspere leave behind them an enduring reputation. They but drift across and about his resplendence, sometimes illuminated by him, sometimes beclouding him, like fleeting mists of the air against the sunlight; and such studies as are contained in this volume have only a very evanescent interest. Mr. Grant White's lack of large or profound scholarship was always a hindrance to his treating the subjects he wrote upon with either force or delicacy; and it is matter for regret that he exposed himself to criticisms as an author which as an editor he was comparatively secure from. It is characteristic of the quality of his mind that among these papers those on the acting of some of Shakspere's characters are much more adequate than those upon the plays themselves.

The volume is in four sections, as it were. The first three papers are "On Reading Shakespeare." They contain some sensible hints to would-be readers, and close with a not idle diatribe against "Shakspere Clubs." He approves, as every one must, of clubs when necessary for obtaining books, but he says, excellently, "All other Shakespeare clubs are mere vanity. The true Shakespeare lover is a club unto himself." The next section is four papers of "Narrative Analysis"—that is, the plots of "Macbeth," "Hamlet," "Othello," and "As You Like It" told in a manner which is quite without value of any kind. To read of *Macbeth* as a "brave, good-natured, loving, but selfish, weak-souled, and unprincipled man," can interpret the play to no one. The next four papers are "Miscellanies," and include one on "The Bacon-Shakespeare Craze," which opens strangely by declaring it to be of no sort of importance who wrote the plays, and concludes more reasonably by asserting that the notion that Bacon wrote them is not worth five minutes' serious consideration. The last section is on "Expositors," and consists of two papers sharply and sometimes ably criticising Mr. Dyce, an *Edinburgh Reviewer* of 1869, Doctor Schmidt, and Mr. W. S. Walker. In these pages Mr. White is at his best; but it should be said that his frequent misconceptions and misrepresentations of Doctor Schmidt's admirable 'Lexicon' are extremely misleading.

M. Tulli Ciceronis Academica: The Text Revised and Explained by James S. Reid, M.L., of Cambridge University, England. 8vo, pp. 8, 372. Macmillan.

THE 'Academica' has been among the most neglected of Cicero's writings. Although the text has received some attention, no edition which aimed to interpret the subject-matter was put forth in England from 1735, when that by Davies appeared, to 1874. On the Continent the latest explanatory edition is that by Goerenz, published in 1810. The book before us is not a second edition of that issued by the same editor in 1874, but an independent and much more extended work. In his text Mr. Reid is on the whole conservative, retaining and defending many readings questioned or rejected by Halm, Baiter, Madvig, and others. His choice of readings is characterized by sound sense, and evinces an intimate familiarity with the Latinity of Cicero. His own conjectures are not as numerous as one might have expected, but are often felicitous; as *quidquid* for *quod*, p. 324, l. 5; *adhiberet*, p. 307, l. 25. The change of *sit* to *est*, p. 304, l. 5, is perhaps hardly warranted or necessary. The orthography is admirable, embodying the best established results of the study of inscriptions.

The elucidation of the subject-matter is full, and passes no important point without comment. The editor has evidently brought to this part of his work a wide and thorough knowledge of the Greco-Roman philosophy. A careful study of the Greek philosophic terms which Cicero was rendering, has been utilized with marked success. Difficulties are squarely met; conclusions are not forced dogmatically on the reader, but are so carefully drawn and judiciously stated that they will rarely be disputed. An introduction of eighty-three pages presents an abundance of information helpful to the study of the work. The first part in particular, on Cicero as a student of philosophy, his philosophic

opinions, and the aim and value of his philosophic writings, is worthy of special attention. Several views at variance with generally received opinions are advanced and ably maintained. The crisp and lucid English of both introduction and commentary is to be heartily commended. The present edition of the 'Academica' will take rank among the most valuable recent contributions to English classical scholarship.

Harbors and Docks: Their Physical Features, History, Construction, Equipment, and Maintenance, with Statistics as to their Commercial Development. By Leveson Francis Vernon Harcourt, M.A. 2 vols. Oxford: The Clarendon Press; New York: Macmillan. 1885.

THIS book is a handsomely printed octavo, the first volume, which is all text, containing about 700 pages, and the second volume consisting exclusively of plates. The first chapters contain some crude theories as to the natural phenomena which affect the conditions of harbors, and some cursory statements as to tides, changes in coast lines, and other matters. The volume, however, is principally descriptive, and contains a mass of undigested information which has been compiled from various official reports and other sources accessible in a good engineering library. The writer appears to have collected and written without appreciating, and the result is a compilation too unsystematic to be of value as a textbook, but which, with the aid of the complete index that accompanies it, may be useful in the same manner that an encyclopædia is. It is very important, however, that a book of this kind should be thoroughly accurate in its statements, and the small number of references to the authorities used and general superficial character of the treatment are not such as to inspire the reader with confidence in the accuracy of this one. The arrangement of the plates in a volume by themselves is a very convenient one.

Bryant and His Friends: Some Reminiscences of the Knickerbocker Writers. By James Grant Wilson. Fords, Howard & Hulbert. 1886.

THIS volume consists mainly of extended reprints of articles on Bryant, Paulding, Dana, and Drake, filled out by briefer sketches of Halleck, Cooper, Irving, Willis, Poe, Taylor, and paragraphs on some twenty of the literary lights of old New York. It has been the fortune of the author to have held more or less close personal relations with the school he celebrates, and hence he has included some new letters by a few of the authors, principally Paulding, Poe, and Halleck, whose biographer he was. Nothing material is thus added to our knowledge. The whole is conceived in the vein of a New York pæan, and its character in the way of criticism is fully indicated by its closing words in regard to the merit of the "Knickerbockers," for whom the author claims Bryant, Poe, and Cooper, as compared with the Bostonians, of whom he instances Prescott, Emerson, Hawthorne, and Longfellow. "When a very great man was asked by the writer for his opinion on this point, he answered, 'They cannot be compared any more than you would compare the commerce of the city of Boston with that of your great metropolis.'" "Who," he triumphantly asks, "will question the impartial judgment of so competent a critic as Benjamin Disraeli?"

The book, which is of goodly thickness, affords a view of the literary life of New York in the Knickerbocker days, and obtains a semblance of originality from the mere exclusion of those whose walk was elsewhere than on Broadway. It provides no new facts, however; and as the author's acquaintance was mainly with the littérateurs, the personal element counts for little to a time that has small need of the Themistoclean prayer—"Teach me rather to forget." The Knickerbocker school, in its old sense, has already received its *Vale*.

A Handbook of Poetics. For Students of English Verse. By Francis B. Gummere, Ph. D., Boston: Ginn & Co. 1885.

ALTHOUGH this is a small text-book it is by no means elementary. It is a complete view of the structural art of poetry, whether regard be paid to the kind attempted, epic, lyric, or dramatic, or to the rhetorical method by tropes in the widest signification of that term, or to the metrical and stanzaic arrangement. Much space is necessarily occupied, particularly in the earlier portion, with the meaning of names, the terminology of poetics; but the method, generally speaking, is historical, and thus the treatment involves the study of the earlier forms of English verse, as far back as 'Beowulf,' and a special characterization, though brief, of great masters such as Chaucer, Shakspere, and Milton. A thorough acquaintance with the learning of the subject is shown throughout, and the range of examples—a very important matter—is extraordinarily large and varied. The whole makes a student's, but not a schoolboy's, volume; and is to be recommended as the first handy compend of the large amount of erudite research in the history of English verse, rather than as a book for beginners in poetry. There is nothing of the rhyming-dictionary character in it. Essentially it is a sort of supplement to the higher rhetoric, and would be of most use as a subsidiary classbook in the study of English literature.

The Religion of Philosophy; or, The Unification of Knowledge: A comparison of the chief philosophical and religious systems of the world, made with a view to reducing the categories of thought, or the most general terms of existence, to a single principle, thereby establishing a true conception of God. By Raymond S. Perrin. G. P. Putnam's Sons. 1885.

SIX pages would have been ample to set forth the doctrine here diluted to six hundred. Motion is the only existence; time and space merely its phases. Time is identical with force; space with matter. God is the universal principle of motion. In place of arguing these propositions, the author tags them incongruously to sketches of the history of philosophy—sketches nil as arguments, and as history rambling, feeble, and ill-proportioned. Some healthy sentiments about morality and religion are expressed in an easy and pleasing style, but the philosophical conceptions seem to be nebulous, and the method of presenting them unsuccessful.

NEW BOOKS.

*THE IDEA OF GOD AS AF-*fected by Modern Knowledge. By John Fiske, author of 'Myths and Myth-Makers.' 16mo, $1 00.

This is a sequel to 'The Destiny of Man,' which appeared last year, and produced so profound an impression. Its object is to show that the indications of Science and Philosophy are not atheistic, but that while the idea of God has been greatly modified by modern knowledge, it has been very much expanded and illuminated.

*DARWINISM AND OTHER ES-*says. By John Fiske. New and Enlarged Edition. 12mo, $2 00.

Mr. Fiske has added several papers to those which appeared in the former edition of this book, greatly increasing its value and interest.

JOHN BUNYAN: HIS LIFE, Times, and Work. By John Brown, B. A., Minister of the Church at Bunyan Meeting, Bedford. With a fine Steel Portrait, and 25 Illustrations by Edward Whymper. 1 vol. 8vo, $4 50.

This is the first adequate life of Bunyan that has ever been published. The work is founded on documents contained in the English State Paper Office, the British Museum, the Bedford County Records, and Church Books. It cannot fail to interest a multitude of readers, who count the 'Pilgrim's Progress' a religious classic, as well as a profoundly interesting book.

MRS. PIATT'S POEMS. Select Poems. From the Writings of Mrs. S. M. B. Piatt. 1 vol. 16mo, gilt top, $1 50.

This book comprises the most striking and popular poems contained in the several volumes published by Mrs. Piatt—'A Woman's Poems' 'A Voyage to the Fortunate Isles,' 'That New World,' 'Dramatic Persons and Moods.'

It is a Powerful Novel, Splendidly Written.

WORTHINGTON CO., 28 Lafayette Place, New York.

The Shakespeare Library.

Collected by the Eminent Shakespearean,

JOSEPH CROSBY, Esq.,

of Zanesville, Ohio, is now offered for sale *en bloc.* It contains upwards of 500 titles, embracing more than 1,500 volumes, about equally divided between text and *ana.* Almost all the principal editions from Rowe's (1709) to the Riverside (1883) are present, and most of the standard Shakespearean criticism and illustrative literature in the English language. Mr Crosby's studies lay principally in the field of textual criticism, and many of his books are enriched by numerous marginal notes and emendations neatly written by him in pencil. These, of course, render the Library unique, and, it is believed, materially increase its value. The present owners dislike to disperse this valuable collection without giving some gentleman or institution the opportunity to possess it entire. Inquiries should be addressed to

JOHN J. INGALLS, Zanesville, Ohio.

HAVE JUST PUBLISHED:

I.

Farthest North;

Or, the Life and Explorations of Lieutenant James Booth Lockwood, of the Greely Arctic Expedition. With Portrait, Map, and Illustrations. By Charles Lanman. Small 12mo, cloth. Price, $1.25.

The work records the personal history of an American hero whose fortune it was, at the sacrifice of his life, to visit and explore the utmost limit in the Arctic regions ever attained by human skill and enterprise. The material of the book, so far as it relates to the Greely Expedition, was derived from Lieutenant Lockwood's journal. The important part taken by Lieutenant Lockwood in the Expedition, his zeal, energy, and loyalty to his chief and the cause, are strikingly set forth in the narrative.

II.

The Mother's Manual of Children's Diseases.

By Charles West, M.D., of the Royal College of Physicians, London. 12mo, cloth. Price, $1.25.

The object of this book is to give a description of the diseases of early life, such as may help a mother to understand something of their nature and symptoms, to save her from needless anxiety as to their issue, and to enable her wisely to second the doctor in his endeavors for their cure.

III.

The Diseases of Sedentary and Advanced Life.

A Work for Medical and Lay Readers. By J. Milner Fothergill, M.D., Physician to the City of London Hospital, etc. 8vo, cloth. Price, $2.

The diseases of sedentary and advanced life lie a little outside of and beyond the ordinary text books of practice. This work is designed for medical men and also for intelligent lay readers.

*** *For sale by all booksellers; or will be sent by mail, post-paid, on receipt of price.*

D. APPLETON & CO.,
PUBLISHERS,
1, 3, and 5 Bond Street, New York.

Back Numbers of "The Nation."

In response to frequent inquiries from subscribers:

An incomplete set of the *Nation* has little or no market value. Partial sets, bound and unbound, are always obtainable (usually lacking the earliest volumes), and do not command high rates. the bindings generally counting for nothing. Volume I. has readily brought $10 and upward when complete, but will bring very little in proportion if a single number is missing. Volumes II. and III. are also scarce, but not so high-priced as the first.

Complete sets, both bound and unbound, have sold for $100, with tolerably quick bidders, and have an increasing value year by year.

Single numbers not more than a year old can usually be supplied by the publishers at 10 cents each. For numbers more than a year old purchasers are referred to Mr. J. W. Christopher, 47 Dey St., New York, dealer in back numbers of periodicals, who can frequently supply them, having purchased, a few years ago, a large quantity from the publishers.

The publishers no longer undertake to buy or sell numbers or volumes more than a year old, and can only recommend sellers or purchasers to negotiate with a dealer, or to advertise in the *Nation*.

[Publication was begun July 1, 1865, Vol. I. comprising the last half-year. Two volumes per year have since been issued, Vol. XL. comprising the first half-year of 1886.]

"MIGHTIER THAN THE PEN." Manuscripts carefully copied. CENTURY TYPEWRITING CO., 241 B'way. Mail orders solicited.

MACMILLAN & CO.'S NEW BOOKS.

PART 2 OF DR. MURRAY'S ENGLISH DICTIONARY.

A NEW

ENGLISH DICTIONARY,

ON HISTORICAL PRINCIPLES,

Founded Mainly on the Materials Collected by the Philological Society.

EDITED BY

JAMES A. H. MURRAY, LL.D.,

Sometime President of the Philological Society, with the assistance of many Scholars and Men of Science.

Part 2. ANT—BATTEN. 4to. $3.25.

The original staff of the Dictionary has been greatly enlarged, and its headquarters have been removed to Oxford. The Delegates confidently hope that, under the new arrangements, it will be found possible to issue the succeeding Parts at intervals of Six Months only, and that the work will be Complete in Twenty-four Parts.

OXFORD: UNIVERSITY PRESS. NEW YORK: MACMILLAN & CO.

THE ENGLISH DICTIONARY OF BIOGRAPHY.

The Dictionary of National Biography.

Edited by Leslie Stephen. Volumes 1—4. 8vo, each $3.25. Further volumes will be issued at intervals of Three Months, and it is expected that the work will be completed in about Fifty Volumes.

"It is perfectly safe to predict, therefore, that this dictionary will find as ready acceptance here as in England. It is quite as necessary to an American as to an English library's completeness."—*N. Y. Commercial Advertiser.*

"It will stand almost in the same relation to our material wants as a dictionary of our common language."—*N. Y. Observer.*

"Of the general value of the work to Americans, we need hardly speak. In great part it is the history of our ancestors, and in the achievements of Englishmen in science, literature, art, and politics, we have the warmest and closest interest. No public library will think of omitting this work from its list, and the number of subscribers among those who know the value of a good private reference library will undoubtedly be large."—*Christian Union.*

Italy and Her Invaders.

By Thomas Hodgkin, Fellow of University College, London, etc., etc. Vols. 3 and 4, 8vo, $9

"Everywhere his pages show thorough workmanship. He tells his tale admirably, and is never dull. His book is a contribution to general literature no less than to historical science. Its pages are full of happy analogies and illustrations drawn from all periods of history. It has all the attractiveness of a book written with genuine enthusiasm, while he has spared no labor to make it as complete as possible."—*Contemporary Review (Prof. Creighton).*

A New Translation of Don Quixote. The Ingenious Gentleman,

Don Quixote.

By Miguel De Cervantes Saavedra. A Translation, with Introduction and Notes, by John Ormsby, Translator of the 'Poem of the Cid.' 4 Vols., 8vo, $14 00.

"Mr. Ormsby has done his work well, and has demonstrated beyond a doubt that he was a fit person to undertake the important task of translating anew the novel which many good judges have pronounced to be the best in the world."—*Boston Daily Advertiser.*

"Cervantes' immortal work. . . . It is decidedly more accurate than those which preceded it."—*Athenæum.*

"Enables the English reader to form some true idea of what Cervantes' great work really is. . . . Should certainly supersede all former versions of Don Quixote into English."—*Academy.*

UNIFORM WITH 'THE GRAPHIC ARTS.'

Landscape.

By Philip Gilbert Hamerton, author of 'Etchings and Etchers,' 'The Graphic Arts,' etc., etc. Columbier 8vo, with about fifty illustrations, price, $35. Large-paper copies, with proofs of the Engravings, and bound in vellum, price, $70.

"The superb volume before us may be said to represent, so far as this country is concerned, illustration, decoration, typography, and taste and binding at their best, employed on a work devoted to the fine arts exclusively."—*Athenæum.*

LORD TENNYSON'S WORKS.

NEW COLLECTED EDITION IN SEVEN VOLUMES.

The Collected Works of Alfred, Lord Tennyson.

A new edition, revised throughout by the author. In 7 volumes, globe 8vo, cloth. In paper box, $12. Each volume, $1 75. A special edition of the same on hand-made paper, and in elegant binding. (*Sold in sets only.*) Price, $24 50.

Vol. 1. Early Poems.
Vol. 2. Lucretius and other Poems.
Vol. 3. Idylls of the King.
Vol. 4. The Princess: and Maud.
Vol. 5. Enoch Arden: and In Memoriam.
Vol. 6. Queen Mary: and Harold.
Vol. 7. Ballads and other Poems.

"This edition fills every condition that an intelligent book collector could demand; the paper, the type, the ink being simply perfect, and perfect on account of their simplicity. No English edition hitherto published will compare with it, and certainly no American edition that we have ever seen."—*Independent.*

"A neater, more convenient and more tasteful edition of the Laureate's poems will probably never be printed."—*New York Tribune.*

NOW READY.

Samuel Bowles,

His Life and Times. By George S. Merriam.

As its name indicates, this work is not only a portraiture of that man of strong and many sided personality, who was called by the world "Sam Bowles," for so many years editor of the *Springfield Republican*, but covers the wider field of his "Times." In this book are described the events which led up to the Civil War, the motives and feelings of all parties—Abolitionists, Union-Lovers, Republicans, the two wings of the Democracy, and the Secessionists. The war is described in its significance and spirit rather than in military detail. The process of Reconstruction; the questions of the new era; Grant's two administrations; the Greeley campaign; the vicissitudes of reform and specie resumption; the disputed Presidency and Electoral Commission, etc., are all treated by the author.

Two vols. Price in cloth, $3 00; in half morocco, $5 00.

The Art of Pheidias.

Essays, by Charles Waldstein, Professor at Cambridge, England; M. A. Columbia College, N. Y.

The essays include a number on Greek art in general, and on the works of sculptors other than Pheidias. Illustrated with plates and wood-cuts. Large octavo, 400 pp. Price, $7 50. Send for descriptive circular.

RECENTLY ISSUED.

William Lloyd Garrison.

The Story of his Life, Told by his Children.

The Standard History of the Anti-Slavery Movement. Two vols., 1805 to 1840. 1,000 pp.; 22 portraits. Cloth, $5 00; half morocco, $7 50. "No biographical work of greater importance and interest has been published in this country in this generation."—*Hartford Courant.*

St. Nicholas Songs.

Containing original music by 32 composers, including Dr. Damrosch, W. W. Gilchrist, Samuel P. Warren, J. L. Molloy, Harrison Millard, Richard Hoffman, J. H. Cornell, and many others. The words from ST. NICHOLAS *Magazine.*

A music book for the home, containing 112 charming new songs, written especially for this work, and published in no other form. 200 pp. (size of sheet music), 140 illustrations. In cloth, leather back, $3 50; in full leather, $5 00.

"A more beautiful book, or a more delightful one, it would be difficult to conceive of."—*Brooklyn Union.*

Sport with Gun and Rod.

Containing 50 articles on American Sports, by Experts, with six hundred illustrations. New Edition, price reduced. A Cyclopædia of sport.

This book has been issued two years, but only in expensive form. The latter will be continued as the *Edition de Luxe*, at from $10 00 to $18 00. The new edition, 888 pp., handsome cloth binding, gilt top, $5 00.

The Imperial Dictionary.

A complete encyclopædic lexicon, literary, scientific, and technological. 130,000 words; 3,000 pictures.

In 4 vols. Price, cloth, $20; half-Russia, $25.

Bound Vols. St. Nicholas.

The numbers of the past year, with stories, pictures, etc. Edited by Mary Mapes Dodge.

In two parts. Price $2 50 each, beautifully bound.

Baby World.

A book of stories, rhymes, and pictures for little folks. Edited by Mary Mapes Dodge.

300 pp., a colored frontispiece, and hundreds of illustrations. Price, $2 00.

*** *The above are sold by dealers everywhere, or they will be sent, post-paid, on receipt of price by* THE CENTURY CO., 33 East 17th St., New York.

The Nation

VOL. XLI.—NO. 1065 THURSDAY, NOVEMBER 26, 1885. PRICE 10 CENTS.

THE BEST PERIODICALS FOR FAMILY READING.

NOW IS THE TIME TO SUBSCRIBE.

HARPER'S WEEKLY.

A JOURNAL OF CIVILIZATION AND A PICTURE HISTORY OF OUR OWN TIMES.

Subscription per Year, $4.00.

The THIRTIETH VOLUME will begin with the Number dated January 2, 1886, issued on December 30, 1885.

HARPER'S WEEKLY justifies its title as "A Journal of Civilization" by reflecting, with steadily increasing fulness and accuracy, the progress of civilization, and by embodying as well as by recording the continuous advance of American literature and American art.

It presents, in faithful and graphic pictures, the noteworthy events of the day, portraits of men of the time, reproductions of the works of celebrated artists, cartoons by eminent pictorial satirists, and humorous illustrations of the ludicrous aspects of social and political life.

Besides the pictures, HARPER'S WEEKLY is full of good reading. It always contains instalments of one, occasionally of two, of the best novels of the day, with fine illustrations. Its short stories are bright and entertaining. Poems, sketches, and papers on important topics of current interest by the most popular writers, and columns of humorous and personal paragraphs, make it interesting to everybody.

As a family journal, the care that has been successfully exercised in the past to make HARPER'S WEEKLY a safe, as well as a welcome, visitor to every household, will not be relaxed in the future. The ultimate influence of the subjects treated in its text and in its illustrations is not less considered than their immediate public interest. It is conducted in the belief that such scenes as would be repulsive or brutalizing to persons witnessing them cannot form fit subjects for literary or pictorial representation.

PRESS NOTICES.

"*A thoroughly able, instructive, and entertaining journal for the household. Its general news is well selected, its editorials are judicious and vigorous, its stories are of high interest, its moral tone is unexceptionable, and its illustrations are as famous as they deserve to be.*"—Congregationalist, Boston.

"*For years the* WEEKLY *has enjoyed the distinction of being the best illustrated paper in America, and every successive volume shows new strength and enterprise.*"—Boston Transcript.

"*The ablest and most powerful illustrated periodical published.*"—Louisville Courier-Journal.

"*It should be in every family throughout the land. A purer, more interesting, higher toned, better illustrated paper is not published in this or any other country.*"—Commercial Bulletin, Boston.

"*The only illustrated paper of the day that, in its essential characteristics, is recognized as a national paper.*"—Brooklyn Eagle.

BOUND VOLUMES.

The last Three Annual Volumes of HARPER'S WEEKLY, in cloth binding, sent by mail, postage paid, or by express, free of expense (provided the freight does not exceed one dollar per volume), for $7.00 per volume.

HARPER'S BAZAR.

AN ILLUSTRATED JOURNAL OF FASHION, INSTRUCTION, AND DOMESTIC ECONOMY.

Subscription per Year, $4.00.

The NINETEENTH VOLUME will begin with the Number dated January 2, 1886, issued on December 18, 1885.

HARPER'S BAZAR offers a host of brilliant attractions designed to interest every member of the family circle. It combines the choicest literature and the finest illustrations with the latest fashions, the most useful household knowledge, and all the arts that make home attractive. Its weekly plates of the latest Paris and New York styles, with well-fitting patterns, and descriptions of the materials and styles in vogue, enable ladies to save many times the cost of subscription by being their own dressmakers. It spreads the changes of fashion throughout the land. Its articles on household matters are from the best sources, and are eminently practical. Its papers on social etiquette are of the highest interest. Much attention is paid to art decoration, and exquisite embroidery designs are published, from the decorative art societies.

The literary excellence of HARPER'S BAZAR is beyond dispute. Its serial stories are by acknowledged masters of fiction. Its pithy editorials are marked by good sense, and its short stories, poems, essays, and other matter are the best of the kind. Not a line is ever printed in its columns that could offend the most fastidious taste.

The fine art illustrations of HARPER'S BAZAR, from the best native and foreign artists, form a marked feature of the journal, as do the bright, humorous cuts which have won it the name of the American Punch. No pains or cost will be spared to maintain the high standard of the paper.

PRESS NOTICES.

"HARPER'S BAZAR *is not only an authority in the world of fashion and on matters relating to the home, but it also contains in every number an abundance of useful and entertaining reading of general interest.*"—Observer, N. Y.

"*To take it is a matter of economy. No lady can afford to be without it.*"—Chicago Evening Journal.

"Par excellence *the ladies' paper of the country, a mirror of fashion, a minister of comfort and ornament in the family.*"—The Watchman, Boston.

"*It has become an established authority with the ladies of America.*"—N. Y. Evening Post.

"*A welcome visitor in thousands of homes.*"—N. Y. Tribune.

"*The arbiter and instructor in taste, fashion, and household economy.*"—Providence Journal.

"*The very best family paper in the country.*"—New Orleans Times-Democrat.

BOUND VOLUMES.

The last Three Annual Volumes of HARPER'S BAZAR, in cloth binding, sent by mail, postage paid, or by express, free of expense (provided the freight does not exceed one dollar per volume), for $7.00 per volume.

HARPER'S PERIODICALS (Per Year):

HARPER'S MAGAZINE $4 00	HARPER'S YOUNG PEOPLE $2 00
HARPER'S WEEKLY 4 00	HARPER'S FRANKLIN SQUARE LIBRARY (One Number a week for 52 weeks)... 10 00

POSTAGE FREE TO ALL SUBSCRIBERS IN THE UNITED STATES AND CANADA.

Remittances should be made by Post-office Money Order or Draft, to avoid chance of loss. When no time is specified, subscriptions will be begun with the current number.

*** HARPER'S CATALOGUE, comprising the titles of between three and four thousand volumes, will be sent by mail on receipt of Ten Cents.

Published by HARPER & BROTHERS, Franklin Square, New York.

To the person receiving this as a Specimen Copy:

The Nation

Is a weekly review of politics, literature, science, and art, conducted with the aid of the most competent writers obtainable. The list of contributors who have been employed more or less frequently during the twenty years of the journal's publication, has included most of the leading names in literature, science, art, philosophy, and law in this country, and many of corresponding eminence abroad. A bound volume of the *Nation* presents one of the most complete and accurate condensed records procurable of the world's current history, with impartial comment on leading questions which should occupy the attention of thoughtful men. Its Departments are:

The Week. Brief comments on the most important current events, domestic and foreign, together with a Summary of the Week's News in six columns of brief paragraphs.
Editorial and Miscellaneous Articles. Careful and moderate discussion of prominent political and social topics.
Special Correspondence. From all quarters of the globe, by intelligent and trustworthy observers.
Occasional Correspondence. Letters to the editor on every subject germane to the scope of the paper.
Notes. Short paragraphs, chiefly on literary, scientific, musical, and dramatic topics.
Reviews of Books. By able writers and scholars (mainly specialists) of both hemispheres.
Fine Arts. Competent criticism of art exhibitions and works of art, the drama, etc.

Your subscription is invited. To new readers who desire a better acquaintance with the paper than can be had from examination of a single copy, the *Nation* will be sent for two months at half rate—25 cents. (See blank on page ix.)

Terms, $3 per annum, postpaid. Address

THE NATION, 210 Broadway, New York.

Recent Press Comments on "The Nation."

"With the publication of No. 1043, our New York contemporary, the *Nation*, completes the twentieth year of its existence. Many changes have occurred since the *Nation* first appeared as an independent political and literary journal, not the least important being the improvement effected by its precept and example in political and literary criticism across the Atlantic. We trust that many years of life and usefulness are still in store for our esteemed contemporary."—*London Athenæum.*

"We have often had occasion to differ widely with the *Nation*; but its intelligence, its courage, and the great service it has rendered to purity and independence in public life, have always received our heartiest recognition. The *Nation* has appealed especially to thinkers and students, and although its constituency of readers has been comparatively small, its influence has been out of all proportion to its circulation. Its success has been almost contemporaneous with the rise of a new school of thinkers on public questions in this country."—*Christian Union.*

"The New York *Nation* has just completed its twentieth year of usefulness, and righteously rejoices thereat. It has won a place for itself by its great ability; however much we may differ from it in politics, we must accord it the palm for a fine presentation of its case. As a critical authority in matters of art and literature, it is unapproached and unapproachable. No journal exists that is its superior—few, indeed, are they that equal it—in these departments or in the world-wide correspondence it publishes upon all matters of interest to the best thinkers."—*Hartford Evening Post.*

"It is not too much to say of the *Nation* that no single agency has done so much to advance and dignify the calling of journalism in America. Including in its scope politics as well as literature and art, it has often aroused bitter political antagonism and suffered from partisan excitement and prejudice; but we believe no one—at least, no one whose judgments are valued by thinking men—has ever soberly questioned its sincerity and disinterestedness, or the remarkable force and candor with which its views have been presented. In literary criticism its methods and achievements have been such that this has almost become a new art under its leadership. In all departments the *Nation* has been singularly able and impartial, and its success is a cause of gratification, in which American scholars generally will share."—*Chicago Dial.*

"In celebrating its twentieth anniversary, the New York *Nation* takes a natural pride in showing how often it has been right when many of its readers thought it was wrong. Doubtless the readers of the *Nation* have always been the most intelligent and upright members of the Republican party—the pick and choice of the whole 'party of moral ideas.' The depth to which that party had, as a mass, fallen in 1876 may then be guessed from the fact that the *Nation* says that in that year its opposition to the fraud by which Hayes was seated cost it three thousand of its subscribers. The *Nation*'s subscription list was never large, and, as we have said, it was always made up of the very best class of Republicans, three thousand of whom dropped the paper because it exposed and opposed a known crime against the Republic. Truly this is a party of moral ideas."—*Kinderhook Rough Notes.*

"The *Nation* announces in its number of June 25 that it has completed the twentieth year of its existence, and it indulges itself in a two-page retrospect of its very useful work. Started just at the close of the war, it aimed to discuss political and social questions in more moderate fashion and with fairer spirit than was then common to the daily press. It was very frequently in advance of the Republican party in this course, and lost scores and hundreds of subscribers at times by its independent course, particularly in 1876, when it denounced the methods by which Mr. Hayes was declared President. The *Nation* has fairly fulfilled its promise, however, to be independent of party, and is respected accordingly by thinking people. Its art and literary criticisms have always been of a high order, and have helped to give it a national reputation as a weekly paper of the first class."—*Philadelphia Public Ledger.*

"The *Herald* welcomes the *Nation* to its table, as one of the ablest and most fearless exponents of the leading economic and political questions of the time. The splendid success of this journal, now starting upon its forty-first volume, is the clearest evidence that absolutely independent journalism has a large and steadily growing field in this country. And while the *Nation* has often been opposed and bitterly criticised on the alleged ground that its positions were the independence of a dictatorial spirit, it has yet more frequently had the satisfaction of seeing its short-sighted critics ultimately wheel into line with its advanced ideas on some of the most important questions that have arisen during its career. The astonishing progress which has recently been made in the way of viewing political questions is largely due to the *Nation*'s influence; and its projectors are entitled to the credit of 'having, through its columns, done something to hasten the coming of the better time, the reign of sweeter manners and purer laws.'"—*Council Bluffs Daily Herald.*

"During seventeen of the twenty years of the *Nation*'s publication we have been among its constant readers, and have found it unequalled among American periodicals for pungency of style, candor and accuracy of statement, and force and originality in the discussion of political events and social conditions. In the course of its long history the *Nation* has often taken the unpopular side in the treatment of current topics, but it has been its happy fortune to see its opinions in most cases confirmed by the sober second thought of the people. It was the first Northern journal of Republican leanings that denounced the carpet-bag governments which, supported by Federal bayonets, so long preyed upon the industries of the South, and inflamed and protracted the disunion sentiments of its people. It had the courage, amid much obloquy, to question the impeachment of Andrew Johnson, and it was ten years in advance of popular opinion in unmasking that scheming demagogue Benjamin F. Butler. . . . Justly regarding James G. Blaine as a corrupter of political morality, as a schemer, and as a charlatan, it refused to give him its support in the late Presidential contest, and it has since found abundant reason for approving, in the main, the practical wisdom and honest purposes of the present Administration. In commending to our readers this able and independent journal, we feel that we are doing a service to the cause of public intelligence and morality."—*Portland (Oregon) Daily Standard.*

"Twenty years old" on July 1, and the *Nation* hugs itself with rightful self-respect as it announces the fact and reviews its past. We count ourselves happy in owning a nearly perfect set of the *Nation*—happy because from the close of the war till now it makes the best continuous record of contemporaneous history which our country has produced. One of the works on a young man's bookshelves should be the carefully-kept volumes of the best weekly newspaper he can afford. The growing series is his current cyclopædia, his public diary—*his* because it chronicles the yesterdays in which he lives. And heartily we name the *Nation* as, on the whole, our roundest, ablest, most trustworthy newspaper diary of the world's life and the nation's life and the world's and the nation's literature. It has been a great teacher; never popular, but very influential as a paper for editors, and lawyers, and politicians. Probably many a bright journal through the country has regularly watched the *Nation* as a compass. A strong, bold defender of the policies that have made for noble peace these twenty reshaping years, it has had the faults of its good qualities; comically omniscient almost always; holding its head high; seldom gracing itself with a confession of mistake; sometimes savage in its stamp on a poor sinner of a book; not heartless, but certainly polar in its manner; afraid of sentiment, and forgetful that cynicism is sentimentalism of rather a young man's, or an old man's, sort—it does not belong to the strongest years. But spite of all this, our clear-headed, outspoken, little-fearing, best newspaper. Twenty years of thanks to it, and twenty more of hopes."—*Chicago Unity.*

Other references are in the prospectus. *Pupils entering before Nov. 20 will have considerable advantages.* Young women or men requiring advanced instruction only, can obtain First-Class board and rooms a few doors off. For prospectus, address E. R. HUMPHREYS, as above

MASSACHUSETTS, Boston, 44 Rutland Square.

MISS H. E. GILMAN'S HOME AND Day School offers superior advantages for the study of Music, Art, and the Modern Languages. Resident foreign teacher.

MASSACHUSETTS, Boston.

MISS PUTNAM'S SCHOOL, No. 68 Marlborough Street.

MASSACHUSETTS, Boston.

INSTITUTE OF TECHNOLOGY. Courses in Civil, Mechanical, Mining, and Electrical Engineering, Chemistry, Architecture, etc. JAMES P. MUNROE, Sec'y. FRANCIS A. WALKER, Pres.

MASSACHUSETTS, Boston, 18 Boylston Place.

PREPARATION FOR THE INSTI tute of Technology. ALBERT HALE.

MASSACHUSETTS, Cambridge, Larch St.

HOME FOR BOYS.—DR. ABBOT AD- mits not more than three boys into his family, to fit for college or educate privately. The only pupil he sent to be examined last June entered Harvard as freshman, without "conditions," and with "credits" in 12 out of the 17 subjects of examination. Separate tuition and best of care in all respects. Charming location, with fine tennis-court. F. E. ABBOT, Ph.D. (Harv.).

MASSACHUSETTS, Cambridge, 13 Appian Way.

MR. JOSHUA KENDALL'S DAY AND Family School for Boys. Fits for college. Circulars.

MASSACHUSETTS, Lanesboro, Berkshire Co.

ELMWOOD INSTITUTE, ESTAB- lished in 1849, fits for college or business.
Rev. A. A. GILBERT A.M., Prin.

MASSACHUSETTS, Plymouth.

MR. KNAPP'S HOME SCHOOL FOR Boys.—Fall term (nineteenth year) begins September 24th, 1885.

MASSACHUSETTS, Quincy.

ADAMS ACADEMY.—PREPARA- tory and boarding school for boys. New year begins 14th September, 1885. For catalogue and other information address WILLIAM EVERETT, Ph.D.

MASSACHUSETTS, S. Williamstown, Berkshire Co.

GREYLOCK INSTITUTE.—A PRE- paratory School for Boys 44th year. Circulars on application. GEORGE F. MILLS, Principal.

MASSACHUSETTS, West Bridgewater.

HOWARD COLLEGIATE Institute.—Home and Day School for girls and Young Women. Offers a full preparatory, with shorter college course, including all collegiate work essential to a thorough general education, or to advanced work in American or English Universities. Age, 12-20. Will open eighteen new single rooms in November. For catalogue address the Principal,
HELEN MAGILL, Ph.D.,
Graduate of Swarthmore College, Boston University, and Newnham College, Cambridge, England.

NEW JERSEY, Morristown.

ST. HILDA'S SCHOOL.—A BOARDING School for Girls. Under the charge of the Sisters of St. John Baptist. Sixth year begins September 28. For terms, etc., address THE SISTER IN CHARGE.

NEW JERSEY, New Brunswick, 13 Livingston Ave.

THE MISSES ANABLE'S ENGLISH, French, and German Boarding and Day School will reopen September 23.

NEW YORK, Canandaigua.

FORT HILL SCHOOL (for Boys).—Second year. Enlarged accommodations. $600.
Rev. JAMES HATTRICK LEE, Head Master.

NEW YORK CITY, 231 E. 17th St.

ST. JOHN BAPTIST SCHOOL FOR Girls.—The school is pleasantly situated on Stuyvesant Square, and is a new building planned to supply all that can be required for the comfort and well being of the pupils. Resident French and English teachers. Professors for French, Science, etc. Address
SISTER IN CHARGE.

NEW YORK, Garden City, Long Island.

ST. MARY'S CATHEDRAL SCHOOL, having taken additional building can accommodate a few more pupils. Apply early to
MISS H. CARROLL BATES,
Principal.

NEW YORK, Suspension Bridge.

DE VEAUX COLLEGE.—A Military Boarding School for Boys. $350 per annum.
WILFRED H. MUNRO, A.M., President.

NEW YORK, Utica.

MRS. PLATT'S SCHOOL for YOUNG Ladies.—The next school year begins Thursday, Sept. 17, 1885. Applications should be made early.

PENNSYLVANIA, Germantown, 5128 Germantown Avenue, Phila.

FRANKLIN SCHOOL.—AN ENGLISH and Classical School for Boys. Six resident pupils. Prospectus sent on application.
GEORGE A. PERRY, A.M., Head-Master.

PENNSYLVANIA, Philadelphia, 1350 Pine St.

MISS ANABLE'S SCHOOL for Young Ladies will reopen Sept. 23, 1885.

PENNSYLVANIA, Philadelphia, Norwood Avenue, Chestnut Hill.

MRS. WALTER D. COMEGYS and Miss Bell's English and French Boarding and Day School for Young Ladies will reopen Sept. 21.

PENNSYLVANIA, West Philadelphia, 3903 Locust St.

MR. MARTIN'S SCHOOL. SPECIAL class with afternoon care of play and lessons.

PENNSYLVANIA, WEST PHILADELPHIA.

UNIVERSITY OF PENNSYLVANIA.
I. DEPARTMENT OF ARTS, four-years' classical course. Degree A. B.
II. TOWNE SCIENTIFIC SCHOOL, five-year courses in (a) Chemistry, (b) Geology and Mining, (c) Civil Engineering, (d) Dynamical Engineering, (e) Architecture, leading to B. S., and to technical degrees, P. C. (Practical Chemist), M. E., C. E., E. M., Architect.
III. WHARTON SCHOOL OF FINANCE AND ECONOMY. Courses in Constitutional Law and Public Administration, Political Economy, Mercantile Law and Practice, Finance, Banking, Railroading. Degree Ph. B.
IV. COURSE IN PHILOSOPHY, four years. English, Latin, French, German, Mental and Moral Philosophy, Mathematics, General Science, extended Instruction in Biology with laboratory work. Degree Ph. B.
Liberal electives in and between these courses at close of Second Year.
V. COURSE IN MUSIC. Two-years' graded course. Degree Mus. Bac.
VI. MEDICAL SCHOOL. Three-years' graded course with optional fourth year. Degree M. D.
VII. DENTAL SCHOOL. Two-years' graded course. Degree D. D. S.
VIII. VETERINARY SCHOOL. Three-years' graded course similar to European schools. Degree V. S.
Clinical and laboratory advantages a prominent feature in these three schools.
IX. LAW SCHOOL. Two-years' course; diploma admits to Pennsylvania Bar. Degree LL. B.
X. BIOLOGICAL SCHOOL. Two years' course, with extended laboratory work. Certificate admits to Medical School without examination. Special courses.
XI. DEPARTMENT OF PHILOSOPHY. Two-years' post-graduate course in numerous subjects leading to degree Ph. D.
In making inquiry please specify department.
Rev. JESSE Y. BURK, Secretary,
University of Pennsylvania, West Philadelphia, Pa.

School Agencies.

BEST TEACHERS, AMERICAN AND Foreign, promptly provided for Families, Schools, Colleges. Skilled Teachers supplied with Positions. Circulars of Good Schools free to Parents. School Property rented and sold. School and Kindergarten Material, etc.
J. W. SCHERMERHORN & CO.,
7 East 14th St., New York.

BROCKWAY TEACHERS' AGENCY, *Times* Building, Chicago, will supply superintendents, grade teachers, specialists with positions in Central, Western, and Southern States for ensuing year.

J. RANSOM BRIDGE & CO., 110 TRE- mont St., Boston Mass.—A reliable teachers' agency. Schools and Committees promptly supplied. Interview or correspondence solicited with qualified teachers looking for positions. School properties for sale.

The Portable Bookcase manufactured solely by Lockwood, Brooks & Co., 17 Franklin Street, Boston, Mass., is the most perfect thing of the kind, it being easily moved, and adjustable for books of all sizes. Send for circular or call and see it.

D. APPLETON & CO.

PUBLISH THIS WEEK:

Charles Darwin.

By GRANT ALLEN.

Being Volume One of a new series of short Biographies, entitled

ENGLISH WORTHIES,

Edited by ANDREW LANG,

Consisting of Biographies of Englishmen of influence and distinction, past and present, military, naval, literary, scientific, legal, ecclesiastical, social, etc. Each Biography will be intrusted to a writer specially acquainted with the historical period in which his hero lived, and in special sympathy, as it were, with his subject.

'Darwin' will be followed immediately by 'Marlborough,' by Geo. Saintsbury; and Biographies of STEELE, MORE, WELLINGTON, LORD PETERBOROUGH, CLAVERHOUSE, LATIMER, GARRICK, RALEIGH, and others are in preparation.

Small 12mo, cloth. Price, 75 cents each.

The History of Bimetallism in the United States.

By J. LAURENCE LAUGHLIN, Ph.D., Assistant Professor of Political Economy in Harvard University; author of 'The Study of Political Economy,' etc. With Sixteen Charts and numerous Tables. One vol., 8vo, 258 pages, cloth. Price, $2.25.

"Although the plan of this book was conceived with the view of presenting simply a history of bimetallism in the United States, it has been necessary, in the nature of the subject, to make it something more than that. And yet it was my hope that the effect of an historical inquiry in suppressing some of the theoretical vagaries of the day might be realized by showing what our actual experience with bimetallism has been, in contrast with the assertions of some writers as to what it may be."—*From Preface.*

Physical Expression:

ITS MODES AND PRINCIPLES. By FRANCIS WARNER, M.D., Assistant Physician, and Lecturer on Botany to the London Hospital, etc. International Scientific Series. With Fifty-one Illustrations. 12mo, cloth. Price, $1.75.

"This work is addressed to those who are interested in studying Man as a living and thinking being. . . . The accurate observation of the motor outcome of brain action, and the observation of the effects of external forces upon such functions, will give us much information as to the effect of physical forces in causing the evolution of the individual, and the development of mind by educational processes."

Handbook of American Winter Resorts.

Edition for the present season, revised to date of issue. With Map and Illustrations. 12mo, paper. Price, 50 cents.

The 'Handbook of Winter Resorts' is designed for tourists and invalids. It gives complete information as to winter sanitaria and places of resort in the United States, the West Indies, and Mexico.

*** For sale by all booksellers; or will be sent by mail, post-paid, on receipt of price.*

D. APPLETON & CO., Publishers,

1, 3, and 5 Bond Street, New York.

LATINE ET GRAECE.

Edited by EDGAR S. SHUMWAY, Professor in Rutgers College.

With the fourth volume this journal enlarges its scope to include not only Latin but also Greek. To the teacher and lover of the classics it presents its claim for a place on his table. The moderate price at which it is published brings it within the reach of all. Eight Nos.—during the academic year. Two dollars and fifty cents a year, in advance.

Among the *Latin* articles written for volume III. of LATINE were EPISTULAE from Rome, Heidelberg, etc.; COLLOQUIA (on Horace's life and works, on Terence, grammar, oratory, etc.); ESSAYS, on Reading, etc.; VERSES, Milton's ode on the Nativity, a Boat-song, the Lament of Jeremiah over Jerusalem, *Addiscipulos, Elegidion, Hymnus in Festo Ascensionis, Nascitur Deus Puer, De Bello Imminente* (England and Russia). Ode on East River Bridge, etc.; a translation of Schiller's Lycurgus; selected Latin articles have been—BIOGRAPHICAL EXTRACTS from Cicero (on himself, Cæsar, Anthony, Cato *maior*), and from Erasmus; VERSES, "Rock of Ages"; *Rex Thulae*, "Art thou weary?" *Hymnus in Resurrectionis Domini*, with a Greek translation, etc. In the *English* Supplement every number contained an Installment of "From Old Rome" and "*Antibarbarus*"; there were valuable original essays on Roman Architecture, Studies in Vergil, Phonetic Law, the Education of the Roman Boy, the Study of Roman Law, Some Over-sights in Harper's Lexicon; Booklists on Roman Architecture, Law, Christian Latin, "Side-Lights"; translations from German and French sources have included *De Pronominibus Possessivis*. Names of Countries, Augustus, *Res*, Horatian Allegory, Curriculum in Latin Style; among the English contents have also been original poems or translations, *Phaethon*, Horatio L., 1, and Sat. II., 6. *Vile Potabile*, "Rome's Mission," *Duae Coronae*; Arguments on the side of classical studies; Notes and Queries, etc. A limited number of complete sets of Vol. III. may be had at $5 00. A few sets of Vol. II. may be had at $6 00. Vol. I. cannot be supplied.

LATINE ET GRAECE, New Brunswick, N. J.

The Atlantic Monthly

FOR 1886

Will contain the following Serial Stories:

IN THE CLOUDS,

By CHARLES EGBERT CRADDOCK,

Author of 'The Prophet of the Great Smoky Mountains,' 'In the Tennessee Mountains,' etc.

HENRY JAMES.

['The Princess Casamassima' will continue until August, 1886.]

THE GOLDEN JUSTICE.

By WILLIAM H. BISHOP,

Author of 'The House of a Merchant Prince."

JAMES RUSSELL LOWELL

Will write for the ATLANTIC MONTHLY for 1886.

JOHN FISKE

Will contribute six or more papers on United States History, covering the period from the Revolution to the adoption of the Constitution. These papers discuss a portion of American history very imperfectly known, and cannot fail to be exceedingly engaging by reason of Mr. Fiske's ample knowledge and singularly clear style.

PHILIP GILBERT HAMERTON,

The distinguished English writer, will furnish a series of articles comparing French and English people, character, opinions, customs, etc. Mr. Hamerton is peculiarly qualified, by his intimate knowledge of the French as well as of his fellow-countrymen, to write on this subject.

THOMAS BAILEY ALDRICH,

Author of 'Marjorie Daw,' etc., will contribute some Short Stories.

LIVING QUESTIONS.—The important political subjects which will come conspicuously before the public in the immediate future—Civil Service Administration and Reform, the Silver Question, the Tariff, our Indian Policy, and questions in Social Science—will be discussed by men competent to treat them adequately and impartially.

The various features of THE ATLANTIC which have secured and maintained its remarkable prestige as a literary magazine will be carefully provided for during the coming year.

TERMS: $4 00 a year in advance, POSTAGE FREE; 35 cents a number. With superb life-size portraits of Hawthorne, Emerson, Longfellow, Bryant, Whittier, Lowell, or Holmes, $5 00; each additional portrait, $1 00.

Postal Notes and Money are at the risk of the sender, and therefore remittances should be made by money-order, draft, or registered letter, to

Houghton, Mifflin & Co.,

4 Park Street, Boston, Mass.

The Critic.

A Literary Weekly. Ten cents a copy. $3 a year.

THE CRITIC *of Nov. 28th will be an issue of special literary interest; and as it will also contain the announcements of the leading publishers, of new books, works of art, &c., it will be a useful guide-book for holiday purchasers.*

"*Its pages are full of the best literary criticism on this side of the Atlantic.*"—N. Y. HERALD.

"*There is no other publication in America that rivals* THE CRITIC *in its field.*"—NEW YORK SUN.

"*Has earned a right to live by the excellence and variety of its materials.*"—HARPER'S MONTHLY.

"*The most interesting journal of literary criticism in the country.*"—SPRINGFIELD REPUBLICAN.

We will send three specimen copies for examination on receipt of ten cents.

The Critic Co.,

18 & 20 *Astor Place, New York City.*

'Historic Boys,' by E. S. Brooks, is a most attractive volume of stories of real boys who met with real adventures and plenty of them. It is fully illustrated, and sells for $2.25. G. P. PUTNAM'S SONS, Publishers, New York.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 26, 1885.

The Week.

THE country took it for granted last month that the election of a Republican Legislature in Ohio meant the reëlection of Mr. Sherman to the Senate. But rumors soon began to gain currency that Mr. Sherman could not command the full strength of his party, and that enough Republican members would refuse to support him to leave him short of a majority. As the Republicans number only three more than the Democrats upon joint ballot, it is obvious that if two Republicans withhold their votes from Mr. Sherman, he cannot be elected. The Democratic papers declare with increasing confidence that at least two members of his party will never support the present Senator, and the Republican papers manifest a growing apprehension that the claim is well founded. It scarcely needs to be said that Mr. Sherman is entitled to a reelection, and that the country would have nothing to gain from the substitution of such a man as "Charley" Foster, who would be most likely to be selected as the candidate of a coalition of the Democrats with the anti-Sherman Republicans. At the same time this is theoretically a free country, and if any Republican member of the Ohio Legislature thinks he can best serve the State by voting for somebody else than Mr. Sherman, he is entitled to cast such a ballot without endangering his personal safety. Leading Republican papers, however, do not hesitate to warn the suspected legislators that they will vote for anybody else than Mr. Sherman only at the risk of their lives. The *Ohio State Journal*, the Republican organ at the State capital, recently said: "If any two Republicans vote with the Democrats for Senator this winter, they will go down to posterity in more infamy than Booth and Guiteau. In fact, we would not insure their safe exit from this city." The Cincinnati *Commercial Gazette* reprinted this threat of assassination without a word of censure, and in a way which involved endorsement of the sentiment. And these are the papers which wax so indignant over political intolerance in the South!

Southern newspapers of both parties are quick to recognize the significance of the breaking down of the race line in the Atlanta canvass over the prohibition question. The Richmond *Dispatch*, the leading Democratic paper of Virginia, remarks that Northern Republicans see proved to them by this Georgia incident "how easy it would be to divide the Southern voters on other questions if sectional prejudices were out of the way;" and says that "the way to melt the solidity of the South is first to furl the bloody shirt," since, with sectionalism disposed of, the Southern white voters are sure to divide on economic questions. The Louisville *News and Commercial*, the leading Republican paper of Kentucky, takes the same view of the matter. "The true lesson to be learned from this canvass," it says, "is that time and circumstance and the free play of opinion, rather than legislation, can best be depended on to settle what remains of the old Southern question." It thus appears that intelligent Republicans at the South are as weary of the bloody shirt as intelligent Republicans at the North, and that they realize that the worst enemies both of their party and of their section are the politicians who keep on ranting about the "rebels."

The *Times*, with commendable enterprise, has collected, through its special correspondents, the complete official figures of the last election in this State, and published them on Monday in advance of all its morning contemporaries. The figures make, as we surmised they would, some very interesting disclosures, the most striking of which is that Governor Hill's total vote is much smaller than that which Cleveland polled both for President in 1884 and for Governor in 1882. Hill's total this year is 501,418, which is 61,650 less than Cleveland's in 1884, and 33,900 less than Cleveland's in 1882. Hill is also 33,218 votes behind his own vote for Lieutenant-Governor in 1882. Hill also runs slightly behind three of his associates on the ticket, being 518 votes behind Chapin, 839 behind O'Brien, and 787 behind Sweet. Davenport's total vote is 72,274 less than Blaine's in 1884, but is 147,263 larger than Folger's in 1882, and 43,619 larger than Carr's vote for Secretary of State in 1883. Davenport is behind Carr this year 2,561 votes, 262 behind Wadsworth, and 227 behind Van Rensselaer. He runs ahead of the other candidates on his ticket. The Prohibition vote, which was 25,783 in 1882 and 24,999 in 1884, has risen to 30,840 this year.

There is one great difficulty in the way of drawing deductions from these figures, and that is the absence of any preceding vote which can be taken as a fair basis of comparison. The vote for Governor in 1882, which would naturally be used for such purpose, is entirely unavailable because of the peculiar character of the contest in that year. Cleveland got his phenomenal majority then because, first, the entire Independent vote was cast for him, and, second, because thousands of Republicans, mostly Blaine men, stayed at home, in obedience to a hint from Blaine himself, in order to kill off Arthur and Folger from the Presidential succession. Last year's vote is unavailable as a basis of comparison because there is always a falling off in the total vote at an election immediately succeeding a Presidential election. It is noticeable that, great as was Cleveland's plurality for Governor, his total vote in 1884 exceeded his total vote in 1882 by 27,730. He held all the strength he had at first and added to it besides. Hill, on the contrary, has not held the strength he had in 1882, but has lost over 33,000 votes of it. While the falling off in his vote from the vote of last year is no greater than usual after a Presidential election, it is obviously too soon for him to set himself up as a stronger candidate than Cleveland in New York State. Davenport's total shows very plainly, what has been evident enough all along, that he was defeated mainly by the same Blaine influence which defeated Folger, and in the same way. The smallness of the plurality against him and the increase of 147,000 which he makes over Folger's vote shows that either he must have received a very large number of Mugwump votes, or else the Blaine contingent is greatly reduced in size, and we cheerfully accord to the Blaine organs the privilege of deciding which is the more correct explanation.

The opinion of the Solicitor of the State Department, Dr. Francis Wharton, on the accounts of the *Alabama* Claims Commission, has been concurred in by the Attorney-General, and has been published. It makes sad havoc with the "incidental expenses" and "assistant counsel" of the court. The court has held that the clause of the Act of Congress allowing it "necessary incidental expenses" really allowed it to procure anything which the judges thought desirable or convenient, and they ordered accordingly. Dr. Wharton holds that "necessary incidental expenses" mean simply the expense of such officers as might be needed to keep order in the court-room and keep it clean. Dr. Wharton is also very severe about the employment of the "assistant counsel." Congress allowed one counsel for the Government, to be paid by fees, which were not to exceed in any one year $8,000. The court, nevertheless, appointed "assistant counsel," one of them being Mr. Walker Blaine, whose united cost reached in three years the enormous sum of $166,734. The explanation of all this, as we have said before, is very simple. Everybody in Washington counted confidently on Blaine's election, and in fact on the indefinite retention of power by the Republican party. Had Blaine been elected, there would have been none of this overhauling and objecting. Everything would have been made pleasant for everybody in money matters, and nobody would have had much work to do for his salary, beyond keeping an eye on the negro vote in South Carolina and Mississippi.

The document purporting to be an authorized but not official statement of the Postmaster-General's reasons for refusing to apportion the sum of $400,000 placed in his hands by Congress for carrying the ocean mails in American steamships, is hardly satisfactory. The obvious intention of the law-making power having been defeated, of course the only available defence is the plea of economy. But the value of the plea must be judged and weighed by its results to the postal service. These cannot be ascertained until the Postmaster-General submits his annual report, perhaps not until an investigation is made by one or the other branch of Congress. If it should be shown that the mails were carried as speedily and satisfactorily by the methods and routes adopted by the Postmaster-General as formerly, he would have a fair standing before the country, although he took upon himself a grave responsibility when he ignored the plain intendment of the law because its

language was permissive and not mandatory. It is to be feared that his action in this matter may strengthen the hands of the subsidy jobbers by giving them a real injury upon which to make an appeal to the country. Hitherto they have had no chance of success because they have had no logic to their argument. Their attitude has been that of a faction seeking to build up foreign commerce with one hand while tearing it down with the other, putting obstructions upon trade by means of excessive duties and then calling for public money to counterbalance the obstructions. Such arrant hypocrisy is not likely to make head against the awakening liberal sentiment of the country unless reinforced by some substantial grievance, and we apprehend that this is what they will find in the action of the Postmaster-General respecting the allotment of the $400,000 appropriation, which was not, properly speaking, a subsidy.

The *World* thinks the next step forward in civil-service reform is not to prohibit office-begging by members of Congress, but "to admit a proper proportion of all parties to the public service," and then "make the tenure of office for all capable, faithful, honest public officers as certain and assured during good behavior as are positions in the army and navy of the United States." This will be an excellent step when it comes, but the *World* is mistaken about the order in which it will come. It can never be taken as long as members of Congress are allowed to share covertly and corruptly in the appointing power. The last thing in the world they desire is to see a fair proportion of all parties in the public service, or to see tenure during good behavior. Therefore, the next step is, we repeat, to prohibit them, under proper penalties, from asking the Administration to bribe them with patronage, and to confine them to their proper business of legislation.

The closing of the penitentiary doors upon the attractive form of Mr. Jo. Mackin, the professor of "fine work" in Chicago, is a notable event. His conviction and final incarceration are the result of the continuous and indefatigable labor of a Citizens' Committee, composed of men of both political parties, to whom ballot-box stuffing appeared to be the most dangerous of all attacks upon social order. Crimes of this sort had become common in Chicago, and the immunity which had previously attended them led Mackin to his doom. The alteration of the returns of the Sixth Senatorial District last fall was evidently prompted by professional pride rather than by any expectation of personal gain. It was ascertained a week or more after the election that the State Legislature was a tie politically. Mackin was Secretary of the Democratic County Committee, but he had no greater interest in the result of the election than any other Democrat. The opportunity to do a neat thing in the way of changing the popular verdict in a State election when nearly 700,000 votes had been cast, was an irresistible temptation to Mackin. It appealed to his instincts as Donnybrook Fair stirs the emotions of every true son of the sod. He deftly altered the returns, deceiving in the first instance even his own party friends. He was arrested, tried, and convicted. He perjured himself liberally on the trial, but his underlings became alarmed, and betrayed him in order to save themselves. Before sentence was pronounced an appeal was taken to the United States Supreme Court, upon the ground that the proceeding against him had been begun by information instead of indictment. There was a strong probability that he might escape, as the Court had decided in another case that prosecutions for felony must always be begun by indictment. The Citizens' Committee lost no time in bringing him to a new trial for perjury. He was convicted in this case also, and, after appealing unsuccessfully to the State Supreme Court, which, by the way, has a majority of Democratic judges, he has been put in prison garb and set at hard labor for five years, and is disfranchised for life unless pardoned before the expiration of his term. The fraud in the Sixth Senatorial District of Illinois has thus been adequately and legally punished. It led also to important changes in the election law of the State. It produced a most gratifying upheaval of civic virtue, and upon the whole, when all the consequences of his act are taken into view, one cannot greatly regret that the devil entered into Mackin at the time and in the manner aforesaid.

The election of J. H. Mitchell as Senator from Oregon by a minority of the Republicans in the Legislature, reinforced by all the Democrats, is a surprise, if anything in party politics ought to be considered a surprise nowadays. Last year the Republican caucus nominated Solomon Hirsch, a smart Machine politician and soldier of fortune, for Senator, and adhered to him throughout the entire session, but failed to elect him because a minority of the members, representing the better element of the party, refused to vote for him. The authority of the caucus was thus broken, and the contest for the Senatorship became "anybody's race." The Republicans this year divided between ex-Senator Mitchell and ex-Attorney-General Williams. It cannot be said that there is anything to choose between them. Mitchell and Hirsch are fast friends, and both belong to the rising cult in politics to which Clinton Wheeler, Esq., of New York, has declared himself a convert—those who are "getting along in life and must look out for themselves." Nobody is better fitted to be a catechumen in this faith than Mitchell. He will be at the head of the class very soon. His election will be a bitter dose to the *Oregonian* newspaper, which has lately published charges of the most serious character against Mitchell and defied him to bring an action for libel. Of course Mitchell passes over them with the scorn they deserve.

The Democratic papers in this State are pointing out the inequalities of the present system of legislative apportionment, and showing how it works to the disadvantage of their party. Their complaints are well founded. The Republicans enjoy an unfair advantage in every contest for the Legislature by reason of the fact that the Democratic counties do not have as many members as they are entitled to. Very likely the Republicans may carry the lower branch next year, and thus secure the United States Senatorship, by a margin which they would not have if Representatives were fairly apportioned. But it is well enough to point out that if this does happen, the Democratic party itself will be responsible for its misfortune. If a State census had been taken this year, according to precedent, the incoming Legislature would have reapportioned the State, and it could not fail to have increased the representation of this city and Brooklyn, by which the Democrats would have gained several seats. Governor Hill, however, forbade the taking of a census and the rectification of the injustice before the Legislature of 1887 is chosen. If the Republicans prove to have a majority of only six or eight votes on joint ballot in that Legislature, the Democrats can set down their loss of the Senatorship to David B. Hill's account.

It is curious with what fidelity history repeats itself in the matter of negro education. Last summer a Connecticut lady who owned a summer-resort hotel at Quitman, Ga., presented the property to the American Missionary Association for a boarding-school for colored girls, and the support of the institution was assumed by other Connecticut ladies. Teachers were engaged, and the school opened in October with about a hundred pupils. The white people resented the innovation. The building was assaulted with mud-balls and stones; the teachers were insulted on the streets; and finally, a few nights ago, the building was set on fire and burned. This is the reproduction in Georgia in 1885, with almost absolute fidelity, of the methods adopted in Connecticut in 1833, when Miss Prudence Crandall threw open her boarding-school in Canterbury to colored pupils. The house was smeared with filth and assailed with rotten eggs; the water supply was defiled; the shops were closed against teacher and pupils; and finally the building was set on fire. The analogy does not hold to the end, however. The Georgians of to-day who "don't believe in teaching niggers" wreak their vengeance in secret, while their Connecticut prototypes of half a century ago were not ashamed to work openly as well, and actually, after vainly trying to suppress the outrage by town-meetings, got the Legislature to pass an act expressly designed to break up the school, the news of which was received with the ringing of the church bells. The Quitman of to-day, after all, is not so hopelessly wrong as the Canterbury of 1833 appeared, and if Connecticut feels inclined to despair of Georgia, she can recall her own history and cheer up.

The transformation which California has undergone since the days of the gold craze, a generation ago, is forcibly shown in the recent statement of Senator Stanford that "the most important interest of the State," if properly managed and fostered, would be, not mining, but the raising of fruit. The Senator expressed this opinion to a committee of the fruit-growers who had consulted him, in his capacity of President of the Southern Pacific Railroad, as to the best means of developing their trade with the East, and the result of their deliberations is of interest to every-

body on the Atlantic seaboard who likes good fruit. The great difficulty about placing the growth of California vineyards and orchards upon the Eastern market at reasonable figures has been the large freight charge, which has been $400 per car to Chicago, when sent in a regular freight train, and $600 per car when attached to a passenger train. Mr. Stanford agreed that the Pacific railroads should make up special fruit trains, running on either ordinary or fast time, and charge only $200 per car in the one case and $300 in the other, provided the growers would arrange to systematize their shipments, so as to fill a train of fifteen cars three times a week or oftener. The growers at their State Convention last week decided to do their part toward carrying out the scheme, and organized a union for the purpose of insuring regularity in shipments. No less than 1,025 cars of fruit, averaging ten tons per car, have been shipped across the Rockies this year, and with the changes proposed the business should be greatly enlarged, and the prices to Eastern consumers materially reduced.

The long-standing quarrel between the Baltimore and Ohio and the Pennsylvania Railroad Companies respecting the former's access to New York appears to be settled at last by the leasing of the Staten Island Rapid Transit property by the former company for the period of ninety-nine years. The Staten Island Company have been making great improvements during the last year, looking to the enlargement of the available water-front of New York harbor. There is no unoccupied piece of ground in the United States so well adapted to great commercial purposes as the shore of Staten Island. The Baltimore and Ohio Company have made a wise choice in selecting it for their entrepôt, and the merchants of New York will be equally fortunate when the proposed new facilities of transportation are placed within their reach.

Pastor Downs, of the Bowdoin Square Baptist Society in Boston, has been judicially but indirectly pursued lately in Boston on charges of immorality, of which the court, in its decree, recognized the validity. During the trial, however, the pastor presented an unshaken front to the enemy, and had the satisfaction of seeing his church crowded to suffocation every Sunday. His remark to the throng on one occasion, "that the Lord had chosen his own way of bringing them there, but now that they were there he hoped they would be benefited," and his then preaching on Jonah in the whale's belly, showed that he is not without a touch of grim humor. His continuing to preach, however, in spite of the decree of the court, and his compelling the trustees to expel him from the church and lock the doors, proves that he has not humor enough to overcome the passion for "vindication" by plébiscite, which is so strong in the breasts of politicians. A large number of politicians, including the late James G. Blaine, hold that any charge, however grave or undisputed, is disposed of by a subsequent election to some public office; and such election they always call a "vindication," although what it means is, not that the voters have examined the charges and found them baseless, but that they do not care a cent whether the candidate is guilty or not. In like manner Pastor Downs holds, that his ability to secure a large audience shows that he is a much maligned man, and he maintains that he has "the young life of the church with him, its fire and brains," and that the thing for him to do is "to go right on in spite of courts and popular prejudice." His theory, doubtless, is that ability to get an audience, no matter what motive brings it together, is a "vindication."

Purity is a great thing, but truth is at least as great, and the servants of purity ought therefore to be also the servants of truth. We make this remark in consequence of seeing in the *American Bulletin*, a sheet "issued occasionally by the New York Committee of the International Federation to Promote the Abolition of State Regulated Vice," the report of a meeting of the New York Committee of this organization. In one of the resolutions adopted on this occasion the Committee expresses its hearty sympathy with Mr. Stead, and offers its hearty thanks to him for "making public the astounding disclosures of criminal immorality in high places." This resolution was moved by Mr. Aaron M. Powell, and Mrs. Abby Hopper Gibbons was in the chair. We now ask this lady and gentleman to inform us and the world generally where "these astounding disclosures of criminal immorality in high places" are to be found, and whether they have, themselves, ever seen them, or have any good reason for believing in their existence, and if so, what.

On the 12th instant Mr. Joseph Chamberlain made a speech at Birmingham in support of the Liberal candidates for Parliament, in the course of which he analyzed the dogmas of "fair trade" which Lord Salisbury had expounded a few days before to the South London Conservatives. Incidentally he let out a secret which will excite some wonder on this side of the water. Mr. Chamberlain, during his business career, was a manufacturer of screws. His success in this line of trade was due in large part, he said, to an American patent. The screw-making machines which he used were in use also in America and on the continent of Europe, but he was able to export screws to all those countries, notwithstanding the lower rates of wages paid in France, Germany, and Russia. The secret, which he casually dropped, was this—we quote from the *Standard's* report of the speech:

> "At that time the Americans put a duty of 100 per cent. on screws, and in spite of that his firm sent these articles to America in large quantities. The result was that the American manufacturers came over here and said: 'We are making 100 per cent. on capital; if you continue to send screws to America we shall, of course, be obliged to reduce our prices. That will shut you out, but it will reduce our profits, which will not be good for either of us. Let us, therefore, make a bargain; we will pay you so much a year to sit still, and not send a screw to America.' Well, they did it, and his firm received a handsome income for years from the American manufacturers, protected, as they were, by the folly and stupidity of protectionist legislation, to sit still, and not send screws to America."

So the cat is out of the bag—that is, one additional cat. An American company has a patent monopoly for making screws. Not satisfied with this, it gets a duty of 100 per cent. to keep out foreign-made screws. The foreigner still sends screws to our market in spite of the duty. So the American company agree to pay him a yearly bonus not to send screws here, but to leave them in undisturbed possession of their spider's web, to work their will upon all the carpenters and house-builders in the United States. The bonus paid to Mr. Chamberlain by the American Screw Company of Providence, R. I., of course came out of the workmen who paid for these indispensable tools of industry, and the net result was extolled as "protection to home labor." Mr. Chamberlain went on to say that, after paying him this bonus for some years, the American Screw Company became greedy, went to Congress, and got the duty raised to a still higher figure, and, thus effectually shutting him out, they were enabled to discontinue the subsidy. We suppose that they were enabled to secure the increased duty by electing and maintaining a Senator of the United States, for it was a common jest in Washington some years ago that New England was represented in the Senate by ten Senators, one print mill, and one screw company. The existing duties on screws are as follows: On all screws two inches or over in length, 6 cents per pound; one inch and less than two inches in length, 8 cents per pound; over one-half inch and less than one inch in length, 10 cents per pound; one-half inch and less in length, 12 cents per pound.

The arrest of the Servian march at Slivnitza, mainly, it would appear, owing to the skill and courage of Prince Alexander, and the subsequent repulse of the Servians at all points, have given a new aspect to affairs in the Balkans. What will happen next it is hard to say, but we shall probably see Austria's hand in the affair a little more distinctly. Greece, too, appears to be waiting simply to see "how the cat jumps," before taking a hand in the fray, the whole of her forces being in the meantime under arms, and her finances going to pieces as rapidly as possible. Whether she will try her luck on land or sea now seems somewhat doubtful. She claims all of Thessaly that was not given her by the Treaty of Berlin, and as much of Macedonia as she can get hold of, the claim being based, as that of Servia is, on ethnological or rather linguistic grounds; that is, she, like all the small States of the Balkan Peninsula, claims all territory occupied by people speaking her language. How much of Macedonia this would give her of course nobody knows, as the various races are curiously intermixed in the whole of what was at the beginning of this century Turkey in Europe. The capacity of these races in that part of the world for living side by side for ages, without intermingling, and without losing their respective tongues, or manners, or even costume, is something of which we have in the Western world no idea. If Servia is now, as seems certain, compelled to desist from her aggression, and peace is made without the Greeks having struck a blow, it will be a dreadful mortification for them, as this will be the second time since 1876 that they have fretted and fumed and armed without hurting anybody.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, November 18, to TUESDAY, November 24, 1885, inclusive.]

DOMESTIC.

THE list of members of the House of Representatives is completed. The House consists of 183 Democrats, 141 Republicans, and 1 Greenback-Democrat. Of the Democrats 110 were in the last Congress, and of the Republicans 84. The Democratic majority will be about one-half as large as in the last Congress.

Mr. Carlisle will endeavor to submit the committees to the House of Representatives some time before the holiday recess. He proceeds, of course, upon the assumption that he is to be elected Speaker without opposition.

Mr. Lamont, the President's private secretary, referring to printed statements that prominent Democrats are urging the retirement of Secretary Bayard from the Cabinet, says: "There is not a particle of truth in it. No such suggestion has ever been made to the President."

The report is current in Washington diplomatic circles that the Austrian Government will not send a new Ambassador to Washington until the successor of Mr. Keiley shall be appointed in Vienna.

Henry N. Gassaway, of New York, Assistant Chief of the Bureau of Navigation of the Treasury Department, was dismissed from the Government service on Monday, by order of Secretary Manning, for incivility. Mr. Manning told Mr. Gassaway that every man, black or white, who had business with the Treasury was entitled to civil treatment, and no employee who was unable to remember that he was a servant of the people and bound to be courteous to those whom he served, need expect to be retained.

Reports received at the Treasury Department indicate a growing scarcity of ten cent silver pieces in all parts of the country. Forty thousand dollars in dimes were coined at the Philadelphia Mint a week ago. These, however, were found insufficient, and the Superintendent of the Mint has since been insructed to coin into dimes all the uncurrent subsidiary silver coin at the mint.

James Armstrong, Internal Revenue Collector of the Twenty-first New York District, was on Monday suspended, and William A. Beach, of Syracuse, was appointed in his place. Armstrong was one of the "Spartan band" of Conkling men in the Legislature of 1881, and one of the Grant 306 at Chicago.

The annual report of Joseph S. Miller, Commissioner of Internal Revenue, shows that the total receipts from all sources of internal-revenue taxation for the fiscal year ended June 30 were $112,421,121, as compared with $121,590,039 for 1884, $144,553,344 for 1883, and $146,523,273 for 1882. It was estimated that the receipts for the last fiscal year would be about $115,000,000; and that they fell more than $2,000,000 short of the estimate, the Commissioner says, resulted from the seven months' extension allowed for the exportation of distilled spirits in bond, on which the tax was due.

The Post-office Department is in constant receipt of information showing that the predecessors of new Democratic postmasters in many small places endeavor to annoy their successors and to reduce their compensation.

It seems probable that the Civil-Service Commission will be attacked in an unexpected quarter. Some of the Republicans are not satisfied that Mr. Dorman B. Eaton has been chosen to represent them upon the Commission, for they assume that it is as a Republican that he has been appointed. An effort is to be made to defeat the confirmation of Mr. Eaton on this and other grounds. Representations have been made to a prominent Republican Senator that Mr. Eaton was not well disposed to the Republican ticket during the last campaign. There has, besides, been placed in the hands of this Senator a document which, curiously enough, attacks Mr. Eaton on civil service reform grounds. Among its allegations are that Mr. Eaton has steadily opposed the extension of the civil-service system; that he has steadily and even bitterly opposed all efforts of his colleagues to secure the adoption of rules for promotion, using his influence clandestinely with the President for this purpose; that he has steadily declined to coöperate with his colleagues in securing a clear, uniform, and sufficient classification of the "civil-service according to the law," and that, by what he claims is a diplomatic and conciliatory policy toward high officials, he has been led to several gross violations of the law and rules.

J. H. Mitchell was on Wednesday elected United States Senator from Oregon. He received 55 votes in the joint session, of which 38 were Republicans and 17 Democrats. It is said that the Democrats voted for him on the understanding that he would support the Democratic National Administration. This breaks a long deadlock in the Republican ranks over the Senatorship. Mitchell was elected Senator in 1873. His character has been seriously assailed by the Portland *Oregonian* (Rep.).

The Virginia State Board of Education, composed of Governor Cameron, Attorney-General Blair, and Superintendent of Public Instruction R. R. Fan, on Friday appointed Professor John M. Langston, colored, of Washington, ex-Minister to Hayti, to be President of the Colored Normal Collegiate Institute, near Petersburg.

Alderman George H. Sterling, of Brooklyn, who failed to retain the position of United States Weigher, has been appointed by Governor Hill to the more lucrative office of Port Warden. The appointment is considered a direct "rebuke" to President Cleveland.

The strike of the Hocking Valley (O.) coal miners has ended in an agreement to submit the dispute to arbitration.

The Baltimore and Ohio Railroad has secured access to New York by a proposed bridge over Arthur Kill to Staten Island, thence by rail to the most accessible point on Staten Island to New York city, thence by swift ferry-boats to South Ferry in this city.

The West Shore Railroad was sold at auction in Newburgh on Tuesday to J. Pierpont Morgan, Chauncey M. Depew, and Ashbel Green (representing the New York Central) for $22,000,000—the upset price fixed by the Court. There was only one bid.

Ferdinand Ward, W. S. Warner, and J. H. Work have been indicted for conspiracy to defraud the Marine Bank of this city.

President Adams was formally inaugurated at Cornell on Thursday.

The report of the Treasurer of Yale College for the fiscal year ending July 31, 1885, shows that the expenses of the College exceeded the income by $11,534 09. The Theological, Law, and Art Schools were a little more than self-supporting, while the academic, scientific, and medical departments show deficits.

Princeton defeated Yale at foot-ball on Saturday, at New Haven, by a score of 6 to 5, thus practically securing the college championship.

The old library building at Hobart College, Geneva, N. Y., was almost entirely destroyed by fire on Thursday morning. Many valuable books that cannot be duplicated were burned. It is supposed that the fire originated from a kerosene lamp. The building was erected in 1836. The loss is $25,000.

The highest tide known for many years prevailed at many places along the New England, New York, and New Jersey coasts on Tuesday. In this city the damage to goods stored on wharfs and piers along the water front and in cellars was very heavy. A gale had prevailed for two days.

An autopsy on the brain of John McCullough, the dead actor, revealed that there was a disease of the blood-vessels of the brain due, it is asserted, to blood poison. Neither tumors nor abscesses were discovered.

George H. Andrews died in this city on Wednesday at the age of sixty-six. He was at one time part proprietor and associate editor of the *Courier and Enquirer*, but sold his interest in 1858. He was Tax Commissioner of this city from 1866 to 1876. He showed marked ability in this position, and made a deep study of the subject of taxation. At the time of his death he was First Vice-President of the Mutual Life Insurance Company.

Prof. Ettore Barili died on Thursday afternoon at Philadelphia. He came of a famous musical family, being half-brother to Adelina and Carlotta Patti. He took charge of the earlier education of Adelina Patti, and prepared her for her début at the Academy of Music in this city. He himself was an accomplished singer.

FOREIGN.

Reports from the Balkans on Wednesday were conflicting. A London despatch announced that the Bulgarians, after desperate fighting, had carried every one of the Servian positions which were menacing Slivnitza. Prince Alexander led the Bulgarian columns in person. On the other hand, an official Servian despatch said that, after heavy fighting, Prince Alexander was forced to retreat before the Servian advance positions, and retire to Slivnitza. Both sides lost heavily.

On Wednesday news was received in Belgrade of the capture of Breznik. The Servians carried eighteen lines of intrenchments and captured 161 prisoners with a number of rifles. The Bulgarian commander, General Philipoff, fled, leaving his military papers behind him. The Bulgarian volunteers also fled.

Thursday's reports showed beyond a doubt that the Servians had been defeated before Slivnitza on the previous day by the Bulgarians, and had been compelled to withdraw from Dragoman Pass. They were unable to bring their full strength into action. The situation on Thursday was therefore as follows: The Servian advance on Widdin was a complete success; also the march of the southern columns on Breznik. But the chief centre column, which was to have occupied Sofia in a few hours, had been practically routed.

Two Bulgarian battalions were defeated on Thursday in an engagement with the Servians, on the road between Breznik and Pernik. The Bulgarians lost 200 men killed and wounded. The Servians captured sixty prisoners and a quantity of ammunition and provisions.

Advices on Friday indicated that the Servians had become dispirited over their recent reverses. The Bulgarians, on the other hand, were aroused to the highest pitch of enthusiasm by the example of Prince Alexander and the victories gained under his leadership. They had gradually driven back the Servian advance line until the Bulgarians' forward line of intrenchments was within a mile of Dragoman village.

A Servian official despatch from Tzari-Brod on Friday said that the Servian repulse at Slivnitza was attributed to the action of General Yovanovitch, Commander of the Danube Division, who made several mistakes, and failed to execute a certain strategic movement. He was tried by court-martial and dismissed from his command. On the heels of this disgrace, he committed suicide by shooting himself with a revolver.

The London *Times* had advices on Saturday morning stating that King Milan's advisers

counselled him to propose immediate peace, whether Sofia were captured or not, and that a treaty of peace would probably be arranged next week. There was also a rumor that Prince Alexander had proposed an armistice to enable the two armies to bury their dead. The ambulance service of both armies is said to be very inadequate.

After a stiff battle on Sunday afternoon the Servians were driven out of Dragoman Pass by the Bulgarians, who then occupied the pass. The Servians have besieged Widdin. A battle was fought on Sunday which was without decisive result. The Porte has proposed an armistice. It is reported that Prince Alexander is unwilling to listen to the proposition until he has expelled the Servians from Bulgaria, and even entered upon Servian soil.

The Servians on Monday bombarded Widdin, and set the city on fire, but after an hour desisted without accomplishing much.

The Balkan Conference has drafted a final protocol, which embodies decisions declaring that the restoration of the *status quo ante* is equally binding upon Servia and Bulgaria. It is reported that if King Milan refuses immediate peace under the terms of the Conference, he will be declared an enemy to the peace of Europe, and two of the signatory Powers will enforce his deposition.

An official report on Monday said that King Milan had brought his main force into operation with the Drina and Morava divisions; that a decisive attack on Slivnitza was imminent, and that if King Milan was victorious, he would agree to an armistice so as to allow the conference of the Powers to settle the terms of peace.

The Servians on Monday evacuated all positions hitherto occupied by them. King Milan was forced to retreat by the failure of his commissariat.

On Tuesday the city of Sofia, Bulgaria, was wild with excitement over news from the front stating that Prince Alexander, at the head of the Bulgarian troops, had followed up his victories, and was driving the Servians slowly but surely from Bulgarian territory. The latest despatch said that Prince Alexander stormed the heights of Tzari-Brod and occupied the city on Monday evening. The Prince made a triumphal entry into the city and was received with enthusiasm by the populace.

A despatch, from Austrian sources, on Tuesday, said: "Russia and England have induced the Porte to despatch a note to Servia to-morrow counselling King Milan to stop the war. The Servian war accounts are unreliable. All correspondents are excluded from the Servian lines except two Austrian correspondents, whose despatches are cooked."

Late on Tuesday it was reported from Belgrade that King Milan of Servia had decided to abdicate the throne. If necessary, Austria will occupy Servia, in order to prevent the accession of Prince Karageorgevitch. The Servians are retreating in great disorder across the frontier.

The *Journal de St.-Pétersbourg* on Tuesday said: "Upon Russia's initiative the Powers are promoting a scheme for the suspension of hostilities in the Balkans, but hopes are entertained that Servia and Bulgaria, although incapable of resisting the promptings of their passion, will become sensible enough to see that it is to the popular interests of both countries that they of their own accord sheath their swords."

The British Parliament was dissolved on Wednesday, and writs for the new elections were issued.

The Parnellites on Saturday issued a manifesto accusing the Liberal party of bad faith in their dealings with the Irish, and concluding: "We feel bound to advise that no confidence be placed in the Liberal or Radical party; and, as far as possible, to prevent the Government of the Empire from falling into the hands of a party so perfidious, treacherous, and incompetent, the Irish Nationalists should not vote for a Liberal or Radical except in some few cases in which courageous fealty to the Irish cause in the last Parliament has given guarantee that the candidate did not belong to the servile, cowardly, and unprincipled herd who would break every pledge and violate every principle in obedience to the call of the whip or mandate of a caucus. We will communicate to the branches of the Nationalists' Society their names."

Mr. Parnell has withdrawn from the Liverpool Parliamentary contest because he thinks it imprudent to run the risk of defeat. He urges the Irish voters to support Mr. O'Shea, the Liberal candidate who opposed coercion, but to vote against the other Liberal candidates for Liverpool. He further advises Irish voters to support Messrs. Cowen, Storey, Thompson, and Labouchère. These are the only exceptions named in his manifesto.

Mr. Gladstone on Saturday delivered his third speech of the campaign at Dalkeith. Fully 3,000 persons were in attendance. He said that he was confident that the Liberals would elect the majority of the members of the House of Commons in the coming elections. The dependence of the Tories, he said, on the Irish voters was unsafe, and was dishonorable to the country.

The Marquis of Salisbury has written an important election letter on the Church question. In it he says that Mr. Gladstone is shilly-shallying, and adds: "Make the support of the Church a test question above all others." He makes a scathing analysis of what he terms Mr. Gladstone's opportunism.

The nomination of Miss Helen Taylor, who is contesting the Parliamentary division for North Camberwell, has been refused by the returning officer.

The British Parliamentary elections began on Tuesday, when fifty constituencies voted. The following results are known: David R. Plunkett, First Commissioner of Works under the Conservative Cabinet, and Mr. Holmes, Attorney-Gen ral for Ireland, also under the Conservative Cabinet, have been elected from the Dublin University divisions. Thomas Burt, Labor candidate, is elected for Morpeth. George Otto Trevelyan, Chief Secretary for Ireland under Mr. Gladstone's Administration, and afterward Chancellor of the Duchy of Lancaster, is elected for Galashiels. Colonel F. A. Stanley, Colonial Secretary in the Conservative Cabinet, is elected for Blackpool. Henry Campbell-Bannerman, Chief Secretary for Ireland under Mr. Gladstone's Administration, is elected for Stirling Group, Stirlingshire, Scotland, and Mr. Justin McCarthy for Newry. All of these gentlemen were elected without opposition.

The result of the Parliamentary elections on Tuesday was: Liberals 34, Conservatives 37, Parnellites 2—a Conservative gain of 11 seats. The Tories are elated over this result and the Liberals depressed. Sir Charles Dilke was elected in Chelsea by the small majority of 175. Mr. John Bright was elected in Birmingham over Lord Randolph Churchill by a reduced majority.

The British forces have carried the forts in the vicinity of Minhla, Burmah, and captured the city after three hours' firing from the floating batteries, the armed launches, and the heavy guns on board the steamers. The British lost four men killed and twenty-seven wounded. Minhla was the most strongly fortified position on the Irrawaddy River, and by its capture the way is cleared for the British advance to Mandalay. The British force has also captured Magwe, a town of Burmah, on the Irrawaddy River, thirty-five miles above Prome.

Some British shells accidentally set fire to the town of Minhla, Burmah, and it was destroyed.

The British expeditionary force has reached Silemyo without meeting with opposition from the Burmese troops.

Four Deputy British Commissioners and four assistants have been appointed for Burmah. This is tantamount to annexation.

The geographical expedition which was reported to have been massacred in New Guinea has arrived at Queensland. All the members are well.

Lieutenant Greely lectured on Thursday night in Edinburgh before the Scottish Geographical Society. Two thousand persons were present, including many of distinction. The lecturer gave the history of his expedition to the Arctic regions. He complained that the 'Encyclopædia Britannica' credited the British with the results of his explorations. He urged that further explorations be made in the direction of Franz-Josef Land.

King Alfonso of Spain is alarmingly ill.

Germany has acquiesced in the Pope's settlement of the Carolines question. It only remains now to give it a definite form.

The German Reichstag was opened on Thursday with the usual formalities. The Imperial speech in substance was as follows: The foreign relations of Germany are peaceful and friendly with all nations. The Emperor confidently hopes that the Balkan conflict will not disturb the peace of Europe, and trusts that the signers of the Berlin Treaty will succeed in securing respect for the treaties by the people rendered independent by them. The Emperor said that he was animated by confidence that God's blessing in the future, as in the past, would be granted to Germany's efforts to maintain peace. Herr von Boetticher, Secretary of State, read the Emperor's speech.

The complete correspondence of Carlyle with Goethe has been discovered in the Goethe archives. Copies of the original letters of Goethe to Carlyle were also discovered.

The adhesion of Belgium to the Latin Monetary Union has been arranged.

M. de Lesseps celebrated his eightieth birthday in Paris on Thursday. He was visited by all the foreign ambassadors and prominent persons in Paris.

Mme. Zaïre (Martel) Nathalie, the French actress, died on Friday at the age of sixty-nine. She made her début at the Comédie-Française in 1849, and became an associate in June, 1852. She was very successful as the mother in "Le Fils de Giboyer" and "Maître Guérin." Her ability was of a high order.

Five thousand people have been drowned and 150 villages submerged in Orissa, India, by a cyclone, and 1,241 square miles in the Murshidabad and Nuddea districts have been devastated.

A tornado swept over the Philippine Islands on Saturday. Eight thousand buildings, including numerous churches and school-houses, were destroyed, and twenty-two persons were killed.

Caceres, the Peruvian revolutionist, has been defeated by a Government force. He lost heavily in killed and wounded.

The entire adult population of Ste. Marthe village, Quebec, numbering 2,000, on Saturday voluntarily assembled in church and pledged themselves to abstain from alcoholic beverages for one year.

There was renewed excitement in Montreal on Wednesday night, and another mob paraded the streets. At several points serious race conflicts were imminent.

CONGRESSMEN AND THE OFFICES.

We print elsewhere a letter from Mr. Henry C. Lea, of Philadelphia, touching what must undoubtedly be the next step forward in the direction of administrative reform—and that is, the absolute prohibition of office-begging by members of Congress. It is the pressure exercised on the Executive by them which has furnished all the ground there is for hostile criticism of President Cleveland's use of the removing and appointing power. It will be found in nearly every case in which he has really fallen below the standards set up in his letter of acceptance, or in his letter to the Civil-Service Reform League, that it has been due to the overwhelming and combined solicitations of members of Congress. It is they who are "the party," and speak for "the party," and threaten or fear "the break-up of the party," in case their demands at Washington are not complied with. It is they who, through their quasi-official right of entry at the White House and in the departments, make the most serious inroads on the President's time and that of members of the Cabinet immediately after the incoming of a new Administration. It was their habit of filling the subordinate offices with their hangers-on which created sufficient public indignation to bring about the passage of the existing Civil-Service Law. They had, in fact, carried the abuse to such a point that the public service had become simply an asylum or reward for persons who had in some manner aided in their election.

They still, however, retain their hold on places which have to be filled with the approval of the Senate, and as these places are the most important, the pressure on the President continues almost unabated, and must severely tax the endurance even of a man as strong both mentally and physically as he is. As long as these offices are within their reach, that great and final object of civil-service reform—the restoration of that separation of the executive and legislative powers provided for by the Constitution, and the disappearance of which was rapidly threatening the very structure of the Government—will not have been accomplished. Every million of increase in the population of the United States increases enormously the importance of that provision of the Constitution which gives the President his appointing power. It is through the exercise of the power of appointment and removal that he executes the laws. In fact, as has been well said, "choosing is governing." He does almost the whole work assigned him by the Constitution in the selection of agents. The greater the number of officers becomes, therefore, and the wider the area over which they have to discharge their duties, the more important it is that the people should know exactly where the responsibility for every appointment lies. Without this knowledge every Presidential election is but a leap in the dark. The man who gets the majority of the votes may not be the man who is "to take care that the laws are faithfully executed." The Constitution intended, however, that there should be no such uncertainty. It intended that when a bad judge was put on the bench, or a bad collector in a custom-house, or a bad postmaster in a post-office, or a bad minister in a foreign mission, everybody above fourteen years of age should know who was to blame. The framers of the Constitution thought they had provided for this by giving the President the exclusive power of selection. They did not give it to members of Congress. Among the powers and duties assigned to members of Congress one looks in vain for the power of selecting postmasters, collectors, Indian agents, and Territorial governors.

The practice of Congressional interference with appointments grew naturally out of the Jacksonian spoils system, and is an inevitable accompaniment of it. As long as there was a "clean sweep," or even a partial "sweep," at the beginning of an Administration, and a great deal of "rotation"—that is, a great many removals of some "workers" to make room for others—the number of vacancies to be filled was of course enormous. It was impossible for the President to fill them himself. He did not even know the names of persons on the spot who could be got to fill them, or of private individuals of whom he could seek advice or information. Under these circumstances the filling of them fell easily into the hands of the Congressman from the district, who always stood ready to name "successors," and soon got into the way of demanding that vacancies should be made in order that he might name successors. This abuse has been much curtailed by the Civil-Service Law. The lower branches of the public service have been practically restored to the Administration. The general result is that there are far fewer vacancies to be filled than formerly, and the Civil Service Act provides a mode of filling most of them which saves the Executive all trouble in the way of selection. The law cannot, however, be made to cover all offices, or the most important ones; but the complete exclusion of the legislators from a share in the appointing power—which the Constitution calls for—might be reached, and will probably have to be reached, by legal penalties directed against solicitation or "pressure" on the part of members of Congress. It is, in truth, quite as great an offence against good government for a legislator to go to the White House to clamor for offices for himself or his dependants, as a reward for either future or past services, as it is to bribe voters at the polls with the promise of money or its equivalent; and there is no reason why it should not be repressed by the same means.

PLATFORM FORESTRY.

The various discourses which were pronounced in the early autumn about forests and forestry, at the meeting of the American Forestry Congress in Boston, were chiefly remarkable for their entire failure to develop any scheme at all commensurate with its importance for the practical solution of the forest problem. This, perhaps, is not altogether surprising. The subject is, at best, difficult and complex, and its solution can only be hoped for in the application of scientific methods and the adoption of sound economic tenets. These will hardly be looked for upon the platforms of Forestry Congresses, and, as a rule, make no part of the stock in trade of the speakers at such meetings. Such meetings, perhaps, are not without their use in popularizing the ideas of the real students of forest science, but this will be found the only benefit which they can possibly confer upon the public. In failing to do this, the Boston meeting, like its predecessors, failed to accomplish the good that the public had the right to expect from it.

The question of removing the duty now imposed upon foreign lumber, for example, was hardly mentioned at this meeting, and no action was taken looking to its abolition. And yet the importance of placing lumber upon the free list has been so widely discussed, and the necessity of doing this as the first real step toward preserving our forests has been so generally acknowledged by all students of the subject, that it is difficult to comprehend how any body of men, met together conscientiously to devise methods for saving our forests from extermination, could have separated without the most solemn protest against this duty. Anything like a sense of humor must certainly have been wanting at this meeting, or somebody would have been struck with the absurdity of talking about restoring our forests and supplying lumber for the next generation through the agency of Arbor Days, or by planting trees in schoolhouse yards, or along village streets, so long as the Government of the United States continues to pay a bounty to an army of lumbermen to induce them to cut away the forests already in existence. The effect of this duty is disastrous. It produces hardly any revenue to the Government, while it causes every year the needless ruin of thousands of square miles of forest.

There has been during the past two years, in spite of the general business depression which has extended to all parts of the country, an alarming increase in the production in the Northern States of those grades of lumber which are directly affected by the tariff. It is believed that the amount of white pine and spruce manufactured last year was fully 50 per cent. greater than the product of these varieties of lumber in 1880. The market has been glutted; failures among lumber manufacturers have been numerous, and prices have only been maintained at all through trade combinations. Conflagrations in mills and yards—sure indications of an over-supply of lumber—have been unusually frequent. All this means that our forests, already too heavily drawn upon, have been cut away during the past few years of business depression unnecessarily. The duty upon lumber is largely responsible for this state of things. It stimulates production by preventing Canadian competition, and moreover it stimulates it by inducing the manufacturers of lumber to manufacture as much and as rapidly as possible before the removal of the duty (which they feel is inevitable) reduces the profits of manufacturing. In the meantime the whole country suffers in the waste of forests needlessly destroyed for the benefit of a small class of capitalists, who are really more injured than benefited by a duty which induces premature destruction where preservation for future use would be more profitable.

It is idle to talk about protecting our forests, it is useless to plant trees, or to gush over

Arbor Days, until the duty upon foreign lumber is removed. This is the first step, and until it is taken, all the effusive forestry oratory will only serve to make the American people more ridiculous in the eyes of civilized nations. The whole matter would be intensely amusing were it not so serious. It is hardly possible to realize the extent of the blow which must fall on our material prosperity when the annual output of our Northern pine forests is reduced from the present enormous product of 1,800,000,000 feet to not more than one-tenth of that amount. And yet that is what we are coming to. Under existing laws and existing methods of forest management, nothing can prevent the early extermination of our Northern forests. This destruction will mean that building materials in all the prairie States will be so expensive that houses will no longer be built there; it will mean that rents will be higher all over the United States; that many railroads will be deprived of the larger part of their traffic, and that the great centres of lumber distribution, like Chicago, Toledo, and St. Paul, will lose this profitable industry. It will mean that one hundred thousand men will be deprived of employment, and two hundred millions of invested property will be rendered useless. The tariff on imported lumber will not bring all these evils upon the country, but it is hastening the day, and hastening it alarmingly, when our forests will cease to produce anything like what they are producing at present. In the meantime we continue to have Forestry Congresses, and listen, with more or less pleasure, to orators who tell us of the beauties of Arbor Days, and of the number of feet of lumber we use every year in making our tooth-picks.

One gratifying exception, however, to the general run of these discourses was a paper on "Forest Preservation in Canada," by Mr. A. T. Drummond, of the Canadian Geological Survey, which has since been privately printed by the author in advance of the official report of the meeting. It contains practical and valuable suggestions, which are, moreover, of special interest to the people of the United States because it is not improbable that the Canadian system, with some modifications, might wisely be adopted in treating the forests upon our public domain. The practice has long prevailed in Canada of leasing, with the right to cut timber from year to year, large areas of the Crown forest lands under the name of timber berths or timber limits, at an annual rental per square mile. These leases are made from year to year; still, it is pretty well understood that the lessee may, as long as he pays his rent to the Government, remain in possession indefinitely, or until he has cut off all the timber he desired. In other words, the Canadian Government sells to individuals unlimited and unrestricted stumpage, to use an American expression. It follows that the timber limits are often taken up by speculators, who hold them for years, at the original low rentals, without cutting any lumber, and so finally get all the benefit of increased values, which should properly belong to the Crown. To overcome this difficulty, and to perpetuate the productive capacity of the Canadian forests, Mr. Drummond recommends that the lease of timber areas should be restricted to definite periods of five or seven years, and that on the expiration of the lease the area covered by it should be permitted to rest for twenty-five years, to allow the growth of the young trees left standing on it; that the timber limits should be restricted in size to an area of fifty square miles; that the production of square timber should be discouraged, because the hewing of square timber is wasteful of material and increases the danger of fires in the woods; that no trees below twelve inches in diameter at the stump should be cut upon any timber limit; and that the starting of forest fires should be made criminal —as Mr. Drummond remarks, nineteen-twentieths of the forest fires can be prevented. Finally, the planting of seedlings and seeds of the most valuable trees for the purpose of restoring the forest growth when it has been destroyed, by fire or the axe, is recommended, as well as the organization of a Forestry Department in each Province in connection with the management of its Crown lands.

All of these suggestions would be equally applicable to the United States if the Government could adopt the policy of retaining the title to its forest lands, and selling only limited stumpage from them. It will be well to note that Mr. Drummond, whose information on the subject is of the best, tells us that "in Ontario and Quebec, along the streams which fall into the Georgian Bay, and at the sources of the Ottawa, St. Maurice, and other great rivers and their tributaries, there is still a considerable area of white and red pine, but the trees are of diminished size compared with the splendid trunks common on the Ottawa twenty years ago. The lumbermen are fast approaching the northern limits of the growth of these trees. . . . New Brunswick has still some forests of pine and spruce, but the area is, compared with the Ontario and Quebec forests, relatively small, while Nova Scotia has, on the whole, but little timber of good merchantable size left."

THE LESSON OF PHILADELPHIA.

During the past week the people of Philadelphia have been told more plain truth about the condition of that city than they ever heard before in the whole course of their lives. Outsiders have long recognized the fact that Philadelphia is the most provincial and the least progressive of all our large cities, but it was a bold visitor who ever ventured to disturb the serene assurance of the true Philadelphian that his town was still as far ahead of any other as in the days of its colonial preëminence more than a century ago. So the city has gone on year after year hugging the comforting delusion, while the rest of the country has smiled at its self-deception and wondered how the spell would ever be broken.

A week ago one of her leading newspapers concluded that it was high time to tell its readers the truth. The *Times* came out with an exceedingly vigorous editorial article confessing that "there is no city in the world with a million intelligent people that is as shamefully provincial as is Philadelphia"; pointing out in detail how the city has been actually retrograding in almost everything for half a century; showing how far behind the age it is, not only in water supply, sewerage, and public improvements generally, but also in commercial and trade methods; and pointedly summing up the whole case in the graphic remark that its people "are drivelling in village swaddling clothes." Quite as notable as such a deliverance from one leading journal was its hearty endorsement by another prominent paper; the *Press* disregarding the recognized newspaper rule which forbids one editor to "play second fiddle" to another, and sustaining every count in the *Times's* indictment. "Philadelphia," says the *Press*, "ought to be one of the best-paved, best-watered, best-sewered, best-schooled, best-governed, and best-toned cities in the country, instead of being, as is unhappily too true, one of the worst." Some of the minor papers have followed the lead of the *Times* and *Press*, so that the city may be said to have pleaded guilty to the indictment.

The Philadelphia papers are so busily engaged in trying to awaken the city from its lethargy that they do not go into the question of how it came to fall into such a sad state. But the question is certainly one which ought to be asked. It is plain enough, for one thing, that the trouble does not grow out of the presence of a large foreign element in the population. Philadelphia is remarkable among our chief cities for the small proportion of foreigners among her inhabitants. The census of 1880 showed 847,170 people within her limits, of whom 642,835 had been born in this country; in other words, of every 100 persons 77 were natives and only 23 foreigners. In Boston at the same time 32 of every 100 people were foreign-born; in New York 40, and in Chicago 41. That is to say, the foreign element in Philadelphia is but little more than half as large proportionally as in New York and Chicago. Moreover, not only are the overwhelming majority of her population natives, but the descendants of the original stock have always exercised an even more powerful influence than their arithmetical proportion represented. There is no other large city in the country where public sentiment to this day is so largely made by the offspring of the very people who made public sentiment a generation ago, when the tide of foreign immigration to this country was just setting in.

Philadelphia, as the *Press* truly says, is one of the worst-governed cities in the country. It has suffered from ring rule as badly as Chicago —yes, as badly as New York, considering the more limited opportunities for municipal jobbery and thievery. When one asks why New York and Chicago have been so badly governed, the conventional reply is because their ignorant foreign element is so large that bosses have found willing followers, and thus rings were easily sustained. But Philadelphia's foreign element has never been large enough to threaten the dominance of the native, as New York's once really was when, in 1860, 48 out of every 100 residents had been born abroad. Besides, it must be remembered that in Philadelphia, as everywhere else, the bulk of the foreign vote has gone with the Democrats, while the city has been governed —and misgoverned—by the Republican party. While race lines have fused, as they always do, in the conspiracy for municipal plunder, and one of the worst bosses has been an Irishman, yet the fact remains that the dominant party

has been a party always controlled by the native-born. We may remark in passing that this is a fact of no little significance in any study of the municipal problem, since something else than foreign immigration is obviously responsible for ring rule in our cities when the city with the most purely American population suffers from its evils as severely as those which have the largest mixture of the Old World. For our present purpose the point is that Philadelphia's trouble is clearly not due to any abnormal influence of a large foreign element.

So far, indeed, from laboring under special obstacles to the development of a healthy organic life, Philadelphia has always enjoyed some uncommon advantages over other great cities. The tenement-house is everywhere recognized as at its rare best a drawback and incubus upon municipal progress, and at its usual worst a most demoralizing force. Philadelphia hives a smaller percentage of her people in tenement-houses than any other large city. A multitude of small householders, and especially of small house-owners, among the masses has always been considered the surest foundation of a community's prosperity. Philadelphia has a larger proportion not only of small householders, but also of small house-owners, than any other large city. With but little more than two-thirds as many inhabitants as New York, Philadelphia has almost exactly twice as many dwellings, 847,170 people in 1880 having 146,412 dwellings in the latter city, while 1,206,299 in the metropolis had but 73,684. Each dwelling in New York thus contains on the average 16.37 people, while in Philadelphia the proportion is only 5.79 people to a dwelling, which comes surprisingly near to a dwelling for every family on the universally accepted basis of 5 persons to a family.

Such a city ought truly to be "one of the best-toned in the country"—in other words, one of the most enterprising, progressive, liberal. The reason why it is "one of the worst" must be a reason which goes to the very bottom of things. There is one which at least goes far to explain why a city with a population remarkably homogeneous, living under the most favorable conditions, is falling into decay. That reason is because its prosperity has been built upon unsound foundations. Philadelphia is distinctively the American city which represents the fullest development of the protective system. "Protection to American industry" has been the watchword which must be adopted by everybody who aspired to success. The city's manufactures have been very largely the outgrowth, not of the natural laws of supply and demand, but of tariff laws passed by Congress. A system of high duties has forced the whole country to maintain there great industries which, under normal conditions, would never have been started. The nation at large has been roundly taxed for many years to make Philadelphia a great manufacturing city.

The "American system" has had full scope in Philadelphia for half a century. According to all the theories of the protectionists, it should be to-day the most progressive of all our cities. In point of fact, it is, by its own confession, the most backward. The result is only what ought to have been expected. Its people have been trained to believe that their prosperity depended, not upon themselves, but upon Congress; that the true way to surmount any difficulty was, not to summon new courage and exert fresh energy, but to get the tariff laws tinkered again; that the first thing to do if business became depressed was to send a committee to Washington to have it revived by act of Congress; in short, that the whole country was under a moral obligation to see that Philadelphia made money. It was inevitable that a community thus educated to hold the nation responsible for its well-being should gradually lose its public spirit, and should lag behind communities which have realized that they had their own way to make in the world. For half a century the rest of us have been trying to build up the "infant industries" of Philadelphia, and the confession is at last extorted from Philadelphia herself that the city is still "drivelling in its swaddling clothes." History never recorded a more impressive lesson in political economy.

THE ENGLISH ELECTIONS.

The English elections began on Tuesday, when the vote was taken in 50 constituencies. There are 377 members to be returned for counties, and 284 for boroughs, and 9 for the universities, making a total of 670—which is 28 more than the last Parliament. The remaining elections will be held in the course of the next eight days, the choice of the particular day, within certain limits, being left to the Sheriff. Tuesday, for instance, was the first possible, Monday, December 7, will be the last possible day on which an election can be held.

The changes created by the legislation of last year are two in number. Both the counties and boroughs returning more than one member are divided up into what are here called election districts, but are there called "electoral divisions," each of which returns one member. Under the old system, with few exceptions unnecessary to enumerate here, all counties and some boroughs returned two members, who represented the county or borough as a whole, and for whom each voter voted or could vote if he pleased. Now each voter, with a few exceptions, votes for only one member, and each member represents his own division, or his own borough, and nothing more. In other words, the number of constituencies has been greatly increased. There was of course a grand opportunity for gerrymandering in laying out the new electoral divisions and redistributing the seats, but nothing of the kind was attempted. The Commissioners appointed for the work did it to the complete satisfaction of both parties, under the general directions of the act. We should further explain that 103 boroughs formerly returning members were by this act merged for electoral purposes in the counties to which they belong, while two were disfranchised altogether for persistent corruption; 40 lost one member; 20 had the number of their members increased, and 33 new boroughs were created.

The second change is in the electoral qualification, which in the boroughs remains what it has been since 1867, but in the counties is assimilated to that of the boroughs. By the Act of 1867, every householder paying local rates in a borough, and every lodger paying $50 a year or over for his rooms, was entitled to vote. But at the county elections only freeholders, leaseholders, and copyholders paying $25 a year rent, householders paying $60 a year rent, and tenants paying $250 a year, could vote; yet a resident in a borough possessing these qualifications in the county could vote at both borough and county elections, or, in other words, had two votes. The county qualifications in Ireland and Scotland were somewhat different, but in all three countries they had the same basis—that is, a voter had to own land in fee or hold it on a lease at a certain amount of rent, and, if a tenant at will, pay a pretty high rent. All this is now swept away. Every man over twenty-one who rents a dwelling, or a lodging at $50 a year, or lives as a servant or caretaker in premises not actually occupied by the owner, has one vote, but only one, whether in borough or county.

The Liberal strength, as might be expected, has ever since 1832 lain mainly in the boroughs. It was only in some of the northern counties, in which a large manufacturing population had grown up, that they ever achieved any success. So that it may be said roughly that during the last fifty years, town England has been Liberal, country England Tory. In the counties the constituencies were composed of tenant farmers who voted with their landlords, sometimes, but not often, under intimidation. As a general rule the political sympathies of the two classes were the same. They felt that together they formed what was called the "landed interest," and they lived under an old and strong tradition that the owners of land formed the only true English people, or, in other words, were the only persons who had what was called "a stake in the country." A landless man—no matter how much personal property he had—might, they thought, at any moment pack up his goods, take himself off, and become a Russian, or a Prussian, or an Italian. The notion that the farm laborers or the village tradesmen and mechanics should have any share in electing county members, appeared to them little short of ridiculous. Consequently, when the franchise was extended in 1867, the extension was confined to the boroughs. The idea of extending it in the counties also appeared even at that date rather chimerical, and the old division of the kingdom between the two parties was maintained.

It is estimated that the electorate, which numbered over 3,000,000 for the United Kingdom under the old law, will at this election reach 5,000,000. But the greatest uncertainty prevails as to the feelings and opinions of these 2,000,000 new voters. Nothing could more strikingly illustrate the extent to which the laboring class has been excluded from all share in the political and social life of the counties than the utter ignorance in which the squires, parsons, and farmers seem to be as to the use which their dependents will make of the franchise. Both parties have been doing their utmost during the late canvass in the way of exploration among the

rural voters, but the only thing which seems to have been learned with any degree of certainty is that they dislike the farmer and the parson, and would willingly turn the latter out of his glebe and stop his income. Of general political ideas, or of knowledge of the historic issues which divide the two great parties, there is apparently but little trace among them.

This is now the chief element of uncertainty. Another is the influence which Parnell's manifesto will have on the Irish voters, who are very numerous in London and in the great northern boroughs of Yorkshire and Lancashire, and can in some cases turn the scale. He has counselled support of the Tories, who are undoubtedly worse enemies of Irish Nationalism than the Liberals, but, luckily for themselves, have not of late had to legislate against it. The Liberals, in other words, are the latest offenders, and the most scrupulous—that is to say, are likely, owing to their strength, to be less disposed to make concessions to the Irish than the Tories. The Tories are fighting a desperate and probably losing battle for nearly everything they care about in political and social life, and are therefore, like all men in difficulties, ready to pay a very high price for temporary accommodation. It is, therefore, perfectly good politics for Parnell to try to get them into power, as long as he feels he can make a better bargain with them than with their opponents.

ENGLISH PARTIES ON THE EVE OF THE ELECTIONS.

LONDON, November 11, 1885.

To attempt to give your readers anything approaching a résumé of the speeches with which we have been deluged during the last five weeks would be tedious, nor very profitable, for in the multitude of details the main outlines of the battle would be lost sight of. I will therefore try to summarize the position and prospects of the two parties, pointing out their respective outward professions and their internal difficulties, so as to present you with some data for understanding the issues that have to be decided at the polls between November 25 and December 5.

The present election is the first for a good many years in which sharp and definite issues between the parties have not been submitted to the nation. In 1868 the disestablishment of the Irish Church was the chief battle-ground: the Liberals were all for it, the Tories all against it. In 1874 the whole conduct of Mr. Gladstone's Government at home and abroad was impeached, and each party was united in defending or condemning it. In 1880 Lord Beaconsfield's foreign and Indian policy was similarly impugned: the Tories rallied enthusiastically to him, the Liberals not less so to his great antagonist. But now it is hard to say what are the precise issues before the country. Lord Salisbury accepted, although with serious qualifications, three of the proposals set forth in Mr. Gladstone's manifesto, and claims them as no less the property of the Tory than of the Liberal party. In foreign affairs, the real difference (for it is a real difference, of sentiment and temper) does not at present show itself in any tangible controversy as to what should be done in Egypt, in Bulgaria, in Afghanistan, in Burmah, in South Africa; for both parties are agreed in declaring that they will uphold the solid interests of England and at the same time avoid aggression, though the maintenance of British interests receives heavier stress from the Tories, and the avoidance of aggression from the Liberals. Even in the Irish problem there is no great diversity of language. Both parties wish (or say they wish) to govern by the ordinary law, both promise large local self-government, both deprecate anything that can impair the unity of the Empire.

What is still more significant, there are momentous cross-issues in each party, which threaten its internal unity. The Tories are divided on the tariff issue. Some, like Lord Iddesleigh (Sir Stafford Northcote), stand out for free trade; some advocate protection; some, like Lord Salisbury himself, propose a war of retaliatory tariffs which would involve the protection which they profess to disclaim. Among the Liberals the question of Church establishments has produced a more threatening rent. The Radicals are for it, the less advanced Liberals oppose it; and though an attempt is being made to smother these dissensions by declaring that it is a question rather for the future than the present, the more eager advocates of disestablishment, especially in Scotland, cannot succeed in holding their peace, while the more zealous friends of the Presbyterian establishment in Scotland and of the Episcopal establishment here declare they will vote for no candidate who wishes to sever the Church from the State. It looks as if we were approaching a condition of things not wholly unknown in America, where the parties would avoid the great and living issues, because themselves uncertain upon them; would try to "sit upon the fence" as regards those issues; would, in fact, become not so much the exponents of broad and intelligible lines of policy as mere historical bodies, each held together by its traditions, by its leaders, by its desire to control the government of the country, and to a certain extent, also, by a certain tendency and temper which it feels to be opposed to that of the other party. I do not say that this condition of things has arrived—far from it. I conceive that the phenomena we now see are temporary, and that we may see again parties sharply divided from one another by clear issues. But one can scarcely doubt that such a condition of things will ultimately arrive in England; and this foretaste of it, even if temporary, is full of instruction and of warning.

Let me now speak more in detail of each party. There are great searchings of heart among the Tories on other questions as well as protection. The landed aristocracy dislike and fear Lord Randolph Churchill and the programme of Tory democracy. They would like to return to the coercive system in Ireland, and have never acquiesced in the Land Act of 1881. They have no wish for even such changes in the English land laws as Lord Salisbury feels bound to promise, for they cling to the system of great estates. They will submit unwillingly to the supersession of the present system of the government of counties through nominated magistrates by a representative system. They feel as if they were being dragged by an overwhelming force along a painful path to an unknown and probably hateful goal. All this, and the fear of defeat, or of having to avoid defeat by an alliance with the Parnellites, whom they detest, has taken the spirit out of them. They are poor, for agricultural depression has told heavily on them; and it is much to the credit of their fine old British qualities that they continue to make so good a fight. Latterly, however, the cry of "the Church in danger" has come to them like a whistling breeze to becalmed mariners. This is a cry which unites them to the other or democratic wing of their party. It suggests something tangible to defend. It makes them feel themselves true Tories once more. It has rallied the Anglican clergy to them; and the Anglican clergy, when well roused, are no contemptible allies. The Liberals have been fond of calling the Tories "the stupid party." It has, at any rate, the merit of being the dogged party, the party which can abstain from recrimination, can wash its dirty linen at home, and go on facing its opponents without betraying the inner suspicions and misgivings that afflict it. It now presents a united front to the foe over the whole island. In scarcely a constituency does one Tory candidate oppose another, while there are dozens in which two Liberals contend for the favor of Liberal electors.

In the Liberal party one may distinguish two, perhaps three sections. Although the greater part of the wealthier classes, and a vast majority of the landed aristocracy, now belong to the Conservative party, there is still a number, absolutely large, of these persons who remain attached to Liberalism. They are influential by their social position and their education; their weight in the country is to be measured not by their own votes, but by the votes of others whom they affect and guide. Some of these men are moderate Liberals in the sense of being somewhat lukewarm, attached by habit to their party, but little disposed for any swift or large reforms. Others are convinced and earnest in their political principles, but also cautious, sensitive to anything which looks like an attack on the sacredness of property, unwilling to undertake more than one big change at a time. All these men, of both the sections I have just described, may be usually counted, and were counted six months ago, as supporters of the Liberal party. They were not very zealous, because the mistakes or misfortunes of the Liberal Ministry, particularly in Egypt and the Sudan, had irritated the former section and depressed the latter. But the course of the recent canvass has alarmed them. Those who belong to the Church of England, as the great majority do, are averse to meddling with her. They are connected with her services by long habit, with her ministers by personal ties. Even those who are not convinced of the advantages of a State Establishment of religion, want time to think about so large and far-reaching a proposal as the destruction of that Establishment. They resent the claim put forward to treat disestablishment as an essential part of the Liberal programme, both as unwise in itself and as an attempt to force their hand. Many of them have been not less displeased by what they think the socialistic character of the advanced Radical platform. They have great doubts about universal, gratuitous elementary education, doubts based partly on economic grounds, partly on the assault which they suspect to be preparing on the religious instruction given in denominational schools. They distrust the scheme of giving local boards power to take land compulsorily for the purpose of supplying laborers with allotments. They think that those economic principles which used to be the pride of the Liberal party are being undermined, and scent socialism not only in the actual proposals made by the Radical leaders, but even more in the manner and tone of those proposals. Your esteemed correspondent, Mr. A. V. Dicey, whose letters I always read with profit as well as pleasure, describes the educated and property-holding classes of England as taking the Radical agitation coolly and quietly, in the faith that somehow all things will work together for the good of England. So far as external manifestations go, his remarks are justified by the absence of any open expressions of alarm or revolt. But he seems not fully to appreciate the underlying uneasiness, the half-conscious misgivings which prevail in these classes, and which might produce a breach between them and the Radicals were it not that

these moderates and economists are kept by party feeling under the Liberal flag, and repelled from the Tories by the patent insincerity and the tactical blunders of which the latter have been guilty.

The wing of the Liberal party of which I am speaking looks to Lord Hartington and Mr. Goschen as its future leaders. It relies in the meantime upon Mr. Gladstone; and loyalty to him, confidence in him, is one of the chief forces which keep it in line with the rest of the party. It possesses other men of eminence, such as Lord Granville and Derby, Mr. Childers and Mr. W. E. Forster. But none of these has any personal hold on the electors, none would count for much in case a struggle came.

The Radical wing is far more numerous. It includes the great majority of the workingmen in the towns, and, for the moment, of the agricultural laborers also. It heartily embraces the advanced platform, with its planks of gratuitous elementary education, compulsory purchase of allotments, and graduated taxation. It desires Disestablishment, and in many constituencies refuses to accept any candidate as a true Liberal who will not pledge himself to vote therefor. Its leader and favorite is Mr. Chamberlain, whose name is now received at meetings with acclamations not inferior to those given to Mr. Gladstone, and who will have in the new Parliament a large band of members ready to give him personal allegiance. However, the Radicals still recognize Mr. Gladstone as the present chief of the whole party, and Mr. Chamberlain himself has heartily agreed to this, and admits the claim of Lord Hartington, while he denies that of Mr. Goschen to be considered a true Liberal and a party leader. It need hardly be said that there are a great many persons, candidates and voters, who cannot well be referred to either of these wings, but form the centre of the Liberal army—persons who think Mr. Chamberlain too bold, Lord Hartington too slow, Mr. Goschen too purely critical, and who are especially glad that the continuance in command of the old chief saves them from the necessity of knowing where to place their allegiance.

Beyond the Radicals is a party, if it can claim to have won the name of a party, which is substantially socialist in aims and ultra-democratic in methods. It consists of some of the so-called labor candidates and their supporters, some of whom are adherents of Mr. Henry George's scheme of land nationalization, some attracted to one of the many forms of Continental communism. These doctrines have taken no wide hold upon our working class, but they have begun to make a noise, and they are professed by some few (less than a dozen) of the candidates now addressing constituencies. Some of such candidates would be commonly classed as Radicals; others go as far beyond the Radicalism of Mr. Chamberlain or the Tory democracy of Lord R. Churchill as those leaders go beyond Lord Hartington or Lord Iddesleigh. Even the appearance in our politics of such a set of men, however few they will be in the next Parliament, has its significance.

The observer who surveys from a hill a battle which is still only half fought, will reframe, if he is prudent, from giving an opinion on the movements whose motives and results he can but guess at. But such an observer, watching the battle now raging over our island, would probably conceive that the generals on both sides had made serious mistakes. The Liberals, he would say, ought to have scrupulously avoided anything that could divide their own forces. They ought to have kept the question of Disestablishment entirely out of the way, at least in England, where they own that it is not a question for the present. They ought to have brought to the front only so much of a reforming programme as was needed to put zeal into their working-class supporters, and they might have done this without alarming the more cautious men. They were practically sure of their majority when Parliament rose last August, and the extreme language held by some of the Radicals since has rather weakened than strengthened them. Great, no doubt, is the importance of getting new members pledged to an advanced programme, but greater still the importance of having a large majority to make the Liberal party independent of Mr. Parnell. On the other hand, the Tories have neglected to play, or have played most unskilfully, the obvious game of sowing dissensions among the Liberals, and endeavoring to detach the moderate and timid men from the rest of the party. Lord R. Churchill's abusive tongue ought to have been held in check. Lord Spencer's Irish administration ought not to have been so disrespectfully treated, for the Irish vote in England was already sure to go against the Liberals. Lord Salisbury ought not to spoil his part of Defender of the Church and the Faith by overdoing it. To all which and many more similar criticisms there is the old answer, that a statesman, like the rest of us, is himself and not some other man.

Y.

THE REVOLT OF THE CONSTABLE OF BOURBON.

PARIS, November 3, 1885.

THE episode of the rebellion of the Constable of Bourbon is one of the subjects which have been treated with the greatest care by M. Paulin Paris in his 'Studies on Francis the First.'* Charles of Bourbon, born in 1490, was the second son of Gilbert of Bourbon, Count of Montpensier, and Dauphin of Auvergne (the dauphinate of Auvergne was a part of Lower Auvergne). His eldest brother died; and having married at the age of sixteen Suzanne de Bourbon, he became Duke of Bourbonnais and Auvergne, and possessor of domains as large almost as those of the ancient dukes of Burgundy. It was too much for a subject; but the danger was not perceived at once, as the mother of Suzanne retained a life-interest in the greater part of this domain.

Charles of Bourbon, at the age of sixteen, went to Italy with King Louis XII., who conquered the Duchy of Milan. He made a second campaign in Italy, another in Guienne; in 1514, he was sent to Burgundy. His temper was proud and impatient, and he showed much decision on the battle-field. Francis I., even before his coronation, gave to Charles of Bourbon the sword of Constable. Michelet will have it that this choice was the work of Louise of Savoy, who was in love with Charles of Bourbon.

"The proud Louise of Savoy," he says, "in ill-health, but still handsome, ardent, violent, and sensual, had ceased to have love-affairs; she had a real love. It was shown when, at the beginning of the reign of Francis I., she gave the sword of Constable to the young cadet of the Montpensiers. The mother of the King speculated in the ruined health of Suzanne. The ambitious man tolerated this love of Louise, became Constable, engaged himself to her, and even received from her a ring—fatal gift, which lost him, as Louise thought that thus she kept, could claim, pursue him. She would have her ring back, and she had a search made for it in Rome on the corpse of Bourbon."

This is what might be called sensational history, and we must look a little closer into the facts. After the coronation, Francis left France for Italy, where the Swiss had occupied the Milanese provinces. The Constable led the vanguard; the King had the centre, called the *bataille;* the Duc d'Alençon was in the rear. At Marignan, in the letter written by Francis to his mother, after the battle, he says: "I assure you that the Constable and Monsieur have broken lance as well as any gentlemen, and I speak of what I have seen; they did not spare themselves any more than do angry boars." Francis I. went to Bologna to see the Pope, and the Constable claimed the honor of assisting in the mass of Leo X., little foreseeing at the time that he should one day order the pillage of Rome. When the King returned to France, the Duke of Bourbon remained in Italy with the powers of a Viceroy. He hindered, by his wise measures, the Emperor Maximilian from undertaking the siege of Milan. He returned afterwards himself to France, leaving in Milan Odet de Foix, Sieur de Lautrec, whom the King had chosen for his successor. His recall was not the mark of any discontent on the part of the King. Francis, the Queen, and the Regentess (as Louise of Savoy continued always to be called) met him at Lyons and conducted him to Moulins. A child was born to the Constable in July, 1517, and the King was his godfather.

Moulins became a sort of capital; the Venetian ambassadors describe its splendors. The Constable had immense revenues (about the equivalent of twenty millions of francs in our time), but his prodigality was boundless. He was surrounded with an army of parasites; he sent couriers daily to Spain, to Germany, to Italy. He built sumptuous houses and palaces; he fortified his cities and his castles. He patterned after the court: he received ambassadors. Maximilian died in January, 1519, and the Electors of the Empire were uncertain between Francis, King of France, and Charles, King of Spain. Charles of Bourbon asked the King's permission to visit the King of Spain, on some question of claims connected with the Duchy of Sessa. On this occasion he opened relations with the King of Spain, who was three months afterward elected Emperor. On his return, as his infant child had died and his wife Suzanne was dying, he obtained from her a will which constituted him her universal heir. He took his part in the famous interview of the "Field of the Cloth of Gold." Suzanne of Bourbon died soon afterward, at the age of thirty. Great precautions had been taken to insure to the Constable her enormous possessions, but no will could nullify the rights of the Crown. At the death of Suzanne it was impossible that the King's Council and the Parlement should not claim for the King, if not the Duchy of Bourbonnais, at least the Duchy of Auvergne and its dependencies. There arose another difficulty concerning some estates which, after the death of Suzanne of Bourbon, fell by law into the hands of Louise of Savoy; and as the possessions of Louise of Savoy were, after her death, to come to the Crown, she could not renounce her rights.

Many historians have tried to explain the conduct of the Constable by the vexation he felt at the claims of the Crown; but it is now proved that, even before the death of his wife, he had answered the overtures made to him by Charles V. On his trial, Papillon, his Chancellor, reported that once, walking with him, the Constable said: "If my wife were to die, it would be easy for me to marry the sister of the Emperor." Charles V. had fathomed his ambition, and we need not look for any other explanation of the treason. All others are dismissed with powerful arguments by M. Paulin Paris. When Charles of Bourbon, at the instigation of his mother-in-law, Anne of Beaujeu, who hated Louise of Savoy, became a rebel, and offered his services to Charles V., he did not mean to give the Emperor the means of conquering France. He wished merely to force the King to abandon to him the apanages in which he only had a life-interest. He wished to keep Bourbonnais, Auvergne, Provence, to reëstablish the ancient kingdom of Arles or of Burgundy. The story of an intended marriage of

* See the *Nation*, No. 1061.

the Regentess and of the Constable, and of the latter's refusal, is a mere fable.

The secret of the conspiracy was not well kept. Francis learned that the Constable was going to marry the sister of Charles and to support the Emperor's claims on Burgundy. But the Constable did not throw off the mask at first. The campaign began in Picardy. Charles V. arrived as far as Valenciennes, but was obliged to retire before the French forces. Bourbon had played his part in the campaign, but as soon as it was over, he recommenced his intrigues. He affected to be only occupied with his law-suits, but he made a formal alliance with Charles V. and with Henry VIII. The Imperials were to attack France from the side of Navarre and Provence, of Hainaut and Artois; the King of England by way of Picardy and Normandy. Bourbon was to meet Henry VIII. in Paris, to be named Duke of Burgundy and Count of Provence. This was all to be done while Francis, with the flower of the French chivalry, was in Italy.

The correspondence of the Constable gives ample proof of this plan:

"If," says M. Paulin Paris, "the secret could have been kept; if the King of England had not felt some hesitation, and even some remorse, in entering into such an odious conspiracy, France would have become the prey of three confederates. To the Emperor was reserved Burgundy; to the English Picardy and Paris; to Bourbon Poitou, Provence, and Champaign. No more France, no more *fleur de lys*. This is what Charles of Bourbon, first prince of the blood, invested by his King with the office of Constable of France, dared to hope, and what so many historians have tried to excuse."

Early in 1523, Charles V., Henry VIII., and Charles of Bourbon had arranged all the details of the invasion. The despatches of Jean de Marny, of Adrian de Beaurain and others to the Emperor (State Papers, vol. vi), prove this amply. Beaurain in June found Bourbon at Montbrison, surrounded by many eminent men, who were not all yet in the secret of the conspiracy—Saint-Vallier, the father of the famous Diane de Poitiers, alone remained with Bourbon, when the plot was announced. We have the deposition of Saint-Vallier in the National Library. He says that the Constable made him swear on a piece of the holy cross that he would not betray him; he was angry with the King, who had deprived him of many of his rights, and still more with the King's mother. The Emperor had promised him his sister Aliénor (Eleonore), widow of the King of Portugal, and made him many other promises. The confession of Saint-Vallier was confirmed by the confession of the Bishop of Autun, Jacques Hurault, a prelate who had a very bad influence on the violent and versatile Constable. It can no longer be doubted that Charles of Bourbon wished to become a prince of the Empire. He avoided the King, and found many pretexts for not obeying his commands. Francis, who was on his guard, stopped at Moulins, and found the Constable ill in bed, or feigning to be ill. He visited him in his room, spoke to him of the information which he had received, assured him that he did not believe in his treason, and pressed him to join him in Italy as soon as possible.

Bourbon did not arrive. His bad will was manifest. He left Moulins, sent letters to the Queen, to the Regentess, to the King's sister Margaret, in which he spoke of the persecution of which he was a victim, and tried to find excuses for his treason. We have all these letters, as well as many others. He finally took to flight on horseback with only six men, and travelled thus as far as Mantua, Cremona, and Piacenza, where he met Charles de Lannoy, the Viceroy of Naples, who was the lieutenant of the Emperor in the Milanese provinces. Admiral Bonnivet was in command of the French army in Italy, and was obliged to retreat before the Imperials. In this retreat, the famous Bayard, the knight without fear and without reproach, was mortally wounded. He was sitting against a tree, when the Duke of Bourbon saw him "and told him," says Du Bellay, "that he had much pity for him, seeing him in that condition, since he had been such a brave knight. Captain Bayard answered him: 'Sir, there need be no pity for me, as I die a virtuous man; but I pity you, seeing you in arms against your prince, your country, and your oath.' And shortly afterwards he expired, and his body was given to his servant, who carried it to Dauphiné, where he was born."

We need not relate here the danger of France, the invasion of Normandy, of Picardy, of Provence, of the Low Countries, of Burgundy and Champaign. Bourbon, who was anxious to enter Provence, was obliged by his allies to remain in Italy. In 1524 he laid siege to Marseilles, but all his efforts were vain, and he was obliged to retreat. Francis entered Italy once more, but was made prisoner at Pavia, and one of the conditions of the treaty which set him free was a clause in virtue of which Charles, Duke of Bourbon, should recover all his possessions and his honors, and should not be prosecuted for his actions. Bourbon himself felt, however, that he could not return to France. He was discontented with his allies: he had quarrelled with De Lannoy; he had not been able to take Marseilles, owing, as he said, to the English not having entered Normandy, and because the Imperials had not appeared on the Rhone, and he had received no reinforcements from Spain or from Italy; he was angry with the Emperor, who had kept delaying the marriage with Princess Eleonore. He had become desperate. He was at the head of an army of undisciplined soldiers, who were only drawn together by the hope of pillage. He was led by them against Rome, more than he led them, and he fell on the day of the assault before the walls of the holy city. Those who have read the memoirs of Benvenuto Cellini know how the famous sculptor claims the honor of having struck Bourbon.

It was fortunate for Bourbon that he died as he did. He had already lived too long when he signed his treaty with Spain and with England. It was certainly not uncommon, in the troubled times of the fifteenth and sixteenth centuries, to see great lords entering into alliance with foreigners; but these alliances were temporary, and were always made under the pretext of defending the power of the king against some minister or some party. They always pretended to save the king from a tyrannical rule. Bourbon did more: though he was a prince of the blood, he tried to dismember France and to create a sovereignty for himself. We do not think that M. Paulin Paris has been unfair to him, and he has rendered service to historical truth in showing that Francis I. and his mother, Louise of Savoy, cannot be made responsible in any way for the actions of the Constable. He has shown, also, in the analysis of other episodes, that the memory of Francis has been much calumniated; and he has done justice to the "Knight King," to the man who wrote, after Pavia, "Tout est perdu, sauf l'honneur."

Correspondence.

THE LEGISLATIVE AND EXECUTIVE DEPARTMENTS.

To the Editor of The Nation:

Sir: All reforms must be aggressive and progressive. It does not do to rest satisfied with a position that has been won, but we must push forward until all that is possible has been accomplished. Civil-service reform has made most gratifying progress, but much remains to be done, and the securing of what we have gained depends perhaps on our gaining more.

It seems to me that the time has come for a further advance, and I would suggest that it be in the direction of putting an end to the claim of Congressmen to control the distribution of patronage. There is no more fruitful source of abuse than this. The spoils system has struck its deepest roots in the halls of Congress, and until they are eradicated all other reforms are but superficial. There is no right-minded citizen who has not, since last March, been moved to alternate shame and indignation at the sight of members of Congress, singly and in batches, hovering around the President and the departments in the avowed capacity of office-brokers, and quarrelling with each other over their respective claims and successes and defeats. Scandals such as this are possible under no other civilized government than ours; and in the speculations of the political quidnuncs with which the special despatches from Washington are filled, the interests of the public service are never even alluded to: the sole topics are whether the Hon. Mr. A. or the Hon. Mr. B. will succeed in getting his henchmen quartered on the Government.

It is this, perhaps more than anything else, which leads to the enforcement of the vicious principle of rotation in office. The pressure thus brought to bear on the President and the heads of departments is almost beyond the resistance of human endurance. I give Mr. Cleveland credit for uncommon tenacity in withstanding it, and yet the changes in office since he came into power are vastly more numerous than they ought to have been, and we are constantly threatened with the prophecy that the dykes are about to break down and the floods to sweep in. If Congressmen could be restricted from this degrading brokerage, there would be an opportunity of carefully weeding out the unprofitable public servants and replacing them judiciously. The time and attention of the President and of his Cabinet could be devoted to the higher duties for which the public has a claim upon them, and the interests of a great nation would not be rendered subordinate to the apportionment of petty spoils. Mr. Cleveland's Executive order of October 27, denying himself in the future to office-seekers, required a high degree of moral courage, and yet it is a most pitiful acknowledgment of an abuse which no lover of his country can regard without humiliation and shame.

Yet this is by no means the worst aspect of the matter. No feature of our Constitution is more striking than its careful adjustment of the Executive and Legislative Departments of the Government, and its precautions to prevent mutual encroachments and interference. The claim of Congressmen to control the "patronage" of their respective districts and States is a palpable violation of this constitutional adjustment, and, like all other violations of the wise provisions of the Constitution, it works unmixed evil. The Executive, in place of being responsible for its action in making appointments, shelters itself behind the Legislature, whose members have insisted on changes and on the appointments of their dependents and heelers. Appointments so made are not apt to be fitting ones: the public service is debauched and is rendered an asylum for political paupers and tramps. On the other hand, the Legislature, by this usurpation of Executive functions on the part of its members, is rendered unfit to discharge its constitutional duties of supervision over the Executive. The country has a right to expect that the Senate will exercise impartial vigilance in performing its function of confirmation, but this is impossible when a nomination has been made at the instance

of some influential Senator; and I have only to allude to the indefensible custom known as "Senatorial courtesy" to show to what absurd abnegation of constitutional duties the system inevitably leads. From this temptation the House of Representatives is free, but the time and attention due to public measures, for which the people pay their representatives, is apt to be devoted to pressing the claims of dependents to office, and when a department is filled with the creatures of Congressmen, no vigilant supervision and correction of abuses in that department is to be looked for. The system moves in a vicious circle: the provisions of the Constitution are evaded and nullified; the public service suffers, and the political life of the whole nation is degraded.

The remedy for these evils which seems nearest at hand would be to deprive members of the national Legislature of all influence, direct or indirect, in Executive appointments. This would be perfectly legal and constitutional—nay, it would be merely carrying out the principles of the Constitution. It should be made a misdemeanor in office for any member of the Legislative Department of the Government to recommend in any way any appointment to office in the Executive Department. At the same time the right of the President and his Cabinet to solicit information in special cases should be carefully guarded. While this suggestion is not offered as a panacea for the evils which have grown up unchecked during two generations, it would be a long step toward their diminution and ultimate suppression. It would leave both departments of the Government to the free and unbiassed discharge of their respective constitutional functions; it would invigorate and purify the administration of public affairs, and it would impose restraint on the insane pressure for office, which is the main source of unnecessary and multiplied removals.

Such a measure would of course meet with determined opposition, and could only be carried as the result of public agitation showing the popular will in unmistakable fashion. The time would seem to be ripe for such agitation, and I therefore venture to make the suggestion in the hope that discussion may follow. Yet, when brought to the test, I have little doubt that it would be favored by many more members of Congress than people are apt to imagine. It does not require much shrewdness for the average member to learn that his control, real or supposed, over the spoils of his district is apt to make him more enemies than friends, to be a source of weakness rather than of strength. Many, doubtless, feel sensibly the degradation inseparable from the office-brokerage inevitably thrust upon them, and still more would be delighted to be relieved from the harassment inseparable from such an occupation.

May I express the hope that the *Nation* will consider this suggestion, and give it the benefit of a discussion which I think in time may result in the adoption of some measure of the sort? HENRY C. LEA.

PHILADELPHIA, November 18, 1885.

THE BOSTON COLLECTORSHIP.

TO THE EDITOR OF THE NATION:

SIR: I have been a reader of the *Nation* from the first to the last number, and I have always believed, and do now believe, that it is not your purpose or desire to misrepresent or mislead.

In your issue of November 19, in speaking of the appointment of Mr. Saltonstall, you say: "The gentleman selected by Mr. Collins for the place was Mr. Peter Butler, who is also highly respectable, and would fill the place worthily." While it may be true that Mr. Collins preferred Mr. Butler, it is not quite true that Mr. Collins selected him; but, on the contrary, Mr. Butler was the unanimous choice of the Democratic State Central Committee, of which Mr. Collins is chairman. Some considerable time after the selection of Mr. Butler, and the presentation of the name of Mr. Saltonstall, it was intimated to the committee by the President, or some one in his name, that if after consultation they could unite upon some new name, a solution of the problem could be had. The committee had a full meeting, and called to their aid many of the leading Democrats outside of their body, who, after consultation, unanimously recommended Mr. Butler as a proper person, by business habits and sympathy with the Administration, for Collector. I do not think any one would say that these gentlemen are all mere spoilsmen.

Again: "Moreover, Mr. Butler is by no means committed to the cause of civil-service reform as Mr. Saltonstall is. Mr. Butler might possibly take a weigher out of a pothouse, but no one would ask Mr. Saltonstall to do it." Mr. Butler is not, and never has been, a public man in the same sense that Mr. Saltonstall is and has been. He is a merchant by business and training, never appearing before a public audience, always on the side of good government, a warm friend of Daniel Webster, a firm believer in the circular issued by the latter while Secretary of State and in the one issued by the Hayes Administration, and in warm sympathy with the policy of President Cleveland, and, in his quiet, unpretentious manner, has made his influence felt in the right direction. He has repeatedly, in my presence and that of others, stated that the Civil-Service Law must and should be enforced in the *spirit* as well as in the letter. As to the *possibility* of Mr. Butler "taking a weigher out of a pothouse," all who know him would treat the idea with the indignation which would greet the same intimation if made against his distinguished and successful rival.

My only reason for writing is the feeling that in this matter a great injustice has been done to both Mr. Butler and Mr. Collins.

A CLEVELAND REPUBLICAN.

BOSTON, November 23, 1885.

THE LATE BISHOP OF MANCHESTER.

TO THE EDITOR OF THE NATION:

SIR: While the estimate of the character of the late Bishop of Manchester given by your London correspondent in the issue of November 19th is in the main accurate, and contains a eulogy which is thoroughly well merited, there is one aspect presented which, while doing more than justice to the dead, is very unfair to the living.

Your correspondent says that it was because Dr. Fraser cared "very little about minor points of doctrinal difference and still less for external observances and matters of ritual," that the "Ritualist party" were displeased at him. This scarcely seems an accurate statement of the position of the Bishop who promoted, and, through all its stages, sanctioned, the prosecution of Mr. Green by agents of a London society (none of his congregation being willing to prosecute), and who subsequently allowed his imprisonment (upon a technical charge of contempt involving the very nicest of constitutional questions) to extend over more than a year, when, by any one of half-a-dozen methods, he might have secured his liberation without the sacrifice of anything for which either party was contending. The same Bishop, a very short time ago—perhaps within a year—at an after-meeting of the Upper House of the Convocation of York, publicly condemned the last official act of Archbishop Tait (in which the late Bishop of London, Dr. Jackson, joined), which was intended to, and for the Southern Archdiocese did, secure for the "Ritualist party" the same toleration which, by the principles of the English Reformation, is enjoyed by every one else. No, Mr. Editor, Bishop Fraser's "broad, general friendliness to all classes and sects" did not extend to the extreme limit of his ecclesiastical horizon, for, either rightly or wrongly, he was the uncompromising foe of the Ritualists.

It is a little odd to call such a man a "moderate High Churchman," for it would be difficult to find either the moderation or the High Churchism. Nor can it quite fairly be said that his "zeal and fervor" were not associated with at least a modicum of "narrowness and even bitterness." In all other respects he was a very prince among bishops. In the matter of church building and restoration his record is little less than astounding, and the number of persons confirmed by him last year exceeds that of many a bishop during his whole episcopate.

If the readers of the *Nation* are presumed to be sufficiently unbiassed in this matter to have had one side furnished them, may I not ask you to be kind enough to let them see the other?

I am, sir, R. H. N.

PHILADELPHIA, November 21, 1885.

WHY NOT A GREAT UNIVERSITY AT HOME?

TO THE EDITOR OF THE NATION:

SIR: Instead of expending so much force in finding fault with a certain denominational college in Connecticut, why do not New York men build a university of their own? Sometimes it is easier to make a new thing than to tinker an old one. What is to prevent the metropolis (and so the whole country) from founding a new university on a larger and more liberal scale than the Congregational college at New Haven? These are days of large enterprises of that sort. If there is no man in New York quite equal to Governor Stanford, who is putting some twenty millions, single-handed, into an institution in California, why should not a dozen or two New Yorkers put together a few millions of their modest little earnings for a similar purpose?

It would be easy to sketch the outlines of an institution of larger scope than either Harvard or Yale. Neither of them is a university in the European sense, or in the ideal sense—a place where everybody might learn anything. They are only universities in the American sense (American, except for Johns Hopkins University, which has a broader plan)—that is to say, colleges surrounded by three or four professional schools. What the *Zeitgeist* demands is a true university; *having, by all means, a great college* as a foundation stone, but having also—above and beyond this—opportunities for special study of every kind, and not merely that looking to two or three "learned" or "scientific" professions. Yale College has not even as yet caught up with the modern idea that women, as well as men, "have souls"; and neither Yale nor Harvard has attained to the idea of having the foremost man available in every branch of important knowledge and skill, with his hands free from school-mastering cares to attend to mature students, outside of those merely seeking a bread-and-butter occupation.

One may well conceive of Yale College, personified, as shrugging her shoulders under the present fire of criticism, and looking toward New York with the sarcastic query—"If you don't like me as my Connecticut clergymen have made me, why don't you make something better?"—Yours truly, E. R. SILL.

CUYAHOGA FALLS, OHIO, November 20, 1885.

A STUDENTS' HOUSE OF COMMONS.

To the Editor of The Nation:

Sir: Would you allow me some of your valuable space to call attention to an institution at the Johns Hopkins University, which I think deserves to be more generally known?

The literary societies of our colleges are chiefly of two sorts—either devoted to the reading of essays and other similar literary productions written by the students, or else consisting of formal debates on subjects of small general interest. Societies of both these sorts have been tried at the Johns Hopkins University, all commencing most promisingly, but invariably dying a natural death within a few months. Interest flagged after the first few meetings, while the students had too much to do to spend time in preparing essays or reading up for fixed topics of debate.

Last year, however, at the suggestion of one of the Fellows in History, a new departure was made. At a mass meeting the students decided to establish a deliberative assembly, resembling as much as possible the English House of Commons. The proposer of the scheme prepared the draft of a constitution, on the model of one he had seen working at another college, which was adopted, with some few alterations, by the students. The "Hopkins House of Commons" was incorporated. The officers were to be as follows: 1, a speaker elected twice a year, who was to have all the duties of the same officer in the English House of Commons, and, besides, the executive power of appointing the prime minister; 2, a prime minister, who was always to belong to the majority of the house; 3, a foreign secretary; 4, a home secretary, who were to assist the prime minister in deliberation and debate—the two secretaries being appointed by the prime minister. The speaker was also to appoint a sergeant-at-arms for the preservation of order, and a clerk to note the proceedings.

With this working machinery, bills are introduced and put through all the readings and forms of a deliberative assembly, and adopted or rejected according to the disposition of the house. The Opposition benches are, as a rule, almost as full as the ministerial seats, causing the rivalry to be very active and the interest unflagging. Meetings are held every Monday evening at 8 o'clock, and the house seldom adjourns before 11 P. M. The attendance is very large, often reaching twenty-five or thirty, while an excellent rule, that three successive absences shall be equivalent to a resignation, insures constant, consecutive attendance. The second year has opened with a membership almost doubled, which is not confined to undergraduate students alone, for the roll contains the names of a number of graduate students.

Here, then, is a students' society doing good work, familiarizing the members with the customs and rules of deliberative meetings, while at the same time interesting them in the social and political problems of the day, and preparing them to be good citizens and intelligent voters. Perhaps, if this letter is seen by members of literary societies of other colleges, it may prompt them to establish societies of a similar character which will do equally good work.

The Hopkins House of Commons has always met with the most courteous support from the Faculty of the University, the president and professors encouraging the students to join, and frequently proposing subjects for debate. On one occasion, I remember, the Professor of Political Economy handed a bill, entirely prepared, to the Ministry to be introduced.

In closing, I will add the names of some of the bills which have been introduced and debated: Bill 3, on Nicaragua Canal; bill 4, Local Option; bill 5, Increase of U. S. A. Navy; bill 9, for repealing title A, U. S. Statutes; bill 10, to admit ex-Presidents to Senate.

Yours truly, Langdon Williams.

Johns Hopkins University, Baltimore, Md., November 16, 1885.

GAMBLING ON STEAMSHIPS.

To the Editor of The Nation:

Sir: My attention has recently been called anew to the gambling permitted, and in some cases, I am told, authorized, by the various steamship companies whose large steamers carry most of the passengers between here and Europe. It is, I believe, permitted on all the steamers. On some it has so conspicuous a place that it is impossible for one who desires, to get out of its atmosphere. The public pool on the run of the steamer is as much a regular incident of each day's life as is dinner, and the smoking-room has long ceased to be represented by its name, but is from morning to night simply and openly a gambling-room. Any objections which ever held good against Baden Baden or Monaco hold with equal force against these public gaming-tables of the large steamers. Young fellows with plenty of money, going to Europe to see the world, will hardly find after they reach the Continent a more dangerous place in this respect than on the steamer that carries them.

It is desirable that persons who wish to gamble in private should have the liberty to do so; or rather, it is not desirable that such liberty should be interfered with by the law of the land or the sea. But it is also desirable that such a practice, which the opinion of a large part of the community stamps as a vice, should not be expressly authorized, accommodated, or allowed in conditions of living where the habits of one member of the community so directly and closely affect all others as in life at sea. One may fairly claim, without committing himself to any theory of ethics, utilitarian or otherwise, that any practice which is condemned on moral grounds by any large part of the community, should not in justice be tolerated in places where those parts of the community are compelled to meet it. Even smoking, which is now rarely opposed on moral grounds, and is obnoxious to a comparatively small number of persons, is so guarded in its practice that one who wishes to avoid it can do so, even on an ocean steamer. But gambling, which is far more nauseous morally to one who objects to it than tobacco is physically to any one, is so persistently thrust into public life on board of some steamers, that there is no protection from its presence. The White Star Line is said to be among the most culpable in this respect, which is the more to be regretted as this line bears so high a reputation for efficiency of service and excellence of accommodation. Persons have said to me more than once that they should prefer to cross by this line, but would never enter one of its ships again, on account of the gambling publicly permitted. Any course that alienates even a minority of patrons is bad policy, unless the opposite course has large and lasting gains.

It is in any case the management of the companies that is in this respect directly responsible. A captain who should wish to stop the practice aboard of his vessel might fear, even if he should be willing to make the attempt on his own responsibility, to be reprimanded by the company for interfering with the rights of passengers. But the company itself could readily stop the practice. Have public pools absolutely prohibited. Have the staking of money on any game prohibited in any public place, as saloon or smoking-room. Have this rule placarded in such places. Have it the duty of the purser to see that the rule is enforced, with the understanding that any complaint entered against him for non-enforcement would be cause for discharge. Undoubtedly this would not put a stop altogether to the practice of betting on any and everything—which wave will break first, what vegetable is in the covered dish opposite—but it would compel gambling to retreat to private places; and to stop the public practice of a vice is always a great gain. There are other social evils which, no doubt, cannot be absolutely guarded against on steamships, but no one would on that account think of making express provision for their practice.

Frederic Palmer.

Jenkintown, Pa., November 16, 1885.

MORE TELEPATHY.

To the Editor of The Nation:

Sir: I have been much interested in the cases of telepathy reported in the *Nation*, and give the following, which happened here last week: Mrs. F. dreamed her watch was broken, and was greatly afflicted to see it all in pieces, and in her distress awoke. Feeling very ill, she awakened her husband to go for a physician. His first words on awaking were, "Who broke your watch?" M. E. W.

Dover, N. H., November 16, 1885.

PRESENT-DAY TELEPATHY.

To the Editor of The Nation:

Sir: An instance of telepathy more striking than any yet mentioned in the *Nation* occurred in connection with the recent elections in this State on November 3d. The county of Halifax, which lies in the "Black Belt," had always been overwhelmingly anti-Democratic; and there was little reason to believe that results this year would be different. On the afternoon of election day, however, before the polls had been closed or the vote counted in Halifax, a vague rumor began to circulate in Lynchburg that Halifax was going Democratic by 1,500 majority. There was absolutely no foundation for the report, but it spread like wildfire; and, strange to tell, was confirmed, even to the correctness of the figures, by the subsequent returns. T.

University of Virginia, November 21, 1885.

THE BLOODY SHIRT.

To the Editor of The Nation:

Sir: The probable origin of the term "bloody shirt," concerning which your correspondent "E. S." inquires, may be learned by reading pp. 188-194 of the fifth volume of Gibbon's 'Decline and Fall of the Roman Empire.' Othman, the third successor of Mahomet, had been assassinated by one of the Arab factions. Moawiyah, who reigned a few years later, revenged the death of Othman. Gibbon says (vol. 5, p. 194): "The sacred duty of pursuing the assassins of Othman was the engine and pretence of his ambition. The bloody shirt of the martyr was exposed in the mosque of Damascus," etc.

It is almost, if not quite, certain that this was the first time the expression was ever used.

Yours truly, T. A.

Huron, Erie Co., Ohio, November 14, 1885.

Notes.

We ought to have stated, last week, in noticing the Greville Memoirs, that the authorized edition is sold in this country only by Worthington Co., 28 Lafayette Place, New York city.

'Selected Poems' of Mrs. S. M. B. Piatt's will be published by Houghton, Mifflin & Co., as well as the following: 'The Thanksgiving Muse,' a book of verse by Prof. Henry A. Beers, of Yale;

and 'The Life and Campaigns of Gen. J. E. B. Stuart,' by Maj. H. B. McClellan. The same firm will undertake the coöperative work edited by Mr. Justin Winsor, entitled 'A Narrative and Critical History of America,' with biographical and descriptive essays of its historical sources and authorities. This enterprise will require eight volumes of 600 pages each, illustrated after the manner of the 'Memorial History of Boston.' Each volume will be complete in itself.

G. P. Putnam's Sons announce that the forthcoming number of the *Journal* of the Military Service Institution of the United States for December will contain a facsimile (even to the paper) of General Grant's last message to his countrymen prepared at Mt. McGregor in June.

Dodd, Mead & Co. publish next month the second volume of Woltman & Woermann's 'History of Painting,' which covers the period of the Renaissance.

J. B. Lippincott Co. have in press: 'Anecdotes of Gen. U. S. Grant'; 'Memoir of Mary Anna Longstreth'; 'Lyrical Poems,' by Emily Thornton Charles; 'People and Preachers in the Methodist Episcopal Church'; and 'Othello,' by Horace Howard Furness, in his Variorum Edition of Shakspere.

A large-paper edition of Wilson's 'Bryant and his Friends,' illustrated with forty-nine portraits and numerous other illustrations, will be issued on December 20 by Fords, Howard & Hulbert.

A. D. F. Randolph & Co. publish immediately 'Correspondences of Faith, and Views of Madame Guyon,' by the Rev. Henry T. Cheever. Also, a new edition of Frederick Saunders's 'Evenings with the Sacred Poets.'

'England as Seen by an American Banker'; 'The Temperance Teachings of Science,' by Prof. A. B. Palmer, of Michigan University; 'A Family Flight through Mexico,' by the Rev. E. E. Hale and Miss Susan Hale; and 'December,' the first of a series of "month-books" of poetical selections compiled by Oscar Fay Adams, are to be published by D. Lothrop & Co., Boston.

'Vergebens,' a novel by Maria Werkmeister, a German lady residing in Chicago, is announced by the Franz Gindele Printing Co., Chicago.

D. Van Nostrand informs us that a sufficient number of subscribers has been obtained for the limited reissue of Halleck's Jomini's 'Strategical Life of the Emperor Napoleon,' and that it will accordingly be ready on December 15.

On December 10 D. C. Heath & Co. expect to issue 'An Application of the Scientific Method to the Teaching of History,' by Mary D. Sheldon, formerly Professor of History in Wellesley College.

The fourth series of Johns Hopkins University Studies will be devoted to American Municipal Government, and the programme embraces a notable array of subjects and authors. The city governments of Baltimore, Philadelphia, Chicago, St. Louis, San Francisco, and New York will be treated, with other more general topics.

The new edition of Shakspere, in seven convenient volumes, from the press of Henry Holt & Co., New York, follows the text of Dyce, and the chronological order of Professor Delius in the 'Leopold' Shakspere, which also furnishes the text of "Edward the Third," included with "The Two Noble Kinsmen" in the body of the work. From Dyce, too, a glossary has been compiled for each volume. The original matter consists of a brief and capable 'Life,' and short introductions to the several plays by Miss A. R. Macfarlane. These are modestly restrained to the narrowest limits, and consist almost wholly of a bare summary of the contemporary evidence regarding the dates of production, the origin of the plot, and the authorship, gleaned from the obvious authorities, and make no attempt at criticism. They are entirely careful and trustworthy, but it would seem that their usefulness would have been greatly increased if a more liberal scale had been allowed.

The oddity and the delicate beauty of the latest edition of 'Gulliver's Travels' (London: Nimmo; New York: Scribner & Welford) will make it a general favorite. There are sixty plain illustrations, and three times as many colored, all printed in with the text in a very workmanlike way, and all free from grossness in design. The letterpress and paper are of the best. Finally, Mr. George Saintsbury has contributed a brief, unpretentious prefatory memoir of Swift, by which the volume is made more complete and valuable. We commend it to all in search of a holiday edition of Gulliver.

The bound eighth volume of the *Magazine of Art* (Cassell & Co.) is very attractive as a mere collection of illustrations in many styles and of many grades. Portraits old and new are very numerous, as are reproductions from paintings or original designs, like the Chodowiecki series, for example. Sidney Colvin, Austin Dobson, Helen Zimmern, A. Mary F. Robinson, Millicent Garrett-Fawcett, Cosmo Monkhouse, Andrew Lang (of whom, by the way, there is a fine full-page portrait), W. J. Loftie, W. M. Conway, and many other well-known writers, insure the literary quality of the contents of this volume.

As our glorious autumn draws to a close, 'Flowers for Winter Days,' by Susie Barstow Skelding (White, Stokes & Allen), become seasonable. We have them here in four chromolithographs, not badly done, bound up in twice that number of leaves of poetry, appropriately selected, in an ornamental cover, inside of which we read: "Patent applied for on this binding." We heed the warning, and are not tempted to infringement of the inchoate rights. The same we may say of the other parts of the "Flower-songs" series, namely, 'Spring Flowers,' and 'Midsummer Flowers.' But why should the cover of the latter be made gorgeous before the time with golden-rod in bloom and leaves of sumach and maple in full autumnal coloration? More agreeable to nature and quite well done are the sprays of apple and flowering cornus for 'Spring Blossoms.' 'Flowers Here and There,' with poems arranged and illustrated by the same authoress and publishers (a quarto of 134 pages), has a descriptive title; for the pictures *here* brought together into one volume are already *there* in the series aforesaid. But the poetry is partly different, and there is more of it.

The most important contribution which has been made for many a long year to the literature of the old English drama, has just been completed by the issue of the fourth volume of A. H. Bullen's 'Old Plays.' Of the sixteen dramas which have been drawn from oblivion or obscurity, and made accessible to students, six are from manuscript never before put in print, and the remaining ten from scarce quartos of which no modern edition exists. None of them are of high literary merit, except the hitherto unknown play of "Sir John Van Olden Barnavelt," believed, on very strong grounds, to be by Fletcher and Massinger, and dating from 1619. This has been warmly welcomed by scholars of the first competency, has been reprinted in Holland, and translated into German, and is styled "a noble poem" by Mr. Swinburne. The other wholly new plays are "Dicke of Devonshire" (Heywood?); "The Lady Mother," Glapthorne, 1635; "Captain Underwit," Shirley (1640?); "The Distracted Emperor," and "The Captives," Heywood, 1624. The reprints from the quartos are: "The Tragedy of Nero," 1624; "The Maydes Metamorphosis" (Day?) 1600; "The Martyr'd Souldier," H. Shirley, 1638; "The Noble Souldier," Rowley, 1634; "Sir Gyles Goosecappe," 1606; "The Wisdom of Dr. Dodypoll," 1600; "The Tryall of Chevalry," 1605; "Two Tragedies in One," Yarrington, 1601; "The Costlie Whore," 1633; and "Everie Woman in her Humor," 1609. A few passages from one or two of these have been given by Lamb, and of course he gave the best; but except for this trifling part the collection is wholly new, and is invaluable for the historical study of the dramatic period, though as literature they can be neglected. The editing has been very faithful and efficient, and it is with pleasure that we notice the promise of continued labor in this very difficult field of investigation. Mr. Bullen deserves the encouragement of all thorough students of our literary history.

The November number of the *Moliériste* (which comes in mourning for the death of M. Émile Perrin, the manager of the "Maison de Molière"), contains a facsimile of a newly-discovered signature of the dramatist, for moneys received at Pézenas, December 17, 1650. M. Georges Monval, the editor of this periodical, and the archivist of the Théâtre Français, has been appointed editor of the 'Nouvelle Collection Moliéresque' (Paris: Librairie des Bibliophiles) begun by the late Paul Lacroix. M. Monval is a more careful and a more exact scholar than his predecessor. It is also announced that the original 'Collection Moliéresque,' now out of print and very scarce, will be reprinted under M. Monval's supervision.

The November number of the *Revue Historique* contains an article by M. Frank Puaux upon the "Responsibility for the Revocation of the Edict of Nantes." His conclusion, drawn from an examination of contemporaneous records and documents, illustrated by many quotations and references to authorities, is that Louis XIV., Mad. de Maintenon, and Louvois can only be regarded as accomplices; that the chief responsibility rests upon the Roman Catholic clergy. This was the opinion of all the Protestant writers of that day; and the King himself, in an impressive scene recorded by St.-Simon, five days before his death, solemnly protested that he had acted ignorantly in the matter, and that the clergy would have to answer before God for what had been done.

Another paper in the same number is on the "Origin of Christopher Columbus." It is an examination of a work recently published by a Genoese priest named Pergallo, in answer to the doubts expressed some fourteen years ago by M. H. Harrisse on the authenticity of the History of Columbus, attributed to Fernando, his illegitimate son.

The December number of *Le Livre* will contain a paper by Mr. Henry Pène du Bois on "New York Bibliophiles," illustrated with views of certain private libraries of this city. A few copies will be issued separately by Mr. John Delay, of Union Square.

M. Georges Duplessis, who has charge of the department of engraving in the Bibliothèque Nationale, has put forth a brochure on 'Les Emblèmes d'Alciati' (Paris: J. Rouam; New York: Christern). His bibliography has been compiled primarily with reference to the wood-cut illustrations of Alciati's famous work, and so has an excuse for appearing after Mr. Henry Green's biographical and bibliographical study of the same author, to which M. Duplessis fully acknowledges his indebtedness. The sons of Aldus Manutius, Christopher Plantin, and many less prominent houses brought out illustrated editions of the 'Emblèmes,' and the cuts underwent many fortunes, some being adopted as the devices of other publishers. Jobst Amman had a hand in directing at least the execution of one series, and all—even the poorest of them—have an interest for the student of early-printing and engraving. M. Duplessis gives eleven examples in facsimile, beginning with the Steyner edition of 1531.

Signora Mario's popular 'Life of Mazzini,' in Italian, now appearing in parts, has already reached the sixteenth chapter, and in point of time is well along in the forties. We understand that it is not her intention to translate this into English when completed, but to write a fresh life for England and America, with the necessary deviations from the original work to suit a foreign public.

Dr. Leopold Ranke, who will celebrate his ninetieth birthday on December 21, has ready for the press a new volume of his Universal History. During the last five years he has regularly supplied the Christmas market with a volume, and three more years will be required to finish the work. As he enjoys excellent health, there is reason to hope that he may complete his task. As Ranke is fully supplied with worldly blessings, there is a project on foot of collecting a sum, apropos of his coming birthday, to be devoted to the endowment of original historic research.

The expedition of Dr. J. R. S. Sterrett, of the American School of Classical Studies at Athens, into Asia Minor during the last summer, seems to have been very successful. He copied 611 new inscriptions in Latin or Greek, and has almost created the map of Isauria and Eastern Pisidia. He found the sites of a number of ancient towns, some of which he could identify by means of inscriptions discovered on the spot, some on general considerations, while others cannot yet be identified. Among his great finds is Lystra, where St. Paul came near being worshipped, which is now called Khatûn Serai, eight hours south of Iconium. Dr. Sterrett also found many Hittite relics.

Gustav Gilbert's 'Handbuch der griechischen Staatsalterthümer' has been recognized, since the publication of the first volume in 1881, as the best short compendium of Greek antiquities. This first volume, 'Der Staat der Lakedaimonier und der Athener,' contains the substance of what most students of antiquity need to know of Greek constitutional history. For the student of institutions, however, the other Greek States present a subject of hardly less importance. The greatness of Athens and Sparta and the completeness of their national life make their contributions historically the more important; but Corinth, Thebes, and Argos were hardly inferior in power and duration, while even the smallest independent city presents on a small scale the leading features of Greek national life. The second volume of Gilbert's work (just published) is principally devoted to these less known States. The *Statistischer Theil*, containing 261 pages out of 426, gives a survey of their constitutions, in 35 sections, beginning with Epirus and ending with Massilia. This is followed by a *Systematischer Theil* in which the whole subject of Greek constitutional history is reviewed, in five chapters, treating respectively of: 1. History of the development of the Grecian State; 2. Elements of population, and political organization of the citizens; 3. Sovereignty (*Staatsgewalt*), administration (*Regierung*), and justice; 4. Military and financial departments; 5. International relations, under the three heads: international law, colonial system, and unions (amphictyonies and leagues).

The managers of the Atchison, Topeka, and Santa Fé Railroad are endeavoring to establish fourteen reading-rooms for their employees along the line of their road. They solicit contributions of books, which may be sent to Mr. W. T. Way, in care of the General Manager, at Topeka, Kansas.

A transposition last week, at the very end of our notice of Thomas's 'Biographical Dictionary,' confused anew the date of George Eliot's birth, which occurred (Dr. Thomas and ourselves in error notwithstanding) in 1819.

— The Christmas *Harper's* is rich in beauty. The selection is not bound hard and fast to the conventional Christmas topics, and thus there is not, either in poetry or prose, the common artificiality of articles worked up for an occasion, and at the same time there is hardly a contribution, except Mr. Arnold's loose and jolting rhymes, which does not involve the sentiment and feeling of the Christmas season, either by its pathos or its legendary touch, or its reconciliations of love into which the element of childhood enters. There is no trace on any page of the theory that the people require inferior literature: the literary work is very even and of admirable quality. Pictures and text are mutually dependent, neither one tagging the other, but united in a rivalry of excellence. In fact, the editing is as flawless as could well be. It seems hardly just to speak of the stories as of minor interest; if they are so, it is because of their fewer and less striking illustrations. Mr. Boughton's is of a nightmare ghost, very simple, but set in a rich relief of art effects both in landscape and in the interiors, and gaining much from a gentle boyish character and the frolicsome tone of the chief adventurer. Mrs. Phelps tells a strong, though raw, tale of a fisherman's hut, a variation of the popular lyric of Kingsley's. "Craddock" describes a Christmas Eve of still ruder mountaineer life, with the same sorrows of women and relentings of hard natured men; and Mr. Brander Matthews weaves together half-a-dozen strands of weirdness by the fire which Judge Feverel kindled two hundred years ago with a brand from the witch's burning. These, with Mr. Howells's farce, less successful than last year's, make up the distinctly literary part of the whole. In the more artistic part, the first place is given of right to the engravings of the Nativity, and the treatment of this central fact of Christmas is shown in historical sequence, from the early devotion of Giotto, to the Parisian frivolity of Bouguereau. The cuts are well selected, and they are very close reproductions of style, the figure of the Virgin from Filippo Lippi, and the whole of the subjects from Luca della Robbia, Roger Van der Weyde, and Dürer being the most successful, unless the frontispiece, Closson's "Madonna del Granduca," be excepted, in which the excellence is marred by a certain weakness in the upper parts of the heads. The water colors of Léon Bonvin, the story of whose pitiful life is told with equal tenderness and reserve, furnish the originals for a second series, which, notwithstanding the seeming hopelessness of transferring the delicacy and purity of such art to black and white, is very attractive; "The Thistle," in particular, with its background of distance and sky, being full of natural charm, while the text throws a shadow of their original hues upon the duller flower pieces, by which what is lost is suggested. The most delicate work, as usual, adorns Mr. Gibson's "Winter Walk." These cuts are at the top of achievement in the later ways of wood-engraving, and show an increasing understanding of their successes and their limits. There are other cuts we should be glad to mention, but we have space only to note the graceful words with which Mr. Curtis winds up the number, with tributes to Wilson Flagg, Edmund Quincy, and William Page.

—More than a year ago there appeared in the *Atlantic* a thoughtful and well-informed article upon Southern colleges which the author has now supplemented by an equally valuable contribution upon Southern preparatory schools, in the December number. A considerable portion of his space is occupied with a presentation of conflicting views, quoted from letters of Southern educators, in regard to questions which have been long thoroughly discussed in the West—whether, for example, the college sacrifices a higher to a lower good by making its standards so elastic as to turn away no student who might possibly be benefited by attendance; whether the college eventually gains or loses more by maintaining its own preparatory department in unfriendly competition with the high schools and academies; and like matters of general policy. The more instructive portion, however, is that in which the present state of secondary education in the South is set forth, and we commend it to the attention of educators. It appears plain that in some parts of the country, and especially in Virginia, these schools are thriving, and that both the character of the teaching and the spirit of the pupils are much better than before the war, and that both public and private beneficence toward education in general are greater than when the poverty of the South was less oppressive. Such a school as McCabe's, which is admirably described by the principal, would be an honor to any State. The author concludes that large State aid is necessary for the common schools, while those devoted to the higher education are likely to be cared for, as at the North, by private endowment. It is interesting to notice how the University of Virginia dominates the subject; and indeed in the range and power of its influence over education, and as an example of a high aim finely sustained through a period of years, that institution has been second to none in the land. Mr. John Fiske unfolds his conception of scientific theism in a concluding article, and, as was to be expected, finds that the Augustinian idea of a magisterial divinity, remote from the universe, must yield to the Athanasian doctrine of immanence, which has some affinity with the modern notion of Force; and that to convert this scientific abstraction into a real idea of deity, an anthropomorphic element must be allowed, which is to be found in the use of man's psychical nature as symbolically representative of God's. Further he does not go, except to discover in the evolution of the psychical element the "manifest destiny" of the world, and to identify it with a divine purpose. Whether he is thought to have bridged the intellectual chasm between finite and infinite or not, he has certainly pointed out the lines of approach between the modern scientific doctrines and the spiritual conceptions of the race, and has indicated in what forms old ideas are beginning to reappear in modern thought. The remainder of the number calls for no notice.

— After six years' work, Mr. C. R. Hildeburn has completed the first volume of 'A Century of Printing: The Issues of the Press in Pennsylvania 1685-1784' (Philadelphia, 1885, 4to), a brief outline of which, wherein titles personally examined were starred, has appeared from time to time since 1882 in the Bulletin of the Library Company of Philadelphia. It is understood that the second volume will be ready next spring. We rejoice over this excellent work, for while we have good bibliographies of the whole country, the States have fared badly. Rhode Island and Ohio, indeed, have elaborate bibliographies of works concerning them, Massachusetts has a catalogue of local history, and more or less unsatisfactory lists exist for Maine, New Hampshire, Vermont, Georgia, Louisiana, Kentucky, Wisconsin, Minnesota, California; but, as regards books printed in the States, much less has been done. Griffith, in his 'History of the Press in Maine' (Brunswick: 1872), has given a list of books published in that State, and, in the *Historical Magazine* for 1870, Dr. Morris began a bibliography of works by residents of Maryland, which was not carried through the second letter of the alphabet. The catalogue of the Loan Book Exhibition at the University of Cali-

fornia (1884) contains a few titles of Californian works, notably the earliest. Mr. Hildeburn, in fact, has produced the first scientific work of its kind. It is comprehensive in scope, with a chronological arrangement, which should be supplemented by an author-and-title index; the titles are accurately transcribed, accompanied by collations or references to authorities, often by illustrative notes and the designation of a library which contains a copy. It is a pity, by the way, that bibliographers cannot agree upon some uniform scheme for thus designating libraries, such, for example, as that used in Bolton's 'Catalogue of Scientific and Technical Periodicals' (Washington, 1885). About 4,500 titles have been collected, 1,935 of which fill the present volume, covering the years 1385-1763. While 1685 has two titles, 1701 has ten, 1751 has forty-three, and 1763 has seventy-one. According to Dr. Haven, there were published in 1763 in the United States 131 works.

—We note that Leeds's 'Temple of Wisdom,' (1688) has surrendered its claim to be considered the first *book* printed in the British Colonies south of New England, in favor of 'The Excellent Priviledge of Liberty' (1687), attributed to Penn. While the first Bible printed in America, Eliot's Indian translation, dates from 1663, the second, which was in German, did not appear until 1743. German titles number about 270, and begin in 1728, though German type was not used until ten or twelve years later; a good part came from the press of the Ephrata community of Seventh Day Baptists. There are a few Dutch and Swedish titles, and about half-a-dozen Latin. The literature of the period was of course largely confined to almanacs and controversial works, but English light literature began to be reprinted about 1760, and after that date "some poem or play came forth at least annually from a native pen."

—At the opening of the present year there were four survivors of the sixty-odd philanthropists who founded the American Anti-Slavery Society in Philadelphia in 1833. One of these, the Rev. Orson S. Murray, died a few months ago, and on Saturday morning, November 21, passed away another, Elizur Wright, at Medford, Mass. Mr. Wright was born at South Canaan, Conn., on February 12, 1804, and graduated from Yale College in 1826. Three years later he became Professor of Mathematics and Natural Philosophy in the Western Reserve College, Ohio, and here there came to him, as to his colleagues, President Charles B. Storrs and Beriah Green, the anti-slavery message which Garrison delivered first through his *Liberator*, and then through his 'Thoughts on Colonization.' As in the case of so many eminent men and women of that day, Mr. Wright's destiny was changed by it. He removed to New York, became Secretary of the New York City Anti-Slavery Society founded in 1833, and, as such, signed the call for the convention to found the National Society in December of the same year. Of this organization he was made the domestic secretary, and a member of the Executive Committee, to which his services were invaluable. It was in 1833, too, that he published an important tract, 'The Sin of Slavery and its Remedy.' His was a large part of that extraordinary activity in anti-slavery publications which threw the South into a panic when copies of the *Emancipator*, the *A. S. Record*, the *Slave's Friend*, and *Human Rights* found their way into the Southern mails, and led to the memorable rifling of the Charleston post office, and the public burning of the "incendiary" matter in 1835. Mr. Wright also founded and ably conducted in New York the anti-slavery *Quarterly Magazine*. In 1838 Mr. Wright was led to abandon the view that the anti-slavery agitation should be purely moral, acting upon political parties as upon the churches, without identifying itself with either. He then, in company with Myron Holley (whose life he has written within the past five years), Alvan Stewart, J. G. Birney, Henry B. Stanton, Gerrit Smith, and others, ardently strove to convert the existing anti-slavery organization into a political machine. This being frustrated by the opposition of Mr. Garrison and his friends, the Liberty Party was formed at the cost of a breach in the anti-slavery ranks. Mr. Wright's fate was again determined for him, and for about a year he edited in Boston a paper founded in antagonism to the *Liberator*. From that time his career was merged in the political evolution which resulted in the Republican party: he established in Boston the *Chronotype*, and subsequently edited the *Commonwealth*. No more racy and caustic political writing has ever been known in this country than saw the light in those Free Soil papers. From journalism Mr. Wright reverted to mathematics, becoming an insurance actuary, and ultimately the head of the State Superintendence of that interest, which he managed, if not always with sound judgment, with a high intelligence, and forced on life-insurance companies all over the United States reforms which are permanent and of great advantage to the insured. Mr. Wright was a man of extreme impulsiveness and warm-heartedness, of real disinterestedness, of rare independence, and of no little versatility of talent, of which (besides the proofs already cited) his standard translation of La Fontaine's Fables in verse (begun about 1837) is an example. He has for two generations been a familiar name and figure in Boston, and his death removes one of a great and heroic breed of New England men.

— Mr. George P. Upton, one of the few able musical critics of the West, has prepared a useful book called the 'The Standard Operas' (Chicago: Jansen, McClurg & Co.). It summarizes briefly the plots of all the operas which one is likely to hear at the present day, besides giving short biographic sketches of the composers, and mentioning the most important numbers in each opera. Mr. Upton's volume is a great improvement in every way on two similar books, by A. S. Gatty and "Notelrac," published in 1880 and 1883. It is better printed and much more comprehensive, and the summaries of the plots are so clear, logical, and well-written that one can read them with real pleasure, which cannot be said of the ordinary operatic synopses. But the most important circumstance is that Mr. Upton's book is fully abreast of the times. It does not, like the other works named, include any of the operas which have disappeared from the stage within the last decade or so, but gives in their place a full account of *all* of Wagner's music dramas. Of 340 pages no fewer than 74 are devoted to Wagner, and this is as it should be, not only because there is so much more to be said about Wagner's poems than about other opera libretti, but because Wagner has now, in this country as in Germany, taken his place at the head of all operatic composers, as far as frequency of performance and the verdict of the best judges are concerned. Goldmark's "Queen of Sheba" and Goetz's "Taming of the Shrew" might have been added by Mr. Upton to his list, as they are among the few operatic successes of recent date, and will both be heard in New York this winter for the first time. An appendix contains a list of operettas and of operas less frequently heard. In this list there are some arbitrary omissions—for instance, Rubinstein's most successful opera, "The Maccabees," is not included in the number of his works, nor is Strauss's "Queen's Lace Handkerchief" alluded to.

— Mr. Walter Damrosch is certainly not deficient in daring ambition. He has signalized the first year of his conductorship of the Oratorio Society by selecting for performance, besides the "Messiah," two of the most difficult works in the whole range of musical literature—Berlioz's "Requiem" and Wagner's "Parsifal," which is to be given as a dramatic oratorio. The "Requiem" was performed on Thursday evening, and it may be said that, if the same standard of execution can be attained in "Parsifal," the Oratorio Society and their conductor will have reason to congratulate themselves, and the audience no ground to be dissatisfied. Not that the performance of the "Requiem" was beyond criticism—far from it; for to achieve such a result with this difficult work would require at least a score of full rehearsals with orchestra, and that would imply the financial ruin of any society not luxuriating in Government support; but such shortcomings as there were—a flattening of the chorus in the first number, an occasional want of decision and orchestral co-operation—did not seriously mar the appreciation of the work as a whole. Of all the forces employed the female chorus deserves most praise for beauty of tone and precision. The four additional brass bands in the "Dies Iræ" did not miss their cue, and Berlioz's extraordinary device of thus building up a colossal pyramid of sound must have had an overwhelming effect on those who had not heard it before, though after repeated hearing it loses its impressiveness, because Berlioz's vaulting ambition so o'erleaps itself—that is, because the method employed by him to express his idea is so much vaster and more stupendous than the musical material, that an effect of hollowness is inevitably produced. And this, in a word, is the general fault of Berlioz's music. Never was there a mind more fertile in devising original and extraordinary forms and methods of execution, and seldom one less fertile in musical ideas than Berlioz's. For some years the glowing and dazzling orchestral garb of his compositions has confused the judgments of many regarding their merits; but to those who have often heard them it becomes more and more certain that Berlioz was little more than a mere colorist. Had he been endowed with only one-tenth of the fertility of ideas of a Beethoven, Schubert, or Schumann, he would have been the greatest of all French composers. As it is, the verdict of posterity will doubtless assign him a rank after Saint-Saëns, Gounod, and Auber, if not one or two other French composers. In the whole "Requiem," though it requires more than two hours for its performance, there is only one number, the Sanctus, which has a melodic charm so great as to impress itself indelibly on the memory and to be recalled with pleasure. To give a more stirring close to the concert, Mr. Damrosch produced, for the first time, a portion of Berlioz's "Symphonie Funèbre et Triomphale," for string and military orchestra, and chorus *ad libitum*. What has just been said of Berlioz's music in general applies especially to this selection. It is pompous, hollow, void of ideas and inspiration; its effect being entirely produced through Berlioz's clever handling of the instrumental and vocal masses.

TULLOCH'S MOVEMENTS OF RELIGIOUS THOUGHT.

Movements of Religious Thought in Britain during the Nineteenth Century. By John Tulloch, D.D., LL.D., Senior Principal in the University of St. Andrews. St. Gile Lectures. Charles Scribner's Sons.

Doctor Tulloch's eight lectures are extreme-

ly interesting and noteworthy, but they would be even more so were the promise of the title-page more fully kept. They actually cover less than half of the nineteenth century so far as it has yet lapsed. They begin with Coleridge, and with Coleridge the philosopher and theologian—that is to say, from the 'Aids to Reflection,' in 1825, when Coleridge the poet was already a quarter of a century remote and a long stretch of Coleridge the lecturer and the political and literary critic had intervened. They "reach to 1860 at the utmost," save as they have six or eight pages at the end devoted to the development of religious thought subsequent to that time. The century was so barren previous to Doctor Tulloch's anterior limit that we can only be grateful to him for beginning where he did; but his posterior limit has prevented his conducting us through fields where he is peculiarly at home, and where his criticism would be exceptionally important. Those who recall an article from his pen three or four years ago, in the *Contemporary Review*, upon the later aspects of religious thought in Scotland, will wish it had been printed as an appendix to the present volume, if a more exhaustive treatment of the subject was impossible. Certainly no previous section of the century was so important to the Scottish Church as the last dozen years have been, synchronizing as they do with the critical development which has produced the studies of Robertson Smith and the theological development which has produced the 'Scotch Sermons' of 1880 in the Church of Scotland and in the Free Kirk, and among the United Presbyterians equally significant expressions. But nothing more significant than the book immediately in hand has yet appeared. It reveals a thinker occupying a position of the first importance in the Church of Scotland, whose intellectual sympathies are hardly less expansive than Dean Stanley's, and whose moral sympathies are certainly as inclusive. That of all the men whom he discusses it is Robertson of Brighton who kindles most his admiration, is perhaps as good a hint as can be given of his own religious point of view.

The volume is extremely readable. It is dedicated to Mrs. Oliphant in terms of glowing admiration. It seems that many years ago Doctor Tulloch and Mrs. Oliphant planned an important work in the line of these lectures, which they were to carry out together, but which is now not likely to be attempted, the more's the pity. The first lecture treats of "Coleridge and his School." It hardly need be said that Doctor Tulloch's estimate of Coleridge as a religious thinker is very different from that of Mr. Traill, as superficial as it was contemptuous, in the 'English Men of Letters.' He rightly estimates the movement that sprang from him as the most fertile and pervasive of the period of which he treats. He claims for it a three-fold operation: the renovation of Christian ideas; the advance of Biblical study; an enlarged conception of the Church. He is as indifferent as Mr. Traill to Coleridge's metaphysics—a mere restoration of the Platonizing divinity of the time of Charles the Second, mixed up with a little Kant and Schelling. "Coleridge's most distinctive work was to restore the broken harmony between reason and religion, by enlarging the conception of both, but of the latter especially; by showing how man is essentially a religious being, having a definite spiritual constitution, apart from which the very idea of religion becomes impossible." Therefore religion is not a something brought to man from a sphere beyond his normal structure, as the Evangelicals believed, and, so believing, destroyed the unity of human experience, and not only separated religion from art and philosophy, but also from morality: it is the natural development of human nature. But while he made religion alive for the reason as well as for the conscience, "he was, with all his vivid and large intuition, a Christian agnostic." Had he cared to do so, Doctor Tulloch might perhaps have shown that this aspect of his character has encouraged those who have, like Doctor Mansel, insisted that Revelation may rush in where Philosophy fears to tread. Coleridge's contribution to Biblical criticism, 'Confessions of an Inquiring Spirit,' was not published till 1840, six years after his death. Doctor Tulloch does not overrate the influence of its ideas nor the charm of its (at times) impassioned eloquence. His volume 'On the Constitution of Church and State,' which Mr. Traill does not even mention, though written in his most rambling and disjected fashion, was certainly the exposition of a large and beautiful ideal of a state church, however impracticable it may be—an organization that should be a nursing mother to "all the so-called liberal arts and sciences, the possession and cultivation of which constitute the civilization of a country." John Sterling and his first biographer, Julius Charles Hare, are briefly characterized in the concluding pages of the first lecture as the most important of Coleridge's earlier disciples.

The second lecture has for its subject "The Early Oriel School and its Congeners." There is brief mention of Thirlwall, whose translation of Schleiermacher's 'Luke' was a significant event, and Milman, whose 'History of the Jews,' with its naturalizing of various miracles and general humanizing of the story, was an abomination on its first appearance. But the lecture is mainly devoted to Whately, Arnold, and Hampden. The proportions of the admiration allotted to Whately and Arnold are not those with which we have become familiar. It is Whately who elicits the most cordial note: "No man ever loved truth more, or more boldly followed it as he found it." The main distinction of Whately is found in his separation of traditional from Scriptural authority. The verbal inspiration of the Bible and the notion of a "Christian Sabbath" met with his most severe disapprobation. The "infidelity," as it was called, of William Lloyd Garrison was not more pronounced upon the latter point. Doubts are suggested of the breadth and calmness of Arnold's temper, and of his knowledge of the world and of human history and character, but high praise is accorded to his Biblical criticism, the immediate outcome of his historical alliance with Niebuhr, and it is claimed that he and Augustus William Hare did more than any other preachers of their time to break down the old technicalities of the pulpit. But it was another Oriel man, Doctor Hampden, who, in his generation, raised the loudest tumult of abuse by his 'Philosophical Evidence of Christianity,' which was an onslaught upon "logical theology," affirming it to be a mixture of Patristic and Scholastic elements, without any Scriptural or rational basis. Quoting Mozley's 'Reminiscences' concerning Hampden—"He stood before you like a milestone and brayed at you like a jackass"—Doctor Tulloch takes occasion to express his opinion of the Mozley book: "Its judgments of men are neither candid nor intelligent." The date of Hampden's book was 1832, and the young Tory Gladstone was consenting to the ecclesiastical punishment of the offender, a fault for which in time he made a full amend.

Lecture III. deals with the "Oxford or Anglo-Catholic Movement." Some of its sternest phrases characterize the "'prentice work" of Hurrell Froude, with which Newman was so much taken. Brief and loving mention is made of Keble, not without strictures on the intellectual narrowness which prevented his seeing any truth or good outside the Church of England. His "principle of probability" brought him into closest sympathy with Newman, whose 'Grammar of Assent' is its elaborate formal exposition. It is condensed by Doctor Tulloch thus: Only assent strongly enough to anything, and it will imbed itself in your mind as a verity of the first order. His sketch of the Oxford movement is very clear and bright. In conclusion he expresses a doubt, which is elaborated in a careful note, whether Newman ever was an Anglo-Catholic in any real sense: "His Anglo-Catholicism was, after all, only a state of transition from Evangelicism or something like liberalism to Romanism." And he is impressed, as every careful reader of the 'Apologia pro suâ Vita' must be, by the purely formal character of the process which carried Newman into the Roman Catholic Church.

The fourth lecture, on "Religious Thought in Scotland," is devoted mainly to Thomas Erskine, with briefer notices of John MacLeod Campbell and Edward Irving, and a passing mention, kindly and appreciative, of George Combe. For the "quiet country gentleman, Mr. Thomas Erskine, of Linlathen," one of the few, the very few, of whom Carlyle spoke only loving words, Doctor Tulloch's reverence is so great that it obscures somewhat his criticism on his always mystical and sometimes misty turn of thought. He knew him personally well, and he gives his own impression of this gentle spirit. He is very frank in his avowal of the antagonism of Erskine's views and those of Campbell, which were very similar, to the prevailing theology of their time. He condemns the Church for its condemnation of these views. Different treatment might have saved Edward Irving also from the worst of his sad fate. But Doctor Tulloch cannot consider Irving seriously as a leader of religious thought: "He was, in short, wholly destitute of the critical intellect. He never knew what it was to hold his mind in doubt or suspense."

The lecture upon "Thomas Carlyle as a Religious Teacher" is at once a brief biography and criticism of Dr. Tulloch's distinguished countryman. With much of admiration it has some caustic sentences. On the whole, considering the standing of the writer, it must be regarded as extremely kind, generous, and sympathetic. Carlyle's triumph in 1826 over the "soul-maddening Mud-Gods of his Epoch," with all their "Phlegethons and Stygian quagmires," and his emergence "into the Eternal blue of Ether," is attributed to a temporary access of health and good digestion. His antagonism to Christianity is found in his denial of miracles and of Divine Personality: his exaltation of Strength as the divine ideal; his alliance with it in his assertion of a Divine Power superior to matter; his derivation of man from this Power; his distinction of right and wrong as eternally different; his vague belief in immortality.

Coming in his sixth lecture to James Mill and his more famous son, Dr. Tulloch is still upon his native heath, and his parallel between the elder Mill and Carlyle is full of interest. They were both brought up religiously and destined for the Church. But the break of Mill with the Church, and Christianity, and religion generally, was much more sharp than Carlyle's. Dr. Tulloch is exceptionally severe in his dealing with James Mill's representations of the Scottish theology of his time. But it may be doubted whether he exaggerated in the least degree its average hideousness. The ghastly particulars of the younger Mill's early education are brought vividly to mind by Dr. Tulloch's rapid sketch. The value of his thinking for religion is found in its necessitating a revision of conventional beliefs. But he also did much to vindicate the moral side of religion. Dr. Tulloch's account of Mill's Necessarianism will not be accepted by those who know it at first hand as fair and sufficient. There will

be more agreement with his estimate of George Grote and his wife as narrow and sectarian bigots of the negative stripe.

The lecture (VII.) upon Maurice and Kingsley admirably discriminates their mental characteristics, their differences from each other and from the conventional types. The temperament of Kingsley was thoroughly poetic; that of Maurice about as little so as possible. The estimate of Maurice is not that which generally prevails, but we are inclined to think that it is much more just. It is that he was remarkably dogmatic and not without occasional bigotry. His insistence on rebaptism when he left the Unitarians for the Established Church is condemned as a capital example of his petty narrowness. His intellectual parentage is traced to Erskine and Coleridge; Erskine the feminine factor. "Scholar and thinker as he was, no man was ever less of a purely historical critic. He saw everywhere a reflection of his favorite ideas."

A second lecture on "The Broad Church," the eighth and last in the course, is allotted principally to Robertson of Brighton, and to Bishop Ewing, of the Scottish Episcopal Church. The characterization of Robertson is warm and admiring. He had none of Maurice's dread of "different sorts of opinion." "He did not shrink from the word 'Liberal' in religion. It expressed the generous recognition of difference and expansion of opinion here as in other things." This aspect of Robertson's preaching is, to Dr. Tulloch's thinking, that which will prove most lasting. It is another sign of Doctor Tulloch's liberality that in speaking of the development since 1860, he singles out for special approbation Dr. James Martineau, referring to his 'Types of Ethical Theory,' recently noticed in these columns. He dates a new epoch from Stanley's 'Corinthians' and Jowett's 'Thessalonians, Galatians, and Romans.' With these publications began the understanding of the New Testament as "a living literature and not a mere repertory of doctrinal texts." And he finally declares, "Unity can never come from dogma, as our forefathers unhappily imagined. Dogma splits rather than unites, from its very nature."

The importance of Doctor Tulloch's work is more in virtue of its general spirit, so broad and sweet, than on account of its particular opinions. It will not only attract and interest; it will be a potent factor in the further progress of that process of doctrinal amelioration which it so happily describes.

CHILDREN'S BOOKS.—II.

It is a discouraging reflection that when there is so much good literature in the English language, the mind of youth should turn or be turned to such books as 'The Rover of the Andes' (T. Nelson & Sons). True, it does not belong to the lowest type of sensational stories, but Mr. Ballantyne has crammed it full of most amazing adventures, the conjunction of which is incredible. The hero, or one of them, rather, is supposed to be an Irishman, but is totally unrecognizable as such. The farcical element of the story, badly done, is introduced *ad nauseam*. No doubt the average boy will find the book entertaining, but his pleasure will be at the expense of taste, imagination, and judgment.

What special need among people who wish to read books of travel will be subserved by Lizzie W. Champney's 'Three Vassar Girls in Italy' (Estes & Lauriat) it is hard to say. It is a sort of diluted guide-book, with a flimsy thread of rather silly personal narrative running through its confusion of places, historical facts, and poetic allusions. There may possibly be persons who will read it with pleasure and profit, but they will be those whom the commonplace does not repel, and who are ignorant of the writers who have sketched Italy with poetic and graphic pencil. Of the many cuts which lend a helping hand to the poverty of the text, very few appear to be new. That of Pisa's Leaning Tower represents it as far too much inclined.

Mrs. Molesworth's 'Us, An Old-Fashioned Story' (Macmillan) is very charming. A dear little six-year-old "bruvver" and sister constitute the "us" whose adventures with gypsies form the theme of the story. Mrs. Molesworth's style is graceful, and she pictures the little ones with brightness and tenderness. A few religious touches will recommend the book to the collectors of Sunday-School libraries. The illustrations are by Walter Crane.

'The Satinwood Box,' by J. T. Trowbridge, recently a serial of *Youth's Companion*, is now issued in book-form by Lee & Shepard. It is the story of a legacy bequeathed to an unlikely recipient, and of the conduct into which he is led by fear of losing it—conduct improbable as well as repulsive, since a well-trained boy would not be apt to tell lies and practise the arts of thief and housebreaker, especially while aiming to preserve an approving conscience. Even taking into consideration his subsequent confession, the fortunate sequel seems undeserved. As usual with the works of this prolific author, lively incident abounds, and the interest is well maintained, but a certain lack of refinement in conception and workmanship stamps the book as belonging only to second-rate literature.

'The Joyous Story of Toto,' by Mrs. Laura E. Richards (Boston: Roberts Bros.), deserves its name, being brimful of fun and cheerfulness. Toto and his grandmother and the birds and beasts of the forest make a very motley circle of friends, who all meet together and tell amusing stories of delightful impossibilities. The tale of this wonderful friendship itself will be as interesting as anything else to some young readers. In view of the great pleasure they will take in the book it seems almost hypercritical to suggest that our authoress sometimes fails to adapt her style to children, and could afford to be more careful in her selection of humorous ideas and scenes. An unexceptionable book for a child should, however, to our thinking, contain neither burlesque descriptions nor stories of courtship nor brutal incidents. The illustrations are amusing. One, at least, of the stories has appeared before.

From Roberts Bros. comes also 'A Little Country Girl.' Susan Coolidge being the author, it is not surprising to find this an easy, natural, refined little story, interesting without being exciting. The various descriptions of Newport scenery are graphic and charming; the graceful refinements of wealth and taste are pleasantly sketched. The book rather tends to make the reader feel that life without all these softer adjuncts is hardly desirable. Perhaps to counteract this tendency—an unsuitable factor in the education of young republicans—the author has given to Candace, who is "The Little Country Girl," a stronger *morale* than to her wealthy cousins, and makes the happy ending of the story turn on her clear-sighted rectitude of thought.

'Stanley Grahame,' by Gordon Stables (A. C. Armstrong & Son), is a poor story of adventures in this country and Africa. Whether the author, an Englishman, is really ignorant of the geography of America, or simply draws upon his imagination in his account of the Virginia plantation near a great inland sea bordered by "wild mountain peaks, the home of the black bear, the python, and the puma," we are unable to say. Notwithstanding all his efforts to introduce sensational incidents, he fails to interest, while his forced humor and frequent imitations of a rollicking sea-dog style are wearisome.

The biography of Dickens which his eldest daughter has contributed to "The World's Workers" (Cassell & Co.) is professedly written for children, and presents him only in his domestic life as a father. There is a brief account of his boyhood, in which unfortunately the tone is one of sentimental pity almost wholly unrelieved by any nobler suggestion. But the rest of the thin volume is occupied with a sketch of his household in its successive homes and sojourns; his frolics with the young people; the various ravens, cats, and dogs which were the pets; Christmases and New Years; and little incidents, many of which are touching and pleasant to know. This matter is filled in with a few extracts from his works and many from his letters on topics interesting to children, or about his own small charges and their affairs, and there is a detailed account of a railway disaster in which he sustained a severe nervous shock. The style of the narrative is infected throughout with the sentimentality already noticed, but otherwise it is an agreeable picture of the home life of Dickens, and may excite an interest in his works among the young, though it is more likely to be of greater use to those who already know something of his writings.

Mr. George Cary Eggleston's 'Strange Stories from History for Young People' (Harpers) is chiefly reprinted from *Harper's Young People*, and well deserves the honor of book form. The stories are told in a spirited and interesting manner, and, being for the most part out of the common rut, are fresh reading for old as well as young. They are not all equal. The one entitled "The Sad Story of a Boy King" is an account of the reign of Richard II., a good deal of it being devoted to his mature years; and, as is natural, a history of twenty-two years in nine pages is too general and devoid of incident to be especially interesting. There are a number of attractive illustrations.

For those who believe in "words of one syllable" books, the 'History of Ireland,' by Agnes Sadlier, and 'Lives of the Presidents of the United States,' by Miss Helen W. Pierson (Routledge), can be recommended. They are prepared with considerable skill, are in excellent type, well illustrated, and moderate in price. In books of this class it is of course not intended to give anything more than well-admitted facts without comment, and we do not find much occasion to criticise the views presented; we should, however, rather demur to the statement (p. 57) that Jefferson, next to Washington, was "the best chief of a free land that the world has known." Both books, we should say, are strongly national in their tone, as is right. As to the principle upon which they are prepared, of words in one syllable, we think it an entirely false one. Words of one syllable are no easier for children than properly selected words of several syllables—often are harder. For instance *naught* is a harder word than *nothing*. So with such words as *siege*, *through*, *realm*, *sketch*, *wealth*, *friends*, and a host of others. The rule has to be violated in the case of proper names, and we observe that it is violated also in such necessary words as *treaty* and *government*, while it is got around by such abbreviations as *'mong*, *'neath*, *'gainst*. But a more decisive objection to this principle is the necessity under it of clumsy sentences and roundabout, inaccurate expressions. We are told, for instance (p. 143), that Chase "was placed in charge of the funds of the land," and then "was made Chief Judge." We must say that the authors have shown a good deal of ingenuity, and met with a good deal of success in avoiding this defect.

Mr. F. Opper's vein of humor is well known through the medium of *Puck*, and we need say no more of the artistic side of 'Slate-and-Pencil People' (White, Stokes & Allen). Mrs. Opper's

verses are clever above the average, whether they describe the nice old man who reels off a yard or so of good advice; the ecstasies of "the last boy" on this planet, "with all the other people dead"; the infant phenomenon who calls for a copy of Wagner's Technology; or Young America in charge of a policeman:

"Have you seen my papa and my mamma anywhere?
I don't know how it happened—but they're lost!
It's really most unkind in them to give me such a scare;
I told them to be careful when we crossed
Those crowded streets: to just keep hold of hands and follow me:
And then—I stopped to see that jumping mouse
The man sold on the corner, and they lost themselves, you see.
Perhaps we'll find them at the station-house."

In 'Little Chicks and Baby Tricks,' by Ida Waugh (E. P. Dutton & Co.), there is a mixture of doggerel and of fairly good verse, both serious and childish. The colored plates are to be praised rather for their general sympathy with infant life than for their execution in line or tint. The grouping and expression in "The New Baby" are of the best.

A thoroughly wholesome and charming book is 'Animal Stories, Old and New, told in Pictures and Prose by Harrison Weir' (E. P. Dutton & Co.). Mr. Weir's animal drawings have delighted more than one generation, and they are here printed both in color and in the brown ink of the text, which abounds in wonderful stories of intelligence and affection on the part of dogs and cats mainly, but also of pigs, horses, and foxes

Lamia. By John Keats. With illustrative designs by Will H. Low. Philadelphia: J. B. Lippincott Co.

THE publication of Vedder's 'Rubáiyat of Omar Khayyám' was justly considered an important event in the history of book-illustration in this country. The success of that work has evidently given confidence to other publishers, and we now find the J. B. Lippincott Co. bringing out a work of no less importance. It is to be hoped that the 'Lamia' will meet with sufficient success to act in its turn as an encourager of further work of equal seriousness, and that, sooner or later, we may even find a publisher in New York sufficiently ambitious to emulate the Boston and Philadelphia firms that have given us these two books.

The bracketing of the two together is almost inevitable, because they are the two most important examples we have where an artist has chosen his own subject and worked out the whole book, covers and title-page and all, from a central idea, and where, his designs once made, they are given us as nearly as possible as they left his hand, without the intervention of another personality, in the shape of an engraver, to alter—as an engraver necessarily must—every line and every tone. But the similarity ends here, and the books are as entirely different in aim and manner as it is possible for two serious and original works to be. In Mr. Low's work there is nothing resembling the mysticism of Vedder. It is clear, clean-cut, and classical. There is no attempt at decorative writing, or at making the illustrations a sort of border, with space left for the text. The poem is *printed* in good, clear type, which is a great gain for those who think a book is to be read as well as looked at; and the drawings, while of varying sizes, are all, with the exception of head and tail-pieces, etc., of plain rectangular forms, taking in the full width of the page. This alone tends to give the whole book an air of sobriety, dignity, and common sense which is in contrast with Mr. Vedder's Orientalism, and in still greater contrast with the wearisomely unoriginal attempts at originality, and mock-Japanese fantasticalities, of much American illustration.

But the great difference between this and the general run of illustrated books is in the quality of the drawings themselves. Of course, in so large a work there is some unevenness, and in these forty drawings, or thereabouts, there are necessarily different degrees of merit; but the best ones are of a very high order indeed, and the set, taken as a whole, could hardly be excelled, if equalled, by any set of book-illustrations ever published.

Mr. Low has taken large liberties with his author, and many of his designs can hardly be called illustrations in the literal sense, being rather a new interpretation of the subject worked out upon parallel lines by the artist. He has rightly considered that, working in a different medium from the poet, he must often gain his effect in a different way. Take, for an example, the treatment of Lamia's transformation. Keats's description of this it would be almost impossible to realize in painting, and quite impossible even to suggest in black-and-white. He describes the serpent writhing upon the ground, dwelling chiefly upon her changes of *color*—

"The colors all inflamed throughout her train,
She writhed about, convulsed with scarlet pain," etc.;

and then—she vanishes. Without her color she would be simply loathsome, and, of course, her disappearance is unsuggestible by drawing. Mr. Low has overcome the difficulty by passing to one side of it, and has, in a noble and grave composition, given us Lamia in the act of transformation, her upper part complete woman, but a hint of snaky tail folding amid the long grass that hides her to the waist.

A minor instance of the same thing is to be found in the treatment of the Hermes in the same drawing. Keats's Hermes has

"—— golden hair
Fallen in jealous curls about his shoulders bare,"

which, with its suggestion of color, is very pretty, and reminds one of the Mercury in Correggio's "Education of Cupid." But try it in black and white, and your Hermes will look more like an Italian model than a Greek god, and so Mr. Low has ruthlessly shorn his locks. Working in black and white, he has felt that the sculpturesque ideal was more proper than the picturesque, and has modelled his Hermes after the Greek statues.

This design is one of the best in the book, and the beautiful drawing and modelling of this superb naked figure, dignified and yet graceful in its tranquil attitude, is an achievement that any artist might be proud of, and the whole composition, though but a few inches square and drawn for a book illustration, is as large in manner and as much a work of fine art as if it were a decoration ten feet long. The Hermes is always fine, as in the drawing "Into the green-recessed woods they flew," where he has a splendid back, and there is a grand swing and movement to both figures; and in other drawings, like the meeting of Lamia and Lycius, with its balanced composition—a head on either side and a little tree in the middle—there is a wonderful refinement and sweetness.

But it is useless to particularize where there is so much that is admirable, and enough has been said to make apparent the main quality of the work, the way in which each drawing is worked out with as much loving care as if it were an elaborate picture. Such thoroughness raises illustration far above its ordinary level, and this book will certainly greatly increase Mr. Low's reputation both with his brother artists and with the public.

The drawings have been excellently reproduced in photogravure by the Forbes Co. of Boston, and the printing and general get-up of the work reflect the greatest credit upon all concerned.

Italian Popular Tales. By Thomas Frederick Crane, A.M. Boston: Houghton, Mifflin & Co. 1885.

THE pursuit of comparative methods in historical study, which has been a leading characteristic of the scholarship of the last half of this century, has given us a large amount of learning that, apart from the conclusions it embodies, has an attraction in its mere materials. In a large sense one may call this new movement of thought—new, at least, in the variety, extent, and weight of its investigation—a study of race-ideas, whether political, religious, or social. In no age before has "the proper study of mankind" been so zealously or profitably followed, and its influence in habituating the educated mind to the notion of the essential unity of humanity is really incalculable; for, although, in view of centuries of Christian teaching, it is always a surprise to find it so, the fact still remains that the old instinct to divide the world into Jew and Gentile, Greek and barbarian, white man and negro, is almost ineradicable. The allied features or common origins, as the case may be, of the myths, rites, and beliefs of men, afford, to those who know them and realize their meaning, that sort of intellectual conviction which most readily becomes a ground of tolerance and sympathy when any occasion arises, and which constitutes true enlightenment in the region of knowledge pure and simple. This interest in the studies to which we broadly refer is undoubtedly the serious and important one, if one is considering net results; but, as has been said, there is in the mere materials of such learning a pleasure-giving element which frequently usurps the first place in the attention of the casual reader. Now fairy tales and ghost stories are a very important part of the common mental stock with which, historically speaking, the race set out, and their examination teaches a great deal that is ethnologically of high value; but, though to this we partly owe the great collections that have been made of them in the last thirty years, they will always be of more interest for themselves alone than for anything they may tell of man's evolution.

Professor Crane seems to have kept in mind this double character in his subject, and has reconciled, so far as was possible, the inevitable antagonism between the needs of the special student of folk-lore and the tastes of the general reader. Italy has been a story-telling land for centuries, and many of the popular tales received literary form, were reworked and adorned and made current in books, long ago. Many remained, however, untold, except by the lips of the people, and have waited until our own decades to be collected directly from the dialects. It is from these that Professor Crane has drawn for his translations, to the exclusion of what are called, for the sake of distinction, the literary versions; and he has made his selection so as to give the best or most complete illustrations of each well-known type in the cycle, so called, together with abstracts or brief portions of other less perfect examples to show the varying features in the plot or the details. There are in the text 109 tales disposed in five general groups: fairy-tales, stories of Oriental origin, legend and ghost stories, nursery tales, stories and jests. The range comprehends the entire mass of the popular tradition in Italy in these departments, so far as it has been gathered in the recent large collections of Italian scholars; and thus the volume serves as a condensation of the literature of the subject, which in this country is not easily accessible to any but the most favored students. The notes, which fill more than sixty pages of fine print, are placed, in this case judiciously, at the end, and furnish ample directions for further investigation by references to the parallel versions of the tale

in the text, to be found elsewhere, and by valuable suggestions in respect to its affiliations with the stock of other nations. A few additional tales, which the author's plan excluded from the body of the book, are included here for special purposes. There is not, however, in any part a discussion of the tales, or any general speculation or philosophizing in regard to them. Professor Crane's sole object seems to be to present a compact and comprehensive view of the Italian folk-lore which has been taken down in late years, and to supplement it by a sort of classified index to his sources. To students, therefore, his volume is simply invaluable, since it will save them much of the enormous amount of work which it represents; while the thorough knowledge, the exhaustive investigation, the grasp and orderliness of mind, and the exactness of statement, which characterize it, make it a substantial and highly honorable contribution to American scholarship.

Others than scholars, however, will find its pages full of entertainment, for the style is pleasant and rapid, and the subject, one need not say, is one that pleases old and young alike. Those stories in which there is the element of wonder predominate, as a matter of course; the scene is laid for the most part in that happy land of the impossible where one may comfortably bid farewell to facts and go a-Maying with his own fancy. One finds here what is still unforgotten of the world's childhood, and may live over something of his own. Some of the stories are familiar from Grimm and Andersen, and some still live in English tradition; but others are less common and will prove a good find. Every variety of marvel seems to be here, and much that is very beautiful; and children whose taste has not been vulgarized nor their imagination blighted, may be taught all the virtues from these old narratives, in which every hero is rewarded with a lovely princess, and every evil stepmother or envious sister is popped into her cauldron of boiling oil with unflinching poetical justice. There are a few legends of the disciples which could never be popular in a Puritan community, and are irreconcilable with the English sense of reverence for holy things. These are a small fraction of the whole, and, as the volume is too heavy for children's own hands, it need make no difference; but one who is in search for a Christmas tale will find few so wholly healthful and charming as "The King of Love," or "The Dancing Water, the Singing Apple, and the Speaking Bird," or "Lionbruno." It would be wrong, however, to give the impression that this is either a Christmas or a children's book. It is a storehouse of excellent "winter tales," nevertheless, and parents in search of really educating literature for their children might go almost anywhere and fare worse.

Norwegian Pictures, Drawn with Pen and Pencil. Containing also a Glance at Sweden and the Gotha Canal. With a Map and 127 Illustrations from Sketches and Photographs engraved by E. Whymper, R. and E. Taylor, Pearson, and others. By Richard Lovett. London: The Religious Tract Society; New York: Nelson & Sons. 4to, pp. 224. 1885.

To readers who have made acquaintance with previous volumes in the "Pen and Pencil Series," 'Canadian Pictures,' 'French Pictures,' 'Scottish Pictures,' etc., few words will be needed to recommend the new volume upon Norway. It seems in every way equal to its predecessors. "The object of this book," according to the preface, "is to give those who have not yet been able to visit Norway some conception of the wonderful beauty of the most accessible parts of that country," and "the end aimed at has been to put before the general reader a series of word pictures and of engravings illustrating as fully as possible the broad features of Scandinavian scenery." This end has been well accomplished. The illustrations, as the title indicates, are more than mere appendages to the text; and while some of the pictures are familiar, they are all good—the half-dozen after sketches by Professor Bonney being especially good—and they are well engraved. Mr. Lovett's text also is acceptable. Written in a modest and unpretending style, with no attempt at fine writing, it is excellent reading, and the descriptions are adequate, and give the reader a vivid and realistic conception of the beauty and grandeur of the scenes which he tries to depict. The author has frequently visited and is familiar with the country which he describes; and, selecting five or six of the most frequented routes of travel, and omitting everything which is trivial and commonplace, but carefully directing attention to whatever is in any way noticeable or beautiful, he brings to pass before the reader's mind a series of panoramas which deserve to be called fascinating. We have first the voyage by steamer from Trondhjem to the North Cape, and beyond to the Varanger Fjord, and back again, then the overland journey from Christiania, by railway, steamboat, and carriole, through the famous valleys of Gudbrandsdal and Romsdal, to the beautiful Molde Fjord on the west coast. This is followed by the west-coast steamer route from Trondhjem to Bergen, with excursions up the Sogne and Hardanger Fjords, famous both for beauty and for awful grandeur; then back to the capital from Bergen over the great mountain road which crosses the summit at a height of 3,252 feet, where snow lies along the roadside in July; and finally the reader is conducted from Christiania through southern Norway—Telemarken and Sæterdal—the districts celebrated for wood and silver carving, and the part of Norway least influenced, perhaps, by the outer world, and rewarding the traveller better than other parts of the country with sights of typical people, characteristic habits, curious costumes, and picturesque buildings. In these chapters the numerous waterfalls for which Norway is so justly celebrated are described with unusual completeness and interest. In addition, the book contains three chapters giving some account of the physical, political, and social aspects of the country, habits, and customs, and an historical view of ancient Norway at the period of its conversion to Christianity; and, as an appendix chapter, a glimpse of Sweden is given in a brief review of the points of interest presented in a sea-voyage from Göteborg to Stockholm, returning via the Göta Canal, and continuing the journey by railway from Göteborg to Christiania.

The author's text is free from errors of importance, the most noticeable being due to his want of a thorough knowledge of the language. Thus he has not discovered that the definite article is an affix in many words, and needlessly writes *the* before such words as Saltbakken, Trolltinderne, Lesjeskogen, Tyven, etc. Curiously, also, although attention is called on page 221 to the fact that "ö" in names indicates an island, the letter "o" is wrongfully used in a great many names like Bygdö, Bodö, Vardö, Nærö, Hestmandö, and others. The well-meant attempt to represent in English the pronunciation of Norwegian names cannot be recommended. "Good" certainly does not give the proper sound of *Gud*, nor "goot" that of *gut*; nor does "flabbro" even approach the pronunciation of *Fladbröd*, while Linchœping would be nearer the proper sound of *Linköping* than is "Linchipping." *Aalesund* is represented upon the same page by "Oalesund," and "Ölesoond," and *sjö* (sea), upon one page by "syö," and upon the next by "syo." Only once has the author ventured to use a Norwegian phrase, and then most unfortunately; for instead of writing, as he supposes, a polite request for a conveyance, he has made an impolite demand, in ungrammatical form, and, by misspelling, he will be shocked to learn, has taken the name of the Deity in vain. "Bonder" and "bonders" are awkward and improper coinages for the plural of *bonde*, peasant; the correct form is *bönder*. So, also, "kronor" is the Swedish plural of *krona*, and should not, therefore, be used in the chapters upon Norway, in which country the coin of equal value (26.8 cents) is called "krone," plural "kroner." "Hovesnen" should be Hovestuen; "Fru Kirche," Fru Kirke; "Smörgas," Smörgås; "Tinshög," Tingshög, *i. e.*, things-mound; and "Galdhöppiggen" should have but one *p.*, *i. e.*, Gald-hö piggen, the peak of Gald heights. Norway is not quite so thinly populated a country as Finland, for whereas the former has 1,913,000 people to an area of 318,125 square kilometres, the latter has 2,111,240 inhabitants to 370,283 square kilometres, or 6.01 and 5.7, respectively, to the square kilometre. And 6,500 people should be added to the population given for Göteborg, and about 20,000 to the number given for Stockholm. The "Statsraad," Council of State, of Norway consists of two Ministers and *eight* Councillors, and the Storthing (Parliament) always meets upon the first week-day in February. The author thinks Nordkyn lies further north than the North Cape, but Friis's map of Finmarken gives the former in latitude 71° 7′, and the latter in 71° 10′ 10″. Upon the whole, 'Norwegian Pictures' remains the most interesting and valuable book upon Norway issued for some time, and is eminently suited for a Christmas present.

Protectionism: The Ism which teaches that Waste makes Wealth. By William Graham Sumner. Henry Holt & Co. 1885.

AMONG that remarkable collection of apothegms dictated by Lord Bacon one day when he was too ill to work, is a story of a certain Bion, that was an atheist. In Bacon's words, he "was showed in a port city, in a temple of Neptune, many tables of pictures, of such as had in tempests made their vows to Neptune, and were saved from shipwreck, and was asked, 'How say you now? Do you not acknowledge the power of the gods?' But he said, 'Yes, but where are they painted that have been drowned after their vows?'" An even more pronounced scepticism is that of Professor Sumner concerning the salutary powers of protective duties. If a protectionist shows him a woollen mill and challenges him to deny that it is a great and valuable industry, he asks if it is due to the tariff. If told that it is not, he says that it is out of the discussion. If told that it is, he says that the mill is not an industry at all. We pay 60 per cent. tax on cloth, simply in order that that mill may be. The mill is simply an institution for making cloth cost 60 per cent. more of our products than it otherwise would; it is a nuisance; its existence works loss and damage to society; it is maintained by taxes upon other industries; they are productive and it is wasteful; the productive industries are damaged and ruined in order that the wasteful industry may flourish. Let us hear from these unprotected industries before we glorify protection.

If any protectionist is rash enough to raise an issue with this antagonist, he immediately finds himself overwhelmed with an avalanche of hard facts and solid arguments, and is fortunate if he gets off without being stripped of every shred of logical defence, and made a public laughing-stock. If he attempts to protect himself by pleading his sympathy with the American laborer, he is furnished with such demonstrations as compel him to impale himself on one

horn or the other of this humiliating dilemma. If he tries to escape by pointing to the prosperity of the country under protection, he is informed that until he has shown how a people is going to be enriched by taxing itself to support unprofitable enterprises, he might as well lay our prosperity to conflagrations and cyclones. One resource of the protectionists is not available in this particular contest. Ordinarily their replies to opponents are chiefly made up of vague denunciation; but Professor Sumner is master of a style of denunciation that is not vague, and he is not hindered in his invective by fears that he may be hurting some one's feelings. The repertory of the protectionists is indeed somewhat limited when they come to make specific charges, comprehending only a series of rather stale propositions concerning the British lion and the abuse of deductive reasoning, which have no particular bearing upon existing facts. On the other hand, Professor Sumner is abundantly supplied with telling illustrations from our own business experience, and has a capacity for most direct and forcible application of plain language to specific cases of protection, so that it is extremely imprudent for protectionists to descend to particulars. Upon the whole they can do nothing wiser than to let him severely alone, giving out that they hold themselves superior to contests with antagonists whose methods are so rude.

Quite the most delightful instance of a *reductio ad absurdum*, which is practical enough to suit any protectionist, is afforded by the history of sugar bounties. In consequence of protection, sugar which is 7 cents a pound here, is 9 cents in Germany, while in England it is 5 cents. The consumption per head is as follows: United States, 51 pounds; Germany, 12 pounds; England, 67½ pounds. Professor Sumner remarks that he has sometimes had difficulty in making people understand the difference between wanting an "industry" and wanting goods, but that this case ought to make the distinction clear. The Germans have the industry and the English have the sugar. Our own system operates in the same way, so that an American consumer has to pay 6¼ cents for the same sugar that is sold to foreigners for 3¾ cents. That is to say, the protective duties of this country and Germany are nothing but taxes upon the inhabitants of these countries for the purpose of enabling the inhabitants of the British Isles to get their sugar cheap. This is one of the most beautiful instances of protecting our labor that we have ever known, and is quite enough to convert the Cobden Club itself to the policy of protection—outside of England. In fact, the *Economist* remarks: "It may be that the gain which we at present realize from the bounties may not be enduring, as it is impossible to believe that foreign nations will go on taxing themselves to the extent of several millions a year in order to supply us and others with sugar at less than its fair price; but that is no reason for refusing to avail ourselves of their liberality so long as it does last."

The tariff is very soon to be a live issue, and those who wish to get a concise statement of the principal points of discussion will do well to buy and read this little manual. It is a handy 16mo, that can be read through in a couple of hours, but will furnish matter for reflection for as many years. We venture to say that no one who has read it will hereafter labor under the impression that all free-traders are visionaries.

A Larger History of the United States of America, to the Close of President Jackson's Administration. By Thomas Wentworth Higginson. Harper & Bros. 1886.

MR. HIGGINSON has few American rivals in the art of story-telling. No one is quicker to see an effective point, or more judicious in giving it just the extent of treatment which is most conducive to the general effect of the story. His 'Young Folks' History' of the United States has for some years been the most effective presentation of the story of American history to young minds. In this 'Larger History' he tells the story again, on very nearly the same general lines as before, but with a breadth of treatment suited to more mature minds. One may very well imagine one of the author's former "young folks," now come to manhood, turning to renew his youth in the pages of this larger work, and finding in it the same characteristics as those which attracted him in his boyhood. There is the same indifference to many events which are commonly considered as of very great historical importance, the same minute acquaintance with the actual life of men and women at each period of our history, and the same skill in depicting it. It is the story of American history, told now to "grown-up" folks.

The author seems to reject the popular theory of a fundamental difference between "Cavalier and Puritan" in our early history. He very justly emphasizes the fact that the colonies were from the beginning homogeneous to a degree which would not be realized by the reader of most of our histories; that the dominant class in Rhode Island and in South Carolina differed very little; and that the differentiation between North and South was really begun by the American Revolution, in which the dominant class at the South was Whig and held its ground, while the dominant class at the North, becoming Tory, was ejected and made way for a more democratic system. It is therefore true, in a sense, that since what was generally true of Massachusetts was generally true also of the other colonies, the story represents the whole country none the less in that a comparatively large share of it is devoted to New England. It is a question, however, whether it was worth while to invite the accusation of provincialism. Among other provocations to such a criticism one curious slip, at page 232, should be corrected. The passage is that which ends Patrick Henry's speech before the Congress of 1774. He says: "The distinctions between Virginians, Pennsylvanians, New Yorkers, and New Englanders are no more. I am not a Virginian, but an American." The text before us makes him say: "I am not a Virginian, but a New Englander."

The author claims in his preface that the illustrations comprise "by far the finest series of portraits of statesmen yet seen in any American book." The claim seems to be very fully justified. The portraits are in every way admirable. The paintings from which they have been taken have been carefully selected for their apparent title to represent the originals; and the work of the engraver has done justice to the artists and to the subjects.

The Lenâpé and their Legends; with the complete Text and Symbols of the Walam Olum, a new Translation, and an Inquiry into its Authenticity. By Daniel G. Brinton, A.M., M.D., etc., etc. No. 5 of the Library of Aboriginal American Literature. Philadelphia. 1885. 8vo, pp. 262.

THIS volume really consists of two parts. In one we have an account of the Lenni Lenâpé, or, as they are commonly called, the Delawares—their "legends, language, and memories"; and in the other there is an inquiry into the authenticity of the Walam Olum, that curious collection of chants or songs in which we have what purport to be Delaware traditions as to the creation of the world and the deluge, together with a record of their migrations, and a list of 96 (or, as Squier says, 97) of their chiefs in the order of their succession.

Beginning with the more important division of the volume, the account of the Delawares, we are obliged, after a somewhat careful study, to admit that, although it contains much that is praiseworthy, as is indeed the case with all of Doctor Brinton's work of this character, yet it does not come up to the standard with which he himself has made us familiar. Were an opinion upon the point permissible, we should say that this work, instead of having been a labor of love, was a perfunctory performance, and that it shows unmistakable signs of having been given to the public without the careful supervision which is necessary to guard against the introduction of loose, doubtful, and at times conflicting statements. In proof of what we say we have but to refer to the first section of the first chapter of the book, and ask how it is possible to know where the tribes that are there named were living "about the period 1500-1600," when some of them were never heard of until toward the middle of the seventeenth century, and others, when first known to us, can hardly be said to have occupied the regions which our author has seen fit to assign them? Or, to take another instance, what are we to think of the statement (p. 40) that the three divisions of the Delawares, known as the Wolf, the Turtle, and the Turkey, "were neither gentes nor phratries," after the endorsement given on a previous page (21) to Morgan's assertion that the Mohegans "had precisely the same phratries as the Delawares, that is, the Wolf, the Turtle, and the Turkey"? These are fair samples of the kind of inaccuracies of which we are now speaking and to which we object. Others might be brought forward, but to do so would detain us too long, and we therefore hasten on to that portion of the work entitled "The Lenâpé as Women," as it is here that our author is believed to be most vulnerable. Indeed, when dealing with this branch of his subject, he seems to have been carried away by his sympathies, and instead of holding the scales even, he takes up the cudgels for his friends, the Delawares, with as much ardor as if he were of counsel for the tribe.

This bias is, we think, evident from the way in which he disposes of that fierce "diatribe" in which the Iroquois chieftain, Canassatego, taunted the Delawares with being women, and ordered them to give up the lands that were in dispute between them and the English, and to remove to Wyoming and Shamokin, towns on the Susquehanna. Instead of replying to these "remarks," as they are termed, in the only way in which it was possible to do so, he tells us they were but parts of a scene that had been carefully arranged, and upon the strength of this he characterizes them as "braggart falsehood," though he admits (pp. 115 and 123) that the Delawares had to obey this and other similar orders, and that (pp. 118, 121, and 122) they were "politically transformed into women." Exactly what was meant by the phrase "we made women of you" is a matter that ought not to occasion any difficulty, though we do not propose to concern ourselves about it at present; neither do we intend to inquire into the circumstances under which it was first applied to the Delawares, further than to say that to believe that a proud and haughty people, as they are admitted to have been, could or would, at the suggestion of rivals and enemies, voluntarily have abdicated their position as warriors and assumed that of women, even though the change carried with it certain privileges as peacemakers, requires a degree of credulity that we do not happen to possess. In saying this, we do not wish to be understood as asserting that the Moravian missionaries who gave currency to the story, manufactured it out of the whole

cloth. So far are we from anything of the kind that we are satisfied that they simply repeated it as they heard it; and we may add, that we are also satisfied that the Indian who told it, "sacrificed," as General Cass rather euphemistically observes, "the love of truth to the love of his tribe."

In regard to the Walam Olum there is not much to be said. It certainly is not history, for if it were we should have to admit that this tribe had records running back, in an unbroken line, through some three thousand years; neither can it be said to be of any very great scientific value since we are given to understand (p. 158) that "it can lay no claim either to antiquity or purity of linguistic form," and that it is "slightly colored by European teachings." That it is of Indian origin is, we think, very probable; and we can see no reason why it may not have been, as our author suggests, the work of "one" or more "of the chiefs or priests who spent their lives in the Ohio and Indiana towns of the Lenâpé, and who, though with some knowledge of Christian instruction, preferred the pagan rites, legends, and myths of their ancestors." The only point about which there can be any difficulty is in deciding whether the figures, as they are here given, were used as symbols to suggest the verses or sentences to which they are respectively attached. The circumstances under which the two were obtained—the figures at one time from one person, and the words not until two years later and from a third party—are, to say the least, somewhat peculiar; and this, taken in connection with the fact that symbols of this character are arbitrary and therefore more or less unintelligible to any one who has not learned the song, is sufficient to cast a shade of doubt over the matter, though it does not justify us in asserting that there is no relationship between them. If, however, such a relationship does exist, and these figures are really the symbols that were used in recalling the songs that are here given, there can be no question that they furnish one of the best specimens of highly conventionalized, Indian pictorial writing that have come down to us. As such, it has a certain interest for those who are curious in such matters; but beyond this it tells us little or nothing.

BOOKS OF THE WEEK.
